While the higher forms of mankind are undeniably far superior in scope of intellect to the most intelligent of the lower animals, it is quite as certain that there are species of the human race having a considerably lesser amount of intelligence and moral responsibility than the higher animals of the so-called brute creation. Man has made unto himself religions, and from them and his heavens arrogantly excludes all but himself. In accord with the divine inimitable laws of nature, there must be a something in all things which does not perish, but exists forever in some form or state; nothing altogether passes away and is gone. In man, call this something which lives forever a soul if you like; what can the soul be but the mind, that fountainhead of reasoning which governs every action? And do not the dog, the horse, the elephant, the monkey, reason the same as man, with the only difference of their having been endowed by nature with a lesser capacity than man? Then, possessing every attribute of the higher animal—man, why deny to them the blessed immortality so freely granted by that mysterious and omnipotent law of nature which rules the universe, and granted by that Power, not alone to them, but to the smallest plant that grows upon the hillside?

CLARKE HELME LOOMIS.

Albinos.

ITHACA, N. Y.—Mr. J. M. Smith recently shot an albino red squirrel, that proved upon examination to be a most perfect specimen of albinism. In size and general characteristics, barring color, which was snow-white, it was a pure type of the red squirrel.

In the northwestern part of the city a white robin has been repeatedly seen of late.

Last spring I observed an albino English sparrow. The little chap, impudent and pugnacious as his less conspicuous comrades, was hustling with might and main, at the head of a rebellious horde of his fellows, in quest of a breakfast.

M. CHILL.

A Coot in a Fix.

BOSTON, Aug. 31.—*Editor Forest and Stream:* I notice article by Ralph Stewart in recent issue of FOREST AND STREAM, regarding a mudhen which was disabled by a mussel clinging to its beak. On Oct. 14, 1884, I shot a coot in precisely the same condition. The lower mandible was almost severed, and the bird was nearly exhausted. This occurred in Fox Lakes, Ill. I have still the skin of the coot in my collection, also the shells of the bivalve.

C. W. CHAMBERLAIN.

A Tremendous Alligator.

FERGUSON, Berkeley County, S. C., Sept. 1.—*Editor Forest and Stream:* Mr. H. D. Swarts, of Scranton, Pa., shot an alligator on the Santee River, in South Carolina, last Tuesday, that measured over 18ft. in length.

W. H. JACKSON.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

A NIGHT ON A TEXAS RANCH.

IT was a warm still night in the middle of August, we had just finished supper at the ranch. Mike was at the back of the house with the only lantern that was in working order, washing up the plates and cups, and I was smoking my pipe on the gallery steps. It was so dark that every now and then I had to blow the smoke through my nose no make sure that my pipe was alight.

Four or five hounds were lying about, occasionally giving notice of their presence by groaning as they turned over to rest the other side, or thumping on the gallery floor as they went for an unusually energetic flea.

The silence was intense; now and then a screech owl wailed in the distance, or a frog in the little creek started to clear his throat, but as a rule even the crickets were too lazy to chirp, and the fireflies only flashed their tiny lamps at long intervals.

One could just make out the dark outlines of the steep brush-covered hills that enclosed our narrow valley, and the black mass of the thicket below the small field that faced the house—a thicket of shin oak and black haw, and almost every other kind of brush that is hard to get through—a tangle of briars and vines so dense, that in the descriptive language of the country "you couldn't stick a butcher knife into it."

Suddenly the silence was broken. From somewhere in the center of the thicket rose the long, lonesome cry of a hound that has discovered something interesting, and needs assistance. I recognize old Brenda's voice, and before the echoes have died away down the valley, the hounds on the gallery are falling over each other down the steps. They scamper across the little field, crash through the old rail fence at the lower end of it, and for a few seconds there is silence. Then old Brenda uplifts her mournful voice again; Bachelor's deep roar trembles through the woods; Rummager, Sultan and Duchess own to the line; Mike comes running out with the lantern, and we stand listening eagerly as one musical voice after the other takes up the chorus, while the hounds crash about through the tangled brush.

Presently we hear little Duchess, halfway up the hillside. The others are with her in a moment; the loose rocks rattle down as they work their way to the top, and in another instant the whole pack in full cry is tearing away to the eastward.

It is no use to think of following them across so rough a country on a dark night like this, so all we can do is to stand listening intently and praying that they may "tree" whatever they are after within hearing distance of the house. They would stay half the night at the tree, and the moon will be up in an hour or so; surely nothing that can climb will stay on the ground in front of them for long at the pace they are going.

Away they race for about half a mile and turn slightly to the north, the music dying to a low murmur as they sink into each of the numerous steep gullies, that run into the north branch of the creek, and rising louder and clearer as they drive across the higher ground.

We go through the house and sit on the fence at the back. Although we can see nothing we know just where they are and what they are doing.

Little Duchess, the fastest hound in the pack, is sweeping along about 50yds. in the lead; then come Bachelor, Rummager and Sultan pretty well together, while the ancient Brenda toils along in the rear, making more noise than any of them.

Now they are over a mile away, among the post oaks on the Divide, and we can only just hear them; if they cross the ridge it is doubtful if we shall see them again before morning. Fainter and fainter their voices fade away in the distance, and at last we hear them no more.

Mike, who has been intensely excited, utters a terse monosyllable expressive of disgust, and we light up fresh pipes and speculate as to what they can be after. If it is a wolf they are as likely as not to leave the country; it can't be a deer, because old Brenda is much too knowing to run one 20yds. unless it is a cripple and she is told to do so.

Listen! Yes, there is Duchess again, and presently we hear the others. They have gone right round the head of the creek and are coming back toward us on the other side of it.

Nearer and nearer they come, and now something is evidently coming down the steep hillside on the west of the house. We can even hear it panting and the slight rattle it makes as it gets through the fence. The hounds are not far behind, and come tearing down the hill and across the field, and directly they are all at fault for a moment in the same thicket that they started from.

We are on the gallery again now, and expect every moment to hear the fierce baying that proclaims that the "varmint," whatever it is, has climbed a tree.

But the end is not yet; the hounds are evidently unable to find out which way their chase has gone and crash noisily about through the thicket, giving tongue now and again in an undecided sort of way. At last old Brenda, using the experience gained in many a long run, works out the line, and in another moment they are off again, clambering up the hill in exactly the same place where they climbed it when they first started.

Once on top they race along with a burst of melody for 100yds. or so and then wheel around and come tearing back again, down the hill and on to a little, open, flat close to the house, covered with a dense growth of broom weed. Here they scatter and circle for an instant, and then there is a loud roar followed by a yell of distress from Bachelor, and then all five of the hounds are baying furiously.

Mike bustles out with the lantern and I stop to grab the

carbine from its corner and hurry after him, losing both my worn-out slippers on the way.

"What have they got, Mike?"

"Sure it's a calf I think, sor," says Mike, who is nevertheless standing at a very respectable distance from the little group that is surging about among the weeds.

I take the lantern from him and this is what I see: Standing with his back arched and his head low, facing first this way and then that, and sometimes making three or four springs at the nearest of his foes, is a large bob-tailed cat or lynx. With his ears tucked back close to his skull and every hair on his body erect, his wicked eyes shining green in the light of the lantern, he is an awkward looking customer enough and is really about the size of a small calf.

Whoo hoop! At the well-known cheer the hounds all dash in on him at once. He fights grimly and grandly and perfectly silently; with every move he makes he scores one of the dogs with tooth or claw. Three times he breaks loose from them all, but they are not to be denied, and at last they get him over on his back and with the claws of both forefeet firmly fixed in poor Rummager's nose, and a big piece of one of Sultan's long ears in his mouth, he gives up the battle. The hounds are too tired to worry and quarrel over his remains, but panting and exhausted they lie down by his side and the fun is over. H. L.

AN ADIRONDACK DEER HUNT.

AT Wa-wa-yanda camp, situated on a beautiful spot of the shores of Indian Lake, there were grouped about the camp-fire one clear evening in late summer the inmates of the camp, enthusiastically discussing a trip back into the wilderness for deer that had been proposed and finally decided upon. The start had been set for the morrow, and all the preparations had already been made.

Our party consisted of five, including our guide: Hank, a good woodsman and old camper; Harry W., inexperienced, but plucky and willing to learn; my brother, myself and our guide Brown, who rejoiced in the sobriquet of "Comical."

The next morning dawned clear and lovely. The waters of the lake, ruffled by the light morning breeze, flashed and shimmered like hammered silver as the golden shafts of the sun-god glanced from its bosom. The start was quickly accomplished, and soon the white tents faded in the distance as sinewy arms sent the light skiffs bounding joyously forward. On we went past stately groves of spruce and hemlock, whose dark needles had turned to burnished gold at the touch of the rising sun; past clumps of bright-leaved birch, and poplar that sighed and murmured softly to us as we passed; past a little island and an emerald marsh, over which two white-headed eagles circled with graceful sweep of wings, till at length the high banks of the Lake Louie "carry" came into view and we knew that five miles had been left behind.

A short "carry" brought us to the outlet of Lake Louie. We followed this a short distance and then sped on over the lake itself. Louie Lake is a roughly circular sheet of water and affords good fishing for lake trout. It is also good hunting territory, one of its inlets being a noted stream for night hunting. Having pulled across this lake our travel by water was at an end. The boats were unloaded, beached and concealed in the brush, then the packs were shouldered and we set out over the long trail to Pillsbury Pond. The setting sun beheld five weary sons of Nimrod, welcome gladly the small clearing in which stood the old log cabin that was to be our home during our stay.

That night there were no volunteers for jacking and soon, after the turning-in pipes, the camp was wrapped in slumber.

The following morning the camp was astir early. My brother and Hank thought they would go over to the Cedar Lakes and see what the prospects were for deer in Beaver Pond, a small sheet of water situated very close to Upper Cedar Lake. They soon departed, and Harry and the writer determined to try a little fishing. Our piscatorial efforts were, however, only rewarded by the capture of a small trout and numerous chub, and we soon quit it, disappointed. As the shadows were lengthening, Hank and my brother came into camp. They reported numerous deer sign in Beaver Pond, but as the water lilies were cropped off everywhere along the shores of Pillsbury, we decided to hunt there a few nights at least. That night the moon shone serenely in the sky and night hunting was out of the question.

The following day we all went over to the Cedars. These three bodies of water are very pretty mountain lakes, set in among the hills of hemlock, spruce, beech and basswood, and occasional patches of gorgeous mountain ash, and they afford good trout fishing in the spring, besides being in close proximity to two excellent hunting ponds. The others decided to stay at the lake and spin yarns with an acquaintance that was camping there, but I took my rod and tried for the rainbow-hued denizens of the Cedar River. Using a coachman and scarlet-ibis, I killed about a dozen average fish and then returned to the lake. The scarcity of the trout was due to the extreme lowness of the water, for, under favorable conditions, the lower waters of the Cedar River afford splendid sport in the spring and early summer. When I got back to the lake I found that Hank and Brown had already departed for Pillsbury, while my brother had volunteered to stay with our acquaintance, who was ill; so Harry and I started back to camp. I had doubts of our ability to reach the trail before twilight, and greater ones of our ability to follow a trail that we had passed over but once in the dark. We found the trail after a little delay and started over the mile that separated us from Pillsbury Pond. By the time we were half-way over it, it grew so dark that I could barely distinguish the outline of Harry two paces behind; worse yet, it began to rain, and the prospects of spending an exceedingly disagreeable night in the woods seemed excellent. Time and again we got off the trail, and as many times regained it. How we ever reached the pond is still a mystery to us both, but reach it we did. We were a thankful pair of mortals when we got to camp, and that night I registered a vow never to attempt to go over an unknown trail again at nightfall.

The following day it rained heavily and we whiled the hours away with whist and euchre. That night I was awakened by the report of a rifle just without the cabin, then came a pause and a second shot. Straightaway Hank's voice came through the darkness: "I guess that settled him." Later I ascertained that "him" was a Canadian porcupine that had invaded the dining tent and finally succeeded in upsetting a pile of tin plates. This had proved too much for the nerves of Harry and Hank, and they had sallied forth, with the aforesaid result.

Next morning dawned clear and balmy, as though Dame Nature was trying to atone for her desolate appearance of the day before by donning her loveliest garb. Each of the millions of raindrops sparkled like a diamond as the golden showers from Apollo's chariot fell upon them, and the air was laden with the odor of the balsam.

After breakfast was over, Harry and I started to go over to the Cedars to bring my brother, but we met him midway on the trail between Pillsbury and the Middle Cedar.

That afternoon three of us took the rifles, and at 4:30 started to take positions for a sunset shoot. Hank took a station at a part of the pond called the Narrows; my brother chose one of the islands at the mouth of a deep bay; while the writer chose his stand far up it. Pulling up to the head, where a small brook ran in, I ran the skiff ashore. After I had remained there some time my evil genius prompted me to move lower down, and, acting upon the impulse, I went down about 100yds. Drawing up into the rushes I waited in silence, while only the harsh rattle of the kingfisher and the metallic *quauk!* of the great blue heron broke the stillness. Suddenly my eye caught two red objects moving along the border of a little marsh at the extreme head of the bay, about 180yds. distant. To say that I was disgusted would but faintly express my feelings, for had I not moved they would have been less than 100yds. away. Knowing that there was no danger of their seeing me, and that the wind was also in my favor, I watched them for some time. I soon perceived, however, that they would not feed up closer because the marsh did not extend far, and consequently prepared for action. My arm was a .38-40 Winchester belonging to Harry, which I had never shot. As the weapon came up the sights blurred badly, so I lowered it again. Again it was raised and lowered, but at the third trial I pulled. When the smoke drifted away only one of the red forms appeared, and I thought the other was down. Quickly covering the other, I shot. Again and again, and still again, the rifle spoke, till finally, at the fourth shot the deer sprang into the brush and vanished. Upon paddling up I discovered that the other had also escaped unscathed, and then sadly turned the bow toward camp, whither I arrived in due time. It was somewhat of a balm to my wounded pride when I later discovered that a .38-40 cartridge would not "hold up" 180yds, though it was an inexcusable lack of knowledge on my part.

That night Brown and my brother went out, and returned about 3 A. M. They reported that they had got a shot, but were not certain that they had killed it. The following morning we made search, and found a medium doe lying dead on the shore, shot through the heart. The circumstances attending the killing were peculiar enough to merit mention. They had come upon the deer swimming the pond; my brother fired both barrels, extinguishing the jack by the concussion, the first charge passing through the ears, the second missing entirely. Now was Brown's opportunity, and he was equal to the emergency. Throwing up his repeater, and guided by the sound alone, he shot six times by guess, as he put it. One of them chanced to strike just back of the foreshoulder, and dropped her dead in her tracks.

The following day, Brown and Hank left for the Cedars to hunt Beaver Pond, and the rest of us lay around camp, smoking and talking till late in the afternoon; then we again took stands, but no deer came in. That night was clear, and the moon shone too brightly for successful hunting; though my brother and Harry circled the pond, putting out three, but being unable to get a shot.

The ensuing day was rainy, and noon brought Brown and Hank back from Beaver Pond, bringing the head of a fine five-point buck that they had secured by a sunset shot the day before. The antlers were as symmetrical a pair as I have ever had the pleasure of seeing. The evening passed quickly and pleasantly away, till at length pipes were knocked out, blankets unrolled, and all was still, save the gentle breathing of the sleeps and the mournful hooting of an owl.

My brother and Brown had planned a trip to Mud Lake, and as the day was fair on the morrow they left, while the remainder of the party spent most of the day in exploring the borders of the pond. Later, when the sable hordes of night had arisen and engulfed the hills in shadows, Harry and I started on a hunt. As we passed up the outlet, the writer was deeply impressed by the weirdness of the scene. The peaceful, calm night, preternaturally so it almost seemed; the still, majestic forest, with its border of tamarack hoary with their festoons of long, gray moss; the old stumps about which the pale mist curled and twined lovingly, making them appear like wraiths in the jacklight; the surface of the lake, cold, dark and treacherous, save where some wandering beam of the now-rising moon stole through the surrounding foliage, and, by its gentle radiance, mellowed and beautified; the skiff, with the dark, motionless figure in the bow, that glided silently along as might well the grim Ferryman of the Styx; all contributed to the wild beauty of the night. Soon the moon rose above the crest of the trees and made successful hunting impossible. However, we persevered and put out two while going up the pond. There we went ashore and built a fire and had a pipe, while Harry afterward fell into a doze. When I aroused him the serenity of the night had passed away and nature was in a sterner mood. A strong wind had sprung up and was soughing mournfully through the treetops, while a dark bank of clouds was rising rapidly in the west. Hastily shoving off, we started for camp, but the storm overtook us before half the distance had been traversed. With my hat brim pulled down low over my eyes to keep out the driving rain, I was driving the skiff slowly forward in the teeth of the storm when suddenly the sharp report of Harry's rifle rang out. Peering ahead, I saw the head and shoulders of a deer rushing toward the shore, and Harry's rifle spoke twice more. Dropping the paddle and catching up my own arm, I joined in the chorus, but in vain; the quarry escaped scatheless.

Brown and my brother got back to camp the next day. They had seen no deer, but reported seeing some large trout. Brown had hooked a fine fish, using my light tackle on a cub pole, but lost it through the parting of the leader.

Next morning we broke camp and turned our faces homeward. The trip to Lake Louie, with lightened loads and a down grade, was soon over. A halt at McCormack's, where the party was photographed, then we launched the skiffs and pulled down the lake. We passed over the "carry" and rowed down Indian Lake in the soft light of the waning day as the sun sank slowly behind Snowy Mountain until, at last, we reached camp as the hazy twilight was clothing the hills in purple and the white mist was rising from the water in curling billows.

That night, as we lay in the tent watching the fragrant wreaths curl upward in graceful curves, we talked the hunt over in low tones till, at length, silence crept over the camp, while the weird cry of the loon echoed over the lake and the dying embers of the camp-fire flared, flickered and sank into ashes. EURUS.

CHICAGO AND THE WEST.

Expensive Birds.

At Webster City, Ia., on Aug. 26, L. A. McMurray, president of the leading bank of the city, was caught early one morning having a half dozen nice prairie chickens fixed up for breakfast. He said they were given to him by a friend, whose name he would not disclose. This gameness on his part was, at least, commendable, but it cost him $20 a bird to settle up with the law for having the birds in his possession, or $120 in all. It would have been cheaper to have left these birds in possession of the State of Iowa, which owned them.

At Fremont, Neb., last week, Frank Hepperly, of Madison, Neb., was arrested for killing eleven prairie chickens. It cost him $5 per bird, with costs—$70 in all. It would have been cheaper and more respectable to have left the birds in the possession of the State of Nebraska, which owned them.

Where to Get Chicken Shooting.

Thus far I have no reason to change my earlier belief that upper Minnesota and upper North Dakota would prove about as good fields as any for the chicken shooters this season. The law opened last Wednesday in Minnesota, and today that State is alive with chicken shooters from all parts of the Union, as is also North Dakota. Advices from St. Paul mention very favorably upper North Dakota points along the Great Northern Railway, especially St. Vincent, Pembina, Warren, Stephen and Northcote. Grove City and Willmar, lower down and in Minnesota, are said to be good. On the Northern Pacific, between Barnesville and Fargo, the crop is reported good. Glenwood, on the Soo road, is named favorably. If I felt I had to have a lot of chickens and not a few, I believe I would get up well to the north, say as high as Pembina, and then work on west. Of course, this means sharp-tail grouse country too. Little Falls, Fergus Falls, Sauk Center, Detroit and Perham, all in Minnesota, are spoken of as fair points for chickens this fall.

At Aberdeen, S. D., I think the chicken shooting cannot be remarkable, for a local paper states with some interest that three shooters of that city, B. C. Yorks, F. W. Harragin and J. J. Deertz bagged twenty birds "in a few hours one evening," which fact they are not likely "soon to forget."

As to chicken shooting in Nebraska, a well posted newspaper in Omaha gives the good advice to keep off the main lines of the railroads, and to hunt out the small towns far out on the new branch lines. The northern branches of the Omaha line are thought to be about the best, and the following list of towns is prepared for shooters intending to go into Nebraska: Randolph, Hartington, Norfolk, Ponca, Wakefield, all on the Omaha road; Neligh, O'Neill, Merriman and Hardy, on the Elkhorn; Lexington, North Platte and Gottenburg on the U. P., and towns well up on the Billings branch of the C., B. & Q.

In the Indian Nations considerable chicken hunting is done in spite of the law forbidding non-residents to hunt there, or rather the old military regulations, now almost obsolete. It is better to go to the Nations as the guest of some local rancher or other citizen, though no trouble would be apt to arise over the Indian regulations, under which at one time a man was as likely as not to lose his outfit if he got caught by the troops. Blue Jacket, I. T., is reported to be about as good a place as any. This is on the M., K. & T. Ry. Big bags have been made there. I am somewhat at a loss, however, to understand one report from that place, printed in two different papers, of the same individual, described differently as a "saddlery drummer," and a "grocery salesman," who lately killed, in the neighborhood of Blue Jacket, "100 quail in less than an hour, making some very difficult double shots." This drummer, salesman, or whoever he was, is reported to have come from Kansas City. Methinks that either he or someone else lied copiously, else his double shots must have been at flocks sitting on the ground. Is there a saddlery or grocery traveling man known in Kansas City who is in the habit of making difficult double shots on the ground, to the extent of 100 quail in one hour? Or is my friend the daily reporter just dreaming again in the bliss of his evening pipe?

Opening Day.

The eagerness with which shooters look for opening day all over the country may be seen by a dispatch from Necedah, Wis., which says that over 100 shooters, from different parts of the country, were in that town the night before opening day, waiting for the dawn of the season. The chicken's life is fairly to be called an extra hazardous risk.

Ducks.

Opening day for ducks and chickens both is Sept. 1 in Wisconsin, and there was a tide of shooting traffic over that State the last two days of August. The duck marshes around Green Bay, the Winneconne, Poygan, Butte des Morts and Horicon marshes were crowded with shooters. As a rule, good bags obtained, and the earlier and general prophecy of a good shooting season seems more than borne out by the abundance of wildfowl. Of course, the Wisconsin shooting on wildfowl has been thus far confined to the local ducks, or those which for the most part bred on the marshes of the State.

Ducks are now in abundance at Dawson and Valley City, N. D, though the chicken shooting there is reported not so very good. At Crookston, Aitkin, Brainerd, Fergus Falls, Perham, Detroit, Battle Lake and other points of the upper part of Minnesota, ducks are to be seen in such local abundance that the fall season promises very well indeed.

In Illinois.

The Shullsburg *Pick and Gad* publishes for its readers the misleading and dangerous statement that the Illinois chicken law opens Sept. 1. Several papers in lower Illinois have given out this same advice, and much illegal hunting has been the result. I have been told that around De Kalb and Pontiac this has been the case to a great extent. Col. C. E. Felton, of this city, says that he is going to try for a few chickens at Pontiac when the law opens, but he thinks there has been but little illegal shooting there.

In Ohio.

At Middletown, O., a new gun club was organized lately, the members this week got their first conviction against a violator of the game law in the instances of John Clark,

Frank Bush and Ben Davidson, who were arrested for killing doves, thrushes and other song birds.

In Michigan.

Last week, at Harvard, Mich., Charles Barton liberated a dozen and a half of Mongolian pheasants, about half grown, the first he has turned down from his stock. He has been having fair success at raising the birds.

In Minnesota.

Local papers of Minnesota, notably those at Duluth, state that the big game of the State, moose and deer, are doing well, and are bound to be very abundant when the season opens. In Itasca county, the moose and deer are reported so numerous that the the farmers have been obliged to sit up at night to protect their gardens. This I do not doubt. I have known a great many men, sometimes very good men, from the city who were out on fishing trips, who have felt obliged to sit up nearly all night, armed with a rifle and a headlight, to prevent the deer from climbing into their boats and assailing them. I expect it is pretty dangerous out there about this time.

In Colorado.

Judge Wm. Thomas, of Chicago, is just back from Routt county, Col , a district very famous for its big game. and he reports that the Indians are destroying game in most disastrous fashion in Routt and Rio Blanco counties, not far from Meeker. He saw many piles of deer hides The Indian is aware that the best buckskin comes from summer hides.

In Wisconsin.

At Phillips, Wis., Aug. 28, Vincent Folgart, of Chicago, nineteen years of age, was accidentally killed while hunting at night. The young man was the son of Andrew Folgart, of Chicago. and had recently come to Phillips

At Prairie du Chien, Wis., some disgruntled person cut down the orchard of the local deputy warden. The act was one of so-called revenge upon the warden for making arrests. At Eau Claire the deputy warden has been fired at by sooners.

In Montana.

L H. Parker, of the Murphy Cattle Co., near Billings, has begun the establishment of a big kennel of wolfing hounds, to be used in the work of ridding the range of the wolves which destroy so much young live stock. He expects to spend $3 000 in getting his dogs together He will use the best he can find of greyhounds, stag hounds, foxhounds and Russian wolfhounds.

Personal.

Mr. F. B. Huntington, traveling auditor of the Wisconsin Central line, called at the FOREST AND STREAM office this week Mr. Huntington is an old member of the FOREST AND STREAM family, so old that he is known as Grandpa in canoe meets and other sporting gatherings. Yet he is on the right side of thirty, and a hustler. E. HOUGH.

1266 BOYCE BUILDING, Chicago.

MY FIRST DEER, AND HOW I LOST IT.

If the game laws in this southern part of Florida were as well observed as they are in other States, game of all kinds, from quail to deer, would be much more abundant than it is. However, they are not all killed, as it is the purpose of this article to show. My friend D , like the writer, is very fond of hunting, especially deer and turkey. Nothing pleases him better than to take a day off on Saturdays from cultivating his orange and lemon grove, or vegetable patch, and going after a deer, many a one of which has he brought home. He was homesteading a tract of pine and oak land of 160 acres in a good hunting country, and when I first met him in 1886, was living alone. He being instrumental in finding me a homestead of the same size, and within a mile and a half of his own, it is needless to say with so many sympathies in common, we were often together. D hated cooking and I liked it, so he would get me to cook breakfast, while he tended some choice trees in the grove of ten acres.

When out after game, his favorite method was still-hunting, no dogs by day, nor lanterns by night for him; possessed of wonderful sight, he could spot a deer by the mere quivering of an ear when nothing else was visible in the thick bushes. Many a time has he pointed one out to me when I could distinguish nothing but a clump of palmetto bushes, until there was a perceptible movement.

One evening, soon after our mid-day meal (it was a Saturday for D was too conscientious to leave his work any other day, or to hunt on Sunday), we started out together for a favorite spot, situated between two lakes, with a small stream running between, a fine feeding ground for the game. I took up a stand under a large pine tree and awaited developments. D. decided to go on further to the branch (small stream) to listen for turkey calls. It was nearly sundown, and there is very little twilight in this latitude after the sun has dropped below the trees, for the timber is so thick that it is impossible to see the sun actually set as one sees it over the ocean. Well, it was getting dusk and I was straining my eyes into the gathering gloom to catch a sight of anything moving, when out from a clump of bay bushes bordering the lake on my right and about 200yds. off I saw three deer cautiously feeding and coming toward me. How my heart thumped at the prospect of getting a fair shot. I had a .32 Remington, D.'s favorite piece. In my excitement I took off my large hat, and this attracted their attention, and two of them, both does, bounded off. Not so their escort, the buck. he ran a little way, then turned and faced me sideways; a beautiful shot for steady nerves; but I was rattled, most decidedly rattled, for raising the rifle on my knee while sitting, to the level of my face, and pulling the trigger I was struck all of a heap, as the saying is, at seeing that buck bounding off with his scut high in air as though nothing had happened worth mentioning, and I was left lamenting my hard fate. While engaged in kicking myself (figuratively speaking) D came back, and I had to insist that the rifle was dirty and threw high, etc. So that was how I lost my first deer, but there is a sequel to it, but that is another story, which, with the editor's permission, shall be told in another issue. SQUIRE.

Those Rhode Island Chicken Partridges.

PHILIP S. RANDOLPH of Philadelphia, a summer resident of Narragansett Pier, Rhode Island, who was detected sneaking into the woods after chicken partridges in August, was, on trial, found guilty, and paid fines and costs amounting to $107. The case was managed by the Rhode Island Game Association.

MAINE MOOSE AND HUNTERS.

KINEO, Sept. 15.—It becomes apparent that the bolt among sportsmen accustomed to do their fall hunting in this State, will be heavy, and that before the open season is many days old that scores of Americans, with American guides, will be camping on the trails of New Brunswick moose, which are reported very plenty. And this because sportsmen do not care to hunt on snowshoes or be toted out of the woods on sleds, as one must who would hunt in Maine after Nov. 1. This result of our abbreviated moose season has been feared from the first and worst fears bid fair to be realized. Here at Kineo, not a dozen guides are looking forward to a fall trip in this State, while at this time last year good guides were at a premium.

Among the well known sportsmen who are going across the line for the first time are noted: W. T. Jenkins, Frank Decker, M. L. Pratt, E. C. Grew, of Boston; G. A. Worth, Messers. Minton and Grinnell, New York city; Gustav Heyrs, Brooklyn, N. Y.; John T. Gardner, Brookline, Mass.; F. S. Arnold, Philadelphia; J. B. Brainard, East Orland, Me.; and W. S. Miller, of Bangor. All of these gentlemen have hunted in this State for many years. With one or two exceptions they are going into the Restigouche region and will push up that river as far as the Kedgwick.

Last week in the Dover, Me., Municipal Court were tried four cases of violation of the game laws. G A Worth, of New York city, was found guilty of having venison in his possession during September, 1896, and fined $40 and costs. An appeal was taken to February next He was convicted on the testimoney of a trapper of unsavory reputation, who just previous had been arraigned and pleaded guilty to killing a deer and trapping beaver in violation of the law. H F. Gillette, of Chicago, and Mr. Worth, were tried and acquitted of a charge of killing a deer last week north of Moosehead Lake. The trapper in question, Arthur S. Cross, keeper of Lawlers camps on Allegash Lake, has acquired notoriety as informer on a large number of sportsmen, and many of his charges have proved false. In his cases mittemus was suspended and he was ordered out of the woods.

In the case of the students who are under bonds for killing a cow moose last July at Caucomgomoc Lake, it is announced that Sept. 6, a capias will be issued and an officer sent into the woods to bring them into court. It will be remembered that the boys, Walter G Merritt, of Danbury, Conn., and Stanton W. A Forseman, of Williamsport, Pa., are under $1 000 bonds, and failed to appear in court on August, the date of their adjourned hearing. County Attorney Hayes, of Foxcroft, believing they are about to leave, the State asks for the capias. QUINSIGAMOND.

THE JACKSON'S HOLE ELK.

Editor Forest and Stream:

Please permit me to say a word in behalf of Mr. Joshua Adams, who is keeping a band of elk on his ranch in Jackson's Hole, Wyoming. I know Mr Adams, and can testify that he is a law-abiding citizen. Whatever the right or wrong of this particular case may be, I am confident that his intent in this matter was strictly honest During hard winters in that country, the yearling elks do die in great numbers. During my visit to Jackson's Hole, some years ago, I saw hundreds of skeletons of elk that had died from starvation the winter before. They had come down in great bands, and had tried to raid the hay stacks of the few ranchers then in the Hole; but they were fenced off, because the ranchers needed the hay for cattle.

There was very little hay cut in the Hole in those days, and what was cut was wild. Now, long irrigating ditches have been taken out, and plenty of red-top and timothy are grown. I am confident from what I learned long before any one took any interest in enforcing the game laws in northwestern Wyoming, that for every elk that Mr. Adams retained for his own use he saved a score for the wilds.

I do not mean to excuse anyone for violating the law, but permit me to say that the root of the trapping of the big game, like elk, is found in the East among the most influential of the readers of FOREST AND STREAM—among the owners of big game preserves, who are in haste to accumulate stock. Kill the market for live mammals and none will be trapped. When Mr. Adams says he did not intend to ship these animals, I believe him. He is a straightforward man. But even if he had wished to ship them, the real criminal worthy of denunciation and contempt would have been the consignee.

I have no personal interest in this matter. I have no hope, I am sorry to say, of ever seeing Jackson's Hole again, and Mr. Adams never did me a favor, that I should write this from gratitude. I write it simply to defend a square man, and because I know that the game laws are at worst as well enforced in Jackson's Hole as they are in the Adirondacks. JOHN R. SPEARS.

NEW YORK, Sept. 1.

HUNTING RIFLE CALIBERS.

SAN FRANCISCO, Cal., Aug. 25.—*Editor Forest and Stream:* Some time since, in the columns of FOREST AND STREAM, there was much discussion anent the best rifle for big game. I apprehend this matter will again have to be aired ere long. I have for years stood firmly for my faithful .45-90 for use on all our American large game. My fealty to this arm, however, received a considerable loosening last year upon reading Mr. Chanler's account of the execution of the Mannlicher rifle on the largest African game. Here was a very small bore weapon (.31 cal., I believe), with a light bullet and a decidedly light weight powder charge, smashing and paralyzing the most resistant animals in a manner superior to the big double express cannon, with its 6 to 8 drams of black powder This opened my eyes, and watching the reports written by reliable sportsmen, such as Mr Roosevelt and Mr. Hough in this country, as to the killing power of our .30 cal. smokeless rifles, I am convinced that big bores and heavy charges are doomed.

Sickness in my family has prevented my testing my newly-purchased .30 30 this year on game; but my friend M., a very experienced hunter and expert rifleman, has recently returned from his annual hunt, and is a total convert to the new rifle, which he took along with misgivings as to its stopping power. He, of course, used the soft-nosed bullet, and states that the killing power of this when used on deer far surpassed that of any 90 or 100 grain charge of black powder that he ever used; while for accuracy, flatness of trajectory, freedom from smoke and recoil, lightness of weight, etc., this little weapon is unequaled.

My ideal rifle at present, at least an ideal that can be realized, is the .30-30 Winchester take down with shotgun butt, Lyman bead sight, the ivory bead being much reduced in diameter, and Lyman long sight. Leave the regular rear sight that is furnished with the rifle in its slot, but file away the 200yds. leaf, and turn the 100yds. and the 300yds. leaves down flat on the barrel, to be used for twilight shooting; also file off all sharp angles of this sight, to avoid injury to hand in grasping the rifle.

I consider it a desideratum also to have a compartment in the butt for a jointed rod, for one is very liable to lose or break a detached rod. And right here I wish to emphasize the ever present necessity of a rod for this or any other rifle-shooting smokeless powder. It will not do to put off cleaning until to-morrow if used to-day, otherwise the sportsman will soon have that abomination on his hands—a pitted barrel. Benzine will soften the residue, so that a little effort soon cleans the barrel. A good lubricant is then to be applied. Hitherto I have ridiculed the idea of an "all-around" rifle for game; but with its short range and long range cartridges, this weapon ought to approximate the ideal. I hope we shall soon have unbiased reports on the effects of this little rifle on moose and the larger varieties of bears. I feel sure they will be favorable. ROEEL.

VIRGINIA'S GAME.

Editor Forest and Stream:

A game item or two from "ole Varginny" I thought might not be amiss to your many readers. Strange it is that we have no pheasants to speak of on this side of the Blue Ridge. Further east, in the Flat Woods, there are some few, but not to the extent you find this gamy bird in the Northern States.

Squirrels are always an average crop in this section. The forests are all hard wood; oak, hickory and chestnut predominating.

The partridge is destined to be the coming game bird of Virginia. The Legislature of last year very wisely enacted a law prohibiting the killing of this delicious bird for two years, and consequently they have become quite numerous, and when they come in" next year it will be rare sport indeed to gun for partridges.

Then we have the rabbit, that rare bit upon which our colored citizen delights to feast, and its name is legion. Indeed this is a "crap" that rarely fails. The season is soon upon us, too, during which Br'er Rabbit has "to have legs and use legs" if he wants to escape, even for a short while, the heartless gunner and his rapacious beagle.

Along the foothills of the Blue ridge, in the Ragged Mountains and the Monticello Mountains, we find plenty of wild turkeys, and it takes a more than an ordinary shot to be a successful turkey hunter.

There are a few deer along this side of the Blue Ridge, but they don't take kindly to a civilization that brings with it Winchester repeating rifles and long-winded hounds. South of the James River, in Buckingham county particularly, where there are wide stretches of timber lands, there is said to be a good many, as also farther east, toward Tidewater, Va., they are said to be plentiful.

The game laws are not very strictly observed in this State, more's the pity. The laws are not as strict as they should be, and need revising and made more general.

Pennsylvania's Legislature, at their session this year, passed a model game law, and one which other States might copy with credit to themselves, and make every true sportsman proud that he had laws for the protection of game that could be enforced and that meant just what they said.

JAMES H. FERGUSON.

CHARLOTTESVILLE, Va., Aug. 30.

The Prairie Chickens.

SHELDON, Ia., Sept. 1.—The hunting season has fairly opened, and it looks like old times to see the trains loaded with sportsmen bound for various points in Minnesota, Iowa, Nebraska and South Dakota.

Coming up from Omaha on the train to day I counted seventeen sportsmen, and judging by the sounds emanating from the baggage car, they were well provided with dogs. Chickens are unusually plentiful in all four States, though as the season opened in South Dakota on Aug. 15, that State must be pretty well shot over by this time. I learned of several good bags being shot in the vicinity of Armour and Plankington, a section in which I had a very satisfactory hunt last year, and in the neighborhood of Redfield and Frankford birds are reported as being in great number, all along the line as far as Gettysburg.

Nebraska has (or had) plenty of chickens along the line of the F. E. & M. V. R. R., from Neligh as far west as Gordon. Some illegal shooting was done in this section, but a few timely arrests seem to have put a stop to it. On the Hartington, Bloomfield and Creighton branches of the same road (northeast Nebraska) chickens are very plentiful; southwestern Nebraska also reports plenty of birds along the "High line," west of Holdrege, and also along the Union Pacific from Kearney to North Platte

The northwestern part of Iowa, and southwestern portion of Minnesota, also has a good many coveys in spots; though considerable illegal shooting is reported from the vicinity of Worthington and Heron Lake birds are still plentiful there.

My own chicken shooting will be confined to two or three days this season, and I shall then go with my wife to Kabekona Camp, Cass county, Minn., where we expect to put in a few weeks shooting ruffed grouse and ducks, and also to have a try at the new muskalunge and bass waters. I will let you know the results of the trip later on, and also send you some pictures if the camera works. W. R. HALL.

A Tennessee Preserve Opportunity.

GRAND VIEW, Tenn.—In looking over a recent issue of FOREST AND STREAM I was very much interested in the accounts of game preserves. Not many years ago the deer and turkey were found here in large numbers. Where are they to day? gone, never to return. Now this locality would be an ideal spot for a game preserve. There are hundreds of acres of land here on the plateau that are fit for nothing else, and which could be purchased for a reasonable figure. There is scarcely any winter here, and this would be another advantage. Our climate and water are excellent, and no better place for invalids could be found. Our scenery is magnificent. All in all this could be made one of the best shooting parks in the country. L. M. STARRING.

When the Leaves Fall.

YOU ask about my outing. No, I do not go in summer Summer camping in the Ozarks is not sport, but martyrdom Mosquitoes are bad, ticks worse, and jiggers jiggers are unspeakable. Summer is good enough for the fishermen, poo

souls, but I can't potter around the same stream day after day with a fishpole.

When the leaves fall, I break loose. A frosty morning, a good pair of moccasins, a heavy, small-bore rifle, ten cartridges and a ration in the wallet; a long day of silent, easy stalking through strange forest, one or two fair shots, some uncertainty as to the whereabouts of camp at twilight; roaring backlogs before the lean-to at night. *Voilà! C'est moi!*

H. K.

Connecticut Game.

HADDAM, Conn., Sept. 1.—From observation and reports, quail and partridge are going to be quite plenty in this section the coming open season, which begins Oct 15 instead of the 1st, as formerly, and closes Dec. 15 instead of Jan. 1, as heretofore; for which I am heartily glad, and hope the law will be strictly observed.

As for rail, I don't see how there can be many, for if they come to their usual haunts along the river they will find no wild oats, their usual feeding grounds having been three times swept clean by rushing freshets during the summer.

A.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it.

THE OLD COLONY CLUB.

Editor Forest and Stream:

The sixth annual dinner and meeting of the Old Colony Club at the Vineyard Sound House, Falmouth Heights, on Saturday, Aug. 20, was an interesting occasion.

In the business meeting preceding the dinner, about one hundred members participated, Mr. Joseph Jefferson presiding. The old officers were re-elected: Joseph Jefferson, President: Gerard C Tobey, Charles P. Horton and John S. Bleakie, Vice-Presidents; Charles F. Chamberlayne, Secretary, and Geo W. Jones, Treasurer. The executive committee was unanimously re-elected, with the substitution of Charles H Jones, of Falmouth, and Henry C Thacher, of Yarmouth, for Herbert S. Carruth and Major S B Phinney, resigned An address to the Selectmen of the Buzzard's Bay town recommending to their consideration Chapter 254 of the acts of 1897 relating to the prevention of forest fires, largely procured by the efforts of the club, was adopted.

The guest of honor at the dinner, a regulation Rhode Island clambake, was Capt. Edward R. Ashley, Esq, of Acushnot, who, as one of the committee on Inland Fisheries and Game of the Legislature of 1897, rendered great service to the fisheries of Buzzard's Bay.

In introducing him, President Jefferson, who presided in his usual sparkling manner, after thanking him for his services to the cause, proceeded to say: "The worthy captain has just told me that it is useless to expect of him a speech, but that if he were walking the quarter deck of a ship he would know where he was. Now, that is where he greatly differs from myself. When I am walking the quarter deck of a ship I do not in the least know where I am. I am reminded of what once occurred to me. I was crossing the Atlantic. The weather was dreadful. Capt. Ashley knows what that means. I was trying to guide myself along the deck and incidentally to aid others In this mission I ran across a lady lying prostrated on the deck, evidently sorely troubled with that dreadful disease, seasickness. I said to her: 'Madam, may I bring you anything to relieve you?'

"She looked at me and feebly said: 'I beg you will not mention it. Will you also kindly excuse me, sir?'

"I then said to her: 'But is there nothing I can do for you?'

"'No, sir,' said she, in the same tone; 'please go away.'

"'But, madam,' I said, 'you are evidently suffering. Can I do nothing to help you?'

"'I wish,' said she, 'that you would go away. I am not fit to see any one. I am not fit to speak to any one.'

"'I am sorry, madam,' I persisted, 'that I can be of so little service. Can I do nothing for your poor husband, the gentleman whose head I see in your lap?'

"'Oh!' said she, 'that is not my husband. I do not in the least know who he is.'

"Capt. Ashley, whom we all delight to honor for his valiant work in the Legislature," continued Mr. Jefferson, "tells me that when he started in life he had but a single suit of clothes to his name. Lucky man! I think I may safely say that I myself started in life with considerably less."

Capt. Ashley, on arising to respond to the many pleasant things said of him, was greeted with three enthusiastic cheers. He was not, he said, prepared to make a speech. He was not rigged for it. When he had gone to the Legislature last winter he had done what he did not for the benefit of any club, or for the good of any set of men whatever, but because he felt it his duty to his constituents and to the Commonwealth to do so. Under the same circumstances he would do the same thing again.

Hon. District Attorney Robert O. Harris, the next speaker, after applauding the valuable work of the club, of which he was a member, took occasion to say that, as a result of their efforts, the fishing in Buzzard's Bay had vastly improved; of which fact he gave several personal experiences of excellent fishing he had had for bluefish near his own house at North Falmouth.

Gerald C. Tobey, Esq., and John S. Bleakie, vice presidents, spoke briefly of the actual work of the club during the last year in antagonizing and defeating a bill licensing porgy steamers; a bill permitting Gosnold citizens to set pounds; the bill to permit free scallop catching in Buzzard's Bay.

The next speaker, Charles F. Chamberlayne, Esq, the reëlected secretary of the club, was cordially received. At the conclusion of his remarks the club rose and cheered the secretary, and voted that the thanks of the club be extended the address and that he be requested to transmit the same to the press of Boston, Brockton and Cape Cod, as a correct expression of the sentiments and objects of the club. Mr. Chamberlayne spoke substantially as follows:

"Your secretary is accorded so many other opportunities of addressing the club as make it hardly fitting for me to address you, were it not possible that a word as to the mission of the club might be of interest to the many new members who have lately joined our ranks.

"Allow me first to thank you for reëlecting me your secretary. It is an honor which I esteem, and one which brings with it duties which have never proved to me other than a pleasure. I fancy this feeling is due to the fact that the work of the club means something; that it is an organization with an object. As we meet year by year at these annual gatherings, in ever-increasing numbers and enthusiasm, the peculiar value of the occasion to us is not that we may again greet our distinguished president, or meet each other; or eat an excellent dinner, or admire Mr. Lawrence's tasteful decorations, pleasant as all these things are. We recognize as the essential significance of our meeting, that it emphasizes, so far as our influence extends, to our Buzzard's Bay communities, our renewed devotion to certain principles of conduct which we regard and therefore commend to them as most essential to their legitimate growth and development. We insist, and to-day renew our allegiance to the proposition that these Buzzard's Bay communities present immense, almost unlimited, capabilities for legitimate development not only along the lines of material prosperity, but as to those more subtle and intangible elements of our life which delight the eye and feed the soul. In this spirit we seek suitably to mark and preserve the historical local landmarks of our ancient history, and have been instrumental in the creation of the 'Old Colony Commission' created for that purpose. We endeavor to secure, so far as possible, the preservation of our magnificent forest stretches, to the increased beauty of our highways, the improvement of our climate, and the chance to delve into the shady recesses where nature still reserves her choicest charms for those who seek her wisely. To this end we have this year, with the especial assistance of our vice-president, Col Charles P. Horton, been of use in securing the best statute for the prevention of forest fires ever placed upon the statute books of Massachusetts.

"It is strictly in accordance with these ideas of the public interest that we should insist, as we most emphatically do, that certain of the other bounties of nature are property in the preservation of which the entire community is interested and should protect and preserve for the present and future benefit of all its people. This club is necessarily an organized protest against a wanton, short sighted destruction, for the benefit of a few of natural advantages which, properly husbanded, might enrich the lives of the entire community. We demand that the great natural spawning ground of Buzzard's Bay should be preserved alike from the local pound owner or the porgy pirates of Tiverton, Rhode Island, as each seeks, though in somewhat different ways, to monopolize for his personal benefit what the Almighty apparently designed for mankind Our success in this connection is written down plainly in the fact that Buzzard's Bay at this moment, alone of all the beautiful inlets of the Atlantic coast, is absolutely protected, in perfect equality to every one, and with special privileges to none, for such a common use by the general public as insures the greatest possible usefulness consistent with maintaining the supply.

"Objects such as those do not easily admit of misrepresentation. As an organization, so far as known to me, we have no friends but the friends of our cause; we have no enemies but the enemies of our cause, We advance no one's political aspirations. We honor no man except as we esteem his work in those directions, and we welcome every man to our membership who will aid our objects, whatever his color, religion, wealth or views on silver or the tariff.

"Upon this statement of faith and exhibition of works, we earnestly solicit the continued and increased coöperation of all persons, whether permanent or temporarily resident, in these communities. We are entitled to the support of all who believe as we do. The adequate realization of our objects would mean not only an increase of value to every acre of ground and an increased enjoyment for every life on these shores, but would assist to make this section of the State the ideal place of residence which it is capable of being made. It would even go further. Such a result would assist, in no small measure by the exhibition of its demonstrated benefit to emphasize (as already is being done as to our fisheries) the fact that a wise preservation of the bounties of nature is as invariably beneficial as the opposite policy overreaches and defeats itself. Such an end would be no insignificant contribution to the general good, and the opportunity of cooperating in attaining it is a privilege.

"The practical thing to do at present is to increase our membership. The more rapidly this is done, the greater the progress which can be made Every new member means a broadening of the influence which is needed for the work; and, while the club's finances seem in excellent condition, such an increased membership would result in more equitable distribution of the financial burden to the relief of the undue proportion which certain of our members are at present carrying. The process is very simple Send to or see an officer member of the club and send the names to the secretary. If any choice is to be had where all are welcome, I imagine that a public-spirited townsman who does not go fishing much is the ideal member.

"It is too early to relax our vigilance regarding Buzzard's Bay. So long as the profits of catching other people's fish continue so great, we must be prepared to defend these waters. But the club looks forward with impatience to being permitted to use more of its money and thought in the attainment of its other objects, and with confidence that each of our members and the club as a whole do its full share, while the responsibility is with us, toward the best development and enrichment of this section of the commonwealth."

Among the guests invited by the club were most of the selectmen of the Buzzard's Bay towns. The first speakers, on the relation of the towns to the Buzzard's Bay fisheries, was the stanch friend of the fisheries, Hon. George I. Briggs, chairman of the Selectmen of Bourne.

Mr. Briggs expressed the opinion that the prosperity of the Buzzard's Bay towns was inseparably connected with the preservation of the fisheries, and therefore, it was, in his judgment, not only justifiable, but necessary that the towns in their corporate capacity should raise and appropriate money for the defense of these fisheries. He therefore respectfully suggested that the Old Colony Club consider the propriety of securing such legislation, as might enable towns legally to appropriate money for that purpose. As for Bourne, it unanimously had this year placed $500 from the proceeds of its herring fishery at the disposal of the selectmen for defense of its fishery rights, and it was prepared to do the same thing in future. He strongly urged a similar course upon the attention of the other towns. John H. Howland, chairman of Selectmen of Fairhaven, and George H Palmer, of New Bedford; James L Col., chairman of Selectmen of Mattapoisett; Benj F Gibbs, chairman of Selectmen of Wareham, and Joshua C Robinson, of Falmouth, spoke of the interest of their respective towns in the preservation of the fisheries.

Among the other speakers were Rev. N H Chamberlain, upon the preservation of historical spots; Col. A M. Ferris, of Newton; Edward H Burgess, of the Boatmen's Association; Walter Rapp, of Brockton, and Horace S. Crowell, of Boston.

CHAS. F. CHAMBERLAYNE, Sec'y.

SUMMER TARPON FISHING

Two Days with the Tarpon at Aransas Pass, Tex.

HAVING for years had a desire to try my hand on the tarpon or "silver king," I concluded on Aug 9 that I would make the effort.

Leaving Little Rock on Monday afternoon, the 9th ult., over the Iron Mountain Railroad to Texarkana, I caught the Cotton Belt train to Waco, where a night's rest is given, and the Aransas Pass Railroad early the next morning starts for Rockport, Tex., where you arrive in time for late supper. The following morning our party, which had now grown quite large, left Rockport on the mail boat, in command of Capt. Sam Grey, for Tarpon City, at the head of Mustang Island, where we were welcomed by the landlord of the Ingleside Hotel, Capt. Hatfield, and just in time for dinner after a beautiful sail of about fifteen miles.

Here we found quite a number of sportsmen lying around enjoying the cool breezes off the Gulf of Mexico Among them were J. S. Ingram, of Pine Bluff, the champion tarpon fisherman of the season, having seventy-six tarpon to his credit already this season (and, by the way, he expects to make it an even 100 and then quit); Byron Houston and Mr. Maverick, of San Antonio; J. A. Edison, of Tyler, Tex., and W. C. Conner, ex-Mayor of Dallas, Tex, and a number of others made up as jolly a lot of fishermen as one would care to meet.

Having been provided with a tarpon reel and some hooks, I selected a bamboo cane rod that had been cut down to about 8ft. and mounted with guides and a good tip. I had my reel lashed to it, and after attaching my hook I was ready for the fray, not, however, without some misgivings as to the strength of my line, but had been used. Mr. Ingram suggested that I could buy at the little store for 15 cents a cotton line that would fill the bill, so I at once availed myself of such an investment; and it was a good thing I did, as my experience will show. Going to the wharf, I hired a boatman for $2 per day and bait. All being ready, I took my seat in a comfortable chair in the rear of the boat, facing the stern, and my boatman put on a live mullet and we were off for the pass, some 150yds. distant. Paying out some 100ft of line from the rear of the boat we slowly pulled out in the pass. It was but a short time until the pass was filled with tarpon fishermen, and steadily they rowed up and down and across the channel The tide going out made a good current. In a few moments Mr. Conner, of Dallas, Tex, had a strike and a great fish, like a flash of lightning, cleared the water with the big hook fast in his gills, and then again and again he showed his beautiful shape clear of the water, and a loud cheer went up for the lucky fisherman, who after about an hour's hard work landed him safely on the beach, and the first tarpon for the afternoon was killed. Next a Mr. Sarazen, of Sherman, Tex., took a beauty and landed it in fine shape. All this time I had been an admiring spectator and wishing for my time to come, when I felt a tug at my line and I instantly gave a vigorous strike, and out came another tarpon, clearing the water fully 6ft., shaking his head to dislodge the hook from his jaws, and down only a moment until he was out again, and when he struck the water again he made a bee line for the Gulf of Mexico. I put on my brake, and that through my inexperience was too much for my line, and to my disgust it parted, and away went my first tarpon, leaving me feeling very cheap; but nothing was left but to try again. So putting on my 15 cent cotton line I was soon ready, but save a strike or two I failed to hook another and went back to the hotel feeling sore at having had my chance and lost it. I was restless and nervous and wanted to go out by moonlight and try to catch another, but the more experienced fishermen assured me that I would get a chance on the morrow. I had only arranged to spend a couple of days and one had gone, and I feared the mail boat would go back to Rockport the next day before I could land my tarpon. However, the next morning I was up bright and early, all anxious for another strike, having seen those big silver beauties in their wild leaps in the air all night in my sleep.

Starting out next day with a strong determination to land a tarpon, I was soon out in the pass. In a short time I had a strike and hooked a fish, but it did not come out of the water, and we knew almost positively that it was not a tarpon because it did not show itself, and yet it fought like a tiger; what could it be—stingaree, jewfish or what? After working with him for thirty minutes I told my boatman to pull for the beach, and under a tight strain we led him toward the shore. Before arriving there I was surprised and disgusted too to find that I had a shark hard and fast. I wished I did not have him, but there was only one way to get rid of him, and that was to land the ugly thing, which I did, and was glad to get him off. We went right back into the channel and I soon had a strike right, and instantly a royal fish jumped high out of the water, and again and again did he jump to rid himself of the steel. I had him pretty subdued to all intent, and after the third jump he started for the Gulf; but by this time I had gained some pointers on the handling of this great fish, and when he made his grand rush I put on the brake and had the boatman row up on him, gathering in the line, inch by inch, and after a constant fight of one and one half hours we reached the shore with the boat, and I jumped out on the beach, hauling the beautiful fish up to within reach of the boatman with his gaff, but the fish turned and he missed his chance, and as he wallowed and fought in the surf, the hook lost its hold, and my second tarpon swam away. My friend Edson had just landed one at the same place, and he can tell you how badly I felt. I felt that now I surely would have to go back without my tarpon, but after a little encouragement from Edson I took to the boat again, and another shark was the result. Two sharks taken in one forenoon. I went in to dinner with a heavy heart and found much sympathy, as everybody wanted to see me get one tarpon out on the land.

Although the boat had not arrived, I had made up my mind to wait for the boat the next day, as a tarpon I must have. Swallowing my dinner and getting a new boatman (having worn out my boy of the morning), I started again

for the pass, and after passing the point about 150yds. I ran into a school of tarpon and I didn't do a thing to one of them but put him out on the sand in less than an hour; he measured 4ft. 6in., and I landed him where everyone could see the fight and my first victory over the tarpon. Meanwhile the mail boat sped on its way back to Rockport and off I went for another; after a pull of a mile I hooked another tarpon, and after a beautiful fight he too was landed high and dry on the sands. Two in one afternoon was almost too good, but there they were, the last 5ft. 8in. in length. Now I was happy indeed, and I pulled off to the pass, where the other members of my party were cruising around. First one and then another would get a strike and a fight and off they would go to land their fish on the beach. Everyone congratulated me and many said: "Are you not glad you remained?" I was very much pleased and elated, but quietly going home that evening I passed over the favorite ground of Champion Ingram, as the boatman told me, when I struck and hooked the fourth tarpon that day. I played him as carefully as I knew how, as he was a large one, and at last I got him to the beach. I jumped from the boat, still holding him tight for the boatman to gaff him, but he made a strike, and missing, struck him again, breaking my line in two places, thus liberating the fish, making the second one for the day lost after getting them almost on dry sand. I found I had done a good, hard day's work that day, however, and was more contented and satisfied with myself, and rested well that night, except that the vision of leaping tarpon remained with me all night.

I had lots of company, too, that day, for several of the party had each landed their fish, and we had a very happy party that evening, talking over the events of the day. Next day a number like myself were to leave for home, and Capt. Grey agreed to take us to Rockport by moonlight; so we put in the day at the same place, and some half-dozen fine fish were taken in the afternoon, the wind being unfavorable in the forenoon until the tide began to run out. I saw no less than four boats going ashore at one time that afternoon with a fish in tow. I had my luck the day before, I suppose, for, although I had two good strikes, I failed to hook; but late that evening I struck a very heavy fish, which, like the first one I hooked, took 150ft. of line and my hook to the Gulf with him, although after breaking loose he jumped out and said "Good-by" with the hook and line hanging to him. I said "Good-by, old boy; I've had a good time, anyway."

The season for tarpon fishing ends Dec. 1. During the present season, up and including Aug. 14, 290 tarpon have been taken with rod and reel. The best months for tarpon fishing are June, September and October. Last season's catch was 400, landed only with rod and reel; tarpon landed with hand lines not included in this record. J. S. Ingram, of Pine Bluff, Ark., holds the championship, having seventy-six to his credit in fifty days. Last season he landed fifty-five tarpon in thirty days' fishing. The largest fish so far caught is 6ft. 11in.; the second 6ft. 10in.

The largest catch in a single day was fifteen tarpon, on May 31, by seven anglers, and June 12 five anglers also caught fifteen. The largest catch by any one angler in one day waa six. This record, without fear of contradiction, pronounces Aransas Pass the greatest tarpon ground now known.

The cool breezes of the Gulf add much to the comfort of the angler who sleeps under cover at night. If you have never tried tarpon fishing, take a few days off and go to the head of Mustang Island and try it. JOS. IRWIN.

CHICAGO AND THE WEST.

Camp Forest and Stream Eighth Annual.

CAMP FOREST AND STREAM, Walworth county, Wis., July 21.—This year, J. B. H. and I went to Mukwonago again. It is true, we have to ride some six miles further by going to Mukwonago than we would if we went to Troy Center; but we have always been going to Mukwonago, and so we probably always shall. I think if J. B. H. and I were starting for South Africa we would go by way of Mukwonago, such is the force of conservatism, at least with J. B. H. At any rate, we had our usual hurry to get into camp before dark, which is one of the pleasantest features of our yearly trip. Should we go in to Lulu Lake, on Mr. J. A. Schwartz's farm, by way of Troy Center, we would arrive there at so unseemly and early an hour in the afternoon, that pitching camp and getting supper would be a most easy, orderly and prosaic affair.

This time our start from Chicago was made during the hot week of 1897, and on Saturday at that, when suffering humanity was hurrying out of town in droves. Everybody was hot and hurried and anxious except J. B. H. and myself. We knew just where we were going, and what we were going to do, so we had no cause to worry. We watched the surging crowds back of the train gates at the Wisconsin Central depot with more of pity than anything else, they seemed so hurried and troubled, as city people always are. J. B. H. has no hurry nor trouble in his makeup, so he was placid, and pitied the crowd.

The wave of the summer exodus spent itself gradually against Gray's Lake, Rockefeller, Lake Villa, Antioch, Silver Lake, Burlington, Beulah, so that after a time our train became less inhabited and more habitable. And lo! to make all things pleasant for the Forest and Stream eighth annual camp, the sky lost its brazen heat and became overcast with clouds before Antioch was passed. A big sigh of relief went up from the crowd as the blessed rain came down, and as it became evident that the hot season was broken. "Let it rain," said J. B. H., "even if we have to go into camp wet to-night."

And we nearly did have a wet camp. At Mukwonago the rain had ceased, but the clouds were ominous. We hurried neighbor Dillenbeck along with our light wagon, and soon were rolling over the gravel roads of this pleasant country on our way to our old camping ground. "If the FOREST AND STREAM luck holds," said J. B. H., "we'll get our tent up before it rains." And the luck held, although the delayed arrival of our train—due to the rush of summer traffic—made us dangerously late that evening. It was sundown when we drove into Mr. Schwartz's yard and made our annual salutation, and the woods were dark and dripping when we made our way back through the country to the little lake which we call our own. Here we hurriedly piled our camp luggage and said good-bye to our driver, who left us to what seemed a cheerless evening.

But not cheerless under any circumstances could be this first evening in our camp. We made merry of the rain. We spread down the hay for our bed and got the tent over it swiftly, and after that all was well. The tent pins went down in the dark, almost in the very holes they made last year. The blankets came out in order, the grocery box divulged store of good things, and knowing by long routine what each was expected to do, we rapidly got things into their regular and pre-ordained condition. While I finished the storing of the outfit under cover, J. B. H. got a little blaze started around the upright of our little gun barrel stove, and betimes I heard a sizzling other than that of rain in a hot frying pan. When we stopped at Mr. Schwartz's barn for our hay there was a fat young pigeon on a beam in the mow, and Mr. Schwartz tossed it down to us, saying he wished we would clean out all the pigeons, as he did not want them. It was this squab that was making the sizzling I heard. For though J. B. H. is seventy-five years of age and deliberate in some things, he is passing swift at dressing and cooking a bird, a squirrel or a fish. Soon, on top of a box, in the half light of the fire and our torch light, we were eating our first supper in camp, in the rain it is true, but none the less in the sunshine of content. Back of us rose the white front of our tent, which is too little for a dining hall. We were assured of shelter and the coffee was very good. As to the squab, I should say its sizzling arose not from the frying-pan, but the little gridiron, which is a big portion of our cooking concern. Never was any squab better. And never was any night better than that, under the patter of the rain, away from the heat of the city, to the quiet and the cool and the calm of Camp Forest and Stream, in which all things make to peace and comfort. Some few camp fires I have seen, in different corners of the land, but there is no camp for J. B. H. or me just like this one we have made together yearly now for nearly a decade.

The next morning was Sunday, and we do not fish on Sunday; so we had a long, quiet day to spend, a day both bright and cool, for the weather had for our pleasure now mended until we could ask no more. We put up our other little tent and equipped it as our storehouse, and thus gradually completed our housekeeping arrangements. J. B. H. found his spring as cold as ever, and duly set in upon his annual task of cleaning it out and walling it up with clean white stones. Our table we set up again under our old oak tree, and into the nail holes of last year (for when we go away we burn up all rubbish and pull out all nails) I drove the nails which during the tenure of the eighth annual are to hold respectively and in the order named from left to right, and at the height of a man's easy reach, the strip of bacon, the dish towel, the hand towel, the soap, the comb, the torch. The two little axes go into the tree trunk just northeast of the bacon, for here is where we first struck them in when we discovered this land. In Camp Forest and Stream things go not at sixes and sevens. No axe is left lying around, no dishrag is ever misplaced. Decently and in order, and with prompt deliberation, so moveth the world here. No new notches, no new nail holes, are to be tolerated. And when J. B. H. found that his fireplace had since his last departure been desecrated by some wandering camper, who had passed a time upon the spot which was ours by all the rights of conquest, it was pleasing to see the vast contempt with which he threw down the hill the bricks with which the ignorant camper had sought to construct a fireplace. Two rows of stones, well set, inside of these two side logs of 3in. diameter each, the tiny gun-barrel stove with its all-convenient rings; such is the fireplace established by J. B. H. A hat full of hickory bark and solid dry wood broken from a standing tree suffices him for a full meal of elaborate cookery. The ashes you could carry in your hand. This I know, for when I sought for ashes in which to bake a fish, after we had been three days in camp, J. B. H. had no ashes to offer at his fireplace. (So we used sand, and the fish was good.)

I have spoken of the suspicion with which J. B. H. regarded our aluminum frying-pans and our device of the gun barrel stove, both of which are accepted by him as indispensable parts of our equipment. This year I had two new things for the outfit, a refrigerator basket and a Colclesser tomahawk, the former made by a Baltimore firm and the latter by the men who made Nessmuk's hatchets. The basket is a success, being made of tin covered with felt, the whole again covered with wood fibre. There is an air space in the lid, and the latter is hinged in the middle and detachable. Inside the basket is a watertight compartment for ice. Thus one can have an ice box in camp at will, and can use it for a lunch basket or an express package at will, provided that, in the latter capacity, he wishes to send some fish to friends. This basket, which I advanced proudly and with confidence, J. B. H. viewed very coldly, remarking that it cast discredit upon our spring, which heretofore had been found adequate to all demands of cold storage. The little hatchet (it weighs just 16oz.) he examined with more interest, and tried it on a hard snag with credit. Sometimes I find him using it furtively, which I consider a great compliment. But, for my own part, I think a 16oz. axe too light for anything but light summer camping, such as ours. I think 2lbs. quite light enough for a real camp axe.

J. B. H. is an old-time squirrel hunter, raised back in Ole Virginny, and in his day was, I think, the best rifle shot I ever saw. Nowadays he reverts, and I often see him out hunting squirrel nests. If there be a squirrel in an entire wood, he is sure to find out his whereabouts, and this amusement seems to please as much as anything. We used to go fishing for bass, bait casting, and made a great many very heavy catches in these waters, but this sport, with its constant work at the reel, no longer seems to suit him, so we have lost interest in it for the time.

One day we paddled about a certain cove we know, and casting frog, I got three strikes, but the weedless hook proved also fishless, much to our disgust, so we quit and came away. On two different evenings we found the fly-rod a good accessory, and using coachman and gray drake flies we got each time eight fish, rock bass, strawberry bass, to say nothing of three black bass, which we thought tasted much better than if they had been caught on frog. Twice we have taken the little .22 rifle and killed a mess of Mr. Schwartz's troublesome pigeons, picking them out quietly from under the eaves of the barn. Once we went five miles overland on a grand *chasse au* frog to a certain prolific pond we wot of, and here we killed with the rifle above three dozen vast bull-frogs, whose athletic hindlegs overstocked us so much that we had to give away part of them to friends who are cottaging not far away. Another day we hunted up our croppy bar, out in the middle of the lake, a secret known of but Billy Tuohy and ourselves, and though we do not find the fishing here so good as usual, owing to the lateness in the season, we caught one day fourteen, another day nine, another three, and again twenty-six, out of which latter great draft we apportioned baskets of fishes for friends. These croppies are so big and fat that we patronize them now to the exclusion of the black bass, which are not nearly so good to eat. For brook trout we have thus far made no quest, though we know where we can get a few. We know where we can go and get some big bass, too, but we are not sure that we want them. J. B. H. says he has caught his share of big bass, but doesn't quite think he has had quite his *pro rata* of fat croppies. We get up at about 6 or 7 o'clock each morning, and work hard all day, going to bed at 10 or 11 at night. We have to work to make a living here, for the game and fish do not grow on trees, but we always manage to get all we want when we want it. I tell J. B. H. I can take him a little further north up the railroad, where we can catch a lot of muscallonge and wall-eyes every day, but to this he will not hear, for he says we could not use the fish if we caught them. There has never been an ounce of meat wasted in Camp Forest and Stream. Yet out of all the countries I have seen, I really do not know of a pleasanter one than this hardwood lake country of lower Wisconsin for a quiet, restful camping out trip. If I did find a better country, I would still have the task of convincing J. B. H. that it was better, and that I fear would be quite hopeless. Here we have set our house, nor is it likely that any mansions of this earth will tempt us further. Our little lake is very quiet. There are no voices of persons in our woods. Our spring is cool and clean. This is the sweet place in the year. We wish as much might happen for each and everyone.

J. B. H. and I do not favor frills. Our outfit is not large nor elaborate, though we are ready to investigate any new thing purporting to be good. We believe in aluminum frying pans, in wire broilers, in the gun-barrel stove, in the toothed-ring fish scaler, in the canvas water pail, perhaps also in the little axe and the tin-lined basket. As yet we have found no camp lantern in which we can believe better than our 5-cent tin torch with the big round wick. This light has thus far never failed us. It does not blow out, it makes a good circle of illumination, and it casts no shadows of tubes and wires and handles. Moreover, when we are done with it, we can pour the oil out of it, wipe it dry and throw it into the pack bag, where it neither breaks nor takes up much room. If any man knows of a better camp light, J. B. H. will look into it, but I doubt if he will approve. For my part, while I admit the torch will do to light up the camp while we are cooking supper after a long and late trip somewhere, I cannot approve of it as a lamp for writing purposes, inside a tent or out. This, however, is irrelevant, for in camp no man ought to write. He should sit on the log and look in the fire and listen to the screech owl. We have a most excellent little screech owl, who lives in a hollow oak about 50ft. from our fireplace. Each night about 10 o'clock he comes out and complains about our disturbing him.

This afternoon J. B. H. and a young lady boarder who lives at Mr. Schwartz's went out hunting together, leaving me to keep camp. They have just come in, bringing with them a young blue heron (the lesser bittern). J. B. H. says he is going to cook it for supper. Then we can tell whether or not it is good to eat.* E. HOUGH.

* P. S.—It was.

CANADIAN ANGLING NOTES.

Editor Forest and Stream:

THE fall rush of American anglers to Canada is just now in full swing, and the water in most of our trout lakes and streams is almost all that can be desired, being cold for the season at the surface, and only moderately high.

Mr. Eugene McCarthy has gone to the Metabetchouan for ouananiche, and to the Belle Riviere for trout. Messrs. R. R. McCormick and W. J. F. McCormick, of Florida, are camped at Lac à Moise on the Triton Tract, and will remain thereabouts to the end of the month. Mr. H. E. Wanamaker, of Syracuse, is bound for the same lake. Mr. A. N. Cheney and Mr. W. F. Rathbone are dividing their time between Lac des Passes, Lake Moise and Lake Batiscan. The latest information from the party reports the killing of a 4½lb. trout in Lac des Passes by Mr. Cheney. Mr. G. H. Squires, of New York, has just got back to the club house at Triton from a visit to Lake des Passes and Lake Batiscan, where he got fish of over 6lbs. in weight. Mr. and Mrs. W. S. Andrews, of Syracuse, are in their own camp on Lake Batiscan, the headwaters of the river of that name, and one of the prettiest lakes that it is possible to imagine, being nine miles long, oval in shape, and completely hemmed in by lofty mountains. During a recent visit to the Triton Tract, I saw a number of caribou both on Lake Batiscan and Lac des Passes. Mrs. Andrews was the fortunate killer of two caribou on Lake Batiscan last year, and brought her rifle again with her into camp. Among others who have passed through here this week on their way to Lake Batiscan are Messrs. Eugene Petit, Douglas E. Petit, William Nottingham and George A. Roff, all of Syracuse. They are to be followed in a day or two by Mr. George E. Hart, superintendent of the Waterbury Watch Company, and by Col. Charles E. Turner, formerly of Waterbury and now Consul-General for the United States at Ottawa, who has lately enjoyed magnificent bass fishing in Thirty-one Mile Lake, in the Gatineau district.

Mr. Brewer, of Springfield, president of the Amabalish Fish and Game Club, whose club house is on the Metabetchouan River, passed through here the other day on his way to his fishing preserve. He is accompanied by Mrs. Brewer, and reports that, in addition to the gentlemen anglers now on the club limits, there are no less than eleven ladies at the club house.

The river Jeannotte, the discharge of Lake Edward, is again the center of attraction to numbers of enthusiastic anglers who enjoy fighting there the large red-bellied fish of the latter end of the season. From the Jacques Cartier, the Moise and the Montmorenci rivers come splendid reports of large fish in reasonable quantities.

Ouananiche fishing is particularly good just now, especially in the lower parts of the Metabetchouan River. Anglers have not much time, however, in which to wage a campaign against the fresh-water salmon of Lake St. John, as the close season for the fish commences on Sept. 15.

E. T. D. CHAMBERS.

QUEBEC, Aug. 31.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

MEN I HAVE FISHED WITH.

LIV.—E. R. Wilbur.

THE last part of the summer of 1880 found me gathering fishing statistics under direction of the United States Fish Commission for the census of that year; my assignment being from the mouth of the Connecticut River to Sandy Hook, and including Long Island. While stopping at Sayville I called on Mr. Wilbur, whom I had long known, and it was arranged that we should chum for bluefish the next day. Mrs. Mather was with me and was delighted at the prospect, because she had taken many bluefish while trolling from a sailboat, and she listened to my glowing account of chumming and of how superior it was to trolling, with great interest, but before the day was over she differed with me and declared in favor of sailing.

Sayville is on the Great South Bay, which is about fifty miles long and some five miles across at its greatest width. It is a shallow bay, but famous for its fishing, fowling, oysters and crabs. The fish are weakfish, bluefish, kingfish, porgies, flounders, sheepshead, sea bass, and, occasionally, a few Spanish mackerel are taken, while Sayville, which is near the eastern end of the bay, is only a mile or two from the famous oyster beds of Blue Point, and sends thousands of bushels to market which become "blue points" when they reach the great city. It is an ideal place in which to live.

We had clams and other bait for bottom fish if the bluefish were not running our way, but we lacked that essential of the chummer—a lot of menhaden, or mossbunkers, as they are sometimes called. In the party were two of Mr. Wilbur's nephews—sharp-eyed boys of fourteen to sixteen—and they kept a sharp lookout ahead as we cruised about, looking for bait. Soon one called: "There's a basket at the masthead," and we were brought up alongside the boat and laid in a supply of the needful fish. In Great South Bay a bushel basket at the masthead means bait to sell, and saves both time and trouble.

In order to give anglers who live far from the sea coast a clear idea of bluefishing, let me say: The bluefish is related to the mackerel tribe, grows to a weight of 18lbs., is swift, strong, and the most destructive fish that I know of. The late Prof. Baird called them "animated chopping machines," for they kill for sport after they are gorged, biting pieces from the menhaden which they cannot swallow. The only thing they seem to fear is a school of porpoises. The menhaden is one of the herring tribe, short, deep and fat; it is seldom eaten, but is taken by thousands of tons each year for its oil, the refuse being dried and mixed with phosphate rock for fertilizing purposes.

As we anchored in a channel near Fire Island Inlet, Mr. Wilbur said: "Chumming for bluefish is a new form of taking them. Scott, in his 'Fishing in American Waters,' in the edition of 1875, does not mention it, except for striped bass, and he was an all-round salt-water angler. The first mention that I find in print of chumming for bluefish is by Mr. R. B. Roosevelt, in 'Fish Hatching and Fish Catching,' published last year" (1879).

"Why," I remarked, "I supposed that it was an old method, but I have little knowledge of salt-water angling. Martin B. Brown, the official printer for New York city, and I went down to Manasquam Inlet, New Jersey, in 1876, when I was with the old Aquarium at Thirty-fifth street and Broadway, and Martin taught me how to chum for bluefish, but just as we got started and had each taken a fish of about 4lbs. from a school which had driven thousands of menhaden on shore, a school of porpoises appeared and served the bluefish as they had the menhaden. The bluefish which did not escape on the flanks of the charging porpoises, or by diving under them, were driven on shore in terror, and the beach was a sight of flopping fish. Martin and I forgot our fishing to wonder at the spectacle. The natives spread the word, and men, women and children with baskets, carts and wagons lined the beach within an hour and harvested the crop. There was no more fishing for us, and we went home by the first train, gathering up enough fish to send to friends. That was a memorable incident, but not much bluefishing. Like the charge of the Light Brigade at Balaklava, 'it was magnificent, but not war,' nor chumming."

All this talk went on to the tune of the chop-chop-chop of the boatman's heavy knife, as he cut a few menhaden into mince meat and scraped the pieces overboard, to float off toward the inlet on the ebb tide to tole the bluefish our way.

"You see," said Mr. Wilbur to the ladies, "that when these small bits of fish fall on the water they sink a few inches as they are carried out by the tide; but there is an oily 'slick' on the surface and that carries the scent for miles, and if a school of bluefish strike it they follow it up, and so we get them to come to our anchorage. If they come to us it will be in a school of thousands, for the bluefish travel only in that way. A few years ago some fishermen noticed that when they sighted a flock of gulls feeding they not only found that they were gathering the crumbs from the feast of bluefish on menhaden, but that as the oily slick drifted off it enticed other schools of bluefish, and so they evolved the sport of chumming; and in the fisherman's vocabulary 'chum' is the name of minced menhaden thrown overboard to attract bluefish."

"A century or more ago," I said, "men chopped fish up to bait pools, or swims, but the fish so used were not oily and did not make a 'slick' on the water. Therefore, what they did was merely ground baiting and not chumming; and in fact, I think that the bluefish is the only fish which can be induced to follow a scent for a mile or more, although striped bass will trace it for quite a distance."

Our boatman had taken a slice from each side of a menhaden, cutting about the middle and slicing along the backbone to the tail, and these were laid aside for baits while the remainder of the fish, head and all, was hashed into chum and a little at a time thrown into the water. Since that day a bait mill has been put on the market and this relieves both fish and anglers from the noise of the chopping board and produces better chum.

Some of our party used hand-lines and others rod and reel, the latter affording better sport. The hooks were on a foot length of either brass or piano wire, for the teeth of a bluefish will cut the best gimp snell as easily as if it was an ordinary fish line. Their cutting capacity is such as to ruin a purse or a pound net in a few minutes, and they will snap at and cut a man's hand badly with their saw-like teeth.

After a while one of the party had a strike, and then it was lively work until the tide turned. One lady hooked the anchor rope and called: "Oh, I've got a shark; help!" And she did not join in the laugh when her catch was made apparent, merely remarking: "It's too bad, I thought I had the biggest fish in the bay, I believe I did have a big one until that rope got in the way. I wish we could fish without an anchor rope."

Only those who have taken bluefish by chumming know what a fierce rush they make when hooked. There is no stopping to think it over nor running off slowly until it is certain that there is a hook with a line attachment in that last bit of menhaden, but it snatches the bait and is off like a rocket, making the reel hum like a locust. No fear of checking the rush too suddenly if the tackle is good, and if it isn't it would be wise to stay at home, for the mouth of this fish is hard and its jaws are strong. The savage snap which it gave the bait sank the hook well in, and if the line is kept taut the fish seldom shakes the hook loose, and more seldom does it tear out.

When we troll for this fish with a sail boat going not over five or six miles an hour we use heavy cotton lines to avoid cutting the hands, and have a stall on the first finger of each hand, either of rubber or woolen, and the speed of the boat, added to the strike of a fish, makes a "chug" that would tear the hook clear from many other kinds of fish; but the bluefish stands it, and is hauled in by main strength, and is shaken from the hook with great regard to its dentition. This is fine sport, but inferior to chumming.

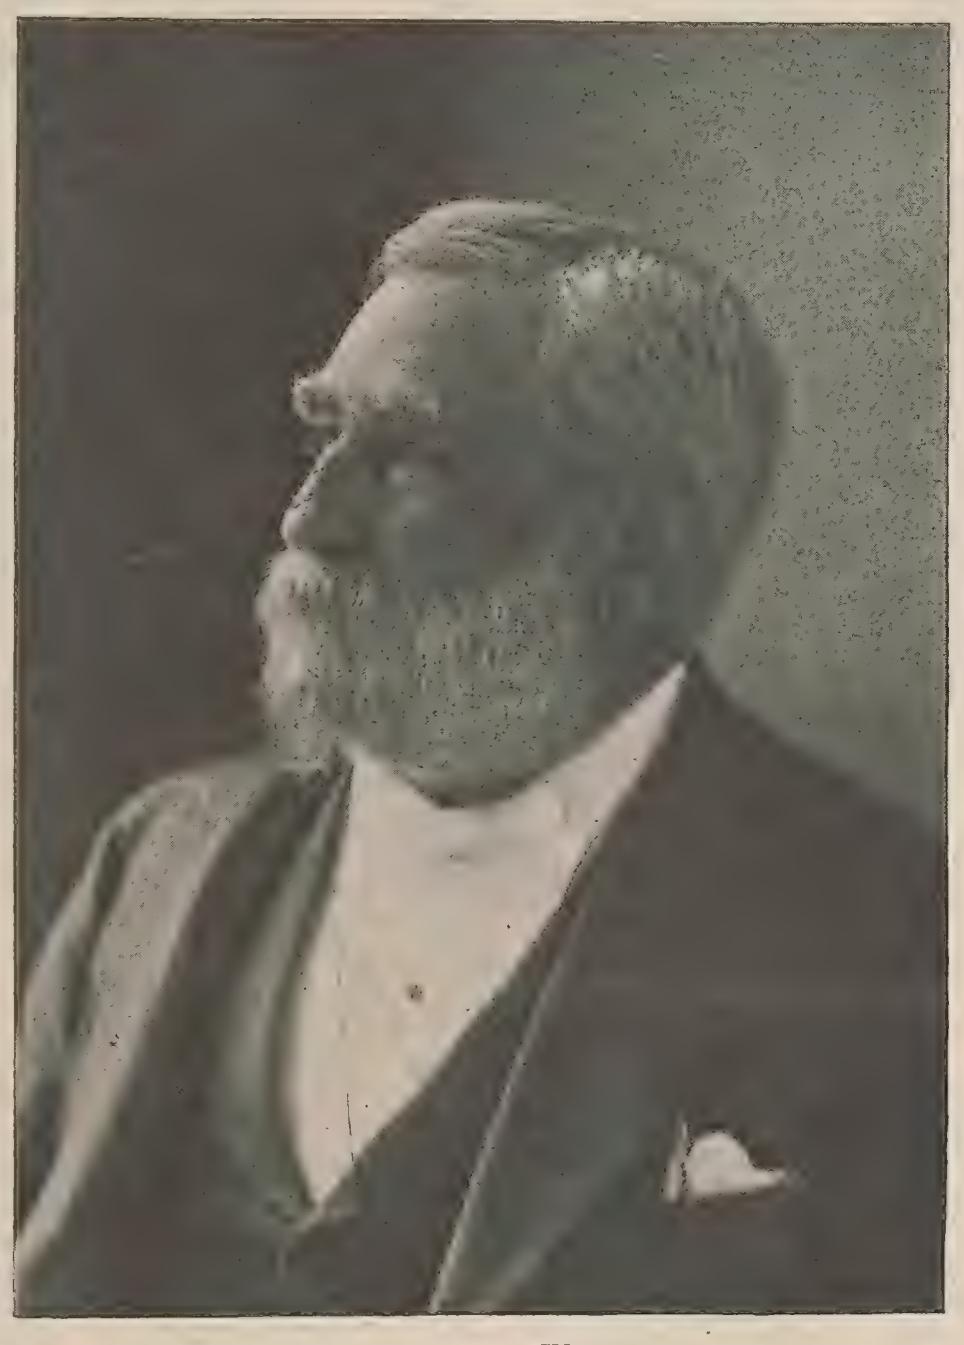
In trolling there are various devices used to represent natural bait. Most of these are called squids, because they shine as they rush through the water, much as the naked mollusk, whose name they bear, flashes through the brine. There are squids of lead cast around a long-shanked hook especially made for the purpose, and from 3 to 6in. long; these are scraped when they get dull. Then there are red flannel attachments to lead squids; squids of bone, round or flat; of mother-of-pearl, flat and spoon-shaped; red bone for Spanish mackerel, and hollow wooden squids, which open to allow a piece of menhaden to be placed inside, to attract bluefish by scent as well as by sight. An eel-skin drawn over a long piece of lead is an old-time lure not much used now; but there is little choice among all these devices, for a bluefish will snap at any bright, moving thing if trailed 80 or 100ft. behind a sail boat, no matter if the fish is gorged to repletion. Its mission is to slay for the sake of slaying, and it fulfills it to the letter. Most animals cease to kill when hunger is satisfied, but a mink and a bluefish never stop as long as there is a living thing in sight. They kill for sport as a terrier kills rats, but they destroy their own food in their savage onslaughts, while what the terrier kills is not his food.

After the turn of the tide there was time for luncheon, and to review the incidents of the day. The school of fish which came in the inlet and attacked our bait was not large in numbers nor in size, but the day was a perfect one for angling, the breeze being light and the sun not too much in evidence.

As it was but little past mid-day when the tide turned and the bluefish left the bay, we decided that it was too soon to sail for home and that we would try bottom fishing for anything that wished to sample such bait as we had to offer, and the clams were brought out to try their powers of attraction.

A variety of fish sampled our clams and were welcomed on board the yacht and assigned quarters with the bluefish. Under ordinary circumstances the porgies and flounders would not have associated with the cannibal bluefish, but at that time the savage blues were very peaceable, contact with civilized man had evidently had its influence and they were quiet.

Mr. Wilbur said that the inlet channel was not the best place for bottom fish, because they did not stop long in the swift current but scattered over the bay in search of the food which lives in more quiet waters.



"Where is the best place in the bay for sheepshead and other fish which feed more or less on the bottom?" I asked.

My host considered a moment, and replied: "The cinder beds are probably as good as any, if not the best. They lie near Point of Woods, opposite the fish factories, and are not real cinders, as many suppose from the name; but the bottom is a hard, gravelly one, on which for centuries the tube-worms have built their dwellings, and have cemented patches of gravel together in a manner that appears like a cinder when an angler's hook gets hold of a piece, as it is very apt to do, and brings it to light covered with more or less mud. The more recent of these crooked tubes contain living worms, on which many fishes feed when they catch them with their heads out."

Here was a chance to exhibit a little technical knowledge which had been picked up somewhere, and I said: "From the way these tubes twist and lock into each other the scientists call them *Serpula contortuplicata*. They fasten to and weight down scallops so that it is difficult for that mollusk to swim. As the worm grows it lengthens its tube, and they always fasten it to rocks, shells or other hard substances, and a mass of old tubes might easily suggest a cinder. I should think that hooks would get fast in the masses very often."

"They do, and it is very annoying. Sometimes the piece is too heavy to lift and then something must break, either hook, snell or cinder; but the beds are such good feeding grounds for many fishes that one is willing to risk losing some tackle on such good feeding grounds. Perhaps we will try the beds some day."

As we parted at the landing we all agreed that the day had been a most enjoyable one every way. We had fish enough, but not so many as to be a burden, and for one I was glad of the chance to practice chumming for bluefish in a more complete manner than on the day when I first tried it with Martin B. Brown on the New Jersey coast. There was not enough of that to write up, and I never fished with him again.

E. R. WILBUR.
From a photograph in 1897.

Mr. Wilbur was one of the early members of the Blooming Grove Park Association, which has an extensive game preserve, with many lakes and miles of trout streams, in Pike county, Pa., and served terms as president and secretary of the Association. During his term of office I met him there to select the site for a trout hatchery. We traveled about a good part of a day and found several excellent locations, from which we chose one after much deliberation, and trout breeding has been carried on there each year since with great success.

When the National Rod and Reel Association was formed, in 1882, for the purpose of holding fly-casting tournaments on Harlem Mere, Central Park, New York city, Mr. Wilbur joined it, and while he did not compete in the contests, he was always ready to act as judge or referee. At the first dinner of the Association, held in the Metropolitan Hotel, Mr. Wilbur made some remarks about a very old salmon which Mr. E. G. Blackford had kindly sent to the dinner, and told us that it bore the marks of a very old fish, and had been caught in the Delaware River, a most unusual catch. Mr. Wilbur thought the fish a stray one from the Connecticut, for the Delaware River was not known as a salmon river, although every few years a salmon was taken in it. Quite a discussion followed about salmon rivers and stray salmon, in which I took no part, but, like the Irishman's owl which he sold for a parrot, "didn't talk, but kept up a divil av a-thinkin'," and it resulted in my repeating former recommendations to Professor Baird, then the United States Fish Commissioner, to make the Hudson a salmon river, and he sent me eggs to begin the experiment that winter. By his remarks at that dinner, Mr. Wilbur unconsciously stimulated a thought which resulted in stocking the Hudson with salmon—an experiment which has been partially successful, and only lacked proper support and appreciation by the State authorities to have made the Hudson a self-sustaining salmon river to-day.

Mr. Wilbur was a member of Company A, 7th Regiment, New York National Guard, so far back as when the drill room was over a stable in University place. He went with the regiment to Washington on their memorable march to the Capitol in April, 1861, as a non-commissioned officer. There they were quartered for a while in the Capitol building, and among Mr. Wilbur's reminiscences of the time is an address by President Lincoln to the troops camped in the Senate chamber. Near the end of his time of service he was sent from Washington with dispatches to Col. Smith, a recruiting officer at Albany, whence he returned to the 7th Regiment Armory, then over Tompkins Market, in this city, where he remained with a part of his regiment during the draft riot. I have mentioned these facts because

we were much interested in some autographs which Mr. Wilbur showed us, as carefully cherished mementoes of those exciting days. Among the signatures most highly prized were those of Col. Lefferts, Gen. Butler and Col. Drake de Kay, whose autograph became so well known during the war; these were attached to the orders carried by Mr. Wilbur, and setting forth that he was in the service of the Government and was to be accorded free transportation and subsistence. Another prized relic is a two-page letter from Major Anderson to Mr. Wilbur, written from Fort Sumter, and dated a day or two before the fort was fired on.

The launching of FOREST AND STREAM by Mr. Charles Hallock in 1873, naturally attracted the attention of a sportsman like Mr. Wilbur; and when Mr. Hallock offered a few shares in the new journal—which had a most phenomenal run in what was then a vacant field—he bought some of the stock, and when Mr. Hallock decided to retire from the management of the paper, he and a few others bought the whole plant, and he is now the treasurer of the company. FRED MATHER.

[See announcement in our advertising pages of the publication of "Men I Have Fished With" in book form.]

HARRY PRITCHARD.

POUGHKEEPSIE, N. Y.—*Editor Forest and Stream:* I have already sent to your company my order for Mr. Fred Mather's book. It seems to me that he has fished with more men than any person I ever knew of, and his memory as to the occurrences during his trips is simply marvelous. If his stock of recollections should happen to run out—and as to that there are no present indications—I would suggest that he should write another series of articles, entitled "Men Whom I Have Not Fished With."

I have always insisted that I could write a book, which would be to some extent readable, on black bass, which I have fished for, more or less, during the last fifty years; and this book would contain two chapters, the first being a short one, and entitled "What I Know About Black Bass," and the next being a long one, entitled "What I Do not Know About Black Bass."

One of the best articles written by Mr. Mather is the one on Harry Pritchard, and I regret that he was not present with Pritchard when he visited the Beaverkill a few years before his death. There was a large number of anglers at Murdock's when Pritchard put in an appearance, none of whom seemed to know him, and all of whom were disposed to enjoy a little fun at his expense on account of his hesitancy in speech, but when Harry Pritchard proposed to fish up stream instead of down there was a huge guffaw.

At that time the Beaverkill had suffered from one or two severe freshets, and the ordinary angler was rarely able to take more than 6 or 8lbs. of trout. Pritchard, in his early life, had been employed to catch fish on an estate in Ireland, and had there learned the merits of fishing up stream. Pritchard carried on this occasion a creel which would contain 15 or 18lbs. of trout, and every night when he came in his creel was full of large trout.

I regret that Mr. Mather never met on his fishing expeditions that remarkable trio of anglers, Judge Fitch, of Catskill; William Adams, of New York, and John Smedburgh, of Prattsville, and I may possibly one of these days write an article for FOREST AND STREAM in regard to them.

J. S. VAN CLEEF.

NEAR PARADISE.

GLORIETA, New Mexico, Aug. 17.—For the past two weeks we have been fishing for the black-spotted mountain trout along the line of the Santa Fé Railroad, and our great expectations have been more than realized. Just think of two anglers capturing over 400 trout in one day. We played our trout until we had extracted full measure of a game fight from each one, then unhooked our captives and allowed them to return to their lovely habitat, for we were only angling for the pure sport, and a dozen small trout answered all purposes for food. This great catch was made in Cow Creek, a stream which can be reached in a three hours' drive from Glorieta, New Mexico. Over a dozen good streams, swarming with trout, can be reached in a drive of from three to seven hours from Glorieta, which is a small station on the line of the Santa Fé Railroad. We are camping at present on the Pecos River, on the south side of Glorieta Mountain.

The southern spurs of the Rocky Mountains extends some distance down into New Mexico, and every gorge and cañon contains its trout stream. The Pecos River is a fine stream to fish in, being just right for wading, with a current which flows at the rate of about seven miles an hour; it heads up seventy miles above Glorieta, and flows southeast through New Mexico and the northern portion of Texas, emptying into the Rio Grande. This river waters thousands of farms throughout the entire Pecos River Valley, a distance of over 500 miles. The upper waters of the Pecos are full of trout, while the lower waters contain small-mouth black bass.

When the waters are clear the fishing is very good, but it has rained every afternoon for the past week, and the waters have been very roilly, and the trout will not rise well in muddy water. These mountain trout are very cunning, and the largest ones will not rise to a fly until almost dark, but between the hours of 5 and 7 P. M. I have hooked some very large fish, and they are very game fighters. I took three trout from one pool just before dark one evening, whose combined weight was 8lbs.

The Pecos River flows over a rocky bed, amid towering ledges of solid rock, then through a beautiful meadow, and when the water is right one can fill a basket with trout from almost any of the pools.

This is a great country for sunshine and rain. Every morning the sun shines bright, and every afternoon, as regular as can be, it rains for an hour or more. The air is very clear and pure; we can hang a trout or a piece of meat in the sun for a day, and it will keep for a year, so pure is the air. The variety of fruits, grains and grasses grown in New Mexico is really surprising. Apples, grapes, nectarines, plums, peaches, apricots and pears grow in great profusion, and the flavor of all the fruit grown in New Mexico is far superior to that grown in California.

The natives live in the river valleys, and each family seems to own a herd of goats and sheep. They drink the goats' milk, make butter from it, and eat both sheep and goats. The Spanish language is largely spoken by the "Mexicans," who are mostly descendants from Indians.

Every night it is cool enough to sleep comfortably under two blankets, not a mosquito or black fly to annoy, and the grand mountain ranges reaching away, far as the eye can see; sky blue as indigo. This is as near paradise as one can get and yet remain upon this planet.

EDWARD G. TAYLOR.

CHICAGO AND THE WEST.

The Best Tarpon Grounds on Earth.

CHICAGO, Ill., Aug. 28.—I presume that without doubt the finest tarpon fishing in the world is to be found at Aransas Pass, near Rockport, Tex., that now famous sporting ground to which attention was first called in FOREST AND STREAM. To-day I am in position to give some interesting details of this tarpon fishing, by courtesy of Mr. Joseph Irwin, of Little Rock, Ark., who has just returned from that country. Mr. Irwin says: "I can't imagine why people who really want to catch tarpon go to Florida, where they have to wait so long for a strike, while at Aransas Pass, Mr. Galbreth, of the Cotton Belt railroad, got nineteen strikes in one day. I wish you would go there and try it yourself, for it is the finest sport with rod and reel imaginable." Mr. Irwin is good enough to prepare a little story of his experience at Aransas Pass, which I send you.

Aransas Pass Tarpon Record.

Following is the record of tarpon landed with rod and reel at Aransas Pass, Tex., head of Mustang Island, from April 10 to Aug. 14, 1897, inclusive:

IN CONNECTICUT WATERS.

Editor Forest and Stream:

HAVING told you during the open season that trout were unusually plenty in this section, there remains only to be said that owing to the abundance of water in the streams during the entire summer, the fry and young trout have had good protection from their merciless foe, the voracious and persistent water snakes, which, during low stages of water, when the trout have been forced to huddle in the shallow pools, can and do gather them in very rapidly; so it seems to me that the season has been very favorable for the growth of young trout, and I hope the 12,000 fry I helped to plant have got a good start, and in a few years will afford sport for some good fellow. The perpetuity of trout in our streams depends upon the stock being replenished, as surely as the farmer's crop of potatoes depends upon his planting the seed at the proper time. If you want trout, plant and protect them, and they will yield a harvest.

I once told you of hooking a black bass "as big as a shad," and losing him by the parting of my leader; well, I caught him this summer, or one very much like him. Trolling with live minnow, and having out about 200ft. of line, I had telegraphic communication that something was at the other end, and after a short wait and a strike, discovered I had him hooked; when to shake the hook loose, or to show me what he was, or to see who was at the other end of the line, or for some other reason best known to himself, he came out of the water fully 2ft., and he looked very large. My son (who thinks he is quite a fisherman) and the man pulling the boat both began with their advice and exclamations of "Look out!" "Give him more line!" etc., etc., until I quietly inquired, "Who is catching this fish?" and on being assured that I was, I suggested to the boatman to pull his boat out into the lake away from the lily-pads, and to the other fellow that he "lay low" and see the fight. Well, I got him, and three hours after he was killed he weighed plump 4½lbs. of small-mouth bass.

This would not be much of a story to tell of the Wisconsin and other Western lakes, but you must bear in mind that this is a very small State, and you will see the bass is fully up to the relative proportion. A.

HADDAM, Conn.

MORE FISHERMAN'S LUCK.

THE long, cold, dreary winter days were of the past, spring time had come and gone and vacation days were at hand. Professor B. was happy, his plans for pleasure afield with rod and gun were now to be realized. It would be several weeks before the shooting season was open, but in the meantime, there were certain deep holes in a little prairie stream, to be investigated for pickerel and other members of the finny tribe. Monday dawned, a splendid day for fishing.

After a hasty breakfast, the Professor decided that he would take his setter, Polly, along, as the exercise would help to harden her muscles, which, from her being chained up so long, must be decidedly soft. And then Polly was getting too fleshy for the chicken hunting, in which she would soon be expected to take a leading rôle.

Frank, the fourteen-year-old fishing companion of the Professor, soon put in appearance, and, Professor, boy and dog, set off up the creek in the direction of the pickerel holes. It might be well to state, that the Professor's choice of a fourteen-year-old boy for his companion, was for the reason that Frank, besides being a genial companion, always performed the unpleasant task of securing minnows and frogs for bait.

Noon time found the trio about four miles from home, rather hot and tired and with but few fish. It was decided that they would take their lunch in the shade of the willow hedge, and then after a couple of hours' rest turn homeward. Polly, tired with chasing rabbits, digging for squirrels, and other canine amusements, had already found a comfortable resting place some rods away from the hedge, beside a stack of new hay. The two hours for rest and lunch were soon passed, and the Professor announced it time to go home Stringing their fish on a forked willow twig they were ready for the homeward journey. The Professor whistled for Polly, waited a few minutes, then whistled again and again, but no Polly appeared. "Come Polly, come Polly," called the Professor, and whistled again This time a distressed whine sounded from the stack, and Frank and the Professor went in that direction to ascertain the source of Polly's apparent trouble. Nestled down in the hay close to the stack, was Polly, busily lapping two little black and white puppies. The Professor was thunderstruck, he had not had the least intimation that Polly was maternally inclined. Polly looked up with a pleased expression in her brown eyes, and wagged her tail as the Professor at last found voice and gave vent to his feelings in lamentations at his ill-luck in acquiring such an increase at such an inopportune time and place. Frank was as much pleased as Polly. "How in the name of Cæsar am I going to get the pups home?" exclaimed the Professor. Many plans were suggested and in turn rejected, until Frank finally said: "Tie 'em up in your handkerchief, as you and pa did the fish and flowers that Sunday, when Mrs. K. went to smell the flowers, and spilled the fish out on the ground and then hollered so loud."

So the handkerchief was again brought into use to carry the new-born pups, while Polly trotted along keeping an anxious eye on the handkerchief and its precious burden.

The fishing party with its odd assortment of fish and pups, reached home in due time. The story of the Professor's luck at fishing spread swiftly through the village, and it was many a day before the Professor heard the last of his "catch of pups." JOHN C. BRIGGS.

NEVADA, Ia.

NEW JERSEY'S SEA FISHING.

ASBURY PARK, N. J., Sept. 1.—The acme of perfection of surf fishing at present is ours; never has the sport attained the magnitude of the past ten days. Bluefish and weakfish are in the surf in multitudes and are taking the hook ravenously, and as if to suit all conditions of men, day fishing for the blues and night fishing for the weakfish is the order of affairs.

A visit to either of our piers any night now is a rare sight. The staid jurist, the eloquent divine, the up-to-date angler with all the paraphernalia that goes to make his outfit complete, as well as the less pretentious hand-line man, all in eager pursuit of the finny tribe, go to make a picture never to be forgotten, and long until after midnight is the battle waged. What though lines tangle, and an occasional thump from a heavy sinker reminds the one not thoroughly alert of his laxity, still all goes on as merrily as a marriage bell, and great good humor is the order of the day.

The exceptionally good fishing in Barnegat calls trainloads of anglers to that point daily; in consequence the yacht men are happy and the bait men have their hands full to supply the demands. I would advise all parties going there to provide themselves with a liberal supply, as there is always an uncertainty in procuring the shedder crab, which is far and away the best all-around bait for those waters. Of course, when bass trolling around the sedges is practiced the blood worm, or white worm, as it is sometimes termed, is the proper article; still, the finest bass I have ever taken there have been on the shedder crab; but in this there are as many opinions as there are men.

In answer to many inquiries in relation to snapper fishing, I will say the season is a trifle early yet, although they are with us in abundance. They are yet very small; two weeks will find them much improved in size and condition. The growth of the snapper, which is the young of the bluefish, is simply marvelous. They will nearly or quite double their size each succeeding two weeks, from Aug. 15 to Oct 15, which is something that can be said of no other variety with which I am familiar. Partaking thus early of the nature of his progenitor, he is very nomadic, and in strong tidal waters a chum is frequently necessary to successfully effect his capture. The following method I have found very effective: chop or mash five or six good-sized menhaden, enclose in a coarse muslin or burlap bag and hang over the side of the boat, occasionally squeezing or shaking the same; the exuding oil creates a slick on the water which will be followed up by the snapper no matter how great the distance, and once they are around the boat the sport at once begins, provided the proper bait is used, which should be the spearing.

And now, as to tackle: I use a very light rod 6½ft. long, lancewood stock and split bamboo tip, a very small multiplying reel, and the finest procurable linen line; to a 2-0 Carlisle hook I attach a 6in. section of hair wire ending with a swivel into which the line is fastened; for a float I secure two bottle corks, cement the ends together, passing a strip of bamboo through, leaving about 1in. of same projecting at either end, then with a very sharp knife and sandpaper I reduce the diameter to about the size of an ordinary lead-pencil; this will carry the split shot sinker and offer little resistance when the strike is made. LEONARD HULIT.

PENNSYLVANIA FISH COMMISSION.

PHILADELPHIA, Aug. 25.—*Editor Forest and Stream:* The last Legislature adjourned without making any appropriation to enable the Fish Commission to carry on its work for the next two years. This omission is supposed to have been an oversight and not intentional.

In consequence of the omission, Gov. Hastings recommends that a convention of fish protective associations be held to assist in raising $25,000 for the Fish Commission's work, and that this sum be subscribed in shares of $500, payable to the treasurer of the Fish Commission in semi-annual installments $125, on the understanding that the next Legislature refund the money. The Governor and a number of the members of the Legislature express the opinion that there will be no doubt that the money will be so appropriated.

The convention will be held in the Board of Trade rooms, Harrisburg, Wednesday afternoon and evening, Sept. 15, at 2 and 8 o'clock.

The Pennsylvania Fish Protective Association, through its executive committee, has subscribed $500 (or one share of stock) from its treasury—all its income outside of its necessary expenses—toward the fund of $25,000; but it is felt that much more than this should be done through the Association. Therefore the executive committee has determined to endeavor to raise at least $1,500 more by subscription through its members and friends, or $2,000 in all.

It is unnecessary to point out the great injury which would result to the cuse of fishculture, if the work of the Fish Commission should be brought to a standstill for two years, for lack of funds. The prominence of the Pennsylvania Fish Protective Association in fishcultural and fish protective work, renders it desirable that it should take a leading place in the contribution of funds.

The following are the propositions of the executive committee:

First—That if $500 is advanced or subscribed, it shall be receipted for on the regular blanks prepared by the State Attorney General, on the understanding that not more than $125 be called for with the subscription; $125 about Jan. 1, and $125 every six months thereafter until the whole has been paid. The receipt each time being signed by the Fish Commission's treasurer.

Second—That if $250 be subscribed, it may be under the same conditions as above, except that each installment shall only be $62 50.

Third—That any other sum that may be subscribed be turned over to Mr. Alfred Hand, the treasurer of the Association, who will issue a receipt in the name of the Association, keep a record of the same, and when the Legislature makes the expected appropriation, refund the same to the subscriber. The aggregate amount subscribed will be turned over to the treasurer of the Fish Commission in the proportion of $125 to the share every six months, in accordance with proposition one.

Fourth—That subscriptions of less than $50 be paid to Mr. Hand in a lump sum. That amounts over $50 be paid in such installments and on such dates as may be fixed on by the subscriber, with the proviso that the first payment shall be within a few days after subscription, and the others before Jan. 1 and June 1 in each year. This proviso is made because when subscriptions amounting to $500 have been received, a share will be taken by the treasurer of the Fish Protective Association, and it would be embarrassing to Mr. Hand not to be able to make payment thereon when the semi-annual installments are due.

The treasurer is Mr. Alfred Hand, 204 Walnut place, Philadelphia.

HOWARD A. CHASE,
Chairman of the Executive Committee.
E. HAGERT,
President Penna Fish Protective Asso.
W. E. MEEHAN,
Chairman Convention Committee.

TROUTING ON THE MADAWASKA.

EDMUNDSTON, N. B., Aug. 26.—Dr. Camber, of Woodstock, being called here on professional services, concluded to put in two days after trout with two objects in view, to have the fun of catching and to take some home to wife and friends.

Hiring a team, we left here at 6 o'clock in the morning. A big frost of the night before made our heavy overcoats a necessity, as the morning was cold. Perhaps this was the reason why Jack, our driver, hurried his horse so much, and verified the old saying, less haste more speed.

The horse dropping into a walk, Jack raised his whip, and the animal gave a quick spring, breaking the whiffletree, clearing itself from the wagon instantly, and running away into the woods, leaving us sitting in the wagon alongside the road. After a laugh at the ridiculous position we were in, we caught the horse, mended the harness with a few strings, and tied the tugs to a solid part of the wagon. Then on we went once more, reaching our destination without further mishap. Here we engaged a man with his boat, and after getting rods rigged and stuff on board, we embarked on the smoothly flowing waters of the Madawaska.

Drifting down with the current, casting as we went, securing one here and another there, we soon had enough for dinner. When we reached a good place in the stream for fish and a nice place on shore to cook and take lunch, we landed and prepared a good dinner, which we all enjoyed thoroughly. Then we set to fishing again until we had descended the river two more miles, where our tent was pitched. A good supply of dry grass was laid down and covered with fir boughs, making a bed that was very comfortable. With a good fire in front, the river at our side, and having had a day's fishing such as the Doctor had never experienced before, we felt very well contented. At 9 we turned into the blankets, with three over us. I slept like a log. The Doctor was disturbed during the night by some small animal, probably a rabbit, hopping on his feet and breast; he jumped and the animal did the same.

At daylight (which means 4 o'clock), breakfast over and things packed, we went on down, getting trout every few casts. At 10:30 we stopped at the mouth of a brook, had dinner, paid our man and sent him back. We fished the mouth of the brook, catching many of 1lb. Here we remained till 5, when our team came along, as previously ordered. Counting up our catch we found that we had sixty-three, besides what we had eaten. Eighteen of them would average 1lb.; the rest were all good pan fish. I call it a very poor catch for this river, but the Doctor was delighted, as it was the best fishing of his life. This river is noted for its large trout during the month of September, varying in size from 2 to 7lbs. Anyone desiring this sport can have their fill at this season. The close time begins the 1st of October. S. J. RAYMOND.

FISHING IN GRAND LAKE.

GRAND LAKE STREAM, Me., Aug. 23.—*Editor Forest and Stream:* The salmon fishing this season has been exceedingly good in Grand Lake. This water has not been known to very many, for the reason that it has never been advertised; and most do not wish to have it known, because it is very easy of access and the fishing good, and for this reason they think the lake would soon be flooded with men, and the result would be no fish after a few years. But this would not be the case. Our fish are on the increase, and there are so many lakes behind Grand and so many spawning beds, that the number of fish will be kept nearly uniform.

Grand Lake is situated in Washington county, about thirty-two miles from Calais, on the West Branch of the St Croix River. It is twelve miles long and some seven miles broad, dotted with beautiful islands and indented with deep coves and beautiful points. The water is exceedingly clear, the bottom being easily seen in 18ft. of water. It is surrounded by one of the most beautiful forests of nature that one could imagine.

There are no houses except the little village of Grand Lake Stream, which is situated at the outlet and a few camps situated at different places around the lake.

Our season began this year on May 4, and each year as soon as the ice leaves. The salmon weigh from 3 to 6lbs., and are very plenty and gamy. The catches for one man average from five to thirty-five salmon, and for a canoe to come in without any is a thing almost unknown. Mr. J. Weeks, of Boston, and his friend, Mr. Frank Austin, took 750 square-tailed trout in one day, weighing from ½ to 2½lbs. H. G. Pitman, Boston, took 105lbs. in one day this season, but as our law is 25lbs, he had to put them back after he had weighed them. C. E. Roberts, Boston, took out 24lbs. of lake trout, and there were several taken weighing from 10 to 20lbs. each.

In fishing in Grand Lake everybody uses canoes, and the sportsman faces the guide while fishing so he can have a fair view of the fish when it comes out of water When the season first opens we catch them by trolling; then in June and July the fly-fishing is excellent.

In coming to Grand Lake, you leave Boston in the evening, come by the Boston & Maine and Maine Central R. R. to Winn, thence by stage sixteen miles to Luck Lake, where your guide will meet you and convey you to quarters, either at some of the camps or the boarding houses in the village, a distance of twenty-six miles; which place you will reach the next evening, or in about twenty four hours.

It is natural for all of us to stretch fish stories, but if you do not credit this, come next spring and try for yourself and then you will say I have not magnified it enough.

J. T. MERRILL, Registered Guide.

ON THE FLORIDA SHORE.

SUMMER HAVEN, Fla., via St. Augustine, Aug. 21.—*Editor Forest and Stream:* For twenty-five days we have had southwesterly winds and frequent showers, with resultant low tides. The anglers, therefore, have not had the fishing looked for in August. No bass at the surf at all, and only one moderate catch at the inlet. Mr. William Vertien landed twenty-two small bass, 2 to 3lbs. each, on the ebb of Aug. 5, at our oyster boats here. On Aug. 10 Judge J. C. Vertien and Messrs. John J., William and J. C. Vertien, Jr., made a fine catch of bass up the river; some ran up to 6, 7 and 8lbs.; about twenty-five in all. These are our anglers. They fish for sport, with light jointless bamboo rods, with reels, moderate sinker and shrimp bait. If you have been to Summer Haven, you know Sam, and when Sam can not catch shrimp you and I need not cast our nets. Capt George Cable, of Drayton Island, is another angler who made several catches of small bass, and landed two good ones at the inlet that were said to weigh 10 or 12lbs. each. He also caught a bad cramp in the surf; it took four pretty girls, a man and a boy to land him and rub life into him. He knew when to catch a cramp.

Mr. George R. Morse put twenty-five turtle eggs in a box of sand on his veranda; in seventy days they hatched. He intends to put them in the ocean in a day or so, and I venture to say that they are the only green turtles that hatched on five miles of beach. It is a sin; not less than thirty nests have been robbed this season.

Mr. David Spence, is our great sheepshead angler, a patient and successful one he is too. He lands some every day, and once brought in forty-one last week.

Aug 16 Mr. Morse, Mr. Harrison and Jack Harrison caught 150 sheepshead (some small bass among them) in the afternoon ebb tide.

Aug. 11, there was a flight of brown backs (dowitchers), summers and grass birds. Two of us killed fifty-eight by 8:30 A. M.; our shells gave out and we had all the birds the community could use, so we quit; but the birds flew all day and 100 would be a low estimate of our bag, if we'd stayed. Aug. 14 the writer killed thirty-five, twenty of them wille's. Aug. 16 there was another flight—no one out. Aug 21 the writer killed thirty-five again.

The shooting is done over decoys stuck in a small flat or pond, selected as being near average line of flight, and lasts about three hours of flood tide. For the writer it stirs up old recollections of days on Scituate Pond and on the flats back of Monument Beach, between Nauset Lights and Chatham, Cape Cod. Life here has compensations; come down and share them a while. CAPTAIN.

Throw Back the Fingerlings.

CHARLESTOWN, N. H., Sept. 1.—*Editor Forest and Stream:* I note Columbia's letter in last number of FOREST AND STREAM. All we can do is to educate the "rising generation," as well as a good many of those who think they are fully risen, to throw back the fingerlings! One of the greatest causes of the scarcity of trout in our New England brooks is the persistent catching and basketing of the yearlings, from 2 to 4in. long, for the sake of making a record, or bragging on "the count." I ask the boys if they would expect to raise "spring chickens" if they ate all the eggs; at which they simply "grin."

I tell them that the trout must be allowed to grow, so that some of them will have a chance to spawn, if they expect to keep the brooks stocked, and I hope I am making progress with some of them; but it has got to be pounded in persistently, and this is one of the cases where "eternal vigilance is the price of liberty." W. VON W.

FLORIDA SUMMER INCIDENTS.

A NEGRO fisherman at the Lake landing one day this week was scaling a fish. After finishing the job he chucked the fish in the lake to wash the scales off when a moccasin bit one of his fingers. A doctor cut the finger open and the fisherman is now waiting for the cut to heal. He didn't suffer any from the poison of the snake.—*Leesburg Commercial.*

Raleigh Flowers has quite a curiosity in the shape of a six-legged rain frog. The third pair of legs is midway between the fore and hind limbs, rather on the side of the stomach and quite small and undeveloped, while the natural rear limbs are normal. The strange little animal has been preserved in alcohol.—*Palatka Advertiser.*

About eighteen months ago Albert Reynolds drove in a buggy to South End to fish. Taking his horse out, he left the buggy on the beach while he wandered off in search of fish. He was gone some time, and upon his return the buggy had disappeared, and he never got any trace of it. The mystery of its disappearance was solved the other day by a crew in a small boat who were dragging the bottom for the body of Wallace Maxwell. The grapple caught on to one of the wheels of the buggy and pulled off the hub. It is supposed the buggy was backed into the surf by the wind the day it was lost, and the shifting sands soon embedded it.—*Nassau County Star.*

The assertion that the bite of a rattlesnake will not prove fatal to a hog, if fat, is untrue, as Mr. A. C. Johnson, a farmer of this county, can testify. He tells us that a few days ago he heard his pigs making a demonstration peculiar to their kind when disturbed, and thinking a dog or other animal was among the herd, he approached to drive it off. As he drew near he saw a large rattler strike one of the hogs and then crawl away. He shot the snake, which measured 6ft. in length, and supporting, as an ornament to his caudal appendage, an even dozen rattles. As a result of the row between the snake and the hogs, two of the latter, one of which was a very fine, fat brood sow, died in an hour after being bitten.—*Suwannee Leader.*

A waterspout in all its terrible magnificence and grandeur, was seen Monday afternoon by Messrs. R. Don McLeod, Sr., Nat R. Walker, Tom Benton and the *Breeze* editor. The party had been fishing along the edges of Gull Island, and seeing a dark, dangerous-looking cloud rising, had started back to the mouth of Spring Creek. When about half-way out in the bay they were struck by a small squall, and looking off to the westward they saw the waterspout whirling around at a lively rate about a half mile away. The clouds seemed to bend down and catch the water as it was carried around and upward by the whirlwind. The phenomena is awfully grand, and is interesting to behold, in spite of its dangerous character. The general course of the wind was almost directly from the waterspout to our boat, and we were all figuring hastily on the best course to pursue in case of a capsize, when the spout veered off southward to the Gulf, passing directly over the spot where we had been fishing, and left us to pursue our course undisturbed.—*Crawfordville East Coast Breeze.*

Mr. W. F. Wilson, who lives out on the Middleburgh road, brought to the *Spring* office on Thursday the account of an attack made by a tiger on his son, Berrian Wilson, and Mr. T. C. Smith, teacher of the New Hope school, on last Tuesday night. They were going from the home of Mr. James Conway to Mr. Wilson's, and when they reached Bradley's Creek the tiger rushed up to the side of the road and growled at them. He then left the road, but circled around and came back to it some distance in advance of them, and lay down by a log not more than 4ft. from the road, and afterward he made another attack on them, appearing this time very near to them and gnashing his teeth at them, as if in an effort to get hold of them; but Mr. Smith understood something of the nature of the animal, and bravely faced him, which is probably all that saved them. They then hurried on to the house and aroused several of the neighbors, who secured their guns and dogs and went in search of his tigership. He was not found, however, as they could not get the dogs to trail him, though his tracks were found very clearly imprinted on the sand. Mr. Wilson requests us to extend an invitation to any who have dogs to go out and take an extended hunt for the animal, and says that it shall not cost them anything while out there, as he is very anxious to rid the community of this dangerous creature.—*Green Cove Spring.*

THE BLACK BASS.

(From the Chicago Record.)

The black bass shot from his rocky nook
In the beech tree's somber shade,
And he struck at the gayly spangled hook,
And the bamboo bent and swayed;
And it's oh! the joy and the heart of it,
And the throb of the spirits high,
And the whirling line and the pole's incline
And the lusty fight ere the prize is mine.
Who is there can picture a part of it
When the black bass takes the fly?

The black bass flashed like a meteor
Straight out where the far depths were,
And I eagerly watched and waited for
The check of the reel's wild 'whir-r!"
And it's oh! the lust and the life of it,
And the straining of hand and eye,
And the frantic fight, and the test of might,
And the pitiless rapture and keen delight,
When the black bass takes the fly.

The black bass, wearied, and worn, and done,
Came in at the wind of the reel,
And the fight was won as it must be won
When a good man feathers the steel;
And it's oh! the satisfied peace of it,
And the gentle, triumphant sigh,
And the pipe's sweet smoke by the shading oak—
My patron saint, thy love I invoke;
Preserve my luck—with increase of it—
When the black bass takes the fly.

Little Bobby—"Ananias was killed, wasn't he, pop?" Little Bobby's Father—"Yes, Bobby." Little Bobby—"For lying, wasn't it?" Little Bobby's Father—"Yes, Bobby." Little Bobby (after a long pause)—"How big did he say the biggest one was he caught?"—*Unknown Exchange.*

Boston Fishermen.

BOSTON, Sept. 4.—The fall fly fishermen are beginning to be anxious, and are off, or soon will be. Mr. F. S Dexter and Mrs. Dexter are booked for Kennebago, as usual. Miss Ada Sherma, of Boston, their guest, has made a good trout record, according to the papers. H. W. Smalley, of South Framingham, writes a friend here that his trip to Seven Ponds was not very satisfactory, by reason of too much rain and high water. But he came back to Kennebago, and fished Kennebago Stream as well, with remarkably good success. He took twenty-four trout, the united weight of which was 60lbs. He landed two trout on one cast, weighing 3 and 4lbs. respectively; a very hard cast to beat.

Mr. Frank F. Dodge is out from his camp at Lake Bahio, Nova Scotia. It has already been mentioned that he went down there recently, with Mrs. Dodge, for the purpose of bringing home his two boys, who have been spending their vacation there. But, like getting the children safely to the circus and back, it often takes both parents, two aunts and their Sabbath school teacher. Mr. and Mrs. Dodge both went fishing and caught trout, the madam leading the catch with the largest, as it should be. The boys caught something like 180 trout during their trip, taking no more than they required for their camp table. On the last day Mr. Dodge and his son were fishing near each other when the father struck a trout. Immediately the hooked fish became entangled in the boy's line, when the father directed him to ease up on his rod till the fish was landed. This done, the attempt to untangle the son's line was made, when it was found to be fast to something, and it proved to be a handsome trout weighing nearly 2lbs., the best catch of the day. Mr. Dodge and his boys are delighted with Lake Bahio, and will take the first opportunity to be there again.

SPECIAL.

Boiled Octopus.

A BRITISH COLUMBIA correspondent writes that being on a cruise and going ashore to wait for the weather to moderate, "I found an old Indian camped waiting for it to calm down. He was boiling a piece of devilfish (octopus) that he had taken from the rocks with a gaff. He offered me some and said it was very good. I felt rather dubious about it, but tried a small piece out of curiosity, and finally made a hearty meal of it. After the arm is skinned it looks very much like a parsnip. After dinner, in passing his canoe I saw some queer-looking things wiggling in the bottom which turned out to be some more of the arms, and though they had been cut off for hours they were still alive."

FIXTURES.

BENCH SHOWS.

Oct. 4.—Danbury, Conn., Agricultural Society. G. M. Rundle, Sec'y, Danbury.

FIELD TRIALS.

Oct. 25.—Brunswick Fur Club's ninth annual trials.
Nov. 1.—Dixie Red Fox Club's third annual meet, Waverly, Miss.
Nov. 1.—New England Beagle Club's trials, Oxford, Mass.
Nov. 2.—Monongahela Valley Game and Fish Protective Association's trials, Greene county, Pa.
Nov. 8.—Union Field Trials Club's trials, Carlisle, Ind.
Nov. 9.—Central Beagle Club's trials, Sharpsburg, Pa.
Nov. 9.—Peninsular Field Trial Club's trials, Leamington, Ont.
Nov. 15.—E. F. T. Club's trials, Newton, N. C.
Nov. 16.—International Field Trials Club's eighth annual trials, Chatham, Ont.
Nov. 22.—U. S. F. T. Club's autumn trials.

1898.

Jan. 10.—U. S. F. T Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

THE CONTINENTAL FIELD TRIALS.

THE open stakes of the third annual field trials of the Continental Field Trials Club, were run at Morris, Man., beginning Sept. 1. It was demonstrated during the trials that the great overflow of the Red River last Spring, had seriously affected the chicken crop. The prairie in and about Morris, which is so high above the river at the present time as seeming to be forever safe from inundation, was some feet under water in places, and the streets of Morris were then navigated in skiffs. On the adjacent sections of prairie which were so high as to be above the overflow, there was also found to be dearth of chickens. The trials, moreover, were not supported with entries to the extent that they deserved, consequently the club had to face a deficit, a small one it is true, but a deficit, nevertheless. On the whole it was not encouraging.

Mr. W. S. Bell, of Pittsburg, famous as a field trial judge, attended to the judicial part of the trials without any assistance—a most arduous task. His awards were pleasantly accepted. Mrs. Bell accompanied and drove for him, managing the horse and carriage with the skill of a trained reinsman.

There were few visitors, the Canadian sportsmen manifesting no interest whatever, save that shown by Mr. G. B Borradaile, of Winnipeg, who was present in person throughout. Mr. and Mrs. Clarence Draper and Prof. Edm. H. Osthaus, of Toledo, and Miss L. Cavileer, of Pemlina, N. D., were present part of the time to witness the competition. Owing to the scarcity of birds, the trials were uninteresting to witness, and unsatisfactory as a competition.

Nearly all the dogs were in the pink of physical condition. Mr. Rose, in particular, won much praise for the extraordinary good condition of his dogs.

The weather was so hot and dry that only the most enduring dogs could run even a short time without great distress or being so blown that a shortened range resulted. Frequent watering was a necessity. With few birds to reward so much effort, the wonder is that the dogs sustained their interest and industry as well as they did.

The puppies were an excellent lot, but needed more experience.

The Blue Ribbon Stake.

This stake was formerly called the Derby. There were nine starters in it. The quality of the competitors was higher than the average, and several of them showed that they had superior material in them which only needed experience to develop properly.

This stake was for setters and pointers whelped on or after Jan. 1, 1896. Entries closed May 15 with $10 forfeit; $5 additional forfeit payable July 15, and $5 to start. The purse was $650, of which $125 went to first, $100 to second, $75 to third and $50 to fourth.

Following is the order of drawing and other information:

W. N. Kerr's b., w. and t. English setter dog Count Edwards (Count Eric—Ann), Geo. Richards, handler, with Dr. M. F. Rogers's b., w. and t. setter bitch Pearl R. (Sam Gross—Donnashey), D. E. Rose, handler.

Del Monte Kennels' o. and w. English setter bitch Minnie's Girl (Antonio—Minnie T.), Frank Richards, handler, with Dr. L. C. Bacon's b., w. and t. English setter bitch Alice K. (Anto Gladstone—Speckle Gown), R. L. Alexander, handler.

Dr J. R. Daniel's l. and w. pointer dog Sam's Beau (Plain Sam—Dolly Dee II.), Geo. Richards, handler, with John Myers' l. and w. pointer dog Chisholm (Von Gull—Croxie R.), D. E. Rose, handler.

Tobasco Kennels' b. and w. setter bitch Hurstbourne Joel (Tony Boy—Bonnie Belle II.), S J. McCartney, handler, with Wm. Elliott's l. and w. pointer dog Doctor Tassie (Hal Pointer—Kent's Star), Geo. Richards, handler.

J. J. Odum's b., w. and t. English setter dog Sport McA. (Tony Boy—Blue), D. E. Rose, handler.

First was won handily by Pearl R. She was the only competitor which showed ability to work properly on birds under general conditions. Her point work was by far the most finished and accurate, and she worked her birds with greater skill. Her range was but moderately wide, though she beat out her ground with judgment.

All the other winners showed rawness in their bird work. Some would point under certain combinations of circumstances, others could road and locate under favorable conditions, and none were reliably stanch. While there was good quality in the puppies, there was a general lack of discipline in their performance on birds, as was to be expected so early in the season.

Sport McA., second prize winner, was the widest ranger of all, and he showed remarkable stamina. He did not work at all times to the gun, and his point work and stanchness were most uncertain. Had he had the finish which will come with more training and experience, he would easily have been first in the take.

Doctor Tassie, third, displayed some excellent ranging ability, which was not well sustained, and his finding and pointing were very erroneous.

Minnie's Girl, fourth, was closely pressed by several others, and her place came to her chiefly not because of the meritorious work she had done, but because she had done less undesirable work than several others. She has a labored way of galloping, and her locating is awkwardly done. Her range, too, was poorly sustained.

Wednesday.

The weather was clear, and though there was a cool morning and evening, the day was warm. The dogs which ran nearest the midday hours had much the most difficult work. Birds were scarce, and consequently the trial was a punishing one in the way of hard work

COUNT EDWARDS AND PEARL R. were cast off at 7:45. Pearl roaded nicely down wind in flax, pointed the bevy nicely and did a clever piece of work. She was diligent and displayed good judgment. Her range in this heat was but moderately wide. Count pottered on the footscent of sparrows, and also frittered away much much time on gophers. His range was narrow, excepting a few irregular casts he made without much purpose. Up at 8:31.

MINNIE'S GIRL AND ALICE K. began at 8:34. Alice pointed a single in grass, but her handler seemed to think there was no bird. The bitch went on and the bird flushed. Alice next stopped to a point on a bevy, at the same time flushed wild Sent on. Minnie made game. Alice pointed a single. She moved on and flushed. Several other birds flushed about her. Minnie was pointing in the meantime. Alice was handled very unskilfully. Minnie ranged wide, but beat out her ground with poor judgment. Alice worked diligently, but her range was only moderately fair in width. Up at 9.

SAM'S BEAU AND CHISHOLM started at 9:02. Both went fast and worked well. Each had a dashing way of going. Chisholm in the latter part of the heat was going quite plainly the wider and covered the most ground. Their bird work was ragged, the errors seeming to be from inexperience. Beau flushed some birds, and next Chisholm flushed a single bird and pointed one. Both made game, but found nothing. Chisholm flushed a single, and Beau was somewhat unsteady. Next Beau pointed three birds well. The heat ended at 9:51. Both maintained their speed well to the finish. They showed a high class of natural ability.

HURSTBOURNE JOEL AND DOCTOR TASSIE were cast off at 10:00. Joel wasted much time on false scents. Doctor ranged wide and fast, used his nose constantly, and ranged well to the gun. He flushed a single. The temperature had become very warm, and birds were difficult to find, and difficult to point when found. Aside from the matter of finding and pointing, Doctor made a very superior showing. Joel ranged narrow and covered but a moderate area of ground.

SPORT McA ran alone, beginning at 10:50; down 36 minutes. He ranged well, and he showed good ability in his work on birds, though, as was to be expected so early in the season, his work was lacking in finish. He failed to locate some marked birds on which he was worked, and pointed some others, making a good find and point on a bevy. His range was fairly good, and his capabilities were very much above the average. The temperature was very warm.

This ended the forenoon's work, and the party went to town for lunch. Work was resumed about the middle of the afternoon. Birds were extremely scarce.

Second Round.

Seven were kept in in this round.

PEARL R. AND MINNIE'S GIRL were started at 3:16. Minnie roaded nicely to a point on a bevy. Pearl at the same time was making game, but she failed to locate before Minnie had the point on the birds. Up at 4:01. Pearl stayed out better at her work, and her range was more skillfully conducted. In this respect she made an excellent competition. Minnie's showing was the better on the single opportunity available, which was largely a matter of accident, when such diligent seeking as Pearl applied herself to was without any finding of birds. The scarcity of birds made severe work for the best dogs. Minnie shortened her range toward the end of the heat, and showed signs of fatigue.

CHISHOLM AND DOCTOR TASSIE were cast off at 4:02 and ran till 4:37. Doctor ranged wide and fast and with excellent judgment, using his nose constantly and keeping his mind on his work. Chisholm lessened his efforts gradually, and was ranging comparatively close in toward the end of the heat, though he went fast and wide in the beginning. Doctor made two good points on birds, Chisholm made one.

ALICE K. AND SPORT McA. started at 4:41. Sport made an excellent display of wide ranging conducted with good judgment, though the scarcity of birds prevented him from making the showing on them which his industry deserved. Sport made a point to which nothing was found; Alice refused to back. Sport roaded nicely to a point on a single bird; Alice crowded up too close and the bird flushed. Alice made a point; nothing found. Up at 5:30. Alice at best had but a moderate range, though she covered her ground in a methodical manner. She gradually contracted her range till, at the end of the heat, she was working close to her handler.

SAM'S BEAU had a bye and was run alone, beginning at 5:32; down 50 minutes. He flushed a single in wheat, and the two remaining birds flushed wild. Next he pointed a single bird well, and was steady to shot. He worked diligently, ranged wide most of the time, and showed excellent judgment in beating out his ground.

Thursday.

The weather was pleasant and a warm, stiff breeze blew steadily. Mosquitoes were less troublesome. Birds were difficult to find. The work of the Derby competitors was decidedly inferior. Nearly all the dogs ran in bad form, and either made bad blunders or misbehaved on birds.

Third Round.

Six dogs were kept in in this round.

SPORT McA. AND DOCTOR TASSIE were cast off at 7:23. Sport flushed a bevy. He chased twice. Doctor flushed twice. Sport was drawing on a bevy when Doctor swung in ahead and pointed it. Doctor made several flushes in succession, then pointed a single nicely. Up at 7:52. Doctor was not ranging up to his performance of the previous day. He was careless in his bird work. Sport was ranging fast and wide, but he was very uncertain in his point work. He showed merit, but he needs more discipline.

PEARL R. AND SAM'S BEAU started at 8. Pearl flushed a single excusably down wind, then flushed another up wind. Beau flushed some scattered birds. Pearl, ranging nicely about 300yds. away, pointed a single bird nicely, going to it with nose well up, and holding her point stanchly till her handler went to her. She was steady to shot. Up at 8:35. Both started slow. Beau loafed through the first part of the heat. He seemed to have lost interest in the search. Pearl was going wide in the last part of the heat, and her last find and point were perfect pieces of work.

MINNIE'S GIRL AND CHISHOLM began at 8:38. The heat was a succession of blunders on birds. Each was not properly steady to wing. Minnie made two points out of the numerous opportunities afforded. She was tired toward the close of the heat and showed signs of quitting. Chisholm was going far the wider, but with no judgment.

Final.

PEARL R. AND SPORT McA. were started at 9:20 and they ran 19 minutes. Sport flushed a single, and Pearl pointed on footscent some moments afterward. Sport ranged wide and fast. Pearl's range was but moderately fair, yet she worked with better judgment and observed proper consideration of the gun.

The Excelsior Stake.

This stake was formerly called the All-Age Stake, and was for setters and pointers which had never won first in an All-Age Stake in any recognized field trial in America. There were three prizes, namely, $125 to first, $100 to second, and $75 to third. Entries closed Aug. 1, with $10 entrance and $10 additional to start.

There were nine starters, drawn as follows:

Edward Gray's b., w. and t. English setter dog Count Robert (Count Eric—Ann), Geo. Richards, handler, with Hobart Ames's b, w and t. English setter bitch Christina (Blue Ridge Mark—Lou R.), D. E. Rose, handler.

Eldred Kennels' b., w. and t. English setter dog Tony Gale (Antonio—Nellie G.), D. E. Rose, handler, with A. C. Reed's b. and t. English setter bitch Swab (Manitoba Toss—Pitti Sing), owner, handler.

F. W. Dunham's lem. and w. pointer dog Elgin's Dash (Kent Elgin—Mack's Juno), D. E. Rose handler, with Edw. A. Burdette's b., w. and t. English setter dog Cincinnatus Pride (Cincinnatus—Albert's Nellie), George Richards, handler.

Edward A. Burdette's b. and w. English setter bitch Anne of Abbottsford (Gladstone's Boy—Bohemian Girl), George Richards, handler, with Del Monte Kennels' b., w. and t. English setter dog Sam T. (Luke Roy—Bettie B.), Frank Richards, handler.

S. P. Jones's b., w. and t. English setter dog Hurstbourne Zip (Tony Boy—Dimple), D. E. Rose, handler.

Anne of Abbottsford, first, displayed a superior dashing range, good judgment in conducting it, and her work on birds, though necessarily limited in consequence of the scarcity of birds, was of a good class. She made an excellent showing considering the poor opportunities.

Elgin's Dash also had a wide range, and was also commendably industrious. He worked with much spirit and he repeated his heats with unimpaired endurance. He showed rawness and lack of experience in his point work. With more experience he should be a first-class performer.

Christina ran an even, pretty race. She divided third with Sam T. Her showing was far superior to that of Sam. She had excelled him incomparably in the quality of her work on birds, and in the precision of her work also. She did not fiddle on false scents and false point as he did, nor follow her competitors, and she beat out her ground with more uniformity and with better judgment. Sam, on his showing, was better dropped out of the running after the second round. All that gave him any standing in the awards was his find in his heat with Christina, and her shortening of range from being blown toward the close of the same heat. As to the class of work he was not in it at all compared to her.

First Round.

When the Derby was concluded on Thursday the All-Age stake was immediately begun.

COUNT ROBERT AND CHRISTINA were started at 9:42, Christina was much the faster and she had a very useful, wide range. Her manner of working to the gun was good. She found and pointed a bevy nicely. Count false pointed several times, and he had but moderate speed and range. The heat ended at 11:10.

The party went to town to lunch. The afternoon was a wearisome search to no purpose. Many dogs were worked almost to a standstill with only nine chickens, one small bevy of seven and two old birds, as a reward for the work. There was a stiff, warm wind blowing, and whether the weather conditions were unfavorable, or whether the dogs were unfortunate, not a point was made on the few birds

found in the miles of ground worked over during the afternoon. The running determined nothing whatever beyond the matter of endurance in a general way, for there was such a difference between the weather conditions of the heats that they were affected accordingly.

ELGIN'S DASH AND CINCINNATUS PRIDE were cast off at 3:05. They ran 53 minutes. Pride, toward the last of the heat, run under a broiling sun, though there was a good breeze above the grass, showed an inclination to quit. Dash ran wide and fast but used little judgment in beating out his ground. He, too, was quite ready to quit before the heat ended.

ANNE OF ABBOTTSFORD AND SAM T started at 4:04. Anne flushed a bevy, and Sam flushed two. Anne flushed a single and was not steady. Sam false-pointed. Anne was the better ranger. Both had all the work they cared for when the heat ended. Up at 4:58.

HURSTBOURNE ZIP, the bye dog, was cast off at 5:09. He made an excusable flush on an old bird. He pointed very steadily two different times, making game and pointing repeatedly on the last occasion, but nothing was found. He quartered his ground very regularly, to and fro, across wind, beating it out unnecessarily close, and his range was much shorter at 6:14, when he was ordered up, than it was in the beginning.

This ended a most unsatisfactory day's work.

Friday.

An early start was made, so that the dogs would have the benefit of the early hours, the best of an unfavorable morning. There was a stiff south wind, but it was warm, and the sun shone clear and hot most of the time. Birds were scarce, so much so that nothing definite could be determined as to the ability of the competitors in pointing and locating.

All the work was inconclusive excepting the dogs' range, pace and judgment. Each heat so far as birds were concerned was much like every other. The dogs were cast off; they worked more or less diligently over broad areas; the sun shone hot; there was a glamour of heat over the shining grass, and—no birds.

All the dogs were taken into the second round, as was very proper to do, the first one being inconclusive. Owing to the scarcity of birds, it was impossible to make it otherwise.

Second Round.

COUNT ROBERT AND TONY GALE were cast off at 6:56. Count's work on birds showed inaccuracy and indecision. Tony also pointed inaccurately. His range was but moderate and was poorly planned. Count ranged both wide and narrow as the humor seized him. Up at 7:27.

CHRISTINA AND SWAB began at 7:29. Swab's roading and pointing work were inaccurate and very ordinary in quality at their best. Both ranged diligently, though Swab was given a lot of coaching and urging to keep her at a reasonably wide range. Christina showed the best range and judgment. Up at 7:56.

HURSTBOURNE ZIP AND CINCINNATUS PRIDE started at 8:01. Zip pointed a bevy and was backed. The sky had become temporarily cloudy, and the weather was cooler for the time being. Zip, going across wind, flushed. Both ranged wide. Zip did not range with the best of judgment. Pride was a good deal blown at the end of the heat. Up at 8:31.

ELGIN'S DASH AND SAM T. began at 8:37. Sam did not range independently much of the time. He either followed Dash or played satellite to him. Dash made a flush. Next he pointed, roaded on, but failed to locate. The bird flushed wild. Sam had no method in his ranging. He went at it hit or miss. A bevy was seen to flush near Dash, but a depression in the prairie hid him from view for the moment. Dash showed rawness in his work on birds. His range was wide, his speed high, and he exercised good judgment in beating out his ground. Up at 9:10.

ANNE OF ABBOTTSFORD began her bye at 9:14. She immediately began ranging wide, and with judgment. At the end of a long cast, she pointed a bevy, and held her point stanchly till her handler walked to her. She then ranged wide, and made some excellent searching for birds, which was without any reward in the way of finding. Up at 9:40.

Third Round.

Six dogs were kept in, of which Count Robert, Swab and Sam T. could have been left out without any injustice being done. The competition should have been settled without further running, or at least it was only necessary to run first and second together to conform technically to the rules. There were no birds, the weather was hot; the dogs had shown their full capacity as rangers, and also gave such display of bird sense as they possessed. Nothing whatever could be demonstrated by further running, excepting which dog would quit first; and as they had not run equal lengths of time, nor in the same hours, the matter of quitting first was of no value as a test.

COUNT ROBERT AND SWAB started at 9:45. Robert chased. He next made a point; nothing found. Up at 10:05. Robert ranged wide in the first of the heat. There was nothing high-class in their work, and they displayed no more ability than they were already known to possess.

CHRISTINA AND SAM T. were cast off at 10:09. Sam found and pointed a bevy well and Christina backed well. Both were steady to shot. The weather was now very dry and warm. There was no moisture on the ground or in the wind. Both ranged well. Near the end of the heat Christina shortened her range a great deal and was hot and blown. Sam was going well. Christina flushed a single excusably.

ELGIN'S DASH AND ANNE OF ABBOTTSFORD began at 10:30 and ran till 10:50. Just what was to be determined was difficult to perceive. It was impossible to secure any work on birds, and Anne had previously shown she could beat the pointer in bird work, and was quite his equal in range and speed, with better judgment displayed generally. Both were ranging narrower at the end of the heat, Anne being a good deal blown and distressed. She showed an inclination to quit once or twice, but on being watered resumed work.

This heat ended the running.

Danbury Show.

THE sixteenth annual bench show of the Danbury Agricultural Society will be held at Danbury, Conn, Oct. 4. Mr. James Mortimer is to act as judge, and Mr. Oldham, of New York, as superintendent, and Spratts Patent are to bench and feed. Exhibitors are assured of an up-to-date show. The New England R. R. and the Adams Express Co. have offices on the grounds, which is a great convenience. Entries will close Sept. 27, with G. M. Rundle, Secretary, Danbury.

CONTINENTAL FIELD TRIALS.

Northwest Stake.

BROWN'S VALLEY, Minn., Aug. 25.—The Minnesota Derby of the Continental Field Trials Club (amateur event) began this morning. It had four starters, as follows: F. A. Bush's liver pointer bitch Bird with L. C. Bacon's black, white and tan setter bitch Alice K., and J. E. Mill's red Irish setter dog Jack with S. A. Smart's black, white and tan setter bitch Queen Esther S.

The weather was clear and bright, with a cool breeze blowing from the south. While the sun shone with warmth, the breeze tempered it so it was not oppressive to the dogs, and the competition could have been continued throughout the day.

W. S. Bell, of Pittsburg, Pa, judged.

There was a large attendance at the trials, which at times pressed too closely upon the judges and handlers, but was good-humored, and the best of feeling prevailed. Among those present were: Prof. E H. Osthaus, Toledo, O.; C. E. Dickey, E. D. Brown, Minneapolis; S. A. Smart, L. C. Bacon, St. Paul; Mr. and Mrs, W. S. Bell, Pittsburg; J. M. Taylor, New York; E. F. B. Hayman, Chicago; Messrs. Alexander, Campbell, Kelly, Bush, Mohr and Mills.

A late start was made, owing to the drawing not taking place until the morning of the start. The grounds are situated in South Dakota, in the reservation, and are nicely adapted for trials, but unfortunately the game law is a dead letter, the Legislature having failed to place a penalty in the enactment, which makes it without force, and the over-anxious and game law violators have taken advantage of this, the chickens are shot out, though the season is not yet open. After a pleasant drive of about two miles the first brace was put down at 8:45.

BIRD—ALICE K. were put down in prairie and worked north toward stubble after a run of fully half an hour. Alice K. wheeled to a point; moved on to locate; pointed again and again moved to locate—good work on her part. She again just established her point when Bird, across wind, flushed an outlying chicken when the bevy flushed; both dogs steady. Dogs sent in direction of the flushed birds; Alice K. found and pointed. Bird, getting too close, flushed. Dogs ordered up at 9:25.

JACK—QUEEN ESTHER S. started at 9:39 and ran until 10:27. Jack got into the middle of a very large bevy which flushed, Queen Esther not being near. Birds were followed, both failing to take advantage of opportunities. A turn was now made toward town, a bird flushing wild, when the dogs were ordered up, and the first brace of the All-Age stake were put down and ran from 10:30 until 11:16, after which adjournment was had for dinner. During the noon recess the Brown's Valley Gun Club held a shoot at bluerocks. At 2:30 a start was made after an hour's drive due west, the first brace in the second series was put down in grass and worked south.

ALICE K.—JACK started at 3:51. Soon a single bird flushed wild; Alice K. coming up caught scent, pointed, moved on to locate and cast off across wind. After a short run in stubble Jack flushed two birds. He then circled around and coming up wind flushed the remainder of the bevy; and following in direction of birds Jack again flushed two of the scattered birds steady to wing. He next pointed where birds had flushed. Alice K., coming up, caught scent and roaded to a flush. Ordered up at 4:22.

BIRD—QUEEN ESTHER S. down at 4:24. Queen Esther started well and soon wheeled on scent when she roaded to a point on a bevy. The birds were not followed. Both narrowed their range, Bird nosing continually. Ordered up at 4:52. Two brace of the All Age stake were put down to give the Derby dogs a rest until the following day.

Thursday.

The weather was clear and bright, a strong wind blowing from the north. A start was made about six miles south of Brown's Valley. Alice K. and Queen Esther S were put down in stubble at 8 o'clock and ran until 8:09 to comply with rule of first and second having run together. The judge then announced the winners: Alice K. first, Queen Esther S. second, Jack third.

Alice K., the winner, is a very quick, merry worker, going with a high head, deciding very quickly on scent; her work is clean and accurate, with good pace and range maintained throughout.

Queen Esther S. has good natural qualities, at times showing timidity. She has good pace and range and with more age and experience will make a better showing.

The first brace of the All-Age dogs were put down at the conclusion of the first series in the Derby.

QUEEN VIC—SILKY B. started at 10:30 and ran until 11:16. Queen Vic pointed; nothing found. Just before they were ordered up Silky B. pointed, and Queen Vic, brought up to back, passed in ahead to a flush. Queen Vic was best in pace and range and remained out better at her work. Silky B. was narrow in range and looked to handler too much for orders, coming in and thus wasting time and energy.

Returning to town for dinner, a start was not made until 2:30, during which time a shoot was given at the grounds of the Brown's Valley Gun Club.

CLARKE'S MAJOR—NELLTONIO were cast off at 4:54. Major ran about 50yds and pointed, but failed to locate, as nothing was raised to his point. After he cast about and passed on, a chicken was flushed by the teams near the place. A run of fully half an hour with nothing found, when Major up wind flushed two chickens; he circled about and flushed another and stopped to flush. The handler coming up, flushed a remaining bird. Nelltonio was best in pace and range, maintaining both throughout. Up at 5:49.

BELLE NOBLE—KELLY'S SHOT were cast off at 5:52. Belle started at a clipping pace and was soon on point, held for Shot to be brought up, which was too long; the birds evidently ran away, as nothing was raised to the point. Shot narrowed his range and was running lame when ordered up at 6:50. The party returned to town.

Thursday morning, at the conclusion of the Derby, the All-Age stake was resumed.

BELLE—CLARKE'S DUKE started at 8:18. Both started well. Duke soon narrowed his range and returned to his handler frequently. After running half an hour Duke up wind flushed one bird when a bevy rose a few paces to the left; he was steady to wing. Following scattered birds, Belle pointed steady to wing and shot. Belle made best competition yet seen, and if she sustains herself she will be close to the first place. Duke's performance was ordinary, though at times he ranged well and wide. Up at 9:05.

ALICE K—FANNY MAY started at 9:07. Alice K., the winner of the Derby, started well, in fact, improved over her previous performance, and soon pointed a bevy, which were flushed, but not followed. Fanny May ran a poor race, being fat and out of condition. Up at 9:39.

DUKE III.—MOLLY PITCHER ran from 9:42 until 10:32 without finding. There is nothing in their performance to entitle them to further consideration.

MONK'S DASH—a bye—started at 10:34, ranged well and hunted out his ground, maintaining his pace throughout. Across wind he flushed a chicken, dropping to flush. Up at 11:16.

A drive of five miles brought the party to town for dinner. At the hotel the second series was announced as follows: Nelltonio with Belle; Bell Noble with Clarke's Duke; Silky B. with Alice K.; Queen's Vic with Monk's Dash.

NELLTONIO—BELLE were cast off at 3:20. Nelltonio flushed two birds in standing grain; the course was changed toward the north, with wind favorable. Nelltonio flushed a bevy in stubble. Belle sustained herself, staying out at her work. Nothing more was found. Up at 3:57.

BELLE NOBLE—CLARKE'S DUKE started 4:01 in large stubble. After a long run Duke pointed, Belle Noble backing. A large bevy was flushed. On scattered birds, Belle pointed two singles and Duke one, Belle going best and ranging widest. Up at 4:57.

SILKY B.—ALICE K. started 4:57. Alice K. ran in improved form; in fact, every time down she improved, and will make a position well up in the stake if she maintains her pace; she is a cheerful worker. Up at 5:47.

QUEEN VIC—MONK'S DASH started in stubble at 5:50. After a run of almost an hour, in which nothing was found, the dogs were ordered up at 6:47 with nothing to their credit for further consideration in the competition. This ended the work for the day.

Friday.

The dogs taken into the third series were Belle with Belle Noble, and Alice K. with Clarke's Duke.

BELLE—BELLE NOBLE were cast off at 8:07 in open prairie and worked toward stubble. Belle Noble, in stubble, flushed a chicken, dropping to flush. Three more flushed. Belle, coming up, caught sight of Belle Noble and drew to a back. Dogs ordered on, when she drew to a point on a remaining chicken. Ordered up at 8:47. A move was now made into other territory, more favorable ground, and with wind more favorable.

ALICE K.—CLARKE'S DUKE started at 9:03 in grass and worked into stubble. Duke pointed and Alice backed. Nothing found. Ordered on, Alice, ranging well in edge of prairie, hesitated a moment, when Duke coming in across wind flushed a single bird. A short run and ordered up at 9:27, Alice having the best of the competition.

The judge announced he wanted Belle with Alice K., allowing the handler twenty minutes' rest for Alice K. before going down in the final heat. He elected to start her at once, which was wise, as she did not exhibit any distress.

BELLE—ALICE K. started at 9:35 and ran until 9:50 in grass and stubble. Belle ranged out in fine form, hunting her ground independently and maintaining her former class of work throughout. Alice K. ranged well and wide; at times trailed Belle some.

The judge announced the awards: Belle first, Alice K. second, Belle Noble third, Clarke's Duke fourth.

The grounds are well situated, but a lack of chickens made the task a very difficult one for the judge, but he came out of the difficulty. Belle, the winner of first and the cup, is a black, white and tan setter bitch, heavily marked, a consistent performer throughout, and hunting out her ground with a purpose, was properly placed first. She is a bitch of much merit. Alice K., no doubt, with age and experience will be heard from later; she is remarkably quick and stylish, and busy every minute, deserving her honors.

Summary—All-Age.

E. D. Brown's liver and white setter bitch Queen Vic (Antonio—Nellie Bly) with Mohr Bros. black and white setter bitch Silky B. (Jeff Brown—Jip).

O. B. Clarke's lemon and white pointer dog Clarke's Major (Hansom Duke—Clarke's Gypsy) with C. E. Dickey's black, white and tan setter bitch Nelltonio (Antonio—Nellie F.).

C. M. Griggs's black, white and tan setter bitch Belle Noble (Click Noble—Georgia) with J. J. Kelly's liver and white pointer dog Kelly's Shot (Hansom Duke—Clarke's Gypsy).

O. B. Clarke's liver and white pointer dog Clarke's Duke (Duke of Richmond—Inez Kent) with C. M. Griggs's black, white and tan setter bitch Belle (Gladstone's Boy—Belle of Gladstone).

L. C. Bacon's black, white and tan setter bitch Alice K. (Anto Gladstone—Speckle Gown) with C L. Campbell's liver, white and tan setter bitch Fanny May (MacD.—Countess Noble).

Arthur Devonspike's black, white and tan setter dog Duke III. (Bon Bein—Elle Vitz) with L. C. Bacon's black, white and tan setter bitch Molly Pitcher (Antonia—Florence Gladstone).

W. H. Vittimo's black, white and tan setter dog Monk's Dash (Doc Quinn—Minnesota) a bye.

Summary—Derby.

L. C. Bacon's black, white and tan setter bitch Alice K., whelped Jan. 5, 1896 (Anto Gladstone—Speckle Gown), with F. G. Bush's liver pointer bitch Bird, whelped March 5, 1896 (Don Fishel—Basset Bird).

S. A. Smart's black, white and tan setter bitch Queen Esther S, whelped July 31, 1896 (Yound Llewellyn Hurd—Sally Kreiger), with J. E. Mills's red Irish setter dog Jack, whelped March 5, 1896 (Slick—I Forget).

The Honest Scot and the Queen.

THE queen was once informed by the manager of her Shaw farm that one Elliott, a Scottish farmer, was a breeder of superior collie dogs, and she expressed a wish to possess one. Accordingly, Mr Elliott forwarded two beautiful dogs, and her majesty was so enraptured with them that she gave orders that the next time he came to the farm he should immediatly be taken to the castle.

Mr. Elliott was somewhat uneasy as to how he should comport himself in the presence of royalty, and the manager spent considerable time in putting him through his facings. At last the fateful day arrived, and he was ushered into the presence of the queen.

Her majesty shook hands with him, and said: "Oh, Mr. Elliott, I have to thank you for the two beautiful collies you sent me!"

And to this gracious remark Mr. Elliott replied. "Touts, touts, wumman! haud yer tongue! What's the maitter o' a pair o' do-gs between you and me?"

DOGS AND THE S. F. P. C. A.

WE take from our esteemed contemporary *Our Animal Friends*, the organ of the S. F. P. C. A. in this city, the opinion of the court in a case recently decided, in which was involved the constitutionality of the law giving into the hands of the Society the licensing of dogs and the destruction of such dogs as are not licensed. The cases before the court were actions brought against the Mohawk and Hudson River Humane Society:

The Cases Before the Court.

FREDERICK FOX, Plaintiff, *v.* THE MOHAWK AND HUDSON RIVER HUMANE SOCIETY, Defendant.

MELVINE L. EVANS, Plaintiff, *v.* THE MOHAWK AND HUDSON RIVER HUMANE SOCIETY, Defendant.

(Supreme Court, Albany Trial Term, June, 1897.)

The two above-entitled actions were respectively brought by the owners of certain dogs within the corporate limits of the city of Albany who ask in their complaints that Chapter 448 of the Laws of 1896 be adjudged unconstitutional and void and that the defendant, its officers and agents, be restrained from destroying the plaintiffs' dogs.

By Section 1 of Chapter 448 of the Laws of 1896, it was provided that: "Every person who owns or harbors one or more dogs within the corporate limits of any city having a population of more than 20,000 and less than 800,000, where a duly incorporated society exists, or may hereafter exist, for the prevention of cruelty to animals, except in the city of Buffalo, shall procure a yearly license for each animal, paying the sum of $1 for each one."

The act further provides that the dog so licensed shall have a collar about its neck with a metal tag attached thereto bearing the number of the license. Such tag is to be supplied to the owner with the certificate of license. Dogs not licensed pursuant to the provisions of the act shall be seized, and if not redeemed within forty-eight hours may be destroyed or otherwise disposed of at the discretion of the society empowered and authorized to carry out the provisions of the act.

Any person claiming any dog seized under the provision of the act, on proving ownership, shall be entitled to resume possession on payment of $2.

The act further provides that the societies referred to are empowered and authorized to carry out the provisions of the act and to issue licenses and renewals and collect fees, "which fees are to be used by such society toward defraying the cost of carrying out the provisions of this act, and maintaining a shelter for lost, strayed or homeless animals, and for its own purposes." The act also provides that any person who shall hinder, molest or interfere with any officer or agent of such society while in the performance of any duty enjoined by the act shall be deemed guilty of a misdemeanor.

The plaintiffs claim the act to be unconstitutional for the following reasons:

1. It takes property without due process of law and without just compensation, in violation of Article 5, Section 1, of the Constitution of the United States, and Article 1, Section 6, of the Constitution of the State of New York.
2. It is an unauthorized exercise of the power of taxation.
3. It permits irresponsible persons without any badge of authority other than that employed by the Society for the Prevention of Cruelty to Animals to invade the residence or home of a citizen, and in case a person hinders, molests or interferes with any officer or agent of such society while in the performance of his duty, subjects such person to criminal liability.
4. It is a special city law, and has not been submitted to any municipal authority for approval.
5. It is a local act within the meaning of Article 3, Section 16, of the Constitution of the State of New York, and the subject is not expressed in the title as thereby required.

Opinions of the Court.

I.—DOGS AS PROPERTY.

CHASE, J.—Although the Constitution of the United States and the Constitution of the State of New York provide that a person shall not be deprived of his property without due process of law, and that private property shall not be taken for public use without just compensation, yet all the States of the Union recognize and exercise a certain power known as the police power of the State, to preserve and promote public safety and welfare. Police power is exercised by the Legislatures of the several States, and the Legislature determines when the public safety and welfare requires its exercise. Unless the Legislature, under pretense that it is essential to the public safety and welfare, arbitrarily exercises such police power the courts will not interfere with or restrain the carrying out of the provisions of such statutes.

The first question for determination in this case is whether Chapter 448 of the Laws of 1896 is a proper exercise of the police power of this State.

In this State dogs are recognized as property, and an action will lie for their conversion or injury. At common law the crime of larceny could not be committed by feloniously taking and carrying away a dog. Mullaly v. People of the State of New York, 86 N. Y. 365.

The United States Supreme Court very recently decided the case of Sentell v. New Orleans & Carrollton Railroad Company, 17 Sup Ct. Rep., being an action to recover for injuries to a dog in the State of Louisiana. The opinion of Mr. Justice Brown in discussing the nature of dogs and the right of the several States to pass statutes relating to dogs is so complete and accords so fully with my own views on the subjects discussed, that I quote from the same at length:

"The very fact that they are without the protection of the criminal laws shows that property in dogs is of an imperfect or qualified nature, and that they stand, as it were, between animals *ferœ naturæ*, in which, until killed or subdued, there is no property, and domestic animals, in which the right of property is perfect and complete. They are not considered as being upon the same plane with horses, cattle, sheep, and other domesticated animals, but rather in the category of cats, monkeys, parrots, singing birds, and similar animals kept for pleasure, curiosity or caprice. They have no intrinsic value, by which we understand a value common to all dogs as such, and independent of the particular breed or individual. Unlike other domestic animals, they are useful neither as beasts of burden, for draft (except to a limited extent), nor for food. They are peculiar in the fact that they differ among themselves more widely than any other class of animals, and can hardly be said to have a characteristic common to the entire race. While the higher breeds rank among the noblest representatives of the animal kingdom, and are justly esteemed for their intelligence, sagacity, fidelity, watchfulness, affection, and above all, for their natural companionship with man, others are afflicted with such serious infirmities of temper as to be little better than a public nuisance. All are more or less subject to attacks of hydrophobic madness.

As it is practically impossible by statute to distinguish between the different breeds, or between the valuable and the worthless, such legislation as has been enacted upon the subject, though nominally including the whole canine race, is really directed against the latter class and is based upon the theory that the owner of a really valuable dog will feel sufficient interest in him to comply with any reasonable regulation designed to distinguish him from the common herd. Acting upon the principle that there is but a qualified property in them, and that, while private interests require that the valuable ones shall be protected, public interests demand that the worthless shall be exterminated, they have, from time immemorial, been considered as holding their lives at the will of the Legislature and properly falling within the police powers of the several States. See cases cited in opinion. * * * Even if it were assumed that dogs are property in the fullest sense of the word, they would still be subject to the police power of the State, and might be destroyed or otherwise dealt with, as in the judgment of the Legislature is necessary for the protection of its citizens. That a State, in a *bona fide* exercise of its police power, may interfere with private property, and even order its destruction, is as well settled as any legislative power can be which has for its objects the welfare and comfort of the citizen. See cases cited in opinion. * * * Although dogs are ordinarily harmless, they preserve some of their hereditary wolfish instincts, which occasionally break forth in the destruction of sheep and other helpless animals. Others, too small to attack these animals, are simply vicious, noisy and pestilent. As their depredations are often committed at night, it is usually impossible to identify the dog or to fix the liability upon the owner, who, moreover, is likely to be pecuniarily irresponsible. In short, the damages are usually such as are beyond the reach of judicial process, and legislation of a drastic nature is necessary to protect persons and property from destruction and annoyance. Such legislation is clearly within the police power of the State. It ordinarily takes the form of a license tax, and the identification of the dog by a collar and tag upon which the name of the owner is sometimes required to be engraved, but other remedies are not uncommon. * * *"

As early as 1789 the Legislature of this State passed an act taxing dogs and providing that any person might kill a dog when found chasing sheep. From 1789 down to this time statutes have been passed from time to time relating to dogs and providing that dogs should be taxed, and also providing that dogs should be killed without notice to the owner when found chasing sheep, and at other times as provided in different acts See Chapter 22, Laws of 1789, and various other laws, from time to time, including the present "county law."

These statutes have been generally acquiesced in as a proper exercise of the police power of the State, and such exercise of power for more than 100 years is strong argument in favor of the right of the Legislature to exercise such power without violating the constitution. If the first contention of the plaintiffs is right, it would require the courts to hold that the Legislature referred to, and which has been acquiesced in during our entire history as a State, is unconstitutional and void. I cannot so hold. The right of the State in the interest of public safety and welfare to destroy property of trifling or little value, has been frequently recognized by our courts. The person whose property is destroyed is, in the theory of the law, compensated by sharing in the general benefits which the destruction is calculated to secure. Health Department *v.* Rectory, etc., 145 N. Y. 32; Lowton *v.* Steele, 119 id. 226; People *v.* West, 106 id. 293; People *v.* Havnor, 149 id. 195.

II.—DOG LICENSE NOT A TAX.

The purpose of the act is not to secure a revenue, but to prevent the running at large of ownerless dogs which have no provision made for their support, and which may become dangerous to the public by reason of their not having proper care and attention. The evidence shows that there are a large number of dogs on the public streets of the cities of this State that are or may become dangerous to human life. Payment of a license fee and the purchase of a tag as provided by the act is a condition precedent to the right to own or harbor a dog. In the absence of the compliance with this condition the dog is liable to be seized and, after a certain interval of time, destroyed as provided by the act. No provision whatever is made in the act for the collection of the license fee.

Where the general purpose of the act is not the raising of a revenue, but the regulation of a business or the restriction of the right to keep an animal that may become dangerous to the public and no provision is made for the enforcement of the collection of the license fee, but simply prohibiting the conduct of such business or the keeping of such animals unless the license fee is paid, the amount so to be paid is not a tax and is not governed by the provisions of the Constitution of the State relating to the imposition of taxes. Trustees of Exempt Firemen's Fund *v.* Roome, 93 N. Y. 313: People ex rel. Einsfield *v.* Murray, 149 id. 367; People *v.* Fire Association of Philadelphia, 92 id. 311.

III.—SOCIETIES FOR THE PREVENTION OF CRUELTY TO ANIMALS AS AGENTS OF THE POLICE POWER OF THE STATE.

Societies for the prevention of cruelty to animals or children are recognized in the general statutes of this State. They exercise certain public duties, and the service they perform is in part a public service.

The officers and agents of all duly incorporated societies for the prevention of cruelty to animals or children are declared to be peace officers within the provisions of Section 154 of the Code of Civil Procedure. Penal Code, Section 668.

Any agent or officer of any such society may arrest without warrant and bring before the court or magistrate having jurisdiction any person offending against any of the provisions of title 16 of the Penal Code.

Any person who shall interfere with or obstruct any such officer or agent in the discharge of his duties is guilty of a misdemeanor. Penal Code, Section 668.

The right of the Legislature to devote license fees to the benefit of a society having public duties, and which can be properly described as a subordinate governmental agency, has been recently upheld by our Court of Appeals. Trustees of Exempt Firemen's Fund *v.* Roome, 93 N. Y. 313. See Board of Underwriters *v.* Whipple & Co., 2 App. Div. 361.

THE ACT IS GENERAL: NOT LOCAL OR PRIVATE.

Section 2 of Article 12 of the Constitution provides: "All cities are classified according to the latest State enumeration, as from time to time made, as follows: The first class includes all cities having a population of 250,000 or more; the second class, all cities having a population of 50,000 and less than 250,000; the third class all other cities. Laws relating to the property, affairs of government of cities and the several departments thereof are divided into general and special city laws; general city laws are those which relate to all cities of one or more classes; special city laws are those which relate to a single city or to less than all the cities of a class. Special city laws shall not be passed except in conformity with the provisions of this section. * * *"

The act under consideration embraces all cities of the second class and part of the cities of the first and third classes. It does not relate to a single city or to less than all the cities of a class. It is neither a general or special city law, for the reason that it does not relate to the property, affairs of government of cities, or of the several departments thereof. People ex rel. Hobach *v.* Sheriff, 13 Misc. Rep. 587; People ex rel. Einsfield *v.* Murray, 149 N. Y. 367; People *v.* Havnor, 149 id. 195.

Article 3, Section 16, of the State Constitution, provides: "No private or local bill which may be passed by the Legislature shall embrace more than one subject, and that shall be expressed in the title."

The Court of Appeals, in construing Chapter 554 of the Laws of 1881, relating to all incorporated cities containing 100,000 inhabitants or upward, uses this language: "A law relating to particular persons or things as a class was said to be general; while one relating to particular persons or things of a class was deemed local and private. The act of 1881 relates to a class, and applies to it as such, and not to the selected or particular elements of which it is composed. The class consists of every county in the State having within its boundaries a city of 100,000 inhabitants, and territory beyond the city limits mapped into streets and avenues. How many such counties there are now, or may be in future, we do not know, and it is not material that we should. Whether many or few, the law operates upon them all alike and reaches them, not by a separate selection of one or more, but through the general class of which they are individual elements. The force of the law of 1881 is not localized in Kings county and confined to its territory. By its terms it applies equally to every other county which may prove to be within the constituted class."

In the matter of Church, 92 N. Y. 1, again the Court of Appeals, construing Chapter 449 of the laws of 1885, relating to all cities containing more than 500,000 inhabitants, uses this language: "Neither is the act a local or private one within the meaning of the section referred to. Such was the decision of this court in the matter of the N. Y. El. R. R. Co., 70 N. Y. 327, and in the matter of Church, 92 id. 1. This act is general in its terms, applying to all cities in the State, of a certain class, and to every corporation carrying on a business requiring the use of electrical wires or conductors in such cities. That the number of such cities is limited or restricted does not make the bill a private or local one, within the constitutional meaning and intent of these words, was expressly decided in the cases referred to." People ex rel. N. Y. Elec. Lines Co. *v.* Squire, 107 N. Y. 593.

The act under consideration is general in its nature. It relates to particular cities as a class. It does not relate alone to people residing in cities having a population of more than 20,000 and less than 800,000, except in the city of Buffalo. It relates to all people generally owning or harboring dogs in specified cities as a class. The exception of the city of Buffalo does not affect the character of the act. People *v.* Havnor, 149 N. Y. 195; People ex rel. Hobach *v.* Sheriff, 13 Misc. Rep. 587; People ex rel. Clauson *v.* Plank Road Co., 86 N. Y. 1.

All the objections raised to the act by the plaintiffs have, in my judgment, been substantially passed upon by the courts in this State adversely to the claim of the plaintiffs. The complaint of the plaintiff in each case is dismissed, with costs.

Complaint dismissed, with costs.

Dogs of the Day.—I.

THE barking of "Chief," the pet dog of Hook and Ladder Company No. 14, in East 125th street, angered and astonished the sleeping firemen about 4 o'clock this morning The man on house duty tried to quiet him, but could not. Capt. Terpery called down the chute in pretty strong language to silence the animal, but nothing could be done. The dog whined and barked till the man on duty went to the stall of Paddy, the old fire-horse of fifteen years' service, with whom Chief slept. Then the cause of the dog's unusual clamor was clear. The horse was covered with sweat and was trembling.

Dr. Myers, the superintendent of horses at the training stable, was summoned, and he treated Paddy for colic, while Chief licked the horse. Paddy was too old to recover. He died at 7 o'clock, and the dog howled over his body, following it to the street when it was removed. As the children came out, they gathered around, too, for they liked the old horse because he ate sugar out of their hands. The firemen let the dog howl; they understood.—*New York Evening Post.*

POINTS AND FLUSHES.

Mr. Norvin T. Harris, of St. Mathews. Ky., has returned from his wanderings in Europe and Africa.

The mosquitoes in parts of Manitoba have been so numerous, that they fairly swarm about men, horses and dogs, and probably other animals which have blood to let.

Mr. Frank Richards said that sometimes his dogs, when on point, would have a blond color from the mosquitoes which covered their surfaces. They were very active even in the midday hours. Horses were sometimes driven to desperation from the torture inflicted by these hungry pests.

I am a pretty regular reader of FOREST AND STREAM, and there is no paper with the same "tone" in the field. May it continue to be a source of pleasure and guidance to sportsmen for years to come.

J. K. ADAMS.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

---

GOOD WHEELS AND LUCKY RIDERS.

THE life of a good wheel is long or short, accordingly as the rider may make it; either the one or the other, by careful treatment or otherwise.

Careful treatment does not necessarily imply that the rider is to pick out only smooth and easy routes on days of sun shine; it does require that he ride his wheel with watchful care and good judgment. Two riders with equally good wheels may ride together over the same routes and one will harm his wheel more or less, while the other will go through without complaint or mishap. The one rides thoughtlessly, passing over stones, regardless of whether they are loose or firm, sharp or smooth, and on lumpy or seamy ground he goes straight ahead, regardless of the jolts and strains to which he subjects his wheel. He sits heavily, pounding it with his weight as if he were an inert mass instead of riding lightly and with becoming skill, and relieving the shocks thereby.

Greater force is necessary to pedal in careless riding, as in overcoming the obstructions or going over the rougher ground, the effort must be much greater than in riding when one avoids them. Sometimes the utmost power of the rider is necessary to force the wheel out of places which could easily have been avoided. There are thus constantly recurring heavy strains, and the intense straining and rough usage are all against the long life of the wheel. From such rough treatment wheels will become warped, or spokes bent or broken, the chain and sprocket will be worn out long before their time, and the repair shop will become prosperous from the careless rider's inefficiency.

In heedless riding, accidents will happen which result in broken wheels outright when the rider uses his feet alone. The best rider uses both head and feet. He scans the road carefully ahead, picks out the smoothest going, deftly passes

rocks, broken glass and other harmful things; and when on a path which has its little side hills and miniature hills and valleys, he rides so as to take every advantage, and avoid unnecessary shocks and strain.

And yet the careless rider seeks causes outside of himself. The careful rider is considered lucky; the many little accidents of himself are attributed to his ill-luck. The many visits to the repair shop are credited to the inferiority of the wheel. No wheel, be it ever so well built, if badly ridden and subjected to collisions with one thing or another, will remain sound. Though a wonderfully perfect mechanism, it will succumb quickly to ill-usage. It becomes old when it should be new, in the hands of the rider who rides only with his feet.

Although so airy and fragile in appearance, so delicately beautiful in its lines, and so powerful within proper limits, yet it quickly yields to the mastery of stupidity or carelessness. It is truly wonderful that it carries such great weights at all, yet there are riders who give no more thought to its considerate use than they would to the use of a hand-car.

Besides careless riding, there may be all the ills of neglect. Bearings are not oiled, and there results all the evils of rapid wear and laborious effort in riding; loose or broken spokes are left unmended, and the wheel twists out of true and becomes weaker; nuts are allowed to become loose, straining the mechanism and jeopardizing the rider's neck; and rust, sand and mud are permitted to contribute a supplementary harm to the owner's own carelessness or indolence. And yet the careless and indolent rider is prone to think that his vigilant brethren have better luck or better wheels. Let him use his wheel with care and intelligence, and he will find that luck is generally associated with those qualities.

Russia, by the way, has only recently developed into a cycling country. Up to February of the present year ladies were not allowed to ride on the streets of St. Petersburg, and without riders of the fair sex we can well imagine the sport would never reach its full bloom and development.

What would the Boulevard or the Coney Island Cycle Path be without the pretty girls!

Russia, too, is behind the times in requiring a license from riders. When applying for this license the cyclist must attach a photograph of himself, so that in case of an infraction of the bicycle ordinance he may the more easily be apprehended

One of the seventeen regulations each rider is forced to obey expressly forbids riding "without a coat or such a costume as would attract special attention." Bloomers are nowhere mentioned in the regulations, from which we are in doubt whether to infer that they are still unknown in Russia or that the latter part of the shirt sleeves section covers the case. The number of registered wheels in St. Petersburg is 7,000.

Permanently Humped.—"Our landlady had to lower the dining-tables three inches." "Why did she do that?" "Nearly all the boarders are scorchers."—*The Indianapolis Journal.*

Yachting.

The racing and measurement rules of the Yach Racing Union of Long Island Sound (the Seawanhaka rule, with allowance tables) can be had of Thompson & Co., 55 Dey street, New York; price 10 cents per copy.

The handbook of "Yacht Flag Etiquette" can be had of Rehm & Co., 157 Fulton street, New York; price 10 cents per copy.

YACHT RACING FIXTURES 1897.

The following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.

Races of the Sound Y. R. U. are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

SEPTEMBER.

M 11. Chelsea, Boston Harbor.
M 11. Y. R. A. rendezvous, Hull, Boston Harbor.
S 11. Riverside, fall race, 43, 36, 30 and 25ft. classes, and 30 and 25ft. classes of cabin catboats.
11 Winthrop, club, Winthrop, Boston Harbor.
11. Roy. Canadian, skiff class, Toronto, Lake Ontario.
11. Beverly, 5th cham., Wenaumet, Buzzard's Bay.
11. Burgoss, cham., sail-off, Marblehead, Mass. Bay.
11. Columbia, annual, open, Chicago, Lake Michigan.
11. Larchmont, schooners (Larchmont cup) and smaller classes, Larchmont, Long Island Sound.
11-12. Cor. San Francisco, cruise, Marin Islands, San Francisco.
S 18. American, fall regatta for all classes.
18 Queen City, 22ft. class, Toronto, Lake Ontario.
21. Absequan, open, Atlantic City.
24-26. Cor. San Francisco, cruise, Dillon's Point, San Francisco.
25. Buffalo, closing cruise, Lake Erie.
25. American, closing race, Newburyport.

OCTOBER.

9. Miramichi, Gould cup, Chatham, N. B.
9-10. Cor. San Francisco, cruise, Corinthian Cove, San Francisco.
16. Cor. San Francisco, closing day, San Francisco.
17. Cor. San Francisco squadron, cruise, San Francisco.

Mr. Charles F. Adams 2d has declared that he will not challenge for the Seawanhaka cup next year, nor build for the trial races should an American club challenge, his business preventing him from giving the necessary time to the work.

The annual regatta of the New York Y. R. A. on Monday was a failure, there being no wind in the Lower Bay. Only a few yachts had finished at a late hour, and no official returns were ready at the time of going to press.

Mayflower, steam yacht, sailed from Southampton on Sept. 4, bearing the body of her late owner, Ogden Goelet. The family came to New York by one of the liners.

By order of Com. J. Pierpont Morgan, N. Y. Y. C., the following has been issued by Fleet Capt. J. Beavor-Webb:

"On the day of the funeral of the late Capt. Ogden Goelet, of which notice will be given by the daily press, the club burgee will be displayed at half-mast from colors until sunset at the club house, at all stations and by all yachts in commission.

It is with deep regret that we learn of the death of a valued correspondent and old friend, Capt. Henry E. Bayly, which took place at his home in Exmouth, Eng., on Aug. 25. No particulars have reached us, but Capt. Bayly, who was well advanced in years, had been ill for a long time.

About thirty yachtsmen were present on Saturday evening at the Seawanhaka C. Y. C. house at Oyster Bay, to discuss the proposed new knockabout class. Mr. D. LeRoy Dresser, of the race committee, who has been busy for some time in perfecting the scheme, acted as chairman, and explained the details. Preliminary sketches and estimates had been requested of several designers and builders, and W. B. Stearns, of Marblehead, was represented by a very complete design, the lines, construction and accommodation, and sail plan, accompanied by a handsome model. Messrs. Gardner & Cox sent in a sketch of a sheer and sail plan, with an estimate by the Spalding St. Lawrence Boat Co. Mr. Stearns's design was very similar to that published in the Forest and Stream of Jan. 23-30, 1897, but with less draft and a small metal centerboard below the floor; the dimensions being: Over all, 33ft.; l.w.l., 21ft; beam, 7ft. 8in.; draft, 4ft., with board, 7ft. The sail area, mainsil and jib, about 550sq ft., with 3,300lbs. in keel. The estimates showed that the yacht could be built for about $800, finished in excellent shape, and it was voted to accept Mr. Stearns's bid. Some small changes will be necessary; the house will be enlarged to give at least 8ft. length and 5ft. headroom. Eleven members put down their names on the list at once, and it is expected that at least fifteen yachts will be ordered. Regular races will be sailed by the class next season.

GOSLING.—Designed by Geo Lawley for Messrs. F. A. North and L. M. Clark, 1897.

Gosling.

The knockabout Gosling is thus far the most successful yacht of the class, the official record being as follows:

Cock Robin	225	4	2	..	1	$50\frac{1}{4}$
Gosling	1000	22	6	6	4	45^{5}_{11}
Cockatoo	600	15	3	5	2	40
Fly	850	23	7	1	4	36^{22}_{23}
Mongoose	575	18	2	6	3	31^{17}_{18}
Hazard	545	21	2	4	5	25
Sally III	300	22	2	..	4	13^{7}_{11}
Jacobin	50	13	..	1	..	3^{11}_{13}

When the victorious Cock Robin was winning everything last year, Messrs. F. A. North and L. M. Clark went to Lawley & Son for a boat to race against her, the result being Bopeep, designed by George Lawley. While not good enough to beat Cock Robin, Bopeep proved herself easily the next best boat of the class last year. This season the same gentlemen placed another order with the Lawleys for a new boat, finally named Gosling, also designed by George Lawley. As the photo shows, she is a very handsome craft, with nothing of the freak about her. She has at least proved that Cock Robin is not invincible, and she has defeated the four new Herreshoff knockabouts of this season.

The New Measurement Formula.

Editor Forest and Stream:

Answering Sextant, in your issue of Aug. 21. Third: "The subject of classification is entirely distinct from the subject of measurement." An absolutely perfect measurement formula would equalize all yachts and so make classification an optional matter of convenience; because the measurement rules are imperfect, we classify in order to avoid gross differences. Our difficulties are decreased by a subdivision.

First Head. (*a*) "A measurement rule is intended to encourage the development of a safe, roomy, speedy and easily handled boat." Sextant admits that this has been the object of many of the rules heretofore made by various yacht clubs, from which yachts have been built. The writer, in conversation with many yachtsmen, has repeatedly heard this opinion expressed. The yachting press, almost without exception, in discussing past, present and future rules, takes the ground as above stated as of the first importance.

The reason for the unfortunate experience of all rules heretofore made has been that they have followed Sextant's advice, as given under the discussion of paragraph (*b*), in which he says that certain things can be secured "by making a supplementary regulation stating in plain terms how much breadth, draught, cubic contents, displacement of hull, etc., are deemed inseparable for a given L.W.L." Sextant says there are certain strong objections to the plan of using a single formula, but gives none of them.

Sextant says that "if these were entirely new problems to be solved, it is inconceivable that any engineer would solve them by the application of the same formula." The primary purpose of all yacht designing is supposed to be to develop forms from which lessons having a commercial value can be drawn. This purpose is directly served by a strict application of (*a*); since the larger the hull and the smaller the sail plan, the greater can be the carrying capacity of a merchant vessel, and the smaller her crew. The very elements which in a yacht tend to produce room and ease of handling tend in a merchant vessel to produce large carrying capacity and small crew. Sextant must produce cogent reasons to overcome so universal an experience and establish what appears to be his contention that the only purpose of a measurement rule is to produce speed.

(*b*) "To equalize the chances of winning prizes between boats of different types and characteristics." The writer does not clearly understand what Sextant intends to convey, each sentence being so long and so involved, and so contradictory apparently, that it is difficult to ascertain what is meant. The assumption of the writer is that every boat possesses, either absolutely or in the mind of its owner or designer, some meritorious feature; and since speed is not the only element to be considered, the endeavor should be made to consider all of the meritorious features possessed by yachts. This cannot be done without equalizing the opportunities of the boats for winning prizes. It is by no means apparent why the utilization of speed factors should be taxed, because it is absolutely certain that none of them are independent of the lines of the design. If the purpose of a measurement rule is simply to develop a hull with the greatest possible speed, then the only rule which is defensible, is one which takes cognizance simply of the propelling power, *i. e.*, the sail area; and yachts should be classified simply by a sail area, an arbitrary amount of sail being fixed for each class, and no time allowance being given. Sail area is not in the least a factor in the speed that comes from length. The writer would like to see arguments produced to show that it is. Taking the contrary view, the only limitation upon sail area is the righting moment of the hull in connection with its ballast.

(*d*) "To leave owner and designer absolutely free to produce anything they please." It is not considered that this is repugnant to (*a*) at all. The designer may produce a very undesirable boat, and if he does everybody will soon know it, and nobody will repeat that form of experiment, which is precisely the thing to be desired, to know what we cannot do, as well as what we can. There is no objection to the modification of (*d*) suggested by Sextant, provided it be not subsequently amplified so as to produce bad results.

Fourth Head. Taking up the specific objections made by Sextant to the formula, it might be well first of all to explain to Sextant what the formula actually does, since it is very evident from some of his objections that he does not know. The formula assumes the L.W.L. as a basis, which is increased by a certain percentage according as certain factors are greater or less, and the extreme of variation is such as to make less than a 15 per cent. variation in the correction. See (4).

(1) The universal experience heretofore of rules supplemental to the measurement formula giving arbitrary limits to certain factors has been bad.

(2) The writer has already emphasized the fact that speed alone is not the prime object. It is admitted that cubic size of hull is detrimental to speed. It is also admitted that ir gives additional room. The amount of room necessary to insure safety and internal accommodation is one that must be fixed, at least in the second element, by the owner. The formula expressly does not credit excessive size as equivalent to speed, but credits it as being a desirable quality in a yacht.

(3) It is true that the formula does give topsides and deck house equal credit with immersed body. It is a mistaken assumption to say that they are not desirable. See last week's Forest and Stream, where the editor comments on the fact that those of the small raters with good freeboard and large above water bodies are still in use as desirable

pleasure boats, while the boats with small freeboard and light displacement are of no present value. The writer's own experience in heavy weather in boats of light displacement with good freeboard goes to prove the great additional seaworthiness given thereby. In the smaller yachts there would be undoubtedly a tendency to run to large hulls, and this is a good thing as above explained. In the larger yachts there would be absolutely no object in excessive topsides because of the resistance they would offer to the wind, and their uselessness as affording additional internal accommodation which is not needed.

(4) The type of rule expressly prohibits the building of a racing machine. Take for example two of the boats given in the list published on July 31, Canopus and Akista; both with about the same sail area, and one with double the cube and more than double the accommodations of the other; one far more seaworthy than the other and much more easily handled, though a very much larger boat. The effect of the rule is to bear more heavily on the very small boat with big sail area than on the big boat with small sail area. In the case of Canopus, the increase of the racing length due to the large sail area and very small hull amounts to 5 6ft. or about 19 per cent. In the other case the increase amounts to 10 per cent. These two are used simply on account of the great difference in hull size and the small difference in sail area, and they represent probably the extreme that could be done in the way of beating the rule.

(5) This objection falls to the ground in view of (*a*).

(6) This is distinctly wrong. That designer wins who produces the best lines on the biggest hull with the smallest sail area; that is, who produces the best all around boat, and this is inevitable.

(7) This objection falls to the ground on account of (*a*).

(8) As already explained, there is in the smaller classes of boats a decided advantage to be gained by increasing the size of the hull above water in the way of a more serviceable boat. The building of a light displacement fin-keel with monstrous topsides and unlimited draft would, from the points of view of the writer, be very interesting, because the ratio of surface in the topsides to sail area would be such as to offer a serious retarding influence to the hull; the discomfort attendant upon excessive draft would soon limit that, and a few such boats would prove a desirable lesson to those men who think that designing consists in beating the rule by an exaggeration of untaxed elements instead of by an adherence to principles that are or should be well established and known to every designer of reputation.

Finally, since the rule is based upon a modification of L.W.L., the scheme of time allowance heretofore used could be used with the new rule. We know that it is not correct either theoretically or practically; but it is a sufficiently close approximation to serve the purpose until the elements of a measurement formula have been so well determined that its form will not probably be subject to change. Then the question of the exact relation between L.W.L. and its coefficients and absolute speeds can be taken up and finally determined.

Taking into account the experience of the past few years in racing, where first special classes were produced and then completely wiped out because boats were produced simply for speed, which killed the racing except in particular classes, thus causing the abandonment of special classes, the acknowledgment that their establishment was a mistake, and finally the creation of special classes again in order to secure entries because no boats would enter against those boats built solely for speed; and on the other hand, taking into account the experience in Massachusetts Bay, and in the racing for the Seawanhaka international cup, where it was found necessary to place restrictions on the sail area of yachts of certain classes in order to get racing of any kind, or in order to produce boats which would have some value other than as racing machines, and we have the present measurement rule thoroughly discredited. We also have, by reference to this experience, already discredited all rules which arbitrarily limit any one dimension of a boat. The only logical way to get a roomy boat is by putting a premium on room. The only logical way to keep down excessive rigs is by taxing the rig; and so the only logical rule is one which takes into account the cube of a hull and sail area. Custom and convenience indicate the desirability of using in addition the L.W.L. The writer is much pleased that Sextant apparently acquiesces in the desirability of using plans to determine elements from, and of determining the L.W.L. from the plans measured when the yacht is heeled to her sailing angle. The concrete case stated has been answered in the foregoing, and the influence of the rule has been stated in the table already published, the two together making a complete answer to the question.

Vigilant and Navahoe.

THE special match of the Newport Yacht Racing Association between Vigilant and Navahoe for a $250 cup was sailed on Saturday, Sept. 4, off Newport, the course being a triangle of 12¾ nautical miles, from off Rose Island, around a mark off Brenton's Reef lightship, and a mark off Beaver Tail. The steam yacht Sultana, J. R. Drexel, carried the committee, Messrs. H. B. Duryea, Woodbury Kane and R. N. Ellis. Navahoe was sailed by Capt. Aubrey Crocker, with Mr. and Mrs. Carroll, Mr. and Mrs. A. Cass Canfield, Miss Helen Benedict, W. B. Duncan, E. D. Morgan and H. P. Whitney. Vigilant was sailed by Capt. Miskell; Mr. H. F. Lippett being on board with Mr. and Mrs. Chubb. Both yachts carried club topsails, and Vigilant allowed Navahoe 2m. 58s.

The start was made from the gun at 12:10, the wind being N.E. and very light. Vigilant led over the line by about a quarter of a minute, with spinaker boom to starboard; she gained a little at the start, but both were moving very slowly. They jibed over when off Castle Hill, and a little later they lost the wind. Before the first mark was reached the wind came in light from S.E., finding Navahoe in the better berth; then it shifted to S.W. and freshened, holding in that quarter to the finish. The first mark was timed:

Navahoe.....1 59 04 Vigilant.....2 00 49

On the second leg, a reach to Beaver Tail mark, Vigilant gained, the times being:

Navahoe.....2 17 37 Vigilant.....2 18 35

They started home with spinakers to starboard, and in the middle of the leg Vigilant passed Navahoe, the first round being timed:

	Time.	Elapsed.	Lead.
Vigilant	3 01 48	2 51 48	0 00 52
Navahoe	3 02 30	2 52 40	

They now had a beat out over the first leg, Vigilant still improving her position, the Brenton's Reef mark being timed:

Vigilant.....3 39 58 Navahoe.....3 41 20

On the three mile run across to the second mark Vigilant added 1m. 34s., the turn being timed:

Vigilant.....3 58 10 Navahoe.....4 00 12

Vigilant set spinaker to port, while Navahoe tried hers to starboard on the run in. The finish of the second round was timed:

		Gain.	Lead.
Vigilant	4 45 22	0 03 30	0 04 22
Navahoe	4 49 42		

In jibing at the mark Vigilant fouled it with her boom end. By this time there was a moderate breeze and some sea, Vigilant made very little on the windward leg, the times at the first mark being:

Vigilant.....5 19 22 Navahoe.....5 23 40

Vigilant picked up once more on the reach, the second mark being timed:

Vigilant.....5 38 07 Navahoe.....5 44 14

Navahoe handled her spinaker more smartly than in the previous round, and set it to port, gaining 2m. 19s. in the 5-mile leg. The final times were:

Start 12:10:	Finish.	Elapsed.	Corrected.
Vigilant	6 21 52	6 11 52	6 11 52
Navahoe	6 25 40	6 15 40	6 12 42

After the race Mr. Chubb notified the committee that Vigilant had fouled a mark and Mr. Carroll put in a protest, Vigilant being disqualified by the committee. A number of steam yachts and many small craft were out to follow the race and much interest was excited over it.

Larchmont Y. C.

LARCHMONT—LONG ISLAND SOUND.

Saturday, Sept. 4.

SPECIAL REGATTA.

THERE was very little wind on the Sound last Saturday, and the races of the Larchmont Y. C. were sailed in slow time. Only one round was sailed, the times being:

CUTTERS—51FT. CLASS.	Length.	Elapsed.	Corrected.
Syce, F. M. Hoyt	50.86	4 53 10	4 53 10
Vencedor, H. M. Gillig	47.64	4 55 51	4 54 00
CATS—30FT. CLASS.			
Kit, T. J. Dunne, Jr.	29.18	4 19 12	4 19 12
Dorothy	28.61	Did not start.	
CATS—25FT. CLASS.			
Qui Vive	25.00	5 01 54	5 01 54
Win or Lose, J. S. Appleby	23.75	4 27 18	4 22 24
Presto	23.48	5 01 05	4 55 51
Anglesea	21.53	4 34 13	4 25 26
Naida	24.98	Did not start.	
Harrietta III.	21.20	Did not start.	

The winners were: Syce, Kit (a walkover) and Win or Lose.

FALL REGATTA.

Monday, Sept. 6.

The annual fall regatta was sailed on Labor Day, and also in very poor weather; the start was made at 11:30 in a sailing breeze from S.W., but it fell light within the first hour; toward the end it came in N.W. Two rounds were sailed. Colonia had no competitor. The 30ft. class had a new starter, the Herreshoff fin-keel Anoatok, recently purchased by Oswald Sanderson, former owner of Pype. She is an improved Handsel, a boat designed for cruising and racing, wider and abler than the special 30-footers. She defeated Acushla and Surprise very easily. Only two 20-footers started—Shark and Keneu. Shark had a long lead in the light breeze of the first round, and Keneu withdrew. The rounds were timed. First round:

Vaquero I	1 49 10	Hera	3 18 58
Houri	1 49 49	Presto	3 22 22
Shark	1 51 27	Acushla	3 24 42
Kit	1 55 32	Sora	3 28 41
Onaway	2 28 35	Harrietta III.	3 30 09
Dosoris	2 40 59	Qui Vive	3 30 41
Win or Lose	2 41 25	Starling	3 30 59
Skimmaug	2 54 42	Minnetonka	3 31 18
Syce	3 01 42	Dorothy	3 33 47
Vencedor	3 04 03	Ione	3 36 52
Priscilla	3 12 08	Vorant II	3 37 29
Anoatok	3 13 02	Pawnee	3 43 20
Colonia	3 14 08	Amos	3 43 56
Norota	3 17 44	Goblin	3 48 07
Musme	3 18 31	Surprise	4 02 32

Second round:

Kit	4 03 05	Syce	5 31 30
Vaquero I.	4 11 33	Ione	5 35 23
Shark	4 13 12	Minnetonka	5 39 30
Houri	4 13 17	Vencedor	5 41 00
Onaway	4 26 43	Norota	5 52 55
Dosoris II.	4 34 57	Amos	5 54 16
Win or Lose	4 45 03	Anoatok	5 59 09
Presto	5 17 15	Hera	6 04 00
Sora	5 19 27	Acushla	6 07 39
Harrietta III.	5 22 25	Musme	6 14 46
Dorothy	5 24 19	Colonia	6 23 54
Starling	5 28 04		

The final times were:

SCHOONERS—95FT. CLASS.	Length.	Elapsed.	Corrected.
Colonia, C. A. Postley	93.13	6 48 54	6 48 54
CUTTERS—51FT. CLASS.			
Syce, F. M. Hoyt	50.86	5 51 30	5 51 30
Vencedor, H. M. Gillig	47.64	6 01 00	5 57 13
CUTTERS AND YAWLS—42FT. CLASS.			
Pawnee, F. Alexandre	42.50	Did not finish.	
Norota, D. B. Burnham	41.64	6 07 55	6 07 55
SLOOPS—36FT. CLASS.			
Acushla, A. G Hanan	34.06	6 17 39	6 16 28
Surprise, J. Baird	34.68	Did not finish.	
Anoatok, O Sanderson	33.47	6 09 09	6 07 45
Vorant II., G. G. Tyson		Did not finish.	
SLOOPS—30FT. CLASS.			
Goblin, C M. Whitman	28.11	Did not finish.	
Kite, G. M. Barretto	28.45	Did not finish.	
SLOOPS—30FT. CLASS—SPECIAL.			
Hera, R. N Ellis	30.00	6 09 00	6 09 00
Musme, J. M. Macdonough	30.00	6 19 46	6 19 46
SLOOPS—25FT. CLASS.			
Priscilla, F. W. Boyer	24.52	Did not finish.

Dorothy, J E. Sanborn	19.67	5 04 19	5 04 05
Ione, C. W. Bird	19.68	5 15 25	5 14 58
Sora, W. Hoey, Jr.	19.65	4 59 27	4 59 00
Amos, C. E Silkworth	19.70	5 34 16	5 34 02
Minnetonka, A B. Alley	19.85	5 19 30	5 19 30

The winners are: Colonia (sail over), Syce, Norota, Anoatok, Hera, Vaquero I., Shark, Kit, Win or Lose and Sora.

On Sept. 11 the race for the Larchmont schooner cup of 1897 will be sailed, also special races of the 51ft. and 20ft. classes.

Beverly Y. C.

THIRD CORINTHIAN RACE.

Saturday, Aug. 7.

THE first report of this race was mailed but failed to reach us, we print it now for the sake of the complete record.

This was the 252d race, third Corinthian, off the club house.

Cruising and second class sailed 11¼ miles, third and fourth sailed 8¼, and fifth class 5½. Judge, W. Lloyd Jeffries. Wind N.E. at start, then a calm, then a good S.W. breeze.

Edith won in the cruising, for the first time they did not tie her up. Opossum, Melro, Daisy and Imp won firsts in other classes. Royal Blue, Thordis, Howard and Heiress won second prizes. Edith, Daisy, Opossum, Thordis and Imp score one for pennant. Royal Blue, Thordis, Howard and Heiress score one-half.

CRUISING CLASS.	Length.	Elapsed.	Corrected.
Edith, C. M. Baker	21.00	2 28 30	. .. ..
Royal Blue, C. S. Dennison	21.00	2 29 25	. .. ..

Skin Jack, Ransom	15.06	Did not finish.	

Squam Handicap Race.

SQUAM, MASS.

Saturday, Aug. 28.

A HANDICAP race—the handicaps based on the records of the yachts for the season—was sailed at Squam on Aug 28 in a variable breeze, from light to moderate, the times being:

FIRST CLASS.	
Coot, Duguo	1 54 50
Luna, Hildreth	1 56 19
Circe, Pigeon	1 56 55
Ruth, Griffin	1 58 14
Brownie, Wheeler	2 02 30
Tzcop, Haskell	2 03 55
Donis, Proctor	2 10 28
Hector, Shattuck	2 14 07
Spruce IIII., Butler	2 29 25
SECOND CLASS.	
H. B., Brown	2 10 20
Oceanus, Adams	2 11 22
Anita, Cunningham	2 17 32
Gertrude, Whittemore	2 21 35
Tobasco, Wiggan	2 22 50
Folly, Woodbury	2 24 22
Kalula	2 37 47
Magnolia	2 37 47
Olly	2 39 08
THIRD CLASS.	
Erena, Duguo	2 27 00
Midget, Norwood	2 27 26
Little Comrade, Haskell	2 32 25
Shamrock, O'Reilly	2 49 45
Thelma, Gardiner	2 59 30

Spruce IIII., of international fame, was entered by Paul Butler, with Miss Ames as crew.

Seawanhaka C. Y. C. Fall Race.

CENTER ISLAND—LONG ISLAND SOUND.

Saturday, Sept. 4.

SOUND Y. R. U. RULES.

THE Seawahaka Corinthian Y. C. sailed its fall race on Sept. 4 in light weather. A start was made at 1:30 in a very light southerly breeze, some of the yachts from across the Sound failing to make the harbor in time. Acushla was towed in by the committee boat, and she and Surprise started at 2:07, the latter having waited for her. They sailed the Sound triangular course, while the smaller yachts sailed the Shippan course, only one round being sailed. The fleet drifted nearly across the Sound, and then the breeze freshened, making quite an interesting race over the reach of the second leg and the beat home. Paprika carried away her peak halyard block after turning the second mark and was towed in. The times were:

SLOOPS—36FT. CLASS.	Length.	Finish.	Elapsed.
Acushla, H. W. Hanan	34.06	5 36 07	3 29 07
Surprise, J. D. Baird	34.55	5 51 38	3 44 38
SLOOPS—25FT. CLASS.			
Secret, H. Townsend	24.79	5 49 03	4 14 03
Priscilla, F. W. Boyer	25.00	6 04 47	4 29 47
Nameless, R. C. Wetmore	23.70	6 00 25	4 25 25
Skimmaug, C. D. Mallory		5 46 30	4 11 30
SLOOPS—20FT. CLASS.			
Skate, Irving Cox	20.00	5 38 32	4 03 32
Shark, Rouse & Hoyt	20.00	5 26 13	3 51 13
Vagary, Barclay Ward	20.00	5 54 10	4 19 10
YAWLS—20FT. CLASS.			
Alice, G. G. Fry	19.66	Not timed.	
SLOOPS—15FT. CLASS.			
Yola, C. D. Mallory	15.00	6 10 20	4 35 20
Paprika, Stevens Bros.	15.00	Disabled.	

The winners were: Acushla, Skimmaug, Shark, Alice and Yola.

Pabst Cup.

PEWAUKEE, WIS.
Saturday, Aug. 28.

THE yacht Avers, of the Pine Lake Y. C., owned by Com. Rob. Nunnemacher, and sailed by Herman Nunnemacher, of that club, won out in the Pabst challenge cup regatta, sailed over the Pine Lake Y. C.'s course this afternoon. Avers was the winner of the Pabst trophy last year. This will give the cup to the Pine Lake Y. C. for another year, as it is too late in the season for another regatta to take place before Sept. 15.

The race as a whole was a very pretty affair, though the loss of the wind on the second round took away a good deal of the snap that was evident early in the event.

The wind was light and puffy from the south, and the start was north from Koch's Landing.

The preparatory gun was fired at 2:30, and the starting signal five minutes later. All the boats were hovering as near the starting buoy as possible, and, with the exception of Sirrocco, Friar and Kite, all got across the line within the five minutes' interval allowed after the second gun fired.

Mistral, Idle Hour, Lorraine, Sophia, Avers and Kismet was the order at the start, and the run to the first buoy was very pretty. The yachts hung together well, but after turning the first buoy they were more scattered.

It was Avers' wind, and from the position of sixth at the start she worked up to first before she had entered on the second leg of the course. She was neatly handled, and with her sail area, nearly twice as great as any of the others, she easily outsailed them, as she needed but a zephyr to make her forge ahead.

The boats finished the first round in the following order:

	Elapsed.
Avers, R. Nunnemacher, P. L. Y. C.	0 41 41
Mistral, J. E. Friend, P. L. Y. C.	0 51 45
Lorraine, Schiller & Bausch, P. Y. C.	0 52 36
Idle Hour, R. E. Giljohann, P. Y. C.	0 52 40
Sophia, W. H. Meyer, P. Y. C.	0 54 31
Sirrocco, Wallber Bros., P. Y. C.	0 50 36
Kismet, A. A. L. Smith, P. L. Y. C.	0 54 02
Henrietta, Geo. Brumder, P. L. Y. C.	0 54 40
Frances, J. C. Wersen, P. L. Y. C.	0 56 30
Friar, B. Skidmore, Jr., P. L. Y. C.	0 53 28
Nancris, Fred Rietbrock, P. L. Y. C.	0 54 53
Leona, Udo Dorestan, P. L. Y. C.	0 57 51
Kite, Poppert and Peckler, P. Y. C.	0 59 54
Allida, Vogel Syndicate, P. L. Y. C.	1 02 02
Ducky Daddles, Winkler Bros., P. L. Y. C.	1 04 09

The second time around was much the same as the first. Avers continued leading, followed by Mistral, Kismet and three Pewaukee boats in a bunch, and had not the wind failed on the beat south and the run back to the finishing stake, the Pewaukee Y. C. would undoubtedly have been victorious.

Sirrocco, sailed by Fred. Wallber, finished second on corrected time. She was thirteenth to get away, but the good judgment of her skipper made up the time lost at the start, and had the wind been a trifle heavier, it would have compelled Avers to reef, and in that event Sirrocco would have unquestionably won out, as she is a heavy weather boat.

Lorraine also did some good work. She was sailed by A. S. Hathaway in the absence of her owners, Messrs. Schiller & Bauch, who are East on business.

Most of the yachts were cleverly handled, but a number of them lost several minutes by being caught and detained in an eddy off Minnemacher Island. On the last round, Kite, Henrietta, Allida and Ducky Daddles dropped out. The rest finished as follows:

	Start.	Finish.	Elapsed.	Corrected.
Avers	2 36 93	4 06 41	1 30 23	1 31 41
Sirrocco	2 40 00	4 18 54	1 38 54	1 36 41
Mistral	2 35 39	4 14 29	1 38 50	1 36 49
Idle Hour	2 35 51	4 16 41	1 40 50	1 39 05
Kinnet	2 26 59	4 06 45	1 47 20	1 41 27
Lorraine	2 35 48	4 22 40	1 46 52	1 44 51
Frear	2 40 00	4 31 32	1 51 32	1 44 53
Nancris	2 39 07	4 27 25	1 48 25	1 46 43
Sophia	2 25 54	4 26 45	1 50 51	1 46 46
Francis	2 36 31	4 31 23	1 54 53	1 52 34
Leona	2 38 16	4 45 23	2 07 13	2 01 37

Judges—J. H. Van Dyke, O. L. C.; Geo. M. Conway, P. Y. C.; O. C. Hansen, P. L. Y. C. Timekeepers—D. E. Murphy, O. L. C.; A. G. Miller, P. Y. C.; W. H. Graw, P. L. Y. C.

ERNEST E. WHITE.

Corinthian Y. C., 116th Regatta.

MARBLEHEAD—MASSACHUSETTS BAY.
Saturday, Aug. 28.

THE Corinthian Y. C., of Marblehead, sailed its third championship race on Aug. 28 in a light south wind, the times being:

	Elapsed.	Corrected.

Jenny Wren, F. D. Peabody		2 15 00

Rooster.

THE yacht Rooster has been sold. Charles F. Adams 2d, of Quincy, parted company with her Saturday at Plymouth after she had added another victory to the many that have made her the peer of the third class.

Melbourne McDowell was the purchaser, and he bought her principally to defend the Davenport cup, which is to be raced for next week.

It was just after the finish of the Plymouth race yesterday, when the little Rooster was tied up to the float, that Mr. McDowell shot Fanny D. up alongside and said to Mr. Adams: "I'll take her at that figure."

"All right," replied the latter, and almost before the yachtsmen standing around realized it, Rooster was being towed behind Fanny D. across Plymouth Bay to Duxbury.

As the little prize-winner pulled out from the wharf, George Adams stepped out on the piazza of the yacht club house to get one last look at her, and waving his hand, said affectionately, "Good-by, my sweetheart."

Charley Adams will sail Rooster in the first cup race next Thursday, this being one of the stipulations in the sale.

Rooster was built in 1895 from designs by J. R. Purdon and Mr. Adams. She is a fast boat, but many yachtsmen give as much credit to the crew as to the boat for the record she has attained, and say that Rooster without the Adams boys will be like a jug without a handle.—*Boston Globe, Aug. 29.*

The Thirty-footers at Newport.

A NEW method of racing in heats was started on Aug. 30, four pairs of the 30-footers starting, the first at 2:55, and the others at intervals of 5m. The wind was S.W., and the Dyers Island course was sailed, the times being:

	Finish.	Elapsed.
FIRST PAIR.		
Vaquero III., H. B. Duryea	5 44 16	2 49 16
Wa Wa, J. A. Stillman	5 47 06	2 52 06
SECOND PAIR.		
Musme, J. M. McDonough	5 47 57	2 57 47
Veda, C. Vanderbilt, Jr	5 59 05	2 59 05
THIRD PAIR.		
Dorothy II., H. P. Whitney	5 58 44	2 53 44
Esperanza, A. S. Van Winkle	Did not finish.	
FOURTH PAIR.		
Hera, R. N. Ellis	6 10 11	3 00 11
Mai. O. G. Jennings	Did not finish.	

The winners of the four pairs sailed off on Aug. 31, the course being to Hope Island and return. The start was made in a light N. wind, shifting and finally dropping, so that the final sail-off was postponed. The pairs were Vaquero and Carolina and Dorothy and Musme, Hera having no competitor. The result was:

	Finish.	Elapsed.
FIRST PAIR.		
Vaquero III., H. B. Duryea	3 16 10	4 16 10
Carolina, Pembroke Jones	3 19 15	4 19 15
SECOND PAIR.		
Dorothy II., H. P. Whitney	3 14 08	4 09 08
Musme, J. M. McDonough	3 16 38	4 11 38

The winners of the two days were Vaquero, Dorothy and Hera.

The series was postponed on Sept. 1 to make way for a special race for the cup offered by Mrs. H. B. Duryea. The Dyers Island course was sailed in a fresh S.W. wind. Veda was manned by professionals, Captains Harry and Clayton Haff and Capt. Barry. The times were:

	Finish	Elapsed.
Esperanza, A. S. Van Winkle	5 36 44	2 36 44
Hera, R. N. Ellis	5 37 13	2 37 13
Carolina, P. Jones	5 38 50	2 38 50
Veda, C. Vanderbilt, Jr	5 39 44	2 39 44
Dorothy II., H. P. Whitney	5 40 50	2 40 50
Musme, J. M. McDonough	5 41 18	2 41 18
Mai. O. G. Jennings	5 41 49	2 41 49
Puck, E. D. Morgan	5 42 17	2 42 17
Wa Wa, J. A. Stillman	5 42 52	2 42 52

On Sept. 2 Vaquero and Hera sailed off. Dorothy going in with the rest of the class for a sweepstakes. The wind was light S.E., and the Brig Ledge course was selected for the series sail-off, the sweepstake being over the triangular course. The times were:

	Finish.	Elapsed.
SERIES.		
Hera, R. N. Ellis	7 43 32	4 25 32
Vaquero III., H. B. Duryea	Did not finish.	
SWEEPSTAKES		
Puck, E. D. Morgan	6 14 50	2 46 50
Veda, C. Vanderbilt, Jr.	6 15 51	2 47 51
Wa Wa, J. A. Stillman	6 19 40	2 51 40
Musme, J. M. McDonough	6 20 06	2 52 06
Dorothy II., H. P. Whitney	6 20 26	2 52 36
Mai. O. G. Jennings	6 22 22	2 54 22
Carolina, Pembroke Jones	Did not finish.	

Kingston Y. C. Open Regatta.

KINGSTON, MASS.
Friday, Aug. 27.
MASS. Y. R. A. RULES.

THE annual open regatta of the Kingston Y. C. on Aug. 28 was a great success. The wind was light, but still strong enough to make a good race, and there was a large fleet of starters. The times were:

	Length.	Finish.	Corrected.

Gravesend Bay Y. C.—Handicap Race.

BATH BEACH—GRAVESEND BAY.
Saturday, Aug. 28.

THE Gravesend Bay Y. C. sailed a very successful handicap race on Aug. 28, the times being:

	Finish.
SLOOPS.	
Start, 2:37:00:	
Kelpie (allows)	5 04 17
Carrie Van Voorhees (4m.)	5 07 08
Susie (10m.)	5 17 05
Nemo (9m.)	5 17 46
Sea Gull (12m.)	5 19 51
Gael (9m.)	5 34 55
Start, 2:42:00: CABIN CATS CLASS.	
Louise (allows)	5 04 22
Acron (8m.)	5 19 20
OPEN CATS.	
Martha M (allows)	3 58 10
Sis (2m.)	4 02 31
Priscilla (2m.)	4 02 55
Baby (1½m.)	3 59 46
Ariel (1m.)	4 06 30

The winners were Carrie Van Voorhees, Louise and Martha M.

Quincy Y. C. Third Handicap Race.

QUINCY, MASS.—BOSTON HARBOR.
Saturday, Aug. 28.
MASSACHUSETTS Y. R. A. RULES.

THE Quincy Y. C. sailed its third handicap race on Aug. 28 in a light and variable wind; the times were:

	Elapsed.	Corrected.
Tantrum, Robbins	3 01 12	2 46 12
Thisbe, Whittemore	2 55 24	2 49 36
Princips, Whiton	2 52 02	2 52 02

THE story of the W. C. A. meet, by our Western correspondent, gives a picture of a sort of summer vacation life that is utterly foreign to canoeing and all similar healthy and wholesome sports. It has, no doubt, attractions for many, but it is most unfortunate that a sport like canoeing, with all its possibilities for pleasant, wholesome and invigorating outdoor life, should be made a mere sideshow to a summer hotel. There must still be a few canoeists of the old sort in the West who are capable of organizing a real camping meet or a cruising meet, and if the sport is ever to be rescued from its present condition the work must be commenced very soon.

The W. C. A. Meet.

CHICAGO, Ill., Aug. 19.—Nothing further transpired last week to give the character of an active canoe meet to the camp of the W. C. A. Two members, Messrs. S. C. Hanks (Nancy Hanks) and H. M. Curtis, both of Madison, came into camp Sunday morning, having ridden over on their wheels from Janesville, some twenty-four miles distant. They were on a little bicycle tour, and dropped into the camp as part of that diversion. In this instance may perhaps be seen one of the influences which have so tended to cut into the sport of canoeing in the West. The insidious bicycle is so easy, so cheap and so pleasant. Bobby Lamp, of Madison, did not again appear, but Mr. J. D. McWorther, of Milwaukee, came out for a couple of days. On Sunday, Mr. N. B. Cook, who had for two days been feeling ill, concluded to break camp and return to his home. Mr. Dickens, canoe Avis, also left for home, and the FOREST AND STREAM representative followed suit, there seeming no further prospect of a bit of news. Vice-Com. Holmes and Rear-Com. Merrill remained with the Madison men to hold the fort for yet a day or so, and grumbled loudly at the secession of the departing ones.

Of all the branches of sport in which there is occasion to do reporting during the year, I like canoeing better than any. It is such a clean, such a beautiful, and such a purely amateur sport that it has a fascination distinctly *sui generis*. Yet of all the lines of sport met with during the year, none is so poorly represented as this. Instead of two dozen active boats, we had here only half a dozen. Instead of a big and lively camp, we had a very small (though very lively) one. It is too bad, but there is no use trying further to hope against hope. The reasons are not known, and do not matter; but the facts do not point to any large meet of the W. C. A. next year, if indeed there shall be any at all. We need better times, more money, more leisure, more something.

But if the majority of the members choose to go to one place or another, to camp in one hotel yard or another, it is really no one's business but their own. It was openly admitted by the Mahn-a-wauk men who made this year's meet, that they did not expect very many tents, and were out simply for a pleasant little vacation camp, with some idleness, and not too much work attached to it. If taxed with the summer hotel or summer girl idea, they each and all, like little men, admitted the soft impeachment, and didn't care who knew it.

LIFE AT A SUMMER RESORT.

For a man who really has a wish to get near to nature and not to get next to a summer hotel and its appurtenances, there can be few more miserable experiences than to be forced to go into prison for even a single week at one of the big caravanseries which line all the larger lakes for the first 150 miles out of every great city such as Chicago. Of course, we who were encamped had not so much to dread, but could sit afar and watch the prisoners walk their daily treadmill. At times we could even, to a certain extent, join in the procession of the miserable ones, who thought they were doing the correct thing at having a good time. The whole business made a very nice little study in human nature, and perhaps it may not, after all, be entirely outside the province of news matter to speak of this in some measure as it really was, so we may have a notion of what a canoe meet in a hotel yard really is.

We will suppose our tents to be pitched upon the bluff a little back from the water, somewhat hidden from the public view by their sheltered position under the forest trees. A path runs along the edge of the bank, in front of the camp and in this path the jolly mariners, after the labors of the day or evening or morning are over, and after the boats are made safe at their dock, at once make plans for conquest. This they call "setting the trap." At the foot of the flagpole the Association cannon is planted, a long line running back to a spot near the tents, where it is not visibly connected with any given canoeist. This arranged, the trap is "baited," for this purpose an orchestra of guitar, mandolin and banjo being employed. (No names may be used in such descriptions, but it will do to say that the music is very good.) After the trap is set and baited, it may be that some one sees a boat pass by beyond the dock, the flutter of white garments visible from its thwarts. "Hello, girls!" sings out some graceless soul. Most undignified and improper is such an accosting without introduction, and greatly to be deplored. Yet it is not of record that in any single instance has such a salute been resented. The wave of a handkerchief and the merry answering shout is the surety in every case that the greeting is acknowledged and appreciated. It has gone abroad in the land that the canoeists are peculiar in their manners, but not at all dreadful. As the boat passes by the water front, the members of the orchestra may step to the brink with the glance of connoisseurs. If the occupants of the craft fulfil expectations, they are kindly and sweetly

asked either to come ashore at once or to call at their first convenience.

Perhaps before this has been concluded there is a hurried call from one side, "Look out! Something comin'." Then all step back to the rear of the trap. It may be that careful inspection inclines the members not to spring the trap. If the group of summer girls approaching along the path offer exceptionally attractive appearance, it is concluded that the trap must be sprung. As they approach the flag staff and step over the line which runs back from it, a proper and decent interval is allowed them and then the cannon is sprung. Of course the loud report causes much screaming and confusion. Really this would seem a most rude and distressful thing to do; but witness how the sailorman disarms all such accusation! At once, upon the screaming and commotion caused by the rude cannon shot, there falls upon the air strains of music of so bewitching a quality that no summer girl, even though she were of the haughtiest, even though she were of the homeliest, could by any possibility be able to resist its spell! The confused group again assembles, stands looking, trembling, as do a number of fawns frightened at a rifle shot. Behind them is noise and terror, ahead of them is safety, safety announced by soft music, entrancing, alluring, comforting. How, under circumstances such as these, can any woman, any summer girl for an instant hesitate? "Hello, girls," croons some dulcet voice from up the hill. And silently, at first slowly, then with more eager and following footsteps, they start toward safety, start toward that point from which emanate sweet music and alluring smiles. No introductions are ever necessary. The girls who are at these summer hotels are not there to trifle. It is a stern necessity for each to accumulate at an early date a man, a good-looking and gentlemanly and musical and sailing and ice cream-buying man, if that be possible. What is it that one wishes? Is not the conclusion easily to be foreseen? When this group of summer girls separates the name of no one of them is known, but the hotel of each is accurately charted. Then the trap is set again.

In common with all exalted souls, I have more than often been compelled to deplore the popular tendency to the use of slang words and phrases. Yet, it must be admitted with an equal candor, I have also, as must every other exalted soul, at times been compelled to feel the exceeding aptness and nicety of many phrases which are to be classified only as slang. Without these expressions, indeed, the English language were not what it now is as an organ for the expression of human thoughts and human emotions. Of all the slang expressions I ever heard, I think the word "rubber neck" is the rudest and most unspeakably common and impossible of any. (This I am advised is derived from the verb "to rubber; to stretch, to gaze, to gawp, to stare, to evince an unnecessary and unseemly curiosity in all immediately contiguous events, circumstances or happenings"). For many moons I have been hearing this expression, though in ignorance of its real significance. Thus, an acquaintance of mine, a very vulgar fellow who hasn't got a thing but money, met me the other day, he carrying his hand in a sling. He told me he had a broken thumb, and naturally I asked him how it happened. He then explained that while out riding on his wheel he had seen a vision go flittering by in the opposite direction, said vision being of such character as to evoke interest upon his part. "I turned round to rubber after it, and down I went," said he. From this I later gathered that he had turned about to stare at a passing lady, and so had fallen from his wheel.

I had still further insight into the use of this expression while observing the members of our camp watching their trap upon the bank of Delavan Lake. When a lot of small boys would come along the path and stare up at the camp, very often I heard some voice or the other calling out, "Oh, rubber, would you bounce!" Again, I heard certain other parties described as "rubbering around." At first this word was very appalling to me, but soon I grew familiar with its face, and so came to admire it, as a phrase without which life at a summer resort could never ever be adequately described. At a summer resort you rubber, he, she or it rubbers; we, you and they rubber, and also everybody rubbers. It doesn't mean anything. In the city you would fall dead rather than stare at a lady. At a summer resort she would fall dead if you didn't; so you do. All the groups of summer girls who passed the canoe camps rubbered and were rubbered at. All the occupants of passing boats were rubbered at and in return rubbered. When we walked down to the hotel for breakfast, luncheon or dinner, we all rubbered at the girls in the hammocks, on the porches on the lawn; and they all rubbered in return. At the hotel tables everybody rubbered at everybody else when they came into the door or rose to go out. This is part of the game. It is a necessity that at a summer resort all persons rubber, else they would not know what was going on. You go to a summer resort to see what is going on.

THE DUTIES OF A DAY.

It is perhaps due to this acknowledged elasticity of vision (or shall one more properly say, of neck?) that another custom of summer resorting has taken its rise. By this I refer to the constant changing of one's apparel, which is part of the duties of the day for either man, woman or summer girl. By no means shall one see the same summer person in the same clothing from day to day, even from meal to meal. When we had arisen and made our toilets in the morning at the camp, we all went down to the hotel for breakfast, but immediately after breakfast we changed our collars, our neckties and those portions of our apparel immediately contiguous to the collar and tie. We dared not, feeling as we did that much depended upon us, allow it to be said that we wore the same hose twice in succession; and as to caps, it was a disgrace to wear one over half a day. For collars we for the most part wore the high, split-ended affairs we call the "Charley boy" collar, because that is the most uncomfortable kind of collar a man can put on, and when you go to a summer resort you want to be as uncomfortable as possible. As we sat at the table we saw all the other fellows wearing this same sort of collar, and looking rather unhappy. Most of the young men had longish hair and cherished sunburn, and each young man had at least one summer girl, the latter always looking perfectly cool, no matter what was the temperature, and as smooth and well laundered as though just taken out of a box.

During the day the guests at a summer hotel dress up four or five or six times, and when not so occupied sit around in the hammocks or on the chairs or on the docks, each looking as pretty as possible, and each doing all in power to give his or her best points a chance. A few carry books, and some affect other means of passing the time, but this is not serious, and is, indeed, only pretense. The one real and actual calling of each and all is to "rubber." After "rubbering" around on the greensward, on the docks, on the boats, on the verandas, on the stairways, all day long, and having a very bad time, it comes to be night. Then everybody dresses up again all over, *cap à pie*, and starts out for the discomforts of the evening. Some play euchre or whist, and are very miserable, and some dance the lancers, or the gay quadrille, at the bi-weekly hop, which is one of the cruelties of a summer resort. Again, there may be a game of tenpins. This latter, like everything else at a summer resort, is *en grand tenue*, which is to say, with flounce and frill, and plenty of starch. I saw one such game in company with a friend, one evening at our summer resort. There were two sides chosen up by the two lady captains (each of whom was chosen captain for her wide assortment of gowns). Each captain chose her lady assistants in the order of her approbation of their gowns. All starched and ruffled and beribboned, they made a long row down either side of the alley, all very correct and very wretched. The captain of one side, I remember very well; for her costume of stiff marseilles skirt and tight satin waist was very becoming to her stately figure, and about as bad for the game as anything could have been. I can not forget the elegant grace and solemn dignity with which she beckoned to each lady in turn to come forward and go through the formalities of the game. It was like dancing a minuet, and I felt my blood run cold. Of course, these ladies couldn't roll ten pins for a cent, and nobody ever said they could. This is only a description of the customs of a summer resort. They made no attempt to roll ten pins. Each lady, some with timidity, some with self-consciousness, some with dignity and *aplomb*, took the nasty ten pin ball in her two hands and cast it daintily forth from her. Each sought to do this attractively. Some smiled, a few squealed, and all felt that they were doing their duty. When by any chance the ball remained on the platform for a brief space, or when by extreme stress or fortune it happened to hit a ten pin at the other end of the short alley, it was a treat to see the attempt to be dignified and not to blush or to look self-conscious! When you play ten pins at a summer resort it is not etiquette to show any emotion. The game is a sort of solemn ceremony. In the progress of this game it is bad form to rubber at anything but the costumes of the ladies upon the opposite side of the alley. Yet, as I noted with some interest in my studies of the inhabitants of this institution, it is not regarded as bad form for masculine persons not engaged in the game, to come up behind the solemn lines of victims and rubber at them.

At a summer resort nobody ever goes fishing, because how can he if he has to be changing his clothes all the time? Men are hired to do the fishing, and when they catch any fish the string is solemnly carried up to the photographer and photographed. This is business. We had no time to fish ourselves, because we were busy changing our clothes when we were not watching the trap; but once we saw a string of fish, and are therefore prepared to say that at this lake the fish are not all merely photographic ones. Indeed, through a very pleasant acquaintance a few of us formed with Carrie, the colored cook, we were able to secure some nice wall-eyed pike from an ice barrel, and ate them at our camp. I never heard of anybody catching any fish at a summer resort, but you can see plenty of photographs of fish, and this is much better, because a photograph of a fish is far cleaner than the fish itself. It is rude to go fishing, anyhow, and sunburn so obtained is apt to be too violent. The sort acquired in a hammock is far more becoming and more generally popular.

FURTHER CUSTOMS.

There are cottages and hotels and camps strung all around any good summer resort lake, and such we found to be the case about ours. After dinner, and after we had all changed our clothes again, we would get the orchestra together and start out to visit cottages and hotels. From Woodlawn to the Log Cabin Hotel, we had the entire coast charted and sounded and buoyed, so that even in case the moon was becalmed behind a cloud, we could nearly always get to the hotel or cottage we wanted to reach. If perchance one passed a recumbent figure in a hammock it was not considered unseemly to sing out the watchword of "Hello, girls!" No offense was ever taken at this, nor is ever taken at a summer hotel. If it happened that one party of summer people failed to keep an appointment to meet and sing and trip the light fantastic toe over the tent ropes, it was really not far on to another party equally adorable and more accessible. All was gay and cheerful. The summer girl who was forsaken turned blithely to the next man and was as pleased with him. Ah! if life could always go on thus, ephemeral, gay, unheeding of the morrow! At such a spot one sees the ephemera itself, that spirit of life and death, soulless, unthinking, willing to die so that it may live one day. Folding its gauzy wings, this beautiful, tender, transient, evanescent, fickle creature sits now upon this leaf, then on that, above you as you walk these shady paths. Even so this flitting and evading summer girl whom one sees to-day comes to-morrow to her death. She rolls up into the form of a mere cashier, clerk, typewriter; or worse yet, perhaps, into a young woman of fashion and wealth. She rubbers no more. Her day is done. These ephemeræ, who shall condemn them, who shall smile at them. Rather let us suffer them to rubber through their brief day of light and joy.

He, she or it rubbers, you rubbers, we rubber. We gather at the table of some little hotel which we have found tucked away under a corner of the shore. Here is a very goddess of summer girl, one which should really be adopted as the totem of the W. C. A., so trim, so tall, so firm, and yet so willowy is she, of teeth and smile so dazzling, of eye alike so laughing or demure. About this divinity gather all the younger sailor men. The sound of music arises and the sailor men sing melodies calculated to melt a heart more of stone than that of the divinity. Said divinity edges away from her chaperon and grows engrossed with handsome sailor man whose shirt is a perfect dream. The chaperon grows uneasy at last and calls attention of the divinity to the fact that her "steady" is getting sulky. "Let him alone," says the divinity, "I can square him in a minute." The 'steady" grows morose at witnessing the wiles of the sailor man, and at last arises and goes to seek solace elsewhere. The divinity of course does not see this. Close observer advises her that "one of her staff is getting away." Divinity says that is all right, and that presently she will go after him. Only she doesn't. He comes back by himself, and is received so sweetly that he wonders where he is or has been, anyhow. *Da capo.* Repeat softly. Do it all over again. Encore. Thus you have an evening on the lake. The next day (for party calls must be made within two days at the lake) everybody calls on everybody, and the above scene is repeated. Nobody knows anybody's real name. We called on all the really nice cottagers about the lake, but we did not use cards, and there is blissful ignorance on both sides. We were always making some call or other, and it was very trying work to be so constantly forced to change one's attire. Let no man think that canoeing is an easy sport. Those who engage in it must possess a certain durability of constitution and a power of withstanding fatigue. The canoeist should have a hand of iron in a glove of velvet, and a neck of rubber in a collar of severest starch. Any canoeist should, if convenient, have a canoe; but it is not imperative. He should have many bicycle hose and shirts; oh, dear! If he can sing and play he is so much the better off.

That is to say, such are the qualifications for the young summer resort canoeist (not including the older and more dignified members who remain in camp). If that is all canoeing is to be, at Ballast or at Delavan, our members do not need any further qualifications.

It is far to the pine woods, and life there is different. Canoeing is a dress parade sport anyhow, the most picturesque of all sports, the most beautiful. The dash and gallantry and daring of it go straight to the heart of womankind. Against the skipper of one of these small ships let no man, even the best of "steadies," attempt to compete. Who shall say that there are not temptations at the summer resort places for the owners of these craft which always carry one to fortune and to smiles?

For my part, I shall no longer attempt to say what is or what is not good for the growth of the W. C. A. I know very well that these same men who touch the light guitar at midnight all along the shores of Delavan can sail an A class canoe in half a gale, and they are not afraid of anything that walks or floats. They could swing a meet up in the pine woods, far from the summer girl, just as well as anybody, if they wanted to. But do they want to? That is a questio which it is their right to answer for themselves. If they think they want to try one meet up in the pine country where they are alone in their own camp, we may or we may not have to record an interesting and somewhat different story. If they prefer to make their annual camp a little jolly vacation near at home, where they can enjoy themselves less sternly, where they can for the time join the cloud of the ephemeræ, it is very likely that the story of their meets, if truthfully told, would read much like the above.

Thus it seems hardly likely that we shall see another meet at an inland lake. If the next meet goes to Ballast, it will not gather any showing much more impressive. At Mullet Lake there was no gathering. At Charlevoix we might have had no more than we had at Delavan. It is much a question what or where the next meet will be. As for the jolly fellows who made the meet this year, they did with their might what their hands found to do, and cultivated resorting and resorters because there was nothing else to do. Had other members turned out, we could have had more sailing and less "resorting." But there were several who said that they would not mind trying a meet further away from the towns and hotels. A few thought they might like to try the small tents, and not the big ones, for a change. No one of them claimed that this meet was a typical or good canoe camp, but they turned it into a summer vacation trip, and so enjoyed it for what it was worth upon the only possible or practical basis at hand. Even if we can have no better or no different meet from this, let us have the meet again next year. These problems sometimes solve themselves, and let us hope the problem of the W. C. A. will be solved, and find at the end a good body of hearty and hardy fresh water sailors. This Association is too good to go by the board. There is too much fun at a canoe camp for any one who has ever been there to tolerate for a moment the thought that there are to be no more of them. Let us have a full turnout next year, no matter where the meet may go. If we can discover a few trout or bass there, or find some new sailing waters, very well. If we must pursue the summer girl, very well. To an impartial view, however, it would certainly seem that a series of meets at or near summer resorts has not, during the past few years, been productive of growth and development in the W. C. A. in the least consonant with its merits and deserts. It will take individual hustling now for a time, quite as much as Association activity, if we are to see success perch on the burgee of the setting sun.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

The British Canoe Association Meet.

WE reproduce from the *Field* the following report of the recent meet of the British Canoe Association meet; a cruising meet on Lough Derg, Ireland. It was written by Mr. Alfred E. Wale, Rear-Com., B. C. A.:

Camp I. (July 10 to July 14), Athlone, was held in the beautiful grounds of the Ranelagh School, by permission of the principal, Mr Baile, a gentleman whose many kindnesses the Association will not soon forget. After the very careful preparations which had been made by our vice-commodore, Mr. Percy Nisbet, it was disappointing for him to find only ten members and five craft present at the opening of the meet. They were Vestal II., canoe yawl, Messrs. Nisbet and Prosser; Vestal I., canoe yawl, Mr. Fair; Spruce, canoe yawl, Mr. Kipling; Jub-Jub, canoe yawl, Messrs. Crawford and Huston, and one of the Mermaids with the four Messrs. Froggarty on board. From this camp some most delightful day cruises were made on Lough Ree, a mile or so up river, and at Ballyglass Regatta, a splendid silver bowl, kindly presented by the Lough Ree Yacht Club, was won by Vestal II., after a desperately close finish with Spruce, only 5sec. separating them.

Camp II. (July 14 to July 15), Clonmacnoise.—A very pleasant twelve-mile sail (in which the canoes were accompanied by the usual fleet of yachts, raters, steamboats and houseboats), and tents were pitched by the ruins of the Seven Churches, by kind permission of Mr. Charlton. On the following morning these interesting antiquities were examined, and the canoes got under way. After a dead peg of fifteen miles to windward, they arrived at

Camp III. (July 15 to July 16), near Banagher, on the property of Major Bernard. On the following day a move was made down river on to

Camp IV. (July 16 to July 19), Portumna, at the entrance to Lough Derg. Here the B. C. A. spent a most enjoyable time, and again received the greatest hospitality, not only from their many friends on other craft, but from the inhabitants of this town. By this time Messrs. Thorp had joined them with the Vita, a very pretty cruising canoe yawl. By request of the Lough Derg Y. C., who were holding a regatta, two races were sailed, and some handsome prizes won by Spruce I. and Vestal II. Tents were struck on Saturday, and all the sailing fleet and steamers left for

Camp V. (July 19 to July 27), Dromineer.—The 15 miles cruise hither was made the subject of two distinct races, one for yachts and another for canoes, etc. After a long and almost windless peg, the latter was won by Spruce, Jub-Jub being second. Here the numbers were increased by the arrival of the two Messrs. Clayton, Oliver and Gibson, with two of the Penarth 18-footers, Watermouse and Waitangi, and Mr. Wale with the cruising canoe Solitaire. An incident which greatly tickled the natives was that on hearing of Solitaire's arrival at Nenagh Station, 7 miles off, her skipper, on a borrowed bicycle, rode thither, and, after putting the canoe on her wheels and the bicycle in the well, walked off with her. Three miles from camp she was tied on behind a friendly car, and, after a smart trot, the procession arrived at Dromineer, amidst the cheers and laughter of the crowd. The week that followed was a busy one indeed. Regattas were the order of the day; dinners and impromptu smoking concerts the order of the night. The weather, up till now perfect, suddenly changed, and race after race was sailed in heavy wind and rain and a sea that would not have felt small in the English Channel.

On Sunday, July 20, two of the members, representing the B. C. A., accepted the kind invitation of Mr. Lloyd Vaughan to camp near his bungalow, about seven miles up the lake, and were most hospitably entertained by him. They returned next day with the message that he had two valuable prizes to be sailed for by them. Monday and Tuesday were spent in cruising on the lake, fishing and other amusements. On Wednesday the B. C. A. men competed in one of the Lough Derg Y. C. races, but without success, there being a smart fleet of cutters on the lake. Among the other races of this memorable week in which the B. C. A. were invited to compete were, first, the Shannon Development Cup, eighteen starters; this was very nearly won by the Watermouse. A race for prizes presented by the L. D. Y. C., Spruce won, Vestal second; a race for prizes presented by the L. D. C. Y. C. (winners' names mislaid); an impromptu race for cash prizes given by the L. D. Boat Club. This was very kindly arranged by them in order to give a sudden influx of visitors the chance of seeing the B. C. A. fleet under sail; Jub-Jub first. A yacht race for prizes presented by the B. C. A., and a sprit-sail race for fishermen, ditto. This was the most exciting one of all, and most of the open craft came back half full of water.

Saturday, the day appointed for the Lough Erne Challenge Cup race, turned out so wet and stormy that the committee decided to suspend the condition requiring men to take on board the whole of their camping outfit. After a very punishing race in heavy wind and sea, the cup was won by Mr. Kipling with the Spruce. In the evening the usual sports were held. These were not improved by a

steady rain, and oilskins were already on when the "oily" race was called. The tug-of-war between B C. A. and Irish yachtsmen resulted in a hard-won victory for the former. Unfortunately the colored fires, etc., ordered for this occasion, did not arrive in time, and the day concluded with the annual dinner at Burgess's Hotel.

CAMP VI. (July 27 to July 29), Bushey Island, Mount Shannon (by kind permission of Mr. George).—About midday on Tuesday the fleet left Dromineer for this camp in the face of a hard breeze and a really heavy sea. The 18-footers reported taking it over green, and the Vita, good little craft as she is, but loaded down with stores, soon had to turn back. Solitaire, starting an hour after the others, had a rather lonely jaunt, but took no longer over the journey. By dark the tents were pitched and all hands comfortable for the night.

On the following day the Mount Shannon regatta took place, and included two races for the the B. C. A. The first one, for a really handsome silver cup, given by the L. D. Y. C., was won by Solitaire, much to her skipper's surprise, as she only carried 47sq. ft. of sail. The second, for a prize most kindly given by Lord Dunalley, was won by Watermouse (Messrs. Clayton). Both races were sailed in a very heavy wind and tolerable sea, and were very fast indeed.

On Thursday all hands left (literally left, for we were getting few) for the last rendezvous of all. A glorious reach across Mount Shannon Bay, a long, close haul between the mountains of the lower and more beautiful portion of the lake, and leaving it at last, we once more came into the river. Here our tents were pitched (for the last time) beneath some grand old beeches on the estate of Mr. Parker.

Camp VII. (July 29 to Aug. 4), Ballyvalley, Killaloe.—This was the prettiest spot of all, and yet an air of sadness hung about the camp. Was it the sense of impending dissolution, the shadow of Brian Boru's old fort, or the attractions of the Shannon View Hotel that drew our members thither in the evening, I cannot tell; but, anyhow, we had some very pleasant reunions with old friends and new at Killaloe. Several of us went in for fly fishing. There is a celebrated evening rise of trout on the rapids there, yet, though the river seemed to boil with fish, and the air was thick with stonefiies, only one good trout was taken among a dozen rods; this fell, or rather rose, to the writer.

On Sunday, Aug. 1, by kind invitation of Mr. Twiss, the members lunched with him at Mrs. Enright's hotel at Castleconnell. The seven-mile journey down the river was done in three of the fishermen's cots, which were very smartly handled on the rapids, and at night the meet concluded officially with a farewell dinner given by Mr. P. Nisbet.

Looking backward on this glorious cruise, I do not hesitate to pronounce it the best step ever taken by the B. C. A. Not only has it resulted in a large accession of members, and set the Association on its legs financially, but it has established and justified the reasons for its very existence.

It is a thousand pities that the muster of men and craft were so poor; those who could have come and did not, missed a chance of a lifetime; but, what between the Jubilee, business, illness, and the R. C. C. races, doubtless many who were really anxious to come, could not. Mention of racing compels me to point out a most satisfactory feature of this cruise, viz., that from first to last, there was not a single capsize or accident to man or craft; and yet, many of the races were held in water infinitely rougher and bigger than anything I have seen at Burnham. Lough Derg is thirty miles long by fourteen wide. Comment will doubtless be made on the large amount of racing done at a cruising meet, but this was simply due to the overwhelming kindness of our Irish yachting friends. They had prizes waiting for us wherever we went, and how or why should we refuse to sail for them?

To the many who befriended the Association, its members return their sincerest thanks. Among so many it is hard to particularize, but mention must be made of Major Bernard, Lord Dunalley, Mr. Baile, Capt. Minchin, Mr. Parker, Mr. Twiss, Mr. Lloyd Vaughan, and Mr. Parker Hutchinson, all of whom spared no trouble or expense to make us welcome.

In conclusion, may I point out to those who only race, that in canoeing cruises such as the above, they have one of the grandest amusements in the world, and that by coöperating with those who attend them, they will do more to revive the sport we love than by building any number of fearful and wonderful racing machines.

Amendments to A. C. A. Racing Rules.

NEW YORK, Aug. 30.—*Editor Forest and Stream:* Inclosed please find a suggestion regarding paddling canoes, which please publish in your paper for two weeks, as required by the A. C. A. rules:

Paddling Canoes—A canoe to compete in any paddling races of the A. C. A. must be sharp at both ends, no counter stern or transome end, and must come within the prescribed limits as follows: Maximum length, 16ft.; maximum width, 28in.; maximum depth, 10in. amidship; not less than 45lbs. in weight. Measurements to be taken same as in sailing canoes. (This shall not in any way conflict with the rules governing sailing or decked paddling canoes.) The same rule to apply in open sailing canoes. C. V. SCHUYLER.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

San Francisco Shots.

SAN FRANCISCO, Aug. 23.—*Editor Forest and Stream:* The first Sunday's shoot of the fall festival of the California Schuetzen Club was held yesterday at Schuetzen Park. A good attendance was had. The shoot will be completed next Sunday, so I will send no partial scores. The Schuetzen Park shoot had no effect upon the attendance at the Columbia Club at Shell Mound. While this club highly prizes the fine target rifle, still most of its members rather prefer other weapons. Just now a herculean competition is in progress for the military medal offered by the club.

Ed Hovey has been and is still in the lead, but during the last few shoots Bushnell has made rapid strides to the front. From fourth in the race he has gained so that he is now one of the highest, using E. Jacobsen's second total of 473 in ten scores, out of a possible 500. He is now within 3 points of Hovey's best, 476. The high men on the Glindemann medal now are: Hovey 476, Bushnell 473, Jacobsen 473, F. O. Young 471, J E. Gorman 459 and C. F. Waltham 455.

Yesterday's scores:

Rifle, re-entry matches, open to all comers, 209yds, Columbia target, F. H Bushnell rifle medal and cash prizes, three-shot scores: F. O. Young, 10, 13; A. H. Pape, 11, 11, 12, 12; Dr. L. O Rodgers, 18, 19.

William Glindemann military medal and cash prizes, ten shots, Creedmoor count: F. H Bushnell, 48, 48, 48; Ed. Hovey, 47, 47; F. O. Young, 47, 46; J E Gorman, 47, 46.

F O. Young rifle record medal and cash prizes, ten-shot scores: Dr. L O. Rodgers 49, A. Hintermann 112.

Cash prizes on flags, inch centers made during month: Bushnell medal—Pape 4, Young 2. Glindemann medal—Bushnell 4, Young 2

Pistol, re-entry matches, open to all comers, 50yds, Columbia target, Gordon Blanding pistol medal and cash prizes, 3 shot scores: J. E Gorman, 7, 3, 9, 9; C M. Daiss, 7, 7, 9, 9; F. O. Young, 8, 10, 13.

Diamond pistol record medal and cash prizes, 10-shot scores: F. O. Young 51.

Howard Carr any revolver medal and cash prizes, 6-shot scores: F. O. Young, 26, 31, 37; A. B Dorrell, 45, 47.

Achille Roos rifle medal, ladies' trophies and cash prizes, 5-shot scores: A. B. Dorrell, 11, 11; Dr. L. O. Rodgers 14, Mrs. M. J. White 26.

ROEEL.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 11-12.————, La.—Tournament of the Many and Robeline Gun Clubs.

Sept 14-16.—KANSAS CITY, Mo.—Tournament of the Schmelzer Arms Co. Merchandise and amateurs.

Sept. 14-16.—DES MOINES, Ia.—Tournament of the Capital Gun Club. S. C. Quimby, Sec'y.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 15-16.—PARKERSBURG, W. Va.—Tournament of the Mountain State Gun Club. State and open events. Chas. E Morrison, Sec'y.

Sept. 21-23.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Co.

Sept. 22-24.—WATSON'S PARK, Chicago, Ill.—Tournament at live birds and targets. Programmes ready about Sept. 1. Write to John Watson, Station R, Chicago.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 28-Oct. 1.—PASSAIC, N J.—Annual tournament of the New Jersey State Sportsmen's Association at Clifton racetrack. First two days, targets; last two days, live birds. Main event on last day is at 25 live birds, $25 birds extra, handicap; $500 guaranteed to three high guns. W. H Huck, Sec'y, Rutherford, N. J.

Oct. 4-5.—WARWICK, N. Y.—First annual tournament of the Warwick Gun Club Open to all. Targets. $50 average money to four high guns in all programme events John M. Servin, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

Oct. 19-22.—BALTIMORE, Md.—Four days' tournament of the Baltimore Shooting Association. Geo. L. Harrison, Sec'y.

Oct. 22-23.—HUNTINGTON, Ind.—Tournament of the Trap Shooters' League of Indiana, under the auspices of the Erie Gun Club.

Oct. 29-30.—GRAND RAPIDS, Mich.—Tournament of the Itasca Gun Club. Dr. W. P. Brown, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

On Aug. 28 the New Haven Gun Club held a handicap shoot on its grounds. The occasion was not an ordinary one, as the following item from the New Haven *Register*, of Aug. 29, will testify: 'The New Haven Gun Club held a handicap shoot yesterday afternoon at their new range. C. B Bristol, the oldest member of the club, was, by a preconcerted arrangement, the winner in the first event. After his victory Judge Callahan called his attention with well chosen remarks, and in behalf of the club presented Mr. Bristol with an elegant gold-headed cane, on which was inscribed: 'C. B Bristol, Aug. 28, 1897,' it being Mr. Bristol's seventieth birthday. The recipient was taken completely by surprise, but briefly responded by saying that money can buy almost any article of merchandise, but true friendship is not bought with either silver or gold. The cane is a fitting testimonial of the high esteem in which Mr. Bristol is held by his fellow members of the club." We have had the pleasure of meeting Mr. Bristol many times, but we wish that fate had been propitious enough to have permitted our being on hand to congratulate "the father of the club" more fittingly than we can do in cold type. As we remember Mr. Bristol's shooting there was not much need of any "preconcerted arrangement" to insure his winning first place, he is nearly always there or thereabouts, even if he does hustle all the time to make things run smoothly.

Jim Elliott's victory over Charlie Budd gives him two championship emblems and titles; he has won the *Star* cup and the Du Pont trophy. The cast iron badge alone remains, and it would seem that that, too, belongs to him by virtue of forfeiture, Charlie Grimm not having paid any attention to the challenge issued by Elliott at the same time, and in the same letter, that he challenged for the two trophies above mentioned. There may be something back of this silence on the part of Grimm, but what it is we cannot guess, and our correspondent who reported the Budd-Elliott match at Eau Claire, Wis., gives us no clew. Not having a copy of the conditions governing challenges for this trophy, we would hazard the statement that the non acceptance of a challenge for the cast iron medal necessarily carries with it the forfeiture of all right to the medal and to whatever title goes along with the emblem. If we are wrong on this point, will some one who is familiar with the conditions kindly correct us.

New Jerseymen must work hard to make the State shoot, Sept. 25-Oct. 1, a big success It is so long since Jersey had a State shoot—the last one being held in 1884—that it should be a matter of pride to make this one something worth talking about. This tournament is practically the "first annual of the New Jersey State Sportsmen's Association," and special efforts have been made by that organization to get out a programme that will attract shooters to the Clifton race track on the above dates. Clifton is so close to Passaic, N. J., that the grounds are easy of access for all Jerseymen and for all those who may sojourn temporarily or otherwise in the city of New York and its suburbs. We shall probably have more to say on this point next week, after we have returned to the busy haunts, etc.

The 1897 season at the Hollywood grounds was brought to a close on Saturday last, Sept. 4. R A. Welch, of the Riverton Gun Club, was the winner in the main event with a score of 24 out of 25. The Elkwood Park traps will now be the place where all the trap shooting around Long Branch will be done. The winter season at Elkwood Park will probably be as interesting as the summer season has been.

The ample club house, well warmed and well lighted, makes shooting during the winter just about as pleasant as in the summer months. The birds, too, are always so much better in winter than in summer that most people will gladly put up with a little discomfort as regards the weather so long as the birds are good ones.

The *American Field* has been "making news" again In its issue of Aug 28 it reprints an item from the Brooklyn, N. Y., *Eagle* of Sunday, Aug. 22, which told how several members of the Brooklyn Gun Club traveled to Secaucus, N J., the previous day to see George Piercy shoot a match with Henry Heflich, of the North Hudson Rod and Gun Club The match between Piercy and Heflich took place on Friday, Aug. 6, and the full score appeared in FOREST AND STREAM of Aug. 14

The Hazelwood Gun Club, of Pittsburg, Pa., has issued the programme of its shoots for the season of 1897-98. Elsewhere, under the head of "Programmes," we give a review of what it offers for the amusement of its members during the fall, winter and spring.

At the recent tournament of the Ontario Rod and Gun Club League, the Mallard Gun Club, of Hamilton, Can., won the league trophy for 5-men teams by scoring 235 out of 250, to 231 scored by the Hespeler team, and 232 scored by the Guelph team. This victory gives the trophy to the Mallards for good and all, as they have won it two years in succession. The league's shoot was a big success, and some of the scores made ran quite high. The scores show how close a race it was.

Drivers and Twisters are rather scarce in the northern portion of the State of New York; at least we have found them so during the past week or two. As a matter of fact, when we are casting for bass or splashing through a swamp that looks decidedly "woodcocky," Drivers and Twisters of a literary nature are about the last thing we want to think about.

There were many inquiries for Jack Fanning at the Interstate shoot at Montpelier, Vt., Aug. 25-26. We have found out where he was on those dates. He was showing the Canadians how to shoot, attending the tournament of the Ontario Rod and Gun Club League, at Waterloo, Ont., Aug. 26-27. Jack showed up well, and made Gold Dust proud.

Fen Cooper, of Mahaney City, Pa., and Fred Coleman, of Pine Valley—same State—are matched to shoot on the Lavelle Fair Grounds, Sept. 16. The men will shoot this race under Schuylkill county rules, 21yds. rise, 60yds. boundary, one barrel only, gun below the elbow. Cooper shoots at 50 birds, Coleman at 52.

In another portion of these columns we give a brief synopsis of the programme issued for the Interstate Association's tournament at Portsmouth N. H., Sept. 15-16.

SEPT. 4. EDWARD BANKS.

Paid Men at Tournaments.

A COMMUNICATION FROM INDIANAPOLIS.

INDIANAPOLIS, Ind.—*Editor Forest and Stream:* For two or three years past gun clubs here and there have barred professional and paid shooters from participation in their tournaments The wisdom of so doing, and its probable effect upon trap-shooting interests, have been quite fully discussed in the columns of FOREST AND STREAM

Comes now the Cleveland Target Company, per Paul North, and, having read the handwriting on the wall, it gravely informs an anxious public that about a year hence, ten months, to be exact, it will do what others have been doing for years And thereupon FOREST AND STREAM denominates it as "Paul North's scheme," and wonders what the trap shooting readers will have to say.

Speaking for myself, and probably for others who shoot for sport and pay their own expenses, I want to ask what the Cleveland Target Company has done for the good of our cause, that its tardy accentance of these old ideas should give new or added importance to the subject?

True, it has held tournaments notable for a large attendance attracted by big added money, for the benefit of the class it now proposes to bar, and by free targets and fake handicaps to beguile the other class which, next summer, it will kindly take under its protecting wings.

Tournaments by gun clubs are necessary to their existence, in that they serve to stimulate local and neighboring interest in the sport, and the profits of such meetings help to pay fixed expenses and provide improved or permanent paraphernalia The manufacturer of trap-shooting supplies who invades this field, solely for commercial purposes, and unmindful of the harm done to gun clubs, is not deserving of our support.

The record of the Cleveland Target Company, per Paul North, hardly justifies the trap editor's notion that its recent announcement, made for trade reasons, would be of special significance to his readers, unless it be to the shooters for revenue only, who will view it as throwing one more dornick in the rocky road they must travel.

ROYAL ROBINSON.

THE TRAP EDITOR'S REPLY.

Mr. Robinson finds fault with us, and with the Cleveland Target Company, in the communication which is given above. "The Cleveland Target Company per Paul North" (as Mr. Robinson seems to prefer to put it), is well able to take care of itself, and the quality of the Cleveland tournaments of past years is so well known that nothing need be said about them. But, while on the subject, we might add that Mr. Robinson's ideas about these gatherings do not coincide in the slightest with our "notions."

The true reason for Mr. Robinson's communication seems to lie in an apparent misconception of what we wrote regarding Mr. North's letter, which appeared in FOREST AND STREAM some weeks ago. Not having a copy of the issue in which the offending article appeared within reach just now, we are loath to believe that we credited Paul North with originating the "scheme" for barring professionals, as Mr. Robinson would have us believe we did. A full quotation of the context would, we fully believe, have set Mr. Robinson's mind at rest on that point.

In reply to the last paragraph of Mr. Robinson's letter, we would say: "The record of the Cleveland Target Company, per Paul North," does justify "the trap editor's notion that its recent announcement," is "of special significance to his readers" We are daring enough to prophesy that ten months hence, we will be able to make a note that "the recent tournament at Cleveland was one of the greatest gatherings of the amateur trap shooters of this country ever gotten together" Such is our belief in the efficacy of "Paul North's scheme" for the programme of the Cleveland shoot in June, 1898! The scheme is of great significance to the amateur trap-shooters of the United States. It means a great big shoot, with big money, and with no one but amateurs to fight for it.

PROFITS DERIVED FROM TOURNAMENTS.

There is one other paragraph in Mr. Robinson's letter which it seems advisable to touch upon; we refer to the one which speaks of "the profits of such meetings" as helping "to pay fixed expenses and provide improved or permanent paraphernalia." FOREST AND STREAM'S stand in this matter has always been that clubs ought not to try to *make money* for such purposes, unless it advertises a tournament for just such charitable purposes as building a new club house, putting in a new and improved set of traps, or something of a like nature. All expenses attending a tournament can be cleared, with a balance in hand from the receipts after all bills have been paid, if 1½ cents per target be charged. Of course, added money alters the conditions, it being thoroughly well understood by all shooters that added money is raised by increasing the price of the targets. But where there is nothing offered to visiting shooters, other than an opportunity to meet a lot of shooters and spend the day in sweepstake shooting, we scarcely like the idea of making them pay more than their share of the expenses of running the shoots, in order to put a good round sum into the treasury of the club, simply "to pay fixed expenses, etc" It looks too much like asking a body of men to come to a dinner, charging them $5 per plate, but giving them only a $2.50 dinner, in order that you might buy a silver set of knives and forks for the next dinner.

We know that this idea of ours may seem too radical to meet with general approval, and we would like to hear something from the other side.

Hazelwood Gun Club, of Pittsburg.

PITTSBURG Pa., Aug. 28.—A long list of events was decided to day on the grounds of the Hazelwood Gun Club. Among the shooters was J. L. 147 Winston, of the Austin Powder Co. Sparrows, targets and pigeons were trapped in the twelve events given below Nos. 1 and 2 were at 15 sparrows, $3, two high guns; No. 3 was the contest for the club championship medal at sparrows; No. 3 at 25 targets, $5, one high gun; No. 5 was a $2 miss-and out at pigeons; Nos. 6 and 7, $3 miss-and-outs at pigeons; Nos. 8-11, $1 miss-and-outs at sparrows; No. 12, $2 miss-and-out at sparrows. Scores were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Sparrows, pigeons or targets:	15	15	25	25	..	..	..	..	..	..	..	..
W S King	14	14	..	..	2	1	9	3	3	3	4	3
147	14	14	..	21	0	3	9	3	3	1	5	9
McPherson	10	..	..	..	2	3	1	4	0	2	..	..
*Strong	8	8	..	..	6	3	2	0	0	1	..	..
*Crossland	8	15	21	17	5	0	9	..	1	3	0	10
*Atwood	..	5	..	..	6	1	..	..	..	..	..	..
Burchfield	..	..	21	..	..	..	..	..	..	..	..	..
Bessemer	..	..	..	22	0	2	10	..	..	..	..	..
Brockman	..	..	..	..	3	2	..	..	..	..	..	..

* In No. 1 Strong and Crossland only shot at 10 sparrows; in No. 2 Strong and Atwood only shot at 10 sparrows.

SMOKE.

Baltimore Shooting Association.

BALTIMORE, Sept. 2.—*Editor Forest and Stream:* We would like to claim dates through your paper for a four days' tournament, to be held at the Baltimore Shooting Association grounds, Baltimore, Md., on Oct. 19, 20, 21 and 22—two days targets and two days live birds; $150 added per day on target events, and $200 added and $500 guaranteed for the Maryland handicap, 25 birds, $75, handicap from 26 to 33yds.

THE BALTIMORE SHOOTING ASSOCIATION.
(Geo. L. Harrison, Sec'y.)

Programmes.

THE PORTSMOUTH INTERSTATE.

The programme for the Portsmouth, N. H., Gun Club's Interstate tournament contains ten events—seven of them at 15 targets, and three at 20 targets. Of the 15-target races, six are at known angles, with an entrance fee of $1; the other 15-target event is at unknown angles and is $1 50 entrance. The three 20-target events are at unknown angles, with entrance fees of $1.50. The programme for both days is precisely similar.

Targets will be charged for at the rate of 2 cents each, and anybody who wants to do so can enter for the price of targets only. The Rose system of dividing purses will be used, with ratio points of 5, 4, and 3 to 2—that is, four moneys in all events. Guns and ammunition may be forwarded in care of Hoyt & Dow, Congress street, Portsmouth, N H., and will be delivered at the grounds free of charge.

Headquarters for sportsmen during the shoot will be at the Langdon House, where a rate of $2 a day will be made for shooters. The tournament will be held at the Portsmouth Bicycle Park, situated on Newcastle avenue. Barges will be at the depot and hotel to convey shooters to the grounds. Mr. W. I. Philbrick, secretary of the club, will give any additional information.

HAZELWOOD GUN CLUB.

The "Pigeon programme for the season of 1897-98," issued by the Hazelwood Gun Club, of Pittsburg, Pa., is a good one, and shows very plainly that this club, although a young one, is in the hands of the right kind of management. Mr. Jno. N. Crossland is both president and manager, and he is ably seconded by his assistant manager, Brother Bill McCrickart. The vice-presidency is held by Jno. G. Messner; J. C. Node is treasurer, while the secretaryship is filled by J. C. Lowry.

The main feature on the programme is the monthly contest for the championship diamond and gold medal, presented by the president, Mr. Crossland. This medal is to be awarded as follows: At the close of the season, the shooter making the highest average in five of the seven diamond gold medal monthly events, will be awarded the Jno. N. Crossland handicap championship diamond gold medal, valued at $100, emblematic of the live pigeon championship of western Pennsylvania, West Virginia and eastern Ohio. The contest is at 20 pigeons, $15, birds extra, four high guns, *not class shooting*, handicap rise, handicaps ranging from 28 to 30½yds., all contestants being handicapped by Mr. Crossland.

The dates for the seven shoots for this medal are Oct. 14, Nov. 18, Dec. 16, Jan. 13, Feb 17, March 17 and April 14. On these dates a regular programme of events will be shot as follows:

No. 1, Hazelwood introductory sweepstake, 7 pigeons, $7, birds extra, 28yds. rise, four high guns.

No. 2, Dr. E. J. Stilley sweepstake, 10 birds, $7, birds extra, 30yds. rise, four high guns.

No. 3 is the Crossland handicap for the diamond medal above referred to.

No. 4, Bogardus sweepstake, 5 pairs of pigeons, $7, birds extra, 25yds. rise, four high guns.

No. 5, Consolation handicap, 10 birds, $7, birds extra, four high guns, winners of money handicapped 1yd. extra.

No. 6, miss-and-out, $5, birds extra, 28yds. rise.

The above programme should make the monthly shoots of the Hazelwood Gun Club popular gatherings. To reach the grounds from the city of Pittsburg, take the McKeesport electric car of the Second avenue line at the corner of Market street and Fourth avenue, Pittsburg, direct to the grounds.

In addition to the above tournaments, sweepstake and practice shooting, open to all, will take place Oct. 8 and 22, Nov. 5 and 26, Dec. 3 and 24, Jan. 7 and 28, Feb. 4 and 25, March 4 and 25, and April 8.

NEW JERSEY STATE SPORTSMEN'S ASSOCIATION.

In our next issue we expect to be able to give a full review of the programme issued for the annual tournament of the New Jersey State Sportsmen's Association at Clifton race track, Passaic, N. J., Sept. 28-Oct. 1.

For members of the State Association there will be four trophy contests, two at targets and two at live birds. The target trophies will be for the individual championship and for the three-men team championship of the State; the live-bird trophies will be for similar championship at live birds. There will also be a special programme of State events at targets.

The open programme on each of the two target days, Sept. 28-29, will be found to be quite interesting to those who like to shoot at targets, while on the live-bird days, Sept. 30 and Oct. 1, the visitors from outside the State will find that they have been well looked after. Oct. 1 in particular is a good day for anybody who can hit a pigeon. The Jersey Special Handicap, 25 birds, $25, birds extra, handicap rise, $500 guaranteed to the three high guns, all surplus added, will certainly attract a large number of shooters. New Jersey herself is strong in live-bird shooters, so that $500 is really only a small guarantee. Still "all surplus added" covers everything. It will be found, we think, that the method of dividing the surplus will recommend itself strongly to shooters. There is something novel in it, although the main idea is cribbed from the Interstate Association's plan for dividing the moneys in the Grand American Handicap.

Buffalo Team Shoots.

BUFFALO, N. Y.—The first of the Bison Gun Club's midsummer tournaments was highly successful. From out of town were: Rolla O. Heikes and E. Rikes, from Canton, O Others are: C. Lane, G. Borst, E. F. Hammond and Dr. Miller. Heikes missed only 3 targets out of 130 shot at, including doubles. Here are scores:

Event No. 11 was at 15 singles and 5 pairs; Event No. 14 was a walking match:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

Sept. 2.—The first team shoot for the championship of Buffalo occurred on the grounds of the Bison Gun Club, Walden avenue and City Line. The Audubon, Cazenovia and Bison gun clubs were represented each by five men, and each shooter had 25 targets. The teams and scores were:

Audubon Gun Club.

Chas S Burkhardt	21	E C Burkhardt	18
G McArthur	21	L Warren	22—103
B Talsma	21		

Bison Gun Club.

F Wheeler	22	G Cooper	21
G Zoeller	21	E Bauman	20—102
W Foxie	18		

Cazenovia Gun Club.

Beck	20	Heinold	20
Stevens	20	Mignerney	18— 98
G Waltz	20		

The Audubon Gun Club won by one target, a remarkably good showing. The next team shoot will be held on the Audubon grounds, Sept. 11.

After the match there was a class shoot, in which the scores were:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	15	20	25	15	15	5p.	Targets:	15	20	25	15	15	5p.
Charles B	10	17	..	11	14	8	Kinner	6	13	17	6	..	..
Cooper	13	15	21	..	..	..	Beck	12	..	..	11	11	..
E C B	12	13	11	11	10	4	Stevens	13	..	..	11	..	..
Dauser	11	..	..	..	..	..	Ditten	9	16	19	9	8	..
Zoeller	12	14	21	..	..	..	Warren	..	16	..	12	12	..
Mignerney	12	..	..	..	..	..	Waltz	..	19	..	13	7	..
Foxie	12	17	18	9	9	7	Bauman	..	18	20	12	9	6
Mack	10	17	16	..	..	..	Hager	..	..	12	..	..	..
Wheeler	15	17	22	13	..	..	Heinold	..	..	..	12	10	..
McArthur	14	14	..	10	..	..	Connor	..	..	..	..	10	..
Talsma	13	17	..	..	..	..							

G. Zoeller won the Class A badge and Mack the Class B badge. The count was made in Class C.

Kinner, Mack, Wheeler and Foxie shot a match, 15 birds each, and all killed straight.

Shooting and Banqueting at Dayton.

(Correspondence of the FOREST AND STREAM.)

DAYTON, Ohio, Aug. 30.—For two years, teams of twelve men each, representing the Buckeye Gun Club, of this city, and the Limited Gun Club, of Indianapolis, have been shooting friendly matches simply for the price of the birds. Conditions: 12-men team from each club, 50 targets each man, known traps, unknown angles, American Association rules.

The first race was shot here in April 1896, won by the Buckeyes. Second race shot at Indianapolis, and won by the Limited Gun Club's team. The odd match was shot here to-day, and was won by the Buckeye team by the score 483 to 465.

The Indianapolis visitors arrived here at 9:18 this morning, and were met at the depot by Buckeye Club officials and reception committee, with tally-ho four-in-hand for a rapid ride to the Buckeye Club range, quite near the city; a beautifully rolling piece of ground, bordered by a grove that gave just shade enough to make steady light.

A very brief time was given to exchange of greetings, unpacking guns and shells, and otherwise preparing for the contests of the day. The cards called for three sweeps for practice before dinner.

Dr. L. C. Adams, referee; David McCutcheon, score keeper.

First match, 15 birds each, known traps, unknown angles, $1.50 entrance, eighteen entries, four moneys: Tripp 13, Beck 13, Cooper 14, Mumma 14, Schwind 14, Griffiths 11, McDonald 12, Protzman 12, Wildhack 15, Britton 14, Comstock 12, Wroe 13, Robinson 9, Kiefaber 10, Kimberlain 8, Hearsey 7, Marrott 7, Gentle 9

W. A. Wildhack, of Indianapolis, the only straight score, received hearty applause and first money, $7.55; second money, $5.65, divided by the 14s, Cooper, Mumma, Schwind and Britton; third money, $3.80, divided by the 13s, Tripp, Beck and Wroe; fourth money, $1.90, divided by the 12s, McDonald, Protzman and Comstock.

Second match, 10 birds, $1 entrance, twenty two entries, three moneys: Mumma 5, Comstock 8, Tripp 8, Protzman 5, Cooper 9, Leutzinger 8, Schwind 7, Wroe 5, Britton 9, Griffiths 6, McDonald 9, Beck 9, Robinson 8, Wildhack 9, Kiefaber 6, Miller 7, Kimberlain 5, Hearsey 7, Marrott 7, Gentle 5, Griffith 7, Stark 10.

Billy Stark, 10 straight, first money, $9; second and third moneys divided.

Third match, 10 birds, $1 entrance, sixteen entries, three moneys: Schwind 8, Stark 10, Britton 10, Beck 7, Cooper 9, McDonald 8, Mumma 9, Tripp 9, Robinson 9, Griffith 9, Protzman 6, Kiefaber 6, Goodhue 7, Miller 5, Adams 7.

Britton and Stark, each 10 straight, divided first money, $6; second and third divided.

A tally-ho ride into the city for dinner was next in order, and the teams returned to the grounds at 1:30, where a fine crowd of ladies and gentlemen were quietly enjoying the cool of the club house porches waiting for the contest of the afternoon.

First was a 10-bird match for practice, $1 entrance, eighteen entries. Leutzinger referee: McDonald 10, Raymond 8, Schwind 7, Marrott 6, Adams 7, Cooper 6, Stark 8, Wildhack 8, Griffith 7, Comstock 8, Tripp 10, Beck 9, Britton 10, Wroe 7, Heikes 7, Craig 7, Mumma 8, Curphey 7, Gentle 1, Raymond 8, Marrott 5, Cooper 9, Griffiths 8, Schwind 8.

THE TEAM RACE.

L D. Leutzinger, of Council Bluffs, Ia., was agreed upon as referee; H. T. Hearsey, of Indianapolis, and O P. Eby, of Dayton, judges; John M. Curphey, scorer. Raymond, of the Buckeyes, was the first man at the scratch, and next came Britton, of the Limited, and thus the teams alternated in shooting the four squads of six men each.

The first round each man shot at 15 birds, second round 15, third round 20, thus making the 50 birds for each man.

Limited team total 465.

The Buckeye team was declared winner by 18 points. Upon announcement of the result, Royal Robinson, of the visiting team, proposed three cheers for the Buckeyes, and the range and surrounding grove rang with huzzas. Dr. Adams, of the local team, called for three cheers for the Limited Gun Club and the team, and the hearty response evened up the social feeling that prevailed.

The match had occupied about two hours time, and at 5 o'clock the officials and teams boarded the tally-ho for a merry ride into the city, jollied along the streets as the result of the shoot became known.

THE BANQUET.

As the Indiana team were to start for home at 8:45 P. M, the banquet room at the Beckel House was thrown open to the local team and the visitors shortly after 6 o'clock, thirty covers being laid.

President Charles W. Raymond, of the Buckeye Gun Club, as toastmaster, occupied the seat at the head of the table, and President George J Marrott, of the Limited Gun Club, sat at the opposite end of the beautifully decorated table, and all enjoyed the feast.

Those who responded to toasts were Judge O. B. Brown, George J. Marrott, Dr. Geo. Goodline, Royal Robinson and Dr. Kimberlin. Dr. L. C. Adams recited in darkey dialect "An Ailment from Yankee Land."

The banquet proved a delightful wind-up for the contest, and pleasures of the day. Good-byes were exchanged with promises for another race between the teams before many months. It is probable that the Buckeye Club *en masse*, will go to Indianapolis for the next match, and members will take their wives and young people to witness and enjoy the sport.

Pawtuxet Hunters' Handicap.

PAWTUXET, R. I., Aug. 28.—The Pawtuxet Gun Club held its fourth shoot for the merchandise prizes, called the Hunters' Handicap, today. The attendance was good, but the scores, owing to the high wind, were rather low. Conditions, Class A, 25 unknown; Class B, 25 known:

Class A.

Bedford Rod and Gun Club.

BEDFORD, Ind., Aug. 31.—Event No. 1, 10 targets. Conditions: Unknown angles, five traps, practice.

Thornton	0101100101—5	Richard	1100111111—8
Sears	1101010111—7	Doyle	0111101010—6
Hatfield	1100001111—6	Palmer	1101000011—5
Sherwood	1110111010—7	Reath	1110111100—7
Francis	0100100011—4	Braxton	1001111111—8
Martin	1110110011—7	Kelly	1011111001—7
Stipp	1011111011—8	Durham	1000011000—3

No. 2, 25 targets, unknown angles, 5 traps, medal shoot:

Doyle (11)	01110111001000011011110000—24
Sears (11)	10110001110001101011110011—26
Thornton (19)	01110001101001101100000011—31
Hatfield (9)	11011111110111011111111111—31
Reath (8)	10101000101100001101w. —17
Richard (15)	11111110101000111111111111—35
Braxtan (3)	11111111001011010111111111—23
Kelly (11)	11111111110111011000011111—30
Palmer (9)	11110100011100101010w. —20
Francis (10)	11001100100100000001001111—21
Durham (8)	00010001010101000000001000—14

No 4, shoot-off of tie, same conditions as No. 3.

Hatfield (9)	11001001101110101100100111—24
Sears (11)	10101011101101010010011101—25
Kelly (11)	00001111111011111001110111—28
Richard (15)	11110101011101111110111001—33

Ties again shot off at 10 targets each man, resulting: Richard 9, Sears 7, Kelly 5. Richard won medal.

No 5, 50 targets, unknown angles, five traps; match race for expenses:

Stipp	11001111110110111111111111111111101111010110011011—40
Sherwood	11100010111101111111111111111111111111111111100011—42

First 25 for each man counted without allowance in the medal match, but were very much "shy."

This was the first shooting on our new grounds, which are fine. Traps and trappers below ground level, and shooters face the north. We shoot every Tuesday afternoon and visitors are always welcome.

SHERWOOD, Sec'y.

St. Louis Fourth Annual.

Editor Forest and Stream:

The King's Smokeless Gun Club, of East St. Louis, Ill., will give their fourth annual fall tournament for amateurs either on last week of September, during Knights of Pythias encampment or first week in October, during fair week, as in both events the twenty-two railroads entering here will make reduced rates. We will state exact dates within a few days.

The shoot will be under management of Jack Parker, of Detroit, and all 20-target events will consist of $5 added money. In addition, merchandise will be given as prizes. There will be four 20 target and four 10-target events each day. All targets thrown from magautrap, and three traps, Seargent system. For programme send to me at 205 Union Station.

JOHN M. TRENDLEY.

PUBLISHERS' DEPARTMENT.

Cresson Springs.

A PERSONALLY-CONDUCTED TOUR VIA PENNSYLVANIA RAILROAD.

THE Pennsylvania Railroad Company has arranged to run an early autumn tour from New York, Philadelphia, Baltimore, Washington, Harrisburg and intermediate points to Cresson Springs, Pa., on Friday, Sept. 10.

Round trip tickets, good going only on Sept. 10 on trains indicated below, or any train arriving in Philadelphia before 10:25 A. M., and thence on special train; and good returning on regular trains until Sept. 15, including also one full day's board at the magnificent Mountain House, will be sold at the following rates:

	Rate.	Train leaves.
New York	$9 50	7:55 A. M.
Newark	9 50	8:25 "
Elizabeth	9 50	8:06 "
New Brunswick	9 00	8:31 "
Phillipsburgh, N. J	9 50	8:00 "
Trenton	8 50	9:23 "
Wilmington	8 50	9:33 "
Philadelphia	8 00	10:25 "
Harrisburg	6 00	1:20 P. M.
Washington	8 00	7:50 A. M.
Baltimore	8 00	8:50 "

Proportionate rates from other points.

Passengers from Baltimore and Washington will use regular train arriving Cresson 3:50 P. M.

To persons remaining at Cresson for a longer period than one day a special reduction in hotel rates will be given.

For tickets or additional information consult ticket agents.—*Adv.*

Cresson.

WHAT is the most beautiful mountain resort in the world? Cresson!

Where is the purest water in the world? At Cresson!

Where is the air so delightful that it is a pleasure to live in just in order to breathe it? At Cresson!

Where are the most romantic forest walks, charming mountain drives and greatest variety of mineral waters to be found? At Cresson!

Where are there no mosquitoes? At Cresson!

Where is there no malaria? At Cresson!

Where are historic associations, magnificent mountain views, church privileges, tennis, golf and bicycling all to be found? At Cresson!

Where is there music every day, "and Sunday, too"? At Cresson!

Where is there an artificial beach of pure white sand and a room full of swings, all under shelter, where children may play in rainy weather? At Cresson!

Where can a business man spend Sunday with his family on the mountain tops, and yet be at his desk on Monday morning? At Cresson!

Where is Cresson? On the Summit of the Allegheny Mountains, just west of Altoona Horse Shoe Curve and Allegrippus, on the line of the Pennsylvania Railroad.

Which is the most delightful month to spend in the mountains? September.

Where can it best be spent? At Cresson!—*Adv.*

Good Chicken Shooting

will be found at numerous points along the Northern Pacific Railway this fall, notwithstanding the heavy summer rains. Present advices are to the effect that in the vicinity of Fergus Falls, Perham, Detroit, Sauk Centre and Little Falls, in Minnesota; and Wahpeton, Pembina and Valley City, North Dakota, chickens will be a good crop. At Aitkin, Little Falls, Perham and Detroit, partridges will be plentiful. Ducks will be found in large numbers all along the line. Season opens Sept. 1. Chas. S. Free, Gen. Pass. Agent, St. Paul, Minn.—*Adv.*

Shoes of Just the Right Sort.

SOME time ago our contributor, John Kennedy, mentioned incidentally his hunting boots, which he claimed to be pretty near perfection. When we asked him where he got them he replied that they came from M. A Smith & Son, of Philadelphia, who were then, as now, advertising in FOREST AND STREAM.—*Adv.*

New Orleans, Mexico and California.

REACHED from New York via Pennsylvania & Southern Railway, offering the most perfect service to New Orleans, Mexico and the Pacific coast. Tourist car the year round from Washington to San Francisco. New York office, 271 Broadway.—*Adv.*

Florida and the South.

SOUTHERN RAILWAY, the most direct route. Operating double daily service. New York to Florida and the South year round. The only line operating dining car service in the South. New York office, 271 Broadway.—*Adv.*

WANTED—To submit plans and specifications of an improved steam house-boat to a responsible gun club wishing to go South for hunting season. State what price you would be willing to pay per day for best of hotel accommodations. A. B. C., care of FOREST AND STREAM, —*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 18, 1897.

VOL. XLVIX.—No. 12. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any address which may be furnished us for that purpose.

I am happy to know that this unsportsmanlike habit of catching to count is now deemed more honored in the breach than in the observance, thanks to the admonitions of the public press and the better education of the present generation of anglers. George Dawson.

A BETTER WAY.

WE print a suggestion coming from the Tennessee mountains that a certain tract of country there, which is highly desirable for game preserve purposes and can be had at a cheap figure, should be taken up by a club for private use. There is a better way. Such tracts of wild land in Tennessee and elsewhere might well be acquired by the State and set apart as permanent possessions of the people. Why should all the good hunting country on this continent pass into private control? It is true that for the most part we have let lawlessness and wanton waste run their course and work their curse, until there is, as a rule, not much game-stocked territory left to convert into public hunting preserves. But there is vastly more remaining to-day than there will be five years hence; and the time to undertake the permanent keeping of this territory is now. The sportsmen of Tennessee will be doing the graceful thing for themselves and for the generations of sportsmen who are coming after them, if they shall persuade the Legislature to set about this reservation of available wild lands for public use. There are good precedents. In 1895 the Michigan Legislature enacted:

That all that part of Lake Erie lying adjacent to the surveyed lands of Monroe and Wayne counties and any submerged lands within the surveyed lines of said counties and connected with Lake Erie and Detroit River, providing such surveyed lands are owned by the State of Michigan, shall be and hereby are set apart and dedicated for a public shooting or hunting ground for the benefit and enjoyment of the people of the State of Michigan, for a distance extending one mile into said Lake Erie, the eastern line of the submerged lands and waters hereby reserved being one mile distant from the surveyed lines of the east side of said counties and parallel thereto: Provided, that this reservation and dedication shall not interfere with, or detract from, any rights or privileges as to fishing now enjoyed by any person or the public.

New York has noble possessions in the Adirondacks and the Catskills, set apart by constitutional mandate, now enjoyed every year by thousands of her citizens, and destined for the perpetual enjoyment of succeeding generations. Minnesota has her public parks, Ontario hers; why not Tennessee her own as well?

As a rule, in such affairs we are not much concerned for posterity; the general sentiment is as that of the man who did not see why he should do anything for posterity, since posterity had never done anything for him. The truth is, however, that in doing wisely for those who are to follow us we are doing not less wisely for ourselves. In other words, if we do something for posterity, posterity surely does something for us. As with the individual, well-planned and well-directed liberality expands and ennobles the nature of the giver, and as one in providing for the future of his family finds in that provision his own present and abiding satisfaction, so a town, a county, a State, may gain the reward of enhanced civic pride and stimulated public spirit through its consciousness of a generous policy for the future. No man, no community, no commonwealth, can live for to-day alone, not even with respect to the resources of the streams and the woodlands. We are bound to have regard for the rights of others in the future; to bequeath to them not wantonly and hopelessly impaired the stores of nature's bounty which it is ours to enjoy. The whole duty of man in this matter of game and fish protection is summed up in the remark made by a father who in advocating a law for the protection of deer in the North Woods said, referring to his infant boy: "I want him when a man to have as good hunting as I have had myself." If that were the governing motive with individuals and communities, who can question that the practical results of such a policy would prove as beneficent for the present as for the future?

THE CHICKEN ON THE PUPPY'S NECK.

ONE way to cure a puppy of killing chickens is to tie about his neck the chicken he has done to death and compel him to wear it as a token of disgrace, until the ignominy, of which a dog may be acutely conscious, shall have wrought in him repentance and a change of heart. The plan works admirably with the puppy, but that is because he is only a dog and lacks human sense. If he knew as much as a man he would make headlong for the nearest studio to have himself and the hen photographed.

That is what the score fisherman does. When he has caught as many as he can lug alone or with the guide's assistance, he poses before the camera, and then if any doubter refuses to believe his fish story, he triumphantly produces the photograph to prove that he was as mighty a fish-killer as claimed. Next to the astonishing satisfaction some fishermen find in killing for count, is this astonishing custom of having themselves photographed *in flagrante delictu*, as it were.

The ennobling influences of field sports are much talked of and written about, and correctly so. One of the ennobling elements in the sports of shooting and fishing is a willingness to stop when one has taken his fair share. But there is nothing elevating in the bloodthirsty gluttony of the "fish-hog" or "game-hog"—detestable names for detestable beasts. On the contrary, the indulgence of bestial proclivities in this direction degrades. The brute who kills a bushel of fish to be dumped on the bank, or a midsummer deer to rot in the woods, comes home not a nobler but a coarser man than he went out.

There are anglers and there is angling. Fishing for count is not angling, nor are such fishermen anglers. Is it not high time that the distinctions were more clearly realized and the lines more sharply drawn and discriminatingly observed; and that the fisherman who has himself photographed with his fish and then consigns them to the compost heap were relegated in public estimation to the limbo of the puppy with the hen about its neck?

SNAP SHOTS.

From Arkansas comes a tragic tale of robbery and love wild turkey hunting and fate. Will Dalton, of Hoxie, was under indictment for robbing Sam Mattox. But that Will on his part had no hard feeling against Sam was shown by his marrying Sam's daughter. In keeping with all precedents, this should have adjusted family differences and disposed of the indictment, as in the "Arkansas Idyl" sung by Nessmuk, the feud of the Likenses and the Simmonses was ended when Yancey led Martha to the altar:

"The tribe of Simmons all came up—the Likenses were there,
The neighbors swore they ne'er before had seen a bride so fair,
Ma'am Likens, primed with applejack, went halting through a reel,
While Granny Simmons in her chair kept time with toe and heel.
They smoked the fragrant cob of peace, they drank their toddy hot;
They swore an everlasting truce and sealed it on the spot."

There was no such happy ending of the Hoxie affair; the indictment still held, and the case was to have come up at the current term of court. But other fate was in store for Will Dalton. The other day he went into the woods hunting for squirrels and wild turkeys. A small boy went with him. The small boy came back, but Dalton did not return. He had been attacked by wolves and devoured, boots, clothes, gun and all. That was the story told by the boy. The dispatch adds that Dalton's widow is wearing mourning. Let us trust that she may be comforted, for one of these days her husband will grow homesick and restore himself to her.

In India the destruction of human life by wild animals continues with little abatement, as shown by the Government statistics collected annually. The figures for 1896 have just been published; they show that 295 persons were killed by tigers, leopards, and other beasts of prey, and 1,869 died from the effects of serpent bites. Addison has a quaint fable of the lion and the man: "The man walking up with that noble animal showed him, in the ostentation of human superiority, a sign of a man killing a lion. Upon which the lion said very justly: We lions are none of us painters, else we could show a hundred men killed by lions for one lion killed by a man."

However the conflict may have fared between man and animals in other lands, there is on our own continent no creature that could make the boast of the lion in the fable. Of bear, wolves, panthers and venomous snakes, more have been killed by man than have slain human kind. The savage American with his crude weapons could cope with his animal foes; and equipped with perfected modern arms civilized man is as secure of life and limb in the haunts of wild beasts as in city streets and home life. We hear of the perils of hunting, but a New York physician was recently killed playing blind-man's-bluff, and wives are solicitous for their sportsmen husbands, while a woman died the other day from the effects of a bargain-counter crush. Provided no indictment is hanging over him, the average wild-turkey hunter, even in a wolf country, is what insurance men would class as a good risk.

Writing from Kentucky, Hayseed asks advice as to how he may stop the illegal hunting which is destroying the game supply. If Hayseed can discover one other citizen like-minded with himself, and they two a third, a beginning will have been made. A combination of the citizens of a town or a county in an association pledged to observe the laws themselves, and to uphold the enforcement of the law as to others, will accomplish wonders, and in default of a warden system, is the only way open. An individual is practically powerless; he cannot stand out alone against his neighbors; whereas the union of few or many, banded together for the purpose of enforcing the game laws, relieves each member of an unwelcome share of responsibility and commands respect and deference. Let some attorney—if himself a sportsman so much the better—be engaged as the counsel of the association; give him the evidence of law-breaking; let him in his official capacity bring the suits and conduct the cases. By prompt and vigorous action show that there is an earnest determination that the game laws shall be respected and obeyed. This is one way; it has worked well elsewhere, it will in Kentucky. We have sent Hayseed a copy of suitable constitution for a protection club, and will gladly supply any others who may wish them.

President Gavitt, of the New York Association for the Protection of Fish and Game, has done well to call a special meeting for Oct. 14 to arrange for an earlier convention day than the usual one in January. There is no good reason why the annual work of the Association should not be put under way in ample season to undertake its application to the Legislature in the beginning of the session. We publish President Gavitt's call on another page; every sportsmen's club in the State of New York should be represented at the October gathering. The Association is concerned for the good of all; it can secure that good only by the active participation and coöperation of all. The membership ought to be doubled; and it would be if sportsmen generally realized the strength of union.

In this latitude, and the breeding habits of ruffed grouse being as they are, an open partridge season beginning Aug. 16 is entirely too early. The year's birds are then immature, and not conditioned. The opening day should be set much later.

The Canadian correspondent who writes of the destruction of song bird eggs, evidently misunderstood the recent suggestion in these columns that the way to protect native birds' eggs by tariff would be to admit eggs free, thus permitting foreign eggs to compete with the American-laid product. To state the principle of such a system was not to advocate its adoption. Moreover, the sale of eggs "for mere fanciful purposes," the existence of which traffic we questioned, does not include the egg gathering for "scientific purposes," since the tariff act particularly exempts that industry from prohibition. The remedy for song bird egg destruction by collectors is to be found in a more adequate enforcement of the laws already on the statute books.

From many quarters and points widely separated come reports of an abounding stock of quail this season. The birds nested under favorable conditions and the food supply has been generous. The quail shooting of 1897 promises to be all that one might wish for. He is wise who makes provision for "getting away" when the season shall come.

ON THE WAY TO THE KLONDIKE.

From the FOREST AND STREAM'S *Special Correspondent.*

ON BOARD STEAMSHIP ISLANDER, Skaguay Bay, Alaska, Aug. 21.—*Editor Forest and Stream:* We are anchored at Skaguay Bay, on the east side of Chilcoot Inlet and five or six miles from Dyea, at the upper end of the inlet and foot of the pass of the same name. Precipitous, rocky hills and low mountains, none of them apparently over 2,500 or 3,000ft. high rise from the inlet on both sides, and on one of the tallest there is a fine glacier.

In front is the infant town of Skaguay, the port of entry for the White Pass. Picture a level plain half a mile wide between enflanking hills that gradually come closer together at the north as the pass narrows behind, and on the beach and scattered among the trees beyond an army of tents, with here and there a frame or log house half completed. This is the town, and lots 50×100ft. already command a good price.

The plain is formed from gravel and sand that a small glacial stream has brought down from the mountain beyond. It has a perfectly square edge at right angles with the bay, and at any stage of the tide (which has a rise here of 18ft.) boats ground long before dry land is reached and one has to jump over and wade ashore. At anchor in the bay are half a dozen steam vessels discharging freight and horses, and most of these have carried passengers also.

Last night, soon after reaching this point, we went ashore and walked in two and one-half miles on the trail. We found the road in excellent condition, and things in general had a prosperous and business-like appearance.

There is plenty of food for man and beast. Wagons are being used on this end of the trail, and freights are 1 cent a pound for the first five miles—that distance the road is level and dry, the sandy soil drawing easily. After that there is an ascent of 2,600ft. in thirteen miles, and the conditions are not so good.

However, there are no serious difficulties to be surmounted, and the only complaints we hear are from a few men who have no horses. Yesterday a man came back who had packed 175lbs. per animal across to the lakes, on mules, making the round-trip in four days.

The timber in the Pass is very much like that in the Adirondacks—for instance, if cottonwood be substituted for poplar. Some of the cottonwoods are 3ft. in diameter.

There is fine spruce timber and a great deal of balsam. I also noted beach and yellow birch.

For game, there are said to be a great many goats on the mountains facing the water. They are only killed to bait traps, as their skins have no commercial value, and their meat is not cared for. There are no deer here on the mainland, and no moose, caribou or sheep on this side the range. Bears are very abundant, particularly the common black bear.

I had a talk with Mr. P. A Smith, Inspector of Customs for the District of Alaska, about the bears. He is a good sportsman and a capable officer. In the last three years, among other game, he has killed fifteen bears. He shoots a .38-55 repeater, and in no case fired more than four shots to kill his bear. On the average it only required two shots to accomplish his purpose. Mr. Smith aims at the neck, whenever possible, and thinks this the best shot for bear.

The brown bears, he says, are pretty tough customers. He knows personally of three men who have been killed by them recently. At Burners Bay, just below this place, two prospectors loaned their rifle to an Indian one day, and shortly afterward one of them passed an old she-bear, which attacked him without any provocation, and in their defenseless condition made short work of her victim. His mangled remains were taken to Juneau.

Still more recently an Indian was killed on Admiralty Island. His little boy was discovered alone in a canoe, crying for the father, who had been gone a long time, and who at that moment was cold in death beside the dead carcass of one of these giant bears. He had shot the bear at short range with his old Hudson's Bay musket, but had been unable to check its charge in time.

Mr. Smith said that these bears are alike fearless of man and firearms. A friend of his shot at one and missed, as was discovered afterward, but the bear charged him just the same, and was only killed by a lucky shot in the brain at shortest kind of range.

The Indians get quite a number of hides, but all have the bullet mark in the top of the back, showing that they shoot them from trees when the bear comes down some favorite runway to a stream in search of salmon.

Captain, or Inspector Harper, of the Canadian Mounted Police, is aboard this vessel. He has a very fine double Lee-Metford rifle. The gun is a hammerless automatic ejector, weighing 9lbs., and beautifully engraved and finished. It shoots the regular .303 English ammunition, which is a strong charge, and one that holds up remarkably well. Judging from shots fired over the water, its trajectory is superior to the U. S. Army cartridge. It is certainly away ahead of the .30 30 smokeless.

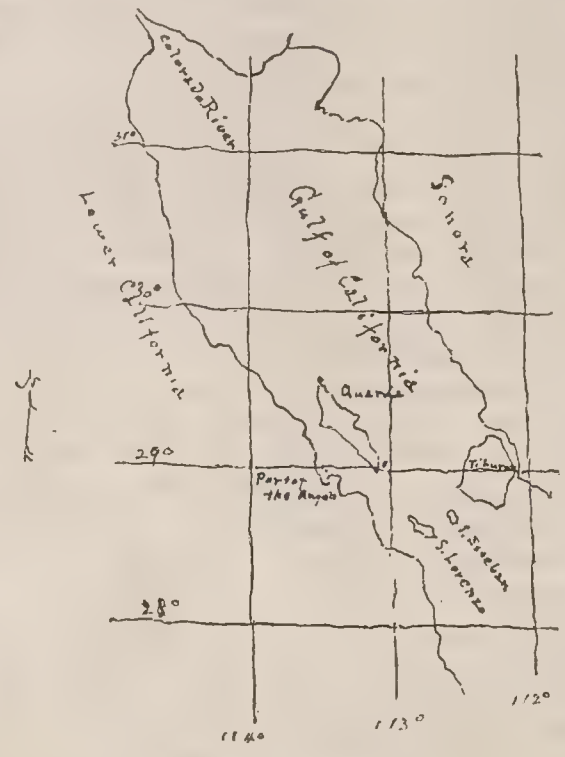
Tappon Adney, whose name is familiar to readers of FOREST AND STREAM, is here as correspondent for *Harper's Weekly*. In Juneau we each bought some strychnine for foxes, and hope to get some good furs this winter.

All goes well so far; and the prospects are bright.

J. B. BURNHAM.

The Sportsman Tourist.

THE ANGEL OF THE GUARD.



(Continued from page 202.)

THE next morning the wind was again strong from the northwest, and, as our boat could make only leeway against a head wind, we decided to take advantage of the occasion to haul her down and stop some of the abundant leaks.

Before breakfast I started out to the river side of the lagoon with Pancho to get a load of oysters. We soon found the bed, and loaded the dory with a kind of oyster quite different from the excellent Yaqui River oysters you get at Guaymas. The oysters at the corral had an indented shell something like a scallop shell, and had a bitter, disagreeable taste when raw; but they were very good when roasted or stewed.

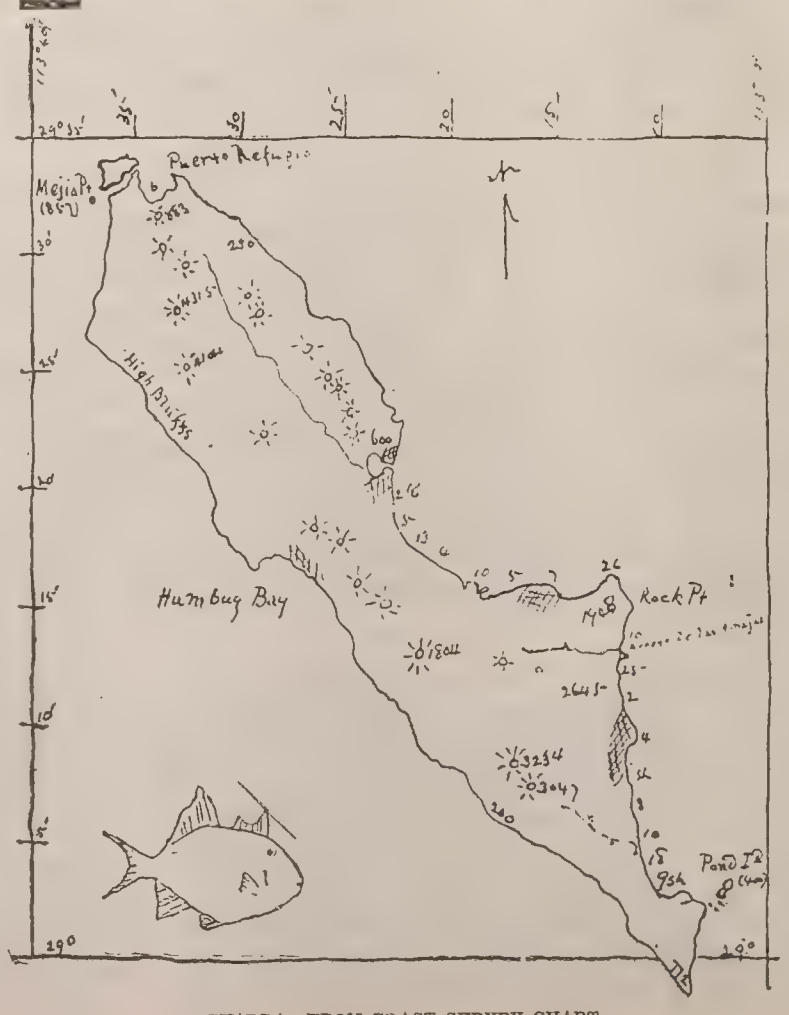
Very large, coarse oysters are found further up the coast of Guarda Island, and at one place Pancho tells me that there is a deposit of fossil oyster shells, many of which are 2ft. long. Besides these varieties, living and extinct, you meet on the beaches frequent examples of the "concha nacre" (pronounced nacker, as in English) or pearl oyster.

This species, besides giving the only valuable kind of

GULF OF CALIFORNIA.

pearls, is almost the sole source of mother-of-pearl, the shells having a beautiful luster both inside and out. The pearl fisheries are at present suspended by Government decree, but many romantic stories are told about the discoveries of "placeres," as the beds of these oysters are called, and Pancho said that twenty years ago his father found a placer on Guarda Island from which he collected 18lbs. of pearls, which were sold to a Guaymas merchant for $16,000.

There were many things here new and strange to me, though no doubt familiar to naturalists. One was a starfish with twenty-three fingers. At first I thought that some "sport" or accident might have caused this unusual number of fingers to sprout on the ordinary starfish, but as I found several more instances of the twenty-three-fingered animal, I became convinced that this was not the work of chance.



On the boulder points we saw several dabs of seaweed among the rocks, which Pancho said were the nests of gulls. These birds, however, had not yet begun laying.

On these spits were also relics of some old sealers' camps.

Hunting for oil, though not a very profitable trade, is sometimes extensively carried on. Oil brings at present from 50 to 60 cents a gallon (Mexican money), and is got from several sources.

Young pelicans afford a large supply of oil. These are caught in great numbers on the breeding grounds when they are as large as hens, but unable to fly, and are then largely composed of oil.

Then a good deal of oil is got from turtles, which are

GUARDA—FROM COAST SURVEY CHART.

harpooned and cut in two, when each half is tried out over the fire in its own shell.

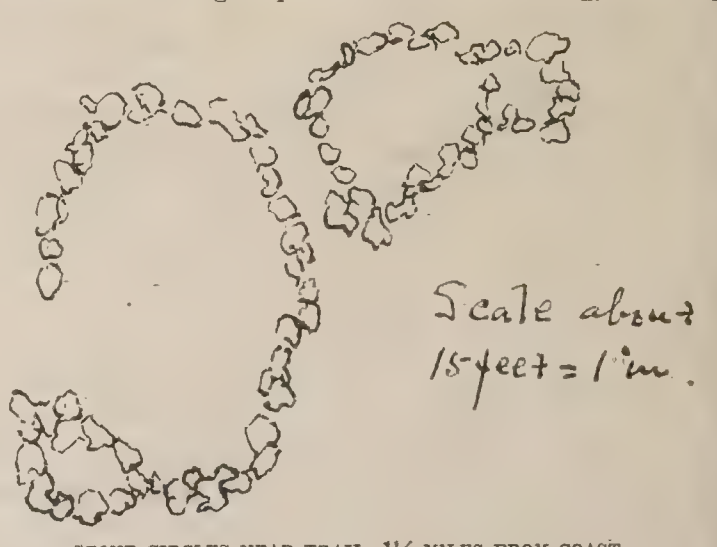
The liver of the shark is another source of supply, and is very rich in oil, though the rest of the fish gives none at all.

The principal resource, however, is the seal. The hunt-

STONE CIRCLES IN FLAT BETWEEN RIDGES

ers invade the hauling grounds and try to shoot whatever seals they can on land. When the animals take to the water it is necessary to shoot them in the head to get them at all, for they are very tenacious of life under these circumstances. The males alone are sought, and principally the larger males, some of which yield exceptionally, as much as forty gallons of oil, while many others will not give a gallon a piece.

In the afternoon the wind changed, and we sailed over to Guarda and carried on our researches.



Pancho and I landed in a small bay, where an ancient trail led over the foot of a boulder-covered hill. It was traced very distinctly for a few yards and then was lost in the flat that stretched up the coast.

We followed northward parallel to the beach for two miles and a half over flat country, old mussel, clam and oyster beds and cobble-strewn stretches, then the shoulder of a hill, ending a long ridge of high land, came right down to the sea, and over this the trail was again well marked, climbing perhaps 150yds. on the south side and winding down as far on the north.

From the crest of this hill I took some pictures of the country north and west, and then photographed Pancho in the distance, standing amid some stone piles like those I had formerly found, and examples of which were seen on or near the summits of the ridges for a mile back from the sea.

The boys in our absence had caught two fine fish they called bacocos, which proved good to eat.

We made a long trip inland next morning, scanning

STONE CIRCLES NEAR TRAIL, 1½ MILES FROM COAST.

every visible locality with the glass for traces of antiquity. This part of the interior had no remains of man's work, but we saw indications of old beaches and beds of shells that seemed to show that the coast here had been somewhat elevated in a time that, in a geological sense, could be called recent.

We found no fresh water, nor trace of any, nor did we see any sign of four-legged thing except the iguanas, which were common. These lizards, which are said to feed solely on vegetables, must endure a tough and scanty diet in this place.

When we got back to the boat about noon Pancho was visibly anxious. The wind was hauling to the northwest, with a rising sea, and we went aboard at once and made sail for our little harbor, reaching there in a heavy roll and a hard blow.

In order to employ the afternoon profitably, I set out over the islet with the captain to visit the "lobera" or hauling ground of the seals. We climbed down to the beach about a quarter of a mile away from the "lobera," and wormed ourselves through the rocks until I got a good view of the animals, some 150yds. distant.

Partly through a desire to test seal meat, and partly in hopes of getting a good skin, I fired at a small seal, and the whole herd (variously estimated by the captain at 200, and by me at fifty seals) took the water with a great noise. I could see no result to my shot, and as I had fired at the chest, while the captain now told me it was "head shot or no seal," I supposed that I had failed to score. On getting nearer, however, we found a victim lying on the stones. I was struck by the unfitness of my disposition for a sportsman's career, for while I feel chagrined to miss a fair shot, I am almost always filled with regret and pity when I succeed, and this instance was no exception. The herd stayed bravely around in the breakers, howling their sorrow and indignation, and I quite sympathized with them. I tried to take a photograph that would show the masses of yellow bodies lying in the wave as it heaved up, but I only got the heads and necks that were above the water.

We skinned our seal and took some meat, and then

Cardon or Thistle Cactus. Guarda, looking north and west from trail on top of hill. Looking east from north dyke of Corral de las Viboras.

Cabrillos. Sealions near Lobera. Timoleo by stone piles on hill. Hernando.

THE ANGEL OF THE GUARD.

went back to the boat. It was singular to see how carefully seals choose a rough and stony spot for a hauling ground.

Just behind this beach lay a little sandy flat, fenced on three sides with steep hills, but not a track or sign of a seal was found there. They love the rough stones, and the rougher, it would seem, the more they love them. Since I am treating this subject, I will say now that the seal meat was soaked over night in salt water, boiled once a little, and a second time a good deal, and served with mustard. It was very dark, like the flesh of the porpoise, and tasted just like boiled beef. But not one of my Mexicans, who, with the exception of my good Pancho, were always feeding and always hungry, would consent to taste seal meat. It offended their finer sensibilities.

At night the wind rose to a tempest, and the surf thundered on our protecting dyke. It was evident that a classic "colla" had set in, and that we were prisoners as long as it lasted.

In fact, it was not until the third day that the embargo was raised, and I had ample time meanwhile to peer into the crannies of the Corral de las Viboras. We found in one place a torpid rattlesnake, which we killed and measured. The snakes on the islet are uniformly of small size, though they are said to be very poisonous. This one, though he had nine rattles, was but 28in. long and 1in. in diameter. He was of a very light *café au lait* color, with a diamond pattern until within 1½in. of the rattles, when the markings were reduced to alternate bands of black and white.

The snakes on Guarda Island, on the contrary, are very large, and one immense fellow was skinned and stuffed for the Columbian Exposition, at Chicago.

Along the shores and in the lagoons are very plentiful coralline, or spongy growths called "riscos," which give the Mexicans quantities of pure lime.

One further observation was made which may have an interest. We found on the top of the cliffs, two ospreys' nests. One had two eggs in it; the other had two young birds, one of which had already succumbed to the storm. These ospreys seem to have been hatched nearly two months earlier than our Northern birds.

I braced myself carefully and tried to get a picture of this nest, but the gale was so strong that the camera quivered like a violin string, and the photograph makes you dizzy to look at.

Finally we got away from our enforced seclusion at the corral, and spent the next three days in hard work on Guarda.

Among the hills near the shore where I first landed I found a few examples of circles of rough stones, usually on the edge of some small flat between the ridges. I had heard that there was a collection of such circles, numbering about 150, in the neighborhood on a red mountain. The mountains were all red, but neither my somewhat worthless Indian nor Pancho nor I could find this collection in our limited time, and so we set out to follow up the fragments of the trail and find out whither it led.

Starting west from the hill which had been the terminus of our previous expedition, we found unmistakable pieces of trail, whose age was sometimes indicated by dwarfed but ancient trees and shrubs growing in the very middle, marked distinctly on the more difficult ground and invisible in smoother places, stretching inland some four or five miles.

At a point near the trail and a mile and a half from the coast were two inclosures of stone; one of which was the largest I encountered, the longer axis measuring 24ft. I made both a plan and a photograph of these inclosures. The picture will show their general appearance, but the larger inclosure is foreshortened and the plate does not bring out properly the small inclosures which, in these instances and in many others, are joined on to the larger structures.

A quarter of a mile beyond this place the trail dipped into a rocky arroyo, now entirely dry, but which seemed to have been roughly cleaned out for a water hole in time past.

A mile further on lies a barren mesa, which is fairly crowded in one part with these small inclosures and the rough stone piles we have before noticed.

We penetrated inland several miles beyond this and got extensive views of the country, but we lost the trail completely a mile and a half beyond the monuments on the mesa and thereafter saw no sign of human handiwork.

Some digging below the stone piles showed that the surface had not been disturbed, and that the boulders and "caliche," or cement formation, were in place. This, as far it goes, tends to show that the stone piles did not mark graves. In my haste I neglected to dig into the stone inclosures, and I greatly regret this oversight. In the North we frequently meet circles of stones on the prairie which had been used formerly to hold down the edges of an Indian lodge. The inclosures here do not seem to me fitted for that; first, many of these figures are not circles, but oblong; then, most of them do not exceed 6ft. in diameter; and in any event the small adjoining circles would seem to be useless for a lodge.

The entire area on the southern portion of Guarda in which we found signs of genuinely ancient work was not more than seven or eight miles long by four miles broad at the broadest part, perhaps as great a comparative area as the district called by old New Yorkers Greenwich Village was to the whole surface of Manhattan Island. The remains we found consisted solely in disconnected portions of an old trail and in stone heaps and rough circles, and the use or intention of the last two classes of monuments is very obscure.

There is nothing to indicate that average rainfall or other climatic conditions have varied appreciably in the Gulf of California in historic times, or for many centuries past. In some localities year after year goes by without rain. Don José tells me that in an experience of sixteen years he has only known of two rainstorms at Santa Marta, near the Port of the Angels. To be sure, one of these storms was a heavy one, and a good part of the little mining town, which was built upon the foundation of a high barometer, was swept, tramway and all, some six miles down the mountain into the sea.

A rainfall so precarious would afford no permanent supply of fresh water on the southern part of Guarda Island. There is certainly no such supply there now, and the localities within the previously inhabited zone are absolutely dry, and, except for a few cactus and other thirsty shrubs, a desert.

The population must have been migratory and occasional. A few miserable families of fishing Indians might come over from either mainland in rainy years to cross the bar to the Corral de las Viboras at low tide and feast on seals or oysters, returning after each expedition to the nearest water hole, following on from pool to pool as the supplies dried up, and leaving the island when these reservoirs were exhausted. The stone heaps may have been used in some instances for wind-breaks by men on look-out, or they may have had some religious significance. They do not seem to be burial monuments over interments, and they certainly were ill-adapted and absurdly placed for any military use.

The stone inclosures may possibly mark sites of former dwellings or fulfill some funerary or superstitious purpose. Comparative ethnologists could perhaps form a reliable opinion on these subjects, but even an amateur is justified in saying that these relics mark only transitory sojourns of a scanty and degraded race.

While our boat was lying off the coast here, the boys caught a fish called a "mero," weighing 20 or 25lbs., shaped like a jewfish, with small spots on a dark ground. We also had several of the common "cabrillas," which weighed 6 or 7lbs. apiece, and were marked similarly to the "mero." A large fish called a "tortoava," said to be our sea bass, wriggled free from the harpoon, but we got a little fiend of a fish called a "peje puerco" or sometimes a "trigger fish." The front dorsal fin of the "peje puerco" has two prominent bony spines in it. The longer one, nearer the head, can hardly be depressed, even by the use of great force, but if you put your finger on the other spine it falls at once and brings with it the obstinate spine in front, folding the entire fin like a fan.

After we had gone over the portion of the island already described, we took advantage of a calm night and pulled and drifted up the coast some ten miles above our first landing.

This brought us a mile or two south of an arroyo called the "arroyo de las tinajas," that is, of the water holes.

Don José had found some pools far up this cañon in former years, and I wished to examine them. Setting out early in the morning with Pancho and the Indian I soon reached the narrow bed of the gully, and we went up this to the crest of the ridge which formed its water-shed.

The former water holes, about three miles from the beach, were entirely dry, even when deepened a couple of feet by digging, and the doves which used to haunt this valley were gone. We did, however, see some bees, which Pancho said must have been blown to the coast since his last visit five or six years ago, and, a mile or two above the dry water holes, we found a hollow in the rock which had caught some passing cloud and wrung from it about fifty gallons of delicious water. Above this all was volcanic slide rock and jagged ridge.

This arroyo gives a fine geologic section. About half way up to the top, going from the sea, you pass out of stratified rocks into the granite core of the island, which sinks again a couple of miles beyond and gives place to shales and conglomerates which are again overlaid in the highest regions by a thin coating of volcanic products.

In the deep sands of the gully several plants were found which do not grow on the barren hills and mesa. There were sixteen "taco" or fan palms by count, most of them about 3ft. high, but some of more considerable dimensions, also a plant which Pancho told me was wild tobacco. Iguanas rattled among the brush and pebbles; a large owl fluttered out of a dim nook, and a great blackish bird called an "aguilon," said to carry off lambs and calves, was trying hard to escape the attacks of a small raven, but of mammalian life there was not a trace, and I incline to think that there is not even a mouse or a ground rat on Guarda.

A variety of cactus called "cardon" or thistle cactus here reaches a great size. In the picture I made to show the character of these growths, the more prominent cactus is to be sure a "cardon," but in this instance it only fills the office of the "foreground plant." The larger cactus in the distance can be gauged by the 6ft. man who stands alongside.

Another very singular cactus, called the "cirio," I saw later on near the San Juan mine. This plant, which grows at times 30ft. high, is found only at an elevation of several thousand feet above the sea, and in but one or two localities. It has a smooth bark, something like a birch tree, with a multitude of little feathery branches, somewhat thorny, on every side, and when I saw it had tufts of yellow, flowering shoots on top.

My camera was not at hand when the "cirio" was met, but I got a piece of an old negative which shows a group of these cactus, somewhat out of focus, and may serve to illustrate their habit.

When we had finished exploring the "arroyo of the water-holes," I found on my return to the boat that our water supply was about two-thirds gone. It was practically impossible to renew the supply from the scanty pool far up the mountain. Even good men would have found the task very serious, and my men were born tired and had improved this natural aptitude by long practice.

To continue north with the impending threat of another northwester would probably have sent us back in a few days waterless and with nothing gained.

With regret I was forced to order a return to the Port of the Angels by the southern route, leaving the northern part of Guarda unvisited. I am told that on this northern part, aside from abundant traces of sealers and fishermen, there are remains of a graded road 30ft. wide, besides a

cave and some skeletons, among which a Spanish peseta was found.

Ancient roads and monuments are apt to shrink before the camera and the measuring tape, but doubtless there are traces of earlier occupation on the northern part of the island, though these traces would seem to be much more modern than the signs of savage life found further south.

Turning back through the calm of the night, and with the swing of the ebbing tide, we managed to get off the south point of Guarda by noon the next day, and here, sure enough, we found a northwester waiting for us; not a storm, fortunately, but a stiff breeze that was able to shove along even our dull craft at a 4 or 5 knot gait. By night we had crossed the "whale channel," which separates Guarda from the islands of the port, and, beating up the coast, we ran into the harbor and dropped anchor at sunrise the next morning.

That night was spent with my good friends at Las Flores, and I had the fortune to find a tramp sailboat about to leave—two days later—for the great French mines of Santa Rosalia, whence I could return by steamer to Guaymas, and thence on to the "land of the superior dollar."

This little 5-ton sloop again found a strong northwester awaiting it outside the harbor. Little by little the wind increased and the sails diminished, until finally we took in all the regular canvas, and, hoisting a small awning for a square sail, made fine progress.

There were fifteen souls, counting women, children and one dog, on this vessel, besides a good deal of freight, and sleeping room was scarce. Indeed, throughout my trip it was striking to see how, in spite of a scanty population in a desert land, there was always a crowd at the points where sleep or travel was desired.

It was the genial captain of this boat, however, who gave me the information I wish to speak of. Don Pablo Rodriguez, during his long residence on the Gulf, had found many interesting things. On one occasion he had discovered a skeleton with a Spanish letter by it, which was deciphered in spite of its age, and proved to contain nothing of modern interest. At another time he had found a skeleton in a cave, and near it lay a small roll of rawhide, cut narrow and wound around itself like a strap. On this roll there seemed to be an inscription in strange characters, and Don Pablo tried to soften the material by soaking it five or six minutes in water. Unfortuately this treatment was inadequate, and the old rawhide broke in pieces as soon as an effort was made to unroll it.

If this were in reality an aboriginal relic it would be of an almost unique description, and I am strongly in hopes that Don Pablo may hereafter find another example of such work.

This, then, is the net result of the expedition, recounted dryly and briefly, though perhaps too long even so; but it would be hard to give any idea of the charm of the early morning with the great islands Tiburon, San Esteban, San Lorezzo and Guarda, rising blue out of the bosom of the Gulf, with their more distant peaks like islets or vast ships hull down, seeming to float separate from the parent masses, while lazy whales sport in the distance; and even the barren desolation of the lofty ridges seems to offer a stern defense to the harbors they shelter, and you feel as you cast anchor in the Port of the Angels that whatever storms may breed in the northern ranges or force their way from the fickle Pacific across the mountain barrier, the harbor can rest secure from eastern tempests, fenced as it is by the towering ramparts of the Angel of the Guard.

Dr. Franceselic, a learned botanist of this place, tells me, after seeing the print, that the cirio is a rare species of *Fouguiera*. The ocatillo is a common species of the same genus. The Gardens at Kew still lack the cirio, and are eager to get it, etc., etc. Indeed, Franceselic interested himself so far as to get the address of people at the San Juan mine to send for specimens. H. G. Dulog.

New York State Association.

Lyons, N. Y., Sept. 8.—*To Members of the New York State Association for the Protection of Fish and Game:* Agreeably to Section 5, Article VII. of the Constitution of this Association, there will be a meeting of the executive committee thereof, Thursday, Oct. 14, 1897, at 1 o'clock P. M., at the Yates Hotel in the city of Syracuse.

All clubs are requested to send a delegate to this meeting, as under the constitution the executive committee shall consist of such delegates.

This meeting is called for the purpose of deciding the advisability of making the call for the annual meeting of the Association earlier than January next; also for the transaction of such other business as may come before the committee.

So many requests have been made in relation to a change in holding our annual meeting that I feel it highly important that the matter have prompt consideration.

The committee on by-laws and also the joint committee on reorganization of protection and trap shooting branches are requested to meet with us at that time.

W. S. Gavitt, President.

The Kentucky Quail Supply.

Mayfield, Ky., Sept. 10.—Quail are quite plentiful here now, and the season promises to afford fine sport. They are more abundant than they have been for many years, and doubtless the number would have been far greater had it not been for the harvesting machines, which destroyed so many eggs.

On my farm of only 160 acres I estimate the number of birds at 200, and they seem to be just as numerous in other portions of the country.

There is more or less illegal shooting here every year, and if something is not done to prevent it the only game bird we have will soon be extinct.

A few years ago the wild turkey roamed our forests, but now he is rarely seen, and is so wary that it is almost impossible to approach him. Last year I spent three days in the woods before I secured one for my Thanksgiving dinner. The few ducks we have here in the spring are pounced upon regardless of season. Now, I wish Forest and Stream would advise us the best way to stop this unlawful shooting.

Hayseed.

The Forest and Stream is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

OLD TIMES ON THE TRINCHARA RANGE.

In Two Parts—Part Two.

Perhaps you remember how Don Gordo Jones and I went home by way of a deep cañon to what was called the Home Ranch. There were ten men there, my partner—Perley, and nine cowboys who were waiting for the round up to commence. They did not know when it would be, but as they were all under pay, and had lots of beef, bread and coffee, several old packs of cards, some month-old newspapers, and just enough interest in the Indian news that they heard occasionally to keep them amused and on the lookout all the time for something unexpected, they were quite contented.

I had the pleasure of doing a good share of the cooking in some Dutch ovens and a few frying-pans in a big fireplace. I would rather cook than guard horses or herd them, and had chosen my job voluntarily. My stove, you will remember, was down to the outside ranch, and about a wagonload of things were hid among the rocks. I thought that even if the jacal had been burnt down, the stove might not be damaged much; and so I told Perley that one of us ought to go down and get the things. He offered to go and let me go out with the round-up if it started; but I knew he did not want to, and I had got a little sick of cooking, so I saddled up the only work horse there was at home, and concluded I'd slip down there in the night, get another horse and come back in the night with the load in the wagon which was down there. The boys had teased me so much about my home-run up through the cañon that I did not want to ask any one to go with me, and so a little after dark I sneaked off alone to regain my lost reputation.

After a very poky ride of twenty miles or so, during which I saw quite a number of things which didn't look nice, but which turned out to be cattle, stumps or great big nothings, I came near the edge of the Jim Hunt Cañon; and dismounting and picketing my horse in the cedars, I sneaked down to the house, to find it unharmed. I afterward found that Sol Mays had come past the ranch the morning he got Lew's horses, had stopped, but couldn't get into the house, and so had built a fire to cook by; he hadn't put it out entirely, and after he left the wind had risen and blown some fire into my big woodpile of cedar and pinon. We had seen the smoke and thought it was the house. There was nothing else damaged; and so I went down to where the horses were in the deep little cañon, and turning old Chumhead, the work horse, down with the rest, I camped for the night without a fire and tried to sleep, but couldn't. I wished then that I had not been so touchy and had got one of the boys to go with me. The night was long. I had my saddle blanket, and was cold; but at last toward morning went to sleep, and slept till late. After cooking some breakfast over a few dry sticks, the next thing was to catch Chumhead and another horse down in the cañon; that took some time, and by the time the wagon was got down to the house and the load in, it was about dark. Just as the sun set I pulled for home.

That wagon made more noise than I ever heard one make before or since. The country looks different in the night, and I occasionally lost the trail. About 12 o'clock there came a heavy fog, and I stopped on the edge of a deep cañon several miles off the road to the crossing place.

Unhitching the horses, and taking them down the steep bank to water, and picketing them after that to the wagon wheels, I ate some cold grub and made a bed under the wagon with lots of blankets and turned in. After sleeping several hours, I was awakened by an awful yell, and before I was well awake I was out from under the wagon with gun in hand. I thought the Indians had found me sure, and that all I could do was to get one or two of them before they got me. But I couldn't see anything; and soon I heard another blood-chilling, long-drawn howl about 200yds. down the cañon, and in about ten minutes another from the same animal further down, each time answered by its mate that was traveling a parallel course, but about a mile or so distant on a cedar ridge. It was a pair of mountain lions, or cougars, traveling. I got cold, for there was a misty rain, and I had been steaming hot in bed, so I crept in again and slept till light. When I took the horses to water, I saw the track of the great cat. If anyone tells you that a mountain lion don't scream it's a mistake, for I have heard them, and it isn't nice when you are alone in the dark.

Hitching up, I soon found the trail, and landed at the home ranch in an hour or so. The boys had come very near coming after me when they found out I had gone alone, and were glad to see me and the stove. Perley seemed more pleased that the confounded pole house hadn't burnt down, and I wasn't talked to any more about my home run up the cañon.

In a few days the Indian scare was about over, and we had word to meet the round-up the next Monday at Jones's Ranch, on the San Francisco Creek. Perley wanted all the horses brought up to the home ranch. Jim Hunt and I started one morning to go down and get them. Jim was one of the cowboys, and some of his brother's horses were with ours; I had been taking care of them, so off we went at daybreak. Chumhead was my mount, and we made good time. When we got down to the cañon pasture we found that four of the horses had broken out and strayed off. I told Jim to take the horses and start for home, and I would hunt the rest. Away he went, while I like a fool did not change horses, but went on hunting the strays on old Chumhead—I hunted till almost dark and then gave up and started for home on my tired horse.

When I had gone about ten miles from home I dismounted in a little valley and let old Chum stand for a few minutes. The valley was the bed of a stream when there were rains, and where I crossed the rock was bare, comparatively flat and about 20yds. wide. I was on the flat rock, with the horse just behind me, and just as I was ready to mount again, I at last saw the Indians that I had not been trying to find. They were riding single file, coming from the east parallel with the cañon, on the ridge right in front of me, and not over 150yds. or less away. They were on thin, woolly-looking ponies, riding in single file. They were so near that I could see their profiles by the sunset glow—big noses, thin faces, long hair; ugly, murderous-looking men; a quiver full of arrows on every one's back, with the feathered ends above their shoulders, and rifles crosswise before them on the saddle. They rode like ghosts, without a word, and I thought of several things. I was afraid my horse would whinny, but he was so tired he stood still, and I don't think he heard or saw them. I had made up my mind that if he did, and the Indians came down to investigate, I'd slip off back into the cedars and let them have Chum if they wanted him. But they went on down into a pocket straight west toward the Purgatoire Cañon. That is, they rode down into a bay of upland with a cañon of 1,000ft. deep on each side of them and one of 3,000ft. in front. After they had passed well out of sight I started again for home and got there well into the night.

Jim had come in early with all the horses, having found the strays on the road home.

Two days after that the same Indians were seen on the other side of the Purgatoire on Van Bremer's range, and were stopped by some men on a round-up. They said that they were good Indians and were only just going out to steal some horses from the Utes, so they were let go. I asked Don Gordo how they had crossed the cañon and he said he knew a trail down into the cañon in the bottom of that pocket. I found it after a long search the next winter when I was hunting, and have packed several deer out of the cañon by it on a horse. I think it was very fortunate that I did not meet them, for if I had I would not have been here writing this.

We went on the round-up and had a pretty good time, especially when a skunk danced on old Jim Wilcox twice in one night when he was in bed. I'll tell all about the round-up some other time. Good night.

W. J. Dixon.

IN APACHE LAND.

New York, Sept, 8.—*Editor Forest and Stream:* For a long time I have wondered what has become of the large number of wild pigeons which twenty or twenty-five years ago were so abundant that they frequently cast shadows upon the earth, and were seen like clouds passing under the rays of the sun during the spring and autumn seasons in many of our Northern and Middle States. I am now in receipt of a newspaper clipping, taken from an El Paso paper, which states that these birds have at last been found in great numbers in the northwestern part of Chihuahua, Mexico, not far from the terminus of the Rio Grande, Sierra Madre & Pacific Railroad—in the forests of the Sierra Madre Mountains.

This is of particular interest to me, for last winter it was my privilege to take a most delightful trip through this region of country, that lasted six weeks. On the morning of Jan. 13 I left El Paso in company with a few others, all of us mounted on good horses, for an extensive journey through this region. We were well equipped with camping outfit, and our commissary was sufficiently stored with provisions to last at least two months. Besides these necessaries, we were well armed with Winchesters, and for close work our revolvers were of such a pattern and size as to make us a pretty formidable party either for Apaches, bear or mountain lion.

Our first few days' experience was tedious, traveling through a sandy desert; but as we worked our way toward the southwest, in the course of a few days we had entered a new country, a new world, as it were, which became exceedingly attractive and interesting; while the further we continued our journey southward and westward the more beautiful it became, until finally we found ourselves entranced by the charms of a wonderland.

I shall hardly be able to describe to you, at this time, my experiences in the cañons, getting lost in the forest, the great tree growth of pine and oak, well fitted for the abiding places of that wildwood bird, which report states has now been seen in such large numbers. I question whether there is a better hunting ground to-day in the world for certain kinds of game than can be found in the Degollado Lands in Western Chihuahua. It is through this section that Gen. Crook pursued the indomitable Apache Indian Chief, Gerinomo; and it has only been in the past week or ten days that reports have been made through the New York papers of finding the body of the "Apache Kid," a son of the Chief Gerinomo, which was discovered in a lonely spot in the Sierra Madre Mountains, quite near this locality—bleaching in the sun. This Kid was a terror, and his death will virtually wipe out any further alarm as regards the desperate Apaches.

The land I have referred to was for many years the roaming ground for these Indians, and a place of such perfect security that only in recent years have people been found bold enough to lift the veil that has screened it from the outer world, while now it is only a question of a short time when the treasures hidden in its hills and the fruits of its rich and beautiful valleys will be advertised to the world. These things so useful and enjoyable to man, with a climate unequalled, will all add their share in making this part of the country a new Eden and a land of great promise.

Geo. Rowland.

Natural History.

SONG BIRD EGGS.

Dunnville, Ont., Sept. 8.—*Editor Forest and Stream:* A paragraph evidently crept unawares or unconsidered into the editorial columns of Forest and Stream of Aug 28, for your valuable paper could not and would not knowingly advocate what that paragraph implies. It says:

> The destruction of the song birds of this continent by the sale of their eggs for mere fanciful purposes is quite as fanciful as are the purposes. The entire proposition is fanciful, fantastic and fallacious. If there were any such traffic in song bird eggs, the true way to protect American laid eggs would be to admit foreign eggs free, and so lower the price and discourage the native industry. To shut out foreign eggs, on the contrary, would mean a lessened supply, with consequently higher prices and a stronger stimulus to nest-robbing activities.

Surely this is Dingleyism run mad or carried to the pettiest, meanest end. Such a course would encourage the destruction of the eggs of the very birds which spend a large part of the year in the United States to gladden the hearts of thousands of American citizens, yet because their instinct carries them north to procreate their species, they must be punished by having their nests robbed and the eggs trafficked in by dealers who pander to the depraved tastes of boy collectors, who think of the eggs about as scientifically as they do of their marbles.

Why you call the traffic "fanciful and fallacious" I cannot understand, for it is a well known fact that there are scores of

dealers in the United States who issue regularly price lists of the eggs they have to sell, and ask for exchanges and lots to purchase. These dealers, too, deal with foreign dealers, whose price lists are also being constantly sent to this country, and more, many of these dealers send collectors to the breeding grounds on purpose to collect bird's eggs for sale. In fact, there is a low, mean trade going on all the time at the expense of the poor birds, and not alone to them, but also to the farmers and fruit growers of this great agricultural continent. You still doubt, then let me tell you of one little incident which occurred on the Canadian side, opposite Buffalo, a short time ago.

A so-called scientific observer, a member of the Buffalo Ornithological Society and a leader in the same, was noticed by one of the game wardens a year or two ago to be collecting eggs—he had no permit, so was reasoned with and asked to desist. This was done more than once, until this season when he was caught *in flagrante delictu* and brought before the police magistrate. He had in his possession six cigar-boxes full of small eggs of different kinds, among them fifty-four of the spotted sandpiper, a number of warbler's eggs, bluebirds, etc. He urged that they were collected for scientific purposes and that on that account he should not be interfered with. What scientific purposes, I ask, could be served by this noble-hearted scientist in taking fifty-four eggs of one common species, and that year after year? or in taking bluebirds' eggs, unless in the latter case to see if the eggs were smaller, now that the bird is so scarce? It is evident this scientist had collected these eggs for the few cents there were in them. I am sorry to say the magistrate let him off on suspended sentence, but such offenders may rest assured that in the future if they are caught they will receive the severest penalty of the law. This man had a number of assistants; for instance, two would drag a long rope over a field and two or three would follow and notice where a bird left its nest—noble and scientific occupation! "Fanciful and fallacious!" Why, it is not long since FOREST AND STREAM reported that no less than $100,000 worth of birds' eggs were collected by the lighthouse keepers and others on the Carillon Islands, and asking that the abominable practice be stopped. It is high time that the public sentiment of this great continent were cultivated by the press and otherwise, against the so-called scientific collecting of the eggs and skins of our native birds, the former chiefly for boys to play with, and the latter for millinery purposes or to fill cases of mounted birds to adorn barrooms, etc. PRO BONO PUBLICO.

The Ways of Snakes.

SAN ANGELO, Texas, Aug. 28.—*Editor Forest and Stream:* I was reminded a few days since of the discussion carried on in FOREST AND STREAM some time ago, as to whether or not rattlesnakes swallowed their young, by meeting with Mr. H. C. Baumann and Mr. A. C. Honig, both thoroughly reliable ranchmen of this county, who informed me that they had on that day killed a rattler, and on cutting it open they found within it twenty-three young snakes, measuring about 8in. in length, and having the imprint or indication of two rattles on their tails.

They aver that they saw the snake before it discovered them, that it was in an open space, and they know that the young snakes were not swallowed after they discovered the old one. The young snakes appeared quite active, but did not have the appearance of having been exposed to the elements; and they were both decidedly of the opinion that they had not yet been born, notwithstanding their extraordinarily perfect development.

I remember once, when a boy, seeing seventy-two young ones taken from a rattler, all alive and active, but they were not more than 3in. in length. I do not now remember which side had the best of it in the discussion referred to, but I don't think any one reported ever having seen any swallowed or found within the old snake as large as these I here report; therefore, I thought it worth reporting.

I was very particular in interrogating them as to the length, and they were both quite positive that they could not have been less than 8in. MILTON MAYS.

[There seems to be good evidence that the mother snakes do offer a refuge to their frightened young within the body. Entirely competent observers have testified to witnessing the "swallowing" of their young by the mother snakes, and their testimony cannot be ignored or dismissed as an error of observation. The belief that the mother in time of danger receives the young into her throat or belly is a very ancient one among many peoples, both civilized and savage.]

Pinnated Grouse in Trees.

GENESEO, Ill.—*Editor Forest and Stream:* Having noted your remarks in regard to pinnated grouse not taking to trees as their cousins do, and Mr. Hough's correction of same, lest an error creep into the records, I wish, in turn, to correct Mr. Hough.

Pinnated grouse do not roost in trees, but roost in the long slough grass along the bottoms or burrow in the snow when the snow is deep enough for that purpose. They fly into the trees on still, frosty mornings, as I have often seen them do in the long ago, when these birds were more abundant in this section. Now, will someone who has been a closer observer than I have been, tell us if they went to the trees after buds, as the sharp-tail and ruffed grouse do, or did they fly up there to get a better view of that celebrated artist J. Frost?

I, too, have shot (at) them with a rifle. Finding them too wild to get within range of the Belgian musket I wielded in those days, I borrowed a rifle of a neighbor and went after them. I distinctly remember standing behind a huge tree and loading and firing at grouse in the adjacent trees nearly all of one forenoon, but the grouse kept right on communing with nature. I had not yet learned the trick of firing at the lower bird in order that the falling bird might not frighten away those beneath, but as no birds fell, I escaped the consequences of ignorance. E. P. JAQUES.

The Sense of Smell.

Editor Forest and Stream:

Assuming the good faith of Shaganoss, I must tell him that the marvelous powers of discriminating between differing smells, shown by Julia Brace, a deaf-blind girl, educated at the American Asylum for the Deaf, in Hartford, Conn., are as well substantiated as that there was such a deaf-blind person as Laura Bridgeman; having been carefully noted and described by the principal of that institution, and specially examined and reported on by the famous Dr. Samuel G. Howe, the rescuer of Laura Bridgeman, and head of the famous Perkins Institution for the Blind, in Boston, Mass.

But to be critically exact, the challenge of Shaganoss, awakens in my memory a suspicion that it is not distinctly affirmed that Julia did actually assort the clothing of her fellow pupils, but the firm conviction of the staff of the institution was expressed that she could do so. I can probably establish exactly what was said on this point by a long search through old papers if the exact point is deemed of sufficent importance, but being quite certain that she could smell at a dozen or more persons, and then select their gloves from a pile, and that James Mitchell (the first deaf-blind person whose case was scientifically studied, and who died about 1830) recognized all his acquaintances by their smells, and even formed his opinions of them by that sense, seems sufficent in showing the extreme sensitiveness of this sense when properly trained.

As the "soap" troubles Shaganoss not a little, I can give my own testimony on that point, within my own personal knowledge, for I have seen Helen Keller pick up a perfectly clean handkerchief, and other clothing, that was in the pile from the wash, put it to her nose and drop it, finding by the smell that it was not her own, and Helen is less distinguished in the matter of sense of smell than most of the deaf-blind are. I would remark, however, that if Shaganoss undertakes to investigate the sense of smell in the deaf-blind, he must remember that some of this class have no sense of smell whatever, the sense, and taste, having been destroyed, or greatly impaired, by the disease that ruined their sight and hearing. W. WADE.

What Did It?

NORTH CHELMSFORD, Mass., Sept. 11.—A pair of chimney swifts occupied my neighbor's chimney as a summer residence this year, the nest being located low down in one of the flues, and resting on the damper grate of an open fireplace. All through the summer, the loquacious twitter of the birds and their offspring was distinctly, and sometimes unpleasantly, audible.

A few days since, however, it ceased entirely. Investigation disclosed that the mother bird and her young ones were dead in the nest, and, strange to relate, the eyes of each had been plucked out. What visual enemy could have reached them in their secluded retreat? CORPORAL.

[Might not the eyes have been eaten out by ants after the birds were dead?]

What Tidings of the Captive Caribou?

Editor Forest and Stream:

About three years ago there was an account of the capture of a baby caribou at Moro Corners, Me., followed by several reports during a year or so of its welfare. Some doubts were expressed of its surviving long in captivity, and I think I express the wishes of others as well as my own in hoping to hear of its later history. DUNBAR HILL.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

NEWFOUNDLAND CARIBOU.

IN Capt. Kennedy's interesting book, "Sports and Adventures in Newfoundland," there is a spirited description of a conflict between two caribou stags, which the captain witnessed, in company with his guide, a friend, and a number of interested hinds that grouped themselves around the party, apparently to see fair play. They were in the midst of a heavy snow squall at the time, and the captain describes this wild and unusual scene as extremely exciting and picturesque. The fight was soon ended by the death of both stags by the rifles of the captain and his companion.

In the fall of 1891, while hunting caribou in Newfoundland, accompanied by my friend, Col. Cecil Clay, and his son, we happened to have in our employ two of the guides, Richard Lebuffe and Joe Busky, who were with Capt. Kennedy on that occasion, and on our expressing a wish to visit the locality of the battle, they offered to pilot us to the very spot, which was on Wolf Hill, some five miles from our camp on the big marsh, so we agreed to make the trip the following morning, and in order to make an early start concluded to retire early; before doing so I made the following preparations for a good breakfast, knowing we should have a long, hard day before us: I selected half a dozen fat loin venison chops which I placed in my wire gridiron, together with a few thin slices of bacon, the whole well seasoned. I then measured out a liberal amount of coffee into our coffee-pot, and after a last pipe crept into our sleeping bags. At the first signs of day we were up and making ready for breakfast. Lebuffe, our head guide, brought a kettle of boiling water. Col. Clay made a big dish of Indian meal bannocks, while I made the coffee and broiled the chops. These important matters attended to, we left camp with our guides, Richard Lebuffe, Joe Bushy and Martin Williams. After crossing French Woman's Creek, on the opposite side of the marsh, we separated so as to cover more ground. The colonel and his son wished to bring in a stag they had killed the day before, while Lebuffe and I intended hunting toward the summit of Wolf Hill.

As we were in the midst of good caribou ground, we went slowly, carefully scanning the ground ahead of us. As we were crossing a small marsh I called my guide's attention to a gray stone at the upper end of the marsh, telling him how much it resembled a caribou; just then the stone jumped quickly to its feet, and to our surprise the supposed stone turned out to be a handsome yearling stag. Not getting our wind, it did not seem to be the least bit afraid, but pranced about, evidently curious to make out what kind of creatures we were. First it would walk slowly up to within 50yds., or even less, then with a snort dash away 100 or more. What a chance for the colonel and his camera had he only been with us. I could have easily made venison of his prancing lordship, and very good venison he would have made, too, but we did not need it, so let it go, though it was an easy and tempting shot.

After fording another rapid and difficult stream we found ourselves at the foot of Wolf Hill, which, after a short rest, we began to climb. Though the October nights in Newfoundland are freezing cold, the days, when clear, are exceedingly hot, and we were pretty well blown and heated before reaching the top. When near the spot where Capt. Kennedy witnessed the combat between the big stags, my guide held up his hand warningly and dropped back into the bushes. "I see deer," he whispered. The natives of Newfoundland always speak of caribou as deer. Sure enough, less than half a mile to our right were four or five caribou feeding rapidly up the hill; but before we could overtake them they disappeared in the thick brush and we resumed our climb. After half an hour's stiff work we reached the summit tired and hot, so we stretched ourselves out on the moss and enjoyed a refreshing pipe.

The wind blew a gale from the west which was strongly in our favor, as it would prevent any deer in front of us getting our scent. While carefully scanning the ground ahead of us with my glass, I made out a small herd of caribou some 600yds. in our front; how handsome they looked with their white necks glistening in the sun! After watching them a while to make sure of their direction we started on a run to head them off, ducking low down so as to keep out of sight.

But to our great disappointment, when we reached the spot where we expected to find them, they were nowhere to be seen. And to our surprise and disgust, a few minutes later we saw them feeding calmly near the spot we had just left. They had—from no fault of ours—doubled back on their tracks and given us the slip. But such are the disappointments the deerstalker must make up his mind to bear. We followed them sadly, and somewhat discouraged at our bad luck. Suddenly Lebuffe, who was a little ahead of me, dropped behind a big rock, beckoning to me as he did so. "There are deer ahead of us," he whispered, his face all ablaze with excitement as he pointed them out. Sure enough, about 200yds. to our front, among the straggling bushes and feeding toward us, were three hinds and a fine young stag. When within about 150yds. they became suspicious and turned sharply off. Knowing this was my only chance, I aimed carefully at the stag and fired a quartering shot into his short ribs. At the report of the .40-65 Winchester he dropped stone dead with his legs spread out in spread-eagle fashion, not a kick or a struggle. The other three were not a bit alarmed, but walked up to the dead stag, smelled of him, evidently wondering why he acted so queer. I am quite certain I could have killed them all, but I had no excuse for the slaughter. While Lebuffe went to work butchering and skinning our prize, I busied myself making a rough sketch of the scene. While at work a great big, innocent-looking doe, with only one antler, came up and almost walked over me. Suddenly she got our wind, and with a loud snort dashed off like a racehorse.

The view we had from the crest of Wolf Hill was superb. Sheffield Pond, a bright blue gem of a lake, nestled at our feet, entirely surrounded by virgin forest; far away to the south the purple hills at the head of Hall's Bay lay bathed in the warm sunlight toward the northwest. The queer and picturesque formations known as the "Topsails" stood out in bold relief, while in every direction ponds, lakes and streams glistened in the bright sun; a perfect paradise for caribou, and all these waters swarmed with speckled trout which had never had a fly cast over them. By the time Lebuffe had completed his work, we had another caribou feed up to within easy shot of us. It went off badly scared but unharmed. We did not shoot, though sorely tempted. We ate a hurried bite of lunch and then started back for camp. On our way home we saw twelve more caribou, and had we had any good excuse could have easily killed at least three of them, but I had killed all my license allowed and venison was plenty in camp, so we resisted temptation and returned without further incident to our comfortable tent on the marsh, where we soon consoled ourselves with a hearty supper of venison steak and frying-pan bread. The colonel and his son soon joined us; they reported having seen thirty-five caribou during the day's tramp.

WAKEMAN HOLBERTON.

HACKENSACK, Sept. 6.

ZIGZAG EXPERIENCES.—I.

THE New England sportsman, when planning for a day out with gun and dog in the stubble for the swift flying quail, or along the wooded hillsides for the peer of American game birds, the lordly grouse, or along the sluggish brook, that winds its sinuous course through alder runs, for the erratic woodcock, makes an elastic programme, having learned in the school of experience that it is the unexpected that often happens.

An unlooked-for experience frequently overturns his plans, a difficult or peculiar shot may surprise him in its result, and when a certainty seemed inevitable a humiliating failure is often his only reward. What is planned as a pleasant adventure may end in disappointment, and that of an untoward beginning may have a very pleasant ending.

These ins-and outs, these ups-and-downs, for the want of more expressive terms, I call zigzag experiences.

Under this caption I will briefly relate, from time to time, some of my personal experiences, and those of others to which I was a party. Some of these were pathetic, some marvelous, and some ludicrous. With one of the latter I begin the narration.

It occurred some few years since in the town of Charlton, one of the three towns of Worcester county that Hallock, some twenty years ago, thought of sufficient importance to be pointed out to sportsmen, in his "Sportsman's Gazetteer," as a good place for "quail, ruffed grouse, woodcock, etc."

Time, in his zigzag flight, has marked his changes here as elsewhere. A growing army of shooters has made sad havoc with the birds, many of the best covers of former times have been destroyed by the woodsmen's axe, and to others the "No Trespass" signs forbid an entrance.

Being invited to spend a few days in November at the Holmes Farm at Dresser Hill, of Revolutionary and subsequent fame and a good place for birds, a trio sauntered forth in the clear crisp, and bracing morning air—Erford, Charley, and the writer—hold! a quintette, for Shot and Doc, two as good setters as ever pointed a bird, were also of the party.

We journeyed to the north and west, and covered quite an extent of country, making some nice clean kills and some scandalous misses.

We added to our game bags in the McIntyre cover, and after marking it out, started for another cover nearly a mile away. To get there, we had to pass a very promising cover of considerable extent, which was posted with an abundanc of no trespass signs

The highway runs along one side of this beautiful chestnut woods, and on the other side of the road is a sloping hillside overgrown with scrub oak and an occasional dwarf pine. Turning a bend in the highway we saw, at a considerable distance, the old farmer who owned the posted land coming toward us with a yoke of oxen and a wagon. He was described to me as a cantankerous old man, who found no pleasure in life, or if qualified pleasure he found at all, it was in trying to make others as unhappy as he could.

Charley said I had better keep along in the road, and while the hillside was rather an unpromising place for birds, that he and Erford would take the dogs and work it out, and that if they started any birds which they failed to get, I might get a shot as they crossed the road to the woods.

Soon after they left me I saw the farmer, and accosted him with: "A pleasant afternoon, sir!"

"Wa-al, pleasant or not pleasant, I don't want you huntin' on my land. See them signs?"

"Why, my dear sir, you have a most excellent piece of woods there, and I would not think of harming it by walking through it," was my reply as I walked along.

Some little distance beyond the timber growth terminated in an open pasture, and turning round to see what had become of the farmer and his team, I saw them turning into the woods. As I turned about to pursue my way, I noticed an apple tree in the pasture not far from the woods, and instantly a partridge took flight from under it. As quick as thought I covered him and fired in the line of his flight; but seeing no bird fall, nor a single feather fluttering down the wind, concluded that I had scored a clean miss.

Breaking open my gun to replace the shell fired, judge of my surprise to see four more take wing and plunge into the cover before I could complete the act. Not an unusual experience to be sure, but mighty exasperating.

Soon the boys were at my side inquiring what I had shot at. Being told the story, Erford volunteered to go back and importune the farmer to let them and their guest put in a few hours in his woods. In the meantime Charley and I were to try and get some of the birds while negotiations were pending, even if driven off later, which it was thought we certainly should be.

We had not been long in the cover before Charley's dog pointed, and a plump bird fell to his gun, and but a short time thereafter I added another to my score.

We soon encountered Erford and the farmer, who finally gave his consent, much to their surprise, as they said later. Night came, and we returned to Dresser Hill after a day of rare enjoyment and success.

The following Christmas, our former friend and his wife were importuned to visit a married daughter in a city some little distance away, and the young people of the household took advantage of their absence to have a Christmas party of the young people of the town at the old homestead. After the Virginia Reel, money musk, apples, cider, and pumpkin pie, stories and good natured banter was the order during intermission.

"Well, Charley," said the farmer's son, "who is your friend from Worcester shooting partridges for now?"

"What do you mean?" said Charley.

"Why, don't you remember the day that Erford got father to let you fellows shoot up in the Chestnut woods? Well, just before Erford got up to father, your friend shot a partridge, that came tumbling down through the treetops and fell at his feet. He picked it up and put it in his pocket and thought he might get another, and so he let you fellows go on and hunt!" GEO. MCALEER.

WORCESTER, Mass.

NEW JERSEY SEASONS.

JERSEY CITY, N. J., Sept. 7.—*Editor Forest and Stream:* Gov. Griggs, who is a fine shot both with rifle and scatter gun, and a good, all-round sportsman, recently delivered a very able address before the Bar Association on Legislation and Legislators, in which he scored the bucolic law makers severely, but very, very justly, we think.

What is the matter with our sportsmen of this State that they should allow the present game law to remain on the statute book for two years? The laws make the open season for snipe March and April, when the birds are mating or traveling north; then September, when there isn't any in all the State; then closed for the remainder of the year.

And the squirrel law, how abominable is that? Open September, then closed until Nov. 10. In September the rodents are only half grown, and in November they are in their holes, most of them. A friend of mine, an ardent sportsman, a good brush shot and a believer in good game laws, thought he would try the bushy tails for one day in Jersey. He started the first day of the season, Sept. 1, but he says he will never again draw a gun on a squirrel in Jersey in September, or at least not until the latter part of the month. He brought to bag five grays, all females and all in milk. Upon shooting into a nest, a little fellow dropped out whose eyes were not yet open; and he heard another one squealing in the nest. It was early in the day, but he shouldered his gun and came home, a sad and repentant sportsman.

This may be an exceptional year, when squirrels are so late in maturing; but, in the name of all that is rational, why make October a close month—the very month of all months of the year dear to sportsmen? The squirrels are ripe, so are the nuts, and the nimble creatures are bounding from limb to limb, laying in their winter stock. They are in their prime and delicious in broil or pie. It may be advisable to close this glorious month of crimson and gold for quail and hare, but nothing else.

"We don't like (and have often said so in your paper) the open season for woodcock in July, those hot, sultry days, when the swamps are reeking with malaria, and lively with snakes and Jersey's billions of blood-sucking mosquitoes. But we know of one man, a resident of Monclair, who watches most intently the Trenton law-makers every year in order to prevent the passage of any law that will stop his few days at the longbills in July. It is but a short distance from his house to their breeding places, and he claims that unless he gets a crack at them at that time, he gets none the whole year, as they are not found near his domicile in the fall; and yet he claims to be a consistent sportsman.

Why, one October woodcock is worth a half dozen of the tender, half-grown squealers of July, and it takes one of quick eye and steady nerve to stop one as with shrill whistle he towers above the scarlet maple or twists around the golden-hued oak copse. With what satisfaction a true sportsman gathers such a bird; and as he smoothes down its full-plumaged breast, and with the eye of experience weighs it in his hand, ere he consigns it to his game pocket, he says to himself: "I am not ashamed of that shot or its result."

How different in July. He goes out with his 10-gauge or 12 even, and with 1oz. of No. 12 or mustard seed shot lets drive at the little weakling through the thick leaves in the direction he last saw it, and then lets the dog do the rest. What kind of a show does the bird have? And if Mr. Sportsman stays out in the swamp all day, with the mosquitoes and flies and the heat, what condition is he or his dog in at the end of the day? Perchance half of his young birds have spoilt in his game pockets to be thrown away. But he had great sport, Bah!

I see that the State Sportsmen's Association has opened its eyes recently from its long sleep, and it proposes not only to have a big tournament the latter part of this month, but to take some active measures in regard to the protection of game. That is supposed to be the object of the Association, at least that is part of its name; but in years back, like the same body of men in New York State, has run more to shoots at the traps and a good time than bothering with game laws. I hope the Sportsmen's Association of Jersey in their conclave, will seriously consider the sad condition of the laws in this State, and give us something sensible and worthy the men of brain as well as nerve, who we know are prominent in that body. I wonder that some of your able writers have not had something long ere this to say in this matter of vital interest to Sportsman; and I hope this hasty note may stir them up, though I know that I tread on the corns of some of the July and spring shooters. JACOBSTAFF.

THE BRANDRETH PRESERVE.

NEW YORK, Sept. 2.—*Editor Forest and Stream:* I have received, but only recently, a letter from you dated May 22, mentioning your proposed fourth annual report on American game preserves, and asking information concerning my private park, with special reference to the fish and game.

Complying with your request, I will say that I have strictly preserved about 30,000 acres of land in Townships 5 and 6, of Totten & Crossfield's purchase, Hamilton county, N. Y., which is situated on Lake Mohegan, Lake Sumner (now Lake Tuscarora) and Lake Shedd (now Lake Sagamore), and some fifteen to twenty miles of brook trout streams. For five or six years past I have stocked two of these lakes with brook trout and lake trout; and two or three years ago put in 4,000 or 5,000 landlocked salmon, and a few frost fish taken out of an adjacent lake.

I have fine mesh, heavy wire screen nettings across the outlets of Sumner Lake and Shedd Lake, and Lake Mohegan, which preclude the egress and ingress of fish.

I find that in Lake Mohegan the brook trout fishing is improved, and this summer, for the first time, landlocked salmon have been caught, one, I believe, weighing about 2lbs.

I find that the brook trout fishing in Shedd Lake and the outlet has become very much better the last year, notwithstanding the fact that this lake has black bass in it. The past spring over eighty black bass, some of them weighing 2½ and 3lbs., were caught in Shedd Lake one morning. I have so far failed to ascertain whether the frostfish have increased or not.

I permit no illegal fishing in my preserve, and I limit the catch of any one person to twenty-five fish.

Regarding the increase of the deer, I can speak with authority, and say that since I have preserved this property the deer have increased very materially. On one of these lakes as many as thirty-one deer during the early part of July have been seen at one time; and at Shedd Lake the deer go down close to the camp and eat up the beet tops and carrots out of the garden. In fact, I do not think there has been a single day this past summer that one or more deer have not been seen on the carries between the lakes I mention, and frequently many more than that number.

I do not see any difference in the partridges; there are some seasons when they seem to be more plentiful, and others when they are scarce.

It is impossible to give anything like an estimate of the deer on my property about Shedd and Sumner lakes. All I can say is, that I do not believe there is a spot in the Adirondacks where there are as many to the acre as on my preserve.

I have noticed a decrease in the bear signs, and no panther track or wolf track has been seen in years in my neighborhood. W. WEST DURANT.

TEXAS AND THE SOUTWEST.

HERETOFORE the writer from Texas has bragged about the game, gone into ecstacies anent the fishing, and has generalized about the health-giving ozone. But this year your correspondent desires to call the attention of the sportsmen's world to the market-hunter-tight game law which is now in full force and effect. To be sure, there is a lot of kicking going on, because the law prohibits the shipment, handling or carrying of game, not only out of, but within the State, and the man who hunts solely for big bags will find his occupation gone, for he can't take his game with him. This will necessarily confine game-killers to the appetites of their party, and thus will people be gradually brought to the realization that an outing can be enjoyed without the wholesale killing. It was intended to prohibit the shipment of ducks and geese, as well as other game, but the proprietor of the Moody-Canvasback rice culture preserve in Galveston spent a few bones, and had the ducks and geese excepted from the law, so that the anglomaniac epicure of Boston and New York can again regale himself with the toothsome canvasback and the succulent redhead that will be shipped from Lake Surprise every week.

Mongolian Pheasants.

Messrs. Albert and Ed Steves, Gus Critzer, of San Antonio; Wagenfuehr and Simons, of New Braunfels, together have about 100 Mongolian or Chinese pheasants which will be turned loose in the spring. The birds are protected for five years and the coming crop will add largely to the game supply of this country.

Capt. Dick Woods, who, with Col. Sam Allen, owns St. Joseph Island, say that the quail are fairly taking the island. These gentlemen are of the open hearted species, and invite sportsmen to their choice preserve.

All along the line of the Aransas Pass Railway quail are more plentiful than for years. At Alice, on the Skidmore branch of this road, deer are very plentiful, and at Mathis, on the Nueces River, turkey abound. From the car window one can see 100 jackrabbits at a glance. The country seems to be fairly alive with game of all kinds.

The Beeville people also report a large crop of deer, turkey, quail and other game. Likewise there is splendid fishing in the fresh-water streams of the neighborhood.

Every trap shot of this country knows Mr. C. Tiblier, of San Diego, Tex., not only on account of his excellent marksmanship, but also on account of that barn-door largesse of the heart which is not common in this world. He lives in San Diego, and told the writer that game is very plentiful in his bailiwick.

Max Luther, of Corpus Christi, wants the shooting world to know that the wildfowl shooting on Mustang Island will be the best ever known this winter. He knows several fresh water ponds on the island which are the watering places of thousands of ducks and geese.

A Good Shot.

Before the toot of the locomotive was heard in San Antonio, there lived a man by the name of Stouts, whose people were not distinguished by reason of the presence of their names on the tax rolls of San Antonio de Bexar; but who, on the contrary, enjoyed a kind of a river bank notoriety. They were lazy, and fishermen of the long cane-pole variety, and whose members daily enjoyed a sleepy sojourn on the San Antonio River in quest of bass. One day one of the longest, biggest-footed representatives of that angling aggregation hied himself to the muddy bank, and swishing a long Japanese bamboo through the foliage of an overhanging pecan tree, managed to plunk his live minnow in the middle of the stream. Falling backward from the effort, this denizen basked in the sunshine for hours, his legs in the water until the great toe of one foot only was visible from the opposite bank, his body, too, being hidden from view by the flag that grew on the shore.

It seems that a lot of young ladies, late in the afternoon, came on the opposite side. They were armed with a small-caliber rifle and up-to date ammunition, and they were looking for turtles. They saw some, fired at them, and then the great toe of our individual was seen to wiggle in the gloaming, and thinking it was a turtle the youthful sportswomen took a few shots at it. For a while all went well with the sleeping hobo, save the occasional plunk of a small-caliber bullet in the water, which he mistook for the gulp of a fish. But then all things have an end. So did our hobo's sleep. A bullet better directed than the others perforated the great toe thereof, and then there came a commotion such as had not been heard on the banks of the placid San Antonio since Jim Bowie put a bullet in Santa Anna's wooden leg. With a roar the owner of the perforated toe fled incontinently. A suit followed, which was promptly hushed by the lady marksman's papa with a handful of shining shekels.

TEXAS FIELD.

CHICAGO AND THE WEST.

More Distinguished Sooners.

CHICAGO, Ill., Sept. 4.—We are getting them on the lists. In addition to the distinguished sooners last week mentioned as having been brought to book for violations of the law, I have this week to add the name of Mr Lee Mitchell, of Noble, Ill., who was on Aug. 28 fined $100 and costs for shipping quail and prairie chickens out of the State, his shipments being made to Cincinnati. There are two very interesting features attached to this case. The first is that this arrest was the first one ever made in Richland county that was followed by a conviction, although there have been more than 1,000 chickens shipped out of the town of Noble alone already this season. The second and especially noticeable fact is, that Mr. Lee Mitchell is no less a personage than a Justice of the Peace, and therefore sworn to enforce and uphold the laws of the State which is unfortunate enough to claim him as a citizen. What his offenses in the past may have been we may leave to the imagination of the reader. His final conviction of willful violation of the law is due to the effective work of deputy warden J. E. Slocum, who has been at work also around Fairfield, in Wayne county. Warden Slocum has secured twenty-nine different convictions during his short season this summer, and he has about broken up the soonerism of the very soon community which lives in Wayne and Richland counties. Justice Mitchell was tried before Justice Gunn, at Olney, Ill., who soaked him $10 for each bird. This is the kind of a repeating Gunn to have.

So now we have a sheriff, a justice of the peace and a would-be warden, all within two weeks tried and convicted for breaking the laws which they are supposed to enforce.

Justice Mitchell, this is Sheriff Johnson, of Peoria. I am glad to make you acquainted. Gentlemen, allow me to introduce to you both Dr. Hedderly, of Minneapolis, somewhat of your sort, though he was not quite appointed game warden. I hope you will like the place.

Word to the Wise.

Mr. John G. Smith, many terms president of the Iowa State Sportsmen's Association, gives the following little instances of the "Word to the Wise":

"One man that I had out caught a fellow shooting prairie chickens. He paid well for his sport, and has concluded that he will let the chickens alone till after Sept. 1. W. W. Titus is at Whittemore, in this county, with his dogs. He sent me word that some fellows from that town were after the chickens, but that he could not catch them. I dropped him a card to let him know that I would have two men there to look after the boys. Mr. Titus lost the card, some one found it, as hunting ceased at once. I saw Mr. Titus yesterday, and he told me that he was satisfied that no more shooting would be done in August."

Work of Illinois Warden.

Warden Loveday tells me that he has at date appointed 244 deputies in different parts of the State, and that during this week alone these deputies have turned in, from various sections of the State, reports of eighty-one convictions; this summary covering not over 20 per cent. of the entire force of deputies, most of whom are yet to be heard from. Warden Loveday has seized thirty dozen illegal chickens in Chicago and four dozen illegal woodcock. He got nineteen dozen illegal chickens this week on South Water street, and got evidence against a restaurant man who was caught selling chicken out of season. This man he does not yet want mentioned, as he is going after him again a little bit harder. He has, best of all this news, secured a case against a South Water street firm—O. P. Emerson & Co.—the trial to come up Tuesday, Sept. 7, before Justice Prindiville. Mr. Loveday tells me that he finds the game dealers receive illicit game nicely done up in butter firkins and shipped as "Fresh Country Butter," the packages coming in with clean cheesecloth sticking obtrusively out from under the edge of the firkin, just as though it were butter and not birds.

Minnesota Airtight.

Minnesota is foremost in the spread of the doctrine of decency. From the St. Paul *Pioneer Press* of Aug. 29 I take the synopsis of the test case brought to see whether or not the State wardens would be upheld in destroying nets and weapons belonging to illegal shooters:

"RED WING, Minn., Aug. 28.—Judge Williston filed a decision to-day finding for the defendant in the case of H. Saupe and B. Wagner against B F. Seiz, whereby he sustains the validity of the section of the State game and fish law under which is authorized the seizure and destruction of property used illegally in fishing or hunting. Last summer Seiz, as deputy game warden, arrested Saupe and Wagner on a charge of illegal fishing and confiscated and destroyed a net used by them. Saupe and Wagner sued Seiz to recover the value of the net, claiming that the law which authorized its seizure and confiscation was unconstitutional. Judge Williston holds that the law is constitutional, being only a legitimate exercise of police power; that the plaintiffs are not entitled to the relief demanded nor to any relief whatever, and that the defendant is entitled to judgment and the action is dismissed."

Fresh News From the Chicken Fields.

ST. PAUL, Minn., Sept. 10.—The general report of abundance of prairie chickens in Minnesota and Dakota is only partially true. In lower Minnesota it is not true at all. In upper Minnesota the shooting is better. In all flat lands, and over much of the prairie country, the crop is poor. There are more birds in rough and hilly regions, and more especially in country partially timbered. Not only the sharp-tailed grouse, but also the pinnated, has this year, more than ever, been found in timbered sections; and some shooters predict a change of habits in the prairie chicken in this respect, the result of continual hunting in the open.

At Bird Island, lower Minnesota, some chickens are reported, but no abundance. At Atwater, lower Minnesota, the crop was below expectation. At Graceville, a much exploited point, the results were bad. The Merrill brothers, of Milwaukee, hunted here, and saw only twenty three birds, bagging sixteen. Disappointed, they at once pulled on up to North Dakota, near the Turtle Mountains. Near Hutchinson, Glencoe, Stuart and other points west of here in lower Minnesota, but meager bags have been made, and it is certain that the crop was poor.

Upon the other hand, the shooting has been much better in Ottertail county, in Clay county and other sections further north in Minnesota, one bag of 120 in two days to four guns having been made, the top bag yet heard of for Minnesota this year.

At Morris, Man., as I am advised by Mr. B. Waters, the chickens are scarce, only 100 seen in the course of an entire field trial.

At Fargo, N. D., so shooters interviewed here to-day advise me, the chickens are gone. The Red River Valley has no sport to offer near there. In the sandhills, a day's journey south of Fargo, upon the contrary, the shooting at chickens was good in opening week

At Dawson, N. D., the chickens were not disturbed, and the shooting is fair.

At Webster, S. D., the chicken crop is reported good.

To any non-residents unacquainted in Minnesota, I would advise for chickens to go to Ottertail county, and to go quick.

But ducks are plentiful, although the estimate of the chicken crop was quite too large, it has not been large enough on the duck crop. Not for ten years have there been so many of ducks all over Minnesota at this season. They have bred in thousands in countless sloughs, swales, water-holes and new-made lakes. All shooters now back from trips in this State agree that the duck crop is an immense one.

The prairie chicken is a departing bird. We should not expect ever again to see what we once called "good shooting" at these birds.

Yet there are chickens enough in some sections to offer reasonable sport.

Ducks are not yet shot out over the lake-dotted prairies of the Northwest to so great an extent that a trip will not offer big reward in sport.

FOREST AND STREAM will have, in due course, a *resumé* of the season's prospects and results in Minnesota and the Dakotas. Early next week I am to meet State Warden Bowers, of North Dakota, and have a small shoot and a big talk with him. Then I am to have a small shoot and a big talk with Executive Agent Fullerton, of Minnesota. Both these gentlemen are in town to-day. There is plenty of news from the shooting fields to be had in this interesting corner of the land, where shooting and protection are beginning to try to walk hand in hand together. There is not time to catch FOREST AND STREAM this week with more than a fraction of this.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Takes Their Heads Off.

OROVILLE, Okanogan County, Wash., Aug. 29.—Our grouse season opened for shooting the 15th inst. That is according to law, but in reality it has never been closed unless it is near some of the large towns. There they may pay some attention to the law, but here on the reservation miners and prospectors begin killing as soon as the grouse come down from their winter quarters, and the result is there are very few to kill this fall

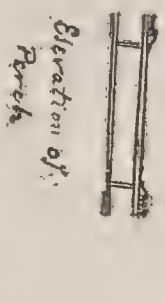
It is the same with deer. Two years ago the country around Mount Bonaparte was thought to be the best place to find big game. Last week some Indians came to the mill and wanted some grub They had been out four days, and had been clear around Mount Bonaparte, and had not seen a deer nor killed a grouse.

I went out a few evenings ago and after three hours' hunting with a good dog I got three nice young grouse. They were the first I have shot at since last fall. I had to use my telescope rifle, as my eyes are changed so much that I can no longer use open sights. However, I did not score a miss; I took the heads off from each, and whenever I cannot do that well with our modern appliances it will be a sorry day for

LEW WILMOT.

Pennsylvania Quail Whistles.

ALLENTOWN, Pa., Sept. 8.—The indications are that we are going to have lots of quail this fall. While driving through the country this summer they could be heard whistling on every side.



E. E. W.

A BOAT AND BOAT-WAGON.

In a country like this, where ponds and lakes are plentiful and good boats are scarce, it is often convenient for the angler to have a light boat of his own, and to have also some means of transporting it readily from place to place.

With a view to meeting these indications I had built the nicest fishing boat I have ever seen. It is 16ft. long, 42in. beam, canvas-covered, with cedar ribs and planking, and has a cane seat in the stern. It weighs about 125lbs. It is steady enough to stand up and walk around in, yet so well modeled and finely finished outside that it is a very easy boat to row, It has been universally admired by those who have seen it, and has been a constant source of comfort to me during the three seasons that it has been in use. It cost $65, and I do not believe anything better or better-looking can be made for the money.

To carry this boat from place to place I had made a boat wagon, which, so far as I know, is original in design. This wagon consists essentially of two well seasoned spruce boards, 14ft. long and 8in. wide, fastened together in the shape of a letter A, and mounted on a pair of wheels and axle. The axle crosses the boards at such a point that the boat when loaded is almost balanced, the front end of the load being a little heavier than the hind end. The boat is immediately supported bottom side up by two perches, of a height sufficient to clear it entirely from the boards and axle, and is held in position by a cleat on each end of each perch, and by straps passing from one of these cleats to the other over the bottom of the boat. Thus mounted, it is obvious that the jar produced by jolting over rocks and other inequalities in the road is distributed along the elastic boards instead of being transmitted directly to the boat, as would be the case if the load rested immediately on the axle. The perches and cleats are well padded to prevent the gunwales of the boat from being rubbed by the slight motion between them and the cleat. The boat wagon and its load is fastened to the rear axle of the riding wagon or buckboard by straps which pass underneath staples in the front of the boat wagon. At this point the spring boards are reinforced by a transverse cleat. The details of this arrangement may be seen from the accompanying diagrams and photographs.

MAINE.

Middlesex Association.

THE annual meeting of the Game and Fish Protective and Propagating Association of Union, Somerset and Middlesex counties, N. J , was held last week in Plainfield. The Association is in a flourishing condition, in spite of many drawbacks, and during the year twenty-five active members have been added to the membership roll, in addition to a large number of land holders.

The report of the finance committee showed a balance of $82 95 on hand. The committee on game laws reported no material change having been made by the last Legislature. The committee on slander, to whom had been referred the matter of suing certain farmers for slanderous attacks upon the Association, reported the matter laid over for the present.

A number of land-owners were accepted as members, and the following committee was appointed to secure the names of the land-owners and to post their grounds: F. Day, R. H. McCullough, Henry Haurand, W. H. Carman, of Dunellen, and J. J. Goff.

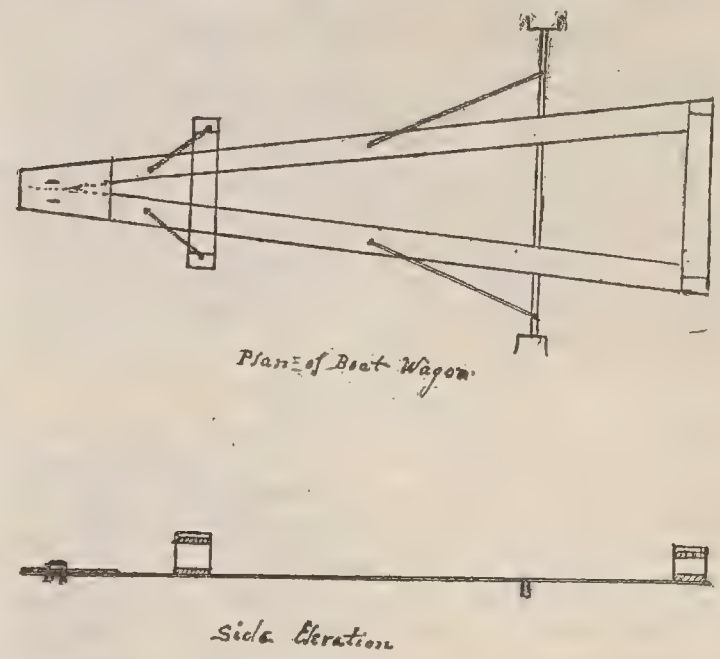
Votes of thanks were tendered to the retiring officers and to Counsellor William Newcorn, for their work, and to W. H. Carman, of Dunellen, Dr. Nelson, of Newmarket, and Percy C. Ohl, for liberating a dozen quail each on the grounds of the Association. Thanks were also extended Peter Weaver for aiding the officers in protecting game on the preserves of the Association at Greenbrook, and to the *Courier-News* and *Press* for their notices and good-will during the past year. The secretary was instructed to send a letter of condolence to the family of Edward W. Hawes, of Newark, a member of the Association, who died a short time ago.

The election of officers and directors resulted as follows: President, John J. Goff; Vice-President, James Stamfield; Secretary, Henry Haurand; Treasurer, R. H. McCullough; Counsel, William Newcorn. Board of Directors: F. Day, W. H. Carman, Andrew Lutkins, J. J. Goff, Henry Haurand, George Fielding, R. H. McCullough, Louis Van Dyke, August A. Warden.

The report of the secretary, which was read and accepted with thanks, showed that there were forty-eight active members and forty-three land-owners on the roll, making a total membership of ninety-three. In the early part of the year ten dozen quail were liberated on the game preserves by the Association in addition to a dozen each by W. H. Carman, of Dunellen, and Dr. Nelson, of New Market. It was intended to liberate 100 rabbits, but only two dozen could be secured. These were liberated at various points and have done well, reports show that notwithstanding the loss suffered by the floods and vermin game is plentiful on the preserves, and the prospects are that the members will have plenty of good sport the coming season. Two hundred rabbits for next season have been ordered.

Besides the regular preserves of the Association at New Market, Feltville and Warrenville, the secretary reported that there were a number of private preserves controlled by the Association, some of which have been stocked by their owners, while others are used as breeding grounds. No shooting is allowed on the latter. The Rothcap farm along Greenbrook and the Percy Ohl farm is included in this list.

Contrary to the efforts of the Association, no changes in the game laws were made by the last Legislature. The Association's committee consisted of Percy C. Ohl and Secretary Haurand, and their efforts were recorded by the Legislative Committee on Game and Fisheries, which consisted of Messrs. Scovel, Litteret, Hutchinson, Wilder, Stokes and Hopkins, and to them many thanks are due. The game laws in this section are particularly well observed, and the game warden and his deputies find nothing to do.



The secretary reported that he had received for initiation fees and dues $219. The expenditures had been $136.05, leaving a balance of $82.95 on hand. A tribute of respect was paid by him to the family of Edward W. Hawes, of Newark, a member of the association, who died early in the summer, and in conclusion he expressed his hope that all members may have much fine sport the coming season.

The Way of the Transgressor.

Sometimes it's Hard.

HAVERHILL, Mass., Sept. 4.—*Editor Forest and Stream:* I copy the following from the columns of our local evening paper, the *Haverhill Gazette:* "Harry W. Spaulding, of this city, pleaded guilty to killing a calf moose when arraigned before Judge Durgin in the Dover, Me., Municipal Court, Wednesday, and paid a fine of $100 and costs, which the judge imposed.

"Last September a party composed of W. W. Spaulding and Harry W. Spaulding (his son), with George Leath, Frank Defoe and Amos Thibido as guides, left Kineo for Allegash Lake via. Mud Pond Carry.

"On Oct. 3, while one of the guides was paddling, Harry ran across a cow moose with a bull calf. Spaulding was sitting in the bow and first fired a shot at the cow and then shot the calf. It is not known whether he killed the cow, but one was found not far from the spot dead a few days after. The guides used a part of the calf for food. The charge of killing the cow was not pressed."

Mr. Spaulding is not a member of our club, I am happy to say.

GEO. F. STEVENS, Sec'y-Treas. Haverhill Gun Club.

And then Again not so Hard.

ALLENTOWN, Pa., Sept. 8.—*Editor Forest and Stream:* Milton Yetter, president of the East Stroudsburg National Bank, and Chas. Warman, superintendent of the glass manufactory at Stroudsburg, were convicted yesterday of illegal fishing and each fined $100 and costs, the full penalty. Their defense was that the lessee of the land had invited them to fish.

After the decision, Messrs. Yetter and Warner caused the arrest of Charles Peters, Charles Dolan and Richard Miller for the same offense, and they have been held for trial. A peculiar part of the affair is that half the fines go to the informer, and though Messrs. Yetter and Warman were fined $100 each, they will receive back $150 for furnishing the information for the arrest of the other three.

W.

And Sometimes it's Harder.

A decision handed down by Judge Williston in the district court at Red Wing, Minn., fully sustains the new rule of the Game and Fish Commission, looking to the confiscation of guns and ammunition found in the hands of sportsmen who are hunting out of season. Last spring the game warden at Red Wing seized a large lot of nets and seines in the river near Red Wing, and the owner of them brought suit to recover possession, claiming that the State had no right to confiscate his property. He admitted the right to arrest him and impose a fine if guilt were proved, but insisted that his nets were his property and that the State had no right to take them. The case was fought very earnestly by the State, and Judge Williston has decided in the State's favor. He lays down the broad principle that the State has the right, as a police regulation, to enact laws looking to the confiscation of all property of this sort, whether nets or seines, or guns and ammunition, and that the courts have no right to grant redress to any party caught red-handed in a violation of the fish and game laws and fined in a court of record. This decision has braced up the general office in St. Paul, and made Executive Agent Fullerton very proud indeed of the fifteen handsome guns which his deputies have taken hold of since Aug. 1.

Florida Protective Clubs.

THE Marion County Game Protective Association offers a reward for evidence sufficient to convict any person or persons found shooting, or otherwise destroying deer, quail or wild turkey during the close season. The penalty affixed by law is $25 for each quail, $25 for each wild turkey, $50 for each deer shot out of season.

The illegal shooting of quail close to the town limits of Titusville has been reported, and will lead to an investigation by members of the Titusville Gun Club, which, it is hoped, will bring the offenders within the pale of the law.

Dr. Webb's Hunting Party.

YELLOWSTONE LAKE, Wyo., Sept. 9.—Dr. Seward Webb, of New York, and a party, including his two brothers, have arrived here *en route* to the Jackson Hole country on a month's hunting trip. There they will be met by Gen. Coppinger, Sir Ross Price, of London, and a number of army men. It will be the largest hunting party ever seen in this section of the country, comprising about 100 men. They will have a couple of hundred mules and horses with which to pack provisions.

The Sportsmen's Exposition of 1898.

NEW YORK, Sept. 10.—*Editor Forest and Stream:* The next Exposition of the Sportsmen's Association will be held at the Madison Square Garden, March 12 to 19, 1898. At a very early date we shall give all further particulars.

J. A. H. DRESSEL, Sec'y-Treas.

Lenox Fish and Game Protective Association.

LENOX, Mass.—At the annual meeting of the Lenox Fish and Game Protective Association, held at the Lenox Club on Monday, Aug. 9, the following officers were elected to serve for one year: President, S. Howland Robbins; Vice President, D. W. Bishop, Jr.; Sec'y-Treas., Clinton G. Gilmore. Executive Committee: F. A. Schermerhorn, Hon. Wm. C. Whitney, W. D. Sloane, John I. Kane, John S. Barnes, John E Parsons, W. D. Curtis, J. W. Burden, John E. Alexandre, Isaac Newton, G. G. Haven, Morris K. Jessup, John Sloane, Charles Lanier, David Lydig, Anson Phelps Stokes.

It is earnestly requested that the residents of Lenox assist in enforcing the game laws of the State.

CLINTON G. GILMORE, Sec'y.

Chesuncook Fish and Game.

PORTLAND, Me., Sept. 9.—I should feel lost without my copy of the FOREST AND STREAM, which reaches us on Friday evening. I have been into my camp on Chesuncook Lake twice this season. In June we had excellent fishing; as an evidence of the same I have a 4½lb mounted square tail before me as I write. Our five largest weighed 20⅜lbs. You can form an idea of how plenty the deer are in that locality when I state that on June 26 I counted twenty-one deer in my clearing at one time. We also saw several moose upon that trip Quite a large party of us leave here Oct. 5, and expect to remain about three weeks. F. L. SHAW

In a Palace Car.

WORCESTER, Mass., Sept. 7 —*Editor Forest and Stream:* A party of gentlemen have bought of the Worcester Excursion Car Co. the well known palace car Yellowstone, in which they will make a four week's trip to northern Minnesota and Dakota for prairie chickens, duck and goose shooting. The party will leave here about Sept. 22. This will be a most delightful trip at the most delightful season of the year. If any readers of your valuable paper should like to join this party a limited number could be accommodated, either ladies or gentlemen, if application be made at once to A. B F. Kinney, Worcester, Mass. A. B. F. KINNEY.

Use for the English Sparrow.

I AM glad to see they have found a use for the English sparrows. They serve them up at Manhattan Beach as Philadelphia reed bird. Unfortunately they do not resemble those delicate little bird excepting in size; and are wretchedly dry and bitter—fried corks would answer just as well.

W. H.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

MEN I HAVE FISHED WITH.

LV.—James L. Vallotton.

ONE day last winter I met Mr. Vallotton on the street in New York, and as he spoke kindly of my sketches I ventured to say: "I've been thinking of writing up our trip to Pasque Island and will do it unless you make a serious objection. I will take pleasure in recalling those days, as I did in the days themselves. Now, don't say no, because I want to do it."

"My dear boy," said he, he was ten years my senior and therefore had a right to call me a boy; "my dear boy, I would have no objection to your writing up that trip only there's nothing to write about; not the slightest thing of interest occurred that I remember, and I fear the story will be flat. However, that's your affair, so go ahead if you can make a yarn of it"

With this in mind I wrote him on Aug. 28 at the Union League Club, where he had made his home since 1888, asking for the date of our fishing trip. The letter was returned in an envelope of the club with a note, saying: "Mr. Vallotton was taken to St. Luke's Hospital three weeks ago and died on Monday last, Aug. 30; his funeral will be held at the hospital on Thursday." The letter reached me on Friday evening.

I made the acquaintance of Mr. Vallotton at the angling tournaments in Central Park, in which he took great interest, especially in the contests in "heavy bass casting," usually acting as judge or referee. He was the treasurer of the National Rod and Reel Association and I the secretary, therefore we were often brought into contact after the tournaments. One day, about a dozen years ago, he asked me to fish for striped bass with him at the Pasque Island Club, of which he was a member and for some years had been its president. Here was a chance to see and take part in the capture of big bass of 10 to 50lbs. in the waters of Martha's Vineyard, Naushon, Nashawana, Pasque, Cuttyhunk and Penikese were all familiar names of the Elizabeth Islands which separate Buzzard's Bay from Vineyard Sound, and I had read much of the fishing there. I did not decline the invitation, and joined my host at the comfortable club house.

It was Monday night, and before retiring the members present drew for stands for the next day. There were about fifteen stands around the island and these were drawn for each night, the highest number taking first choice, and so on. Mr. Vallotton drew only once, as he intended to stay with the novice and be his mentor. The stands were not near together, and thus his being with me was a necessity, for while I was an adept at bobbing for eels, bottom fishing, chumming and trolling for salt water fish, skittering for pike and fly-fishing for trout and black bass, I had never used a free-running, multiplying reel to cast from in actual fishing. I had seen it done in the tournaments, and my friend Frank Endicott had given me some lessons, yet I had not attained the art, which seems to be more difficult than to cast the fly.

A stiff rod, not exceeding 9ft., is used. A 2oz. bait of lobster tail, or a slice of menhaden, is the bait. The latter is reeled up to about 2ft. of the tip, and with a sidelong sweep it is sent into the surf a hundred or more feet away. It looks so easy when done by an expert, like Mr. Vallotton, that the beginner is surprised at his failure. His free-running reel has overrun, "back-lashed," and his bait is suddenly checked in its flight. The reel is on top of the rod and must be checked by the thumb of the rod hand, and in a nice difference between too much checking and not enough lies the secret of bass casting. My trials had been on land with a 2oz. lead sinker, which gave less resistance to the air than the bait. I could not do it, and Mr. Vallotton cast for me all the first morning, while I watched the process.

The stands are built on prominent rocks, with iron stanchions firmly let into them, and on top is a semicircular rail of iron pipe about waist high, to allow the angler to cast without fear of falling. These are often reached by plank bridges stretching from rock to rock. If the sea is rough, the angler is clad in oilskins, and looks out that he is not washed away.

We fished the rising and the falling tide faithfully and did not get a strike. We tried it for five days with the same result. From seven to eleven men fished the different stands on Pasque Island that week, and only one bass was taken, a small one of 6lbs

On Friday night Mr. Valloton said: "There seems to be no use in trying; the bass are not here. I regret very much that I should have selected such an unfortunate time, for I wanted to see you take a good fish."

I assured him that I had enjoyed the trip, and thanked him for it; that I was enough of a fisherman to know that no man could tell when there was going to be an off week, but that I had learned much about casting from the reel which might be of use on some future occasion.

"As to-morrow is our last day," said he, "and there have been no bass taken of any consequence at Cuttyhunk and the other clubs, with no prospect of any better fishing for some days, I can assure you some of the best bottom fishing for tautog and sea bass on the coast. They are always with us in great numbers, and are ever hungry. Would you like it?"

"Yes; it beats no fishing all to pieces, if it is not the highest form of angling. There was a time—when I was younger and had only just learned to take a trout or bass with a fly—that I turned up my nose at all bait fishing, especially of the bottom kind, and compared it to dragging the East River for dead bodies, but that is a state of mind that often comes to young fly-fishers. You remember that Dr. Bethune, in speaking of fishing with the worm, in fresh waters, said: 'My hands have long been washed of the nasty things.' Well, I thought so at one time, but, while I like to take a fish with a fly, my philosophy says if they will not have it in any of its varied and artistic forms, then offer them what you think they want."

"That's my philosophy exactly," said my friend, "we've fished faithfully for five days for the grandest game fish in the world, not excepting the salmon, and they are either not in our waters or are not in need of menhaden or lobster tails, so I will tell the steward to order baits for bottom fishing to-morrow."

And so we went out and anchored in one of those tideways between the islands, which are curiously called "holes" by the natives, and fished in the swift water with drop lines, heavy sinkers and clam bait. If the striped bass were absent, the sea bass, tautog or blackfish, and other kinds were present in great numbers, and had appetites for clams that were surprising. There is a little fish which is always found where the tautog is and which is soundly hated by all salt-water anglers. It can remove a bait without letting the man at the other end of the line know it, and he only finds that his bait is gone when he has waited awhile for the bite which does not come, and then pulls up to find that he has been fishing with a bare hook. It is rare that one of these nibblers is hooked, but Mr. Vallotton brought up a large one, fully 6in. long. He fastened it to a line, with a piece of cork to float it, and for half an hour played with the gulls, snatching it away when they were about to seize it, until finally one gull got a grip on it and tore it loose.

This to me was very amusing, for it was done so seriously. Mr. Vallotton was one of the most dignified of gentlemen; stately in manner, careful and precise of speech, and always so carefully groomed that a speck of dust would avoid him if it could. He was one of those trim, elegant old gentlemen who can be seen by the score any afternoon on Fifth avenue, and who are more plentiful in New York than in any other American city, and therefore I was amused to see him play with the gulls. Evidently he thought it as good sport as bottom fishing, which he stopped in order to tease the gulls. And I don't know but it was as good, or better. The fish bit so fast and were so surely hooked that it was poor sport to haul them in as fast as one could bait and throw out. It lacked that uncertainty—those mingled sensations of hope for a strike and fear of loss, which is the charm of angling.

"Can you tell me," said he, when he resumed fishing, "of what possible use these little nibblers are?"

"Certainly; they serve many useful purposes, as all living things do. They take your bait, and as you provide enough to cover this expected loss the clamming industry is encouraged. They enlarge the vocabulary of the market-fisher, who invents choice epithets for them, and so our language is enriched. They, in common with some other fishes, have several names which sharpen our wits to remember; for instance, about New York, where the Dutch settled, they are known as the bergall; along the Connecticut shore the fish is a cunner; further east it bears the Indian name of chogset, until we reach Cape Ann, where the fish attains its extreme size of 10in., and appears on the table under the name of blue perch. In its turn it serves as food for larger fishes, and is of great service to an angler who tires of fishing and wishes to have sport with the gulls."

"Is that all?"

"All that I can think of at present. If more time for thought could be allowed, I might find more good in the little bait-stealer, which seldom exceeds 5in. in length about New York, and is considered as a pest of the first water."

"Well," said he, "you've made out such a good case for the little nuisance that I'll send down some more clams for it to nibble on; we have plenty, as the steward said he had ordered 200 to be opened, and there are a great number left."

He had hardly lowered his line, when there was a violent tug on it, which drew it through his fingers so rapidly as to scorch them, for he held it loosely. He grasped it firmly, and declined all assistance, saying: "It must be a 20ft. shark, if not a whale; but it must come in." As it neared the surface, I saw that he had a big "barn door" skate, one of the largest and smoothest of our skates; and I got hold of its tail and swung it in the boat, where it flopped around until I killed it with an oar, for it was too large to go into the clam baskets, which had been brought to hold the other fish and keep them from spattering us.

"Now," said my friend, "since you gave such a good character to the little cunner, perhaps you may speak a good word for this misshapen thing."

"I can, and am glad to do it. The skates are good food; not of the first-class like salmon, striped bass, shad or others, but they are better than weakfish, and equal to many others that go to the markets; yet there is a senseless prejudice against them. They are common in the markets of Europe and I've eaten them there, but you can't get our fishermen to try them because their grandfathers didn't eat them, and tons of good food are thrown away every day through prejudice."

The old gentleman looked the fish over and then said: "Pardon me, but are you serious in this matter? Is this sea monster really good to eat?"

"I am serious, and if you will have it cooked at the club and will taste it, after I do, you will find that it is of real value as food. Mr. Blackford has eaten it, and it was this fish which, more than anything else, led to the founding of the Ichthyophagous Club, which was organized to overcome prejudice by sampling all living things which came from the water."

"But," said he, "there appears to be but little meat on so broad a fish. After you take off its wings there seems to be nothing left of it"

"The wings," I replied, "are really great broad fins, which it uses like wings, and flies in the water as a bird does in the air, and these are the edible part of the fish."

The result of this talk was that we had the fins of the skate fried, and induced some ladies at the club to try them. All pronounced the skate very fair, and I've been curious to know if any of them ever tried it again, or if their curiosity was satisfied. None of the boatmen, nor the fishermen along our coast, will eat this fish. They destroy tons of it every day, and people in our large cities are looking for cheap and wholesome food. Such is the effect of blind, unreasoning prejudice, which follows a beaten track and dares not sample a skate, sea-robin or toadfish, partly because they are not handsome, but mainly because some one told them that these fishes are "not good to eat."

When we had fished to our satisfaction, and wearied of pulling in fish which seemed to be anxious to be caught, we went ashore. The half-bushel clam baskets were full of good sea bass and blackfish, which the steward would use in some way; but how many there might be we never knew.

Several times after this I dined with Mr. Vallotton at the Union League Club, and he always spoke of the time when we ate the skate. I think he regarded it as one looks back upon some daring deed from which he has escaped unharmed.

A friend who is a member of the Union League Club, and who only knew Mr. Vallotton slightly, says: "He spent much of his time in the library and was never known to have been engaged in any business. His rooms at the club were richly furnished and contained many valuable paintings. He had no very intimate friends, but was always pleasant and agreeable."

That describes him well. He was a most agreeable man to all men, but one who never seemed to unbend from his formal manner under any circumstances. He was a man whom you might know for years, but with whom you would never be intimate. Yet he was not a cold man despite his dignified and ceremonial manner, which one soon learned to know was not assumed.

James L Vallotton was born in Savannah, Ga., in 1823, and his mother brought him to New York after his father died, about 1840. His mother died in 1860 and then he married a daughter of Robert Sheills, who left him a comfortable income. She died in 1875, and from that time Mr. Vallotton devoted his spare time to angling.

He was as fastidious about his fishing tackle as he was about all other personal matters. His reels must be sent to the maker to be looked over and oiled, and the rods must be tested at the beginning of each season, while all last year's lines were discarded for fear that there might be a chafe on a rock, or some weakness which might cause the loss of the very large bass which he might possibly hook.

He took many large bass, and the record of them is on the books of the Pasque Island Club, but there are so many miles between those books and my den that I can't attempt to give the weight of his biggest fish, but I do remember how his eye brightened as he told of fighting a 35lb. fish.

In rounding up this sketch of a gentleman angler, I wish to record my belief that angling for big striped bass in the ocean surf, as practiced by the anglers who compose the bassing clubs of the Elizabeth Islands, is a sport not a whit inferior to salmon fishing. FRED MATHER.

Chicago Fly-Casting Club.

CHICAGO, Sept. 4 —*Editor Forest and Stream:* The casting tournament held to-day was the last one of the season. These were the scores made:

	Long Distance Fly, Ft	Distance and Acc'y. Per C't.	Acc'y and Delicacy, Per C't.	Bait Casting, Per C't.
W. T. Church	...	....	....	85 2/5
B. W. Goodsell	104	83	89 6/5	94 4/5
E. D. Letterman	61	....	....	95 1/5
C. A. Lippincott	...	89	91 1/3	89 2/5
C. G. Ludlow	85	78	8 2/3	85 2/5
G. A. Murrell	95	81 2/3	8 1/2	91 4/5
F. N. Peet	105	90 2/3	91 1/2	77 2/5
J. E Strong	78	....	....	....
H. G. Hascall	...	....	....	89 1/5
M. D. Smith	73	....	....	86 1/5

Holders of medals: Long distance fly, F. N. Peet; distance and accuracy, F. N Peet; accuracy and delicacy, F. N. Peet; bait casting, E. D. Letterman

A Cumberland Catfish.

AUG 27.—A Barbourville, Ky., correspondent records the capture of a yellow catfish which tipped the scales at 42½lbs. and measured 4ft. in length. It was taken from the river at Barbourville, Ky., about sixty miles above the Cumberland Falls. The lucky sportsmen were Will Hinkle, Capt. McDaniel and James Sewell.

Bluefish at Fire Island Inlet.

BLUEFISHING has been good for the past week at Fire Island Inlet of Great South Bay, Long Island. Boats going out from Babylon, Bayshore and Sayville have made fine catches. The fish run large. The sport should hold for some time yet.

CAMP FOREST AND STREAM, EIGHTH ANNUAL.—II.

An Astral Body.

WE read now and then of that rather vague and indefinite quantity known as an astral body, but it is not of record that many persons have ever seen such a thing. In Camp Forest and Stream all things come true, and it was there that for the first and only time I saw an astral body—as it chanced, that of my own self. Now, a great many men are puzzled over questions of mental philosophy, and indeed, the more mental philosophy one studies, the more he becomes mixed on questions such as those of consciousness, of identity, of the ego, etc., etc., so that after one has studied quite a long while he has lost his confidence in about everything, and is therefore almost fit to write a book, or found a school in something or other. If we want to be happy, the best way is not to found schools or write books and things, but to just go on living. If you do that, and let the sun and the air have charge of you, you will amount to about as much, and get about as far along in the questions about astral bodies and that sort of thing. This I know, because in Camp Forest and Stream we mostly don't think very much, but just live; yet it was there that I saw my astral body, a thing which in earlier times I had not thought about very much, but which at the time was not bothering me in the least.

It happened this way. I was down at the spring for water, while J. B. H. was up on top of the hill watching a fire of hickory bark burn down low enough so that he could broil a fish. It was about 7 o'clock in the evening, and the sun, which is obliging enough to set always just across our lake from us, so that we can have a good view as we sit at table under our big hand-made oak tree, was casting a very intense glow upon the glassy surface of our lake. After I had dipped up my pail full of water from the little spring, I turned and started up the hill, which is very long and steep, J. B. H. and myself always camping at its very top, by reason of the excellence of the view and the freedom from mosquitoes thus afforded. As I was slowly walking up the face of this sharp bluff, I saw distinctly my shadow, clear and black, traveling along at my feet, as any decent shadow should. This shadow was short and sharp, plainly visible against the dried blue grass sod of the hill. There was no mistaking the fact that it was my shadow, for no one else was there except myself. What was my surprise, then, when by chance I cast my eyes on ahead up the hill (I always did so look up ahead, so as to see J. B. H. sitting over the fire; it was such a comfortable sight), what was my surprise, I say, to see, traveling on up the hill far ahead of me, a second, far longer and much fainter shadow, which imitated every movement that I made, and slipped on across the wall of the trees which lined the side of the ascent, and crossed the top of the blue grass hill long before I myself had gotten there! This shadow moved with perfect ease and freedom up the hill, though I myself was no little put to it for breath, such is the steepness of the pitch at that point. Thus we three, I myself, and my shadow and my astral body, walked up the hill together, myself no doubt the most surprised of the three, for my proper shadow said not a word, nor is it of record that astral bodies are ever surprised at anything that happens, they are so very well bred. Well, I set down the water pail and told J. B. H. that I had seen a haunt, or else I was called, or anyhow I had seen my astral body and therefore broken a record; for, of course, as soon as I got to the top of the hill, and began to talk to J. B. H., the astral body discreetly withdrew. They are very shy. J. B. H. was not startled beyond taking another chew of tobacco, and presently he pointed out to me the strong sheet of reflected light thrown up from the mirror of our lake by the flaming sun which was sinking upon the other side. He explained to me, in very plain fashion, that my double shadow was made, one-half by the rays of the sun and the other by its reflected rays, the latter being longer and fainter for reasons plainly to be seen. This explanation he evidently expected would prove conclusive, so I did not urge the matter, though still confident that what I really saw was my own astral body floating up the hill and across the screen of trees.

How to Kill a Catfish.

One day J. B. H. and Mr. Schwartz's lady boarder and I were out fishing for croppies on our own private croppy bar, which at last we had found again (we can't always find it without a long hunt), and we wanted croppies badly that day, since Mr. Schwartz said he would like a mess for his family. We only got about a dozen and a half of the right size to suit us, and along toward the close of our engagement the croppies ceased to bite as in all propriety they should have done, and J. B. H. actually disgraced the enterprise by catching a bullhead, a coarse, fat, aggressive fish, which appropriated the best place in the boat and smiled derisively at us.

"If I had a broom straw I would kill you, Mr. Fish," said J. B. H., confidently, as he repelled the advances of the bullhead with his foot. I did not know what was the burden of this dream on the part of J. B. H., though usually he is able to substantiate things pretty well. Yet I pointed out that, although Camp Forest and Stream contained about all the estential ingredients of a camp, it boasted no store-made broom, so we would probably have to kill the bullhead with the axe.

The difficulty of killing a bullhead is well known. You may tread him under heel, yea, may crush him to earth, but he will rise again, being in this respect different from a plug hat, or a great many other things. As I have earlier remarked, you may break, you may shatter the bullhead if you will, but the sand of the bullhead will linger there still. They were made for the uses of adversity, and you shall find no single other fish that swims more fit to survive without the refining influences of a game preserve. Knowing all these things as I did, of course, it was with feelings of some surprise that I saw J. B. H., immediately upon our landing at our shore, busy himself with the search for a long, stiff, blue grass stem, which should, in so far as possible, bear resemblance to a broom straw; it being agreed that our camp broom, constructed as it was of a bunch of crooked boughs, would afford no straw suitable for this purpose, whatever it should be.

At length J. B. H. found a good stiff stem of grass, and began his operations on the sturdy fish, whose equanimity was in no wise lessened. At first he thought there should be in the center of this bullhead's forehead, and midway between the eyes, a tiny hole about the size of the grass stem, but in this his memory was at fault. So he took his knife and gently cut the skin at that point. Lo! below the skin was a little depression, into which the grass stem followed readily. It progressed on and back for a space of 2 or 3in., at which point a strange thing occurred. The bullhead which, ordinarily, would have wriggled, and twisted, and gasped, and died like a turtle in its stout reluctance to yield up the spark of life, at once gave a single gasp, a single shiver, and lay absolutely still and dead!

"You can kill a 40lb. catfish that way," said J. B. H., "and it seems to be practically painless. The straw touches the spinal cord, and death is instantaneous."

We cut off the head of our dead bullhead, and there at the very point where the head is joined to the spine, at what represents the *medulla oblongata* in catfishdom, I suppose, there was visible the stem of grass which had killed the hardy fish so painlessly and quickly. J. B. H. told me that he had used this way of killing catfish before, but so far as I know, it is something rather new to the public. At least, I have never heard of it before.

Eye Glasses and Rifle Shooting.

In his younger days, as I have said, J. B. H. was a famous rifle shot, and with the old squirrel rifle there were not many who surpassed him, I imagine. As he is now in his seventy-sixth year, it is natural to suppose that for some time he has laid aside the rifle. It chanced that we had in camp a little .22 rifle, for frogs and the like, and this weapon we used when carrying out Mr. Schwartz's admonition to kill off all pigeons we found around his barns. When we went up to the house to take our neighbors some fish, or to lay in a stock of bread or eggs, we would take along the little gun and kill us a pigeon or so. This rifle, I soon found, needed great care in its handling, as it was sighted in such a way that its point-blank was about 50yds. To strike a pigeon in the head, one would need to hold about on his knees; and it is a very uncertain matter, when you see a pigeon sitting on a barn, just where his knees are. It was my regular practice to miss about as many birds as I hit with this gun, and this I plainly saw annoyed J. B. H. very much, though he was too polite to say anything. At last, one day when we were going to have company and needed four pigeons, and only had one secured, I fired four shots and only got one bird. "Blamed if I don't believe I can shoot better than that myself," said J. B. H., with sheer disgust overpowering his politeness. So I gave him the gun, with a quit claim to a pigeon I had missed, a fair shot of not over 28yds, the bird sitting on the ridge of the barn and in a strong light. J. B. H. went up to the side of the building near which we stood, and after carefully settling his spectacles upon his nose, took a deliberate sight, after the fashion of the rifleman whose creed is that meat should follow every shot. And verily, at the crack of the beastly little rifle the bird tumbled from the ridgepole, shot through the neck! "I saw you were shooting high," said J. B. H, calmly. After which I let him carry the gun when we went after pigeons.

One day we were down at Eagle Lake, some few miles away, getting bread and calling on cottagers, when a good-sized rainstorm came up. We had an hour's pull up through a winding, weed-grown channel between the two lakes, and it was too late in the day to wait if we wanted to get to camp that night. There were three of us, the lady boarder at Schwartz's happening to need transportation home from the lower lake that evening. Yet to the three fell only two mackintoshes, this leaving me in shirt sleeves, and a very pretty bicycle cap by which I have been wont to set much store. When we were half through the channel the rain let go all hands and came down in a sheet. It was very cold on my back for the rest of the half hour or so, and both J. B. H. and the lady boarder got very wet in spite of their mackintoshes. The boarder bemoaned the fact that she could not get home across the woods in time for supper, and when invited to eat supper with us, expressed open disbelief in the power of any human being to cook supper in that rain. It was a rainy evening in camp, the worst affliction that can befall the camper, and the one which proves whether or not he is the real article or simply an imitation.

What we did was to get supper just the same, and to eat it and enjoy it more than almost any meal we had on the trip. Methinks the lady boarder will long boast of this adventure, such as might go into story-books of impossible fiction, but which in this case really came to pass. When you see the magician pull the rabbit out of a hat it looks difficult, but really it is easy. Of course all woodsmen know it was easy for us to pull the rabbit out of the hat in this case. The rain was very heavy, and we had no means of cooking except in the open air; but we had mackintoshes now to keep us dry, and we had rubber boots. All about us grew big oaks, some of which had dependent, dried limbs, cured on the tree, so that the bark and sap wood had all rotted off, leaving only the hard seasoned heart. A few of these limbs, not soggy from a soaking on the ground, we broke from the trees, and from them split out some splinters of dry wood. With these we built up a cob house, and over this yet another house of heavier dry fagots, and over this we spread a covering of bark and boughs. Then J. B. H. so vigorously fanned with his drab straw hat that ere long the tiny flickering flame began to gain confidence in spite of the dribble of rain, which sizzled at the edge of the fuel. At last it crept up and into the heavier sticks and dried them, and beset them into giving flame. After that we piled on little logs cut from a lean tree we had pushed over, so our fire held its own in spite of the rain, J. B. H., a tall and flapping figure in gum coat, moving calmly as ever about the evening fire, though it was far too large and hot to be an ideal cooking fire. We boiled coffee, holding out the coffeepot at length upon a stick, and not daring to let the flame burn down. Here, too, at a corner less ardent than the rest, J. B. H.—who is an excellent cook—executed a pan of bacon and eggs in his best style. Meantime I had found yet another form into which I could turn the Protean tent. I pinned the edges of the front to the edges of the fly, and stretched them both out sideways as far as they would go, thus forming a wide extension to our tent, so that its interior looked roughly like that of a lounge or tepee, with its single pole, however, to remind us that it was a tent. Of course our beds, built up high of hay over a tarpaulin, were dry, and came down well to the front of the tent. So we sat on the beds of blankets and spread our table on the ground under the addition made the fly and the flaps. Here, flat on the grass, our little 5 cent torch flared and flamed and smoked sturdily, and confirmed our belief that it is the best camp lamp we shall ever find; for the rain could not quench it, the wind could not blow it out, neither did it cast more shadow than it gave light. Our lamp lit up the entire interior of our extemporized lodge, showing all things therein to be dry and defiant of the storm. From the grocery box, of course, we had this evening sought forth all the especially delectable boxes and cans and jars and bottles, and so we spread as good a supper on the ground inside our lodge as we could have had if we had been eating at our table, some 20ft. distant and very wet and dripping in the downpour. We scoffed at the rain and were happy, not failing to laugh as we set the lady boarder across the fields on her way home, to tell at the farmhouse a wonderful story of cookery done out of doors and in the rain, and of an old gentleman, past three score years and ten, who murmured not at all, but was peaceful and happy though the rain pelted him, and the smoke got in his eyes, and the fire followed him about when he wished to fry the bacon. But this caused me no wonder at all, for I had learned long ago that J. B. H. was a thoroughbred, ready to take things as they come.

As to the fishing, we did nothing very startling this year. The bass troubled us not at all, and we had no records which we sought to make. We would fish a while for croppies, the best fish for the table (we caught them up to 1¼lbs. and 2lbs., the fattest and best croppies I have ever seen), and after we had enough of these for ourselves and Mr. Schwartz, we would go into camp and rest awhile. In the evening we continued to take the fly-rod, and fish for small fishes along the shore in front of our spring, where they jumped very lustily every night. Each time we would take half a dozen or a dozen of rock bass, black bass or the big strawberry bass, the latter the best fighters for their weight of any fish in the lake, and the readiest to strike the fly in the evening. We caught six or seven black bass in all on the fly in this way, using the gray drake and the coachman; but as we had no need for these bass, and preferred to eat croppies, we always put them back again. The little lake seemed to be full of bass fry this year, and if all goes well, there should be better bass fishing there in a few years. A party of men across the lake from us caught one pickerel weighing 15¼lbs., but we did not fish for pickerel, or indeed see or hear of any other. We made no hard work of our fun, but lay about camp and ate things and made lemonade (J. B. H. always insists that one lemon is enough for a pail of lemonade, if the water comes from a good spring; he says he learned this when he was a boy, and lemons cost 6¼ cents apiece); and when night came we sat by the fire till toward midnight, and talked over things which happen in this world, or ought to happen, or could happen if they tried. To me the world is not always a very good sort of world, possibly because I drink too much coffee sometimes and get a touch of dyspepsia; but to J. B. H., whether he has dyspepsia or not, the world has always seemed a good and wise one, well ordered and meant for the happiness and improvement of those beings now dwelling upon it. Over these things we argue far into the night. Yet never have I altered the sweetness of his belief that this is a good world; good, though it sometimes rains at supper time. And though we talk till the fire falls in and scarcely leaves us light enough so that we can find our way into the blankets, we finish always by agreeing that the very best place in all the world for us is the little camp, with the little fire and the little tent, on the high hill by the side of the little lake. "Boy, there are still waters," says J. B. H. It may be. At least, I have another coffee stick in my medicine bundle now, and we look forward now to the ninth annual; myself not without interest, for I have wondered why it is that J. B. H. and the still lake smile at each other so understandingly, why it is that they both accept the world and remain so peaceful and unfretted. If only I could have caught and questioned that astral body which slipped away over the top of the hill!

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

CHICAGO AND THE WEST.

Some Reflections, and More Food for Same.

CHICAGO, Ill., Sept. 4.—Mr. John G. Smith, of Algona, Ia., has some reflections to offer upon the recent statement in these columns in regard to the number of fish taken in some of our Wisconsin lakes by certain parties during the present season. First I shall give Mr. Smith's reflections, and then give him some more food for some more reflections. In his letter Mr. Smith says:

"In your letter to the FOREST AND STREAM of the 28th inst. you say that the wife of a lumber dealer has caught seventy-five muscallonge this summer, and that her guide, a man named Rouleau, has in the same time caught ninety-seven muscallonge. Now, suppose these fish weighed 10lbs. each, the amount would be 1,720lbs. As I understand the law in Wisconsin, no person can take over two fish out of the State. And I hardly see how they can eat so many fish. You also write in the same letter that two men caught 100 bass in one day, one of which weighed 5½lbs. Are these people fishing for the market? How long will our fish last if they are destroyed as you state in your letter? It seems to me that it is time to give the fish a chance. Our game has been destroyed by people that have nothing else to do, and we shall soon be without fish in the lakes and streams."

These reflections are timely enough. I have often wondered that we have any fish left in those wonderful Wisconsin waters, which have been so harried for the past decade. The most wonderful of the catches made in that country were never recorded, and it is perhaps well they never were. They happened in those early days, about a dozen years ago, when many of the muscallonge waters were just opened by the railroads, when many unscrupulous men caught ton after ton of muscallonge and made no use whatever of them, lacking even the humanity to return to the water the fish they could not use. I have earlier mentioned parties who left heaps of fish to rot on the shores of the lakes of Wisconsin, and I have years ago reported instances where fish were buried in the sand to hide them. I have before now given the name of parties who were driven out of the woods later on by residents who, untutorted as they were, would not tolerate such butchery any longer. Since those days there has been a very great change, but even yet the number of fish taken in the upper Wisconsin waters is something fairly unpleasant to think about. Were it the general custom to return to the water such fish as were not wanted, this continuous drain on the waters would not amount to so much, but very often no thought is had about this, the sole desire being to make and prove a record. In the case of Mrs. Williams I do not know what disposition was made of the fish, which were taken through a considerable term of fishing. They were probably not sold, though they might perhaps have been had this been desired. There is a busy little lumber town at Star Lake, and the husky hands there could eat a lot of fish in a summer if the angler cared to so dispose of them by gift or sale. It may be that these fish were returned to the water when not needed, I cannot say.

In the case of some of the Dayton, O., anglers to whom attention was called last week, the fish were not returned to the water. The *Inter-Ocean*, of Chicago, has the following interview with the Ohio party:

"G. E. Shepherd, D. G. Porter, A. H. Reeder, R. G. Craighead, D. E. Meed, Harry Loy, E. H. Bunstine, and Ed Reynolds, all of Dayton, O., have been stopping at J. E. Feeley's hotel on Round Lake, reached by a twenty-two mile ride from Fifield station.

"These gentlemen were in Chicago last Saturday, and Mr. Shepherd, as spokesman of the crowd, said: 'One of our party landed a large muscallunge, early upon our arrival, so we fished Round Lake afterward, and were successful. There are muscallonge, Oswego bass and wall-eyed pike in the two lakes.

"We caught ten muscallonge that weighed 203lbs. Mr, Reeder landed the heaviest, it weighing 26½lbs. Dr. Porter and Mr. Craighead each caught one weighing 25lbs.

"We used a No. 9 Skinner spoon, and seldom had bait. We fished in pairs, Dr. Porter and I leading the list for the greatest number of muscallonge, having caught seventy-five.

"We shipped seventeen boxes to our families and friends."

These fish that were shipped were subtracted permanently. I adduce the weights rather to show the catch than to call attention to the violation of the law, the provisions of which may or may not have been known to the Ohio men who wanted to remember their friends.

Yet another instance of heavy fishing in Wisconsin appears in the columns of a local paper of East St. Louis this week, which mentions the catch made by Messrs "Leek and Wies, of this city; Dr. G A. McMullen and Clark McAdams, of Alton." These gentlemen caught bass, pike and pickerel "to the tune of about 1,000lbs., 400lbs. of which was distributed in East St. Louis." I do not cite this as another instance of law breaking, but only to show the amount of fish taken, so that we may have more food for reflection.

Better Methods.

Out in Minnesota the muscallonge have not yet been fished quite so hard as in Wisconsin. When Mr. H. G. McCartney first told me that he had established his Minnesota place, Kabekona Camp, I called to his knowledge the disastrous results of the former fishing policy in the muscallonge waters in Wisconsin, and begged him to use all his influence to make it the custom at his place to return to the water at once all 'lunge not needed for food or for especial trophies. He said that he would do this, and I am told by many gentlemen who have been there (not that I wish to claim the least credit for that fact) that at Kabekona waters the anglers have, almost without exception, made a practice of putting back the fish they could not use. Of course, the keeper of a hotel cannot dictate to his guests, but it is pleasant to know that the guests at the camp have needed no dictation on this point. I have at hand a recent letter from this camp, written in duplicate to Mr. Geo. W. Davis and Mr. August Hirth, of this city, which will show a little about the angling possibilities of new waters in the pine country of our middle West. The letter is written by F D. Heffron. The Mr. Raisbeck mentioned is from New York city. The communication reads:

"AUG. 14, 1897.—This finds George Raisbeck and myself after ten days' sojourn at Camp Kabekona. We have had a delightful time and good success fishing, having taken over 900 game fish, including bass, pike, pickerel and six fine muscallonge. Kabekona is all that has been said for it, beautifully situated on Woman Lake, commanding a magnificent view. The appointments are first-class in every particular, and our treatment has been very courteous and most satisfactory. Mr. McCartney certainly deserves much credit for having established such a fine place for sportsmen. We heartily recommend it to any who may wish the very best place for fishing and shooting we have ever visited. We have fished on fourteen different lakes, none of which are more than seven miles from the camp. Yesterday was our best day's catch, scoring 313 bass. To-day we leave for a little trip to Leech and Bemidji lakes."

I append scores in detail of the above two anglers, as prepared by the camp keeper, also those of other anglers.

"Fred. D. Heffron and George A. Raisbeck arrived Tuesday, Aug. 3. Fished a little while Tuesday evening; Wednesday, 4th—100 bass, pike, pickerel; Thursday, 5th—A. M., 12 bass and pike, 2 bass 4½lbs., 1 4lbs., 1 3lbs.; P. M., 23 bass and pike; Friday, 6th—126 bass, pike and pickerel, 1 muscallonge 25lbs.; Saturday, 7th—32 fish, 2 muscallonge 25lbs. each, 1 muscallonge 12lbs.; Sunday, 8th—82 fish, 1 muscallonge 17lbs.; Monday, 9th—57 fish, 1 muscallonge 14lbs.; Tuesday, 10th—Broke camp; Wednesday, 11th—101 fish; Thursday, 12th—30 fish; Friday, 13th—313 bass. These fish were all returned to the water except a few for eating. This is a correct account of fish caught by the above gentlemen in Woman and other lakes around camp. J. C. ASHTON."

Yet other records are: "Eight people here. Their catch yesterday was as follows (three did not fish): Johnson Bros., 148 bass; Gentry and Taylor, 170 bass; Thompson, 70 bass. They did not have frogs or would have caught a third more. Monday, Aug. 23—Gentry and Taylor, 96 bass yesterday, average 2½lbs.; lots of them 4lbs. and over in Hunter Lake. CLARK."

Now if Mr. Smith will take out his pencil and go over the reports in these columns in the last two or three weeks of FOREST AND STREAM, he will find that he has added a good many tons of bass and muscallonge to the total he has already figured out. He may further add the scores of the unnoted anglers, in the unnoted waters, in the unnoted weeks and months of the whole season, the unnoted destruction as well as the unnoted though growing percentage of fish returned to the waters by the anglers who did not want to wantonly destroy them. About how many tons has Mr. Smith figured all this to be, working upward and outward from the known data at hand? Neither he nor I would dare to face the total of rod and reel fishing alone if we had it at hand. It is something enormous, no doubt. It cannot last, no doubt. I bear always in mind the statement made to me years ago by A. Booth, the big fish packer, and which I have often reiterated here, that if it were not for the restocking of the Great Lakes by the State governments there would be no market fishing in the Great Lakes to-day, because the fish would all be caught. Yet these great inland seas would seem to be impossible of such diminution in fish life. How about the smaller lakes, rich though they be in game fish? Mr. Smith will not need, as he concludes, to read his answer in the stars. He will be able to read it ten years hence in the angling records, which will then be dwindling. The game records, as he says, have dwindled from year to year. The fish will last much longer than the game. If the anglers will put back what they do not need the fish will last forever. If we would use our game and our game fish as we do our hens, we would have fish and game forever. Is this asking too much, that we respect a prairie chicken as much as a yellow pullet, and a muscallonge as much as a speckled hen?

The Other Side of the Picture.

So much for one picture, the side showing the wonderful natural abundance of the fish supply in certain favored parts of the country. For the other side, for the other picture, for the obverse of this flattering front, bear in mind always the story of the market fisher of the Great Lakes, and paste in the hat always the following chance newspaper clipping, which I take from the columns of the Salina *Press*, of Salina, Utah:

"Salina fishermen have put away their rods and reels, and have given up all thoughts of angling. They are a disgusted lot of fellows. A few years ago Salina Creek was alive with trout; now not a fish is in the stream. Lost Creek used to be an angler's paradise; it, too, no longer furnishes sport to any one. When unscrupulous parties discovered that they could obtain money easily from the capture and sale of mountain trout they gave no regard to law, but began a war of extermination. Traps, nets and explosives have been freely used in all our streams, and now they have become exhausted. A few years hence a mountain trout in southern Utah will indeed be a curiosity."

The new Illinois fish law regulating the size of marketable fish was put in force for the first time known in the State last week at Momence, when J. D. White, known as "Turkey" White, was arrested, charged with shipping a box of undersized bass to Chicago.

The War in Wisconsin.

It is a pretty fight that is going on up at Lake Winnebago, Wis., between the market fishers and the better elements. Much has been printed in FOREST AND STREAM over this little hotbed of protective work. The wardens have been assaulted, shot at, nearly crippled by the fishermen at times, but have still held to their work. The law has been defied and depised by the market men, and they have banded together to break it, not only in part but in whole, with what color of success as has been shown. Just as the Tolleston Gun Club, of Chicago, has been the greatest example in America of the coming preserve system with all the vicious attacks which are sure to be made upon it and which are sure eventually to fail, so has the little band of sportsmen at Lake Winnebago—unnamed, but not unorganized—in Wisconsin, given us the best idea of the coming fight between greed and seemly restraint in matters of the use of the fish supply of the country. The better men of the country, both in Chicago and about Winnebago, uphold the doctrine of restraint and conservation, as against the thoughtless waste and destruction of the old and unbridled ways. One of the best little editorials on protection I have seen for a long time outside of the sporting press was printed last week in the *Menasha Breeze*, of Menasha, Wis., and it has the further merit of summing up the whole fight situation so well that it may be offered in full:

"The fishermen of Lake Winnebago are as relentless of purpose, and as incorrigible as to discipline, as were ever the Sioux under their old chief, Sitting Bull. Personal defiers of the law they invoked its aid to secure the fish and game law of '95 declared unconstitutional. They waged war upon the State in the courts, and fought its deputies upon the water. They won, but the victory was a bootless one, as the next Legislature passed a similar law of a yet more stringent character. For some time many of the fishermen have tried to completely ignore this last legislative enactment, but the deputy game wardens have been pretty active, and many arrests have been made and convictions secured. Now the fishermen have once more decided to resort to legal warfare and fight the matter in the courts. They are circulating a subscription paper in the endeavor to raise money to send an attorney to Madison. Where they got the 'sinews of war' for their long fight before is a mystery, but they did, and there is no reason to doubt their success in securing funds on this occasion. The Lake Winnebago fishermen are about the shortest-sighted people on earth. What benefit will accrue to them if they do succeed in having the present game law knocked out? Before they will have made enough money to pay their attorney fees, the Legislature will meet again and pass another one. They will then have lost what little public sympathy they still possess, and future legislation would certainly not be to their advantage. There are also other things to consider. Game laws are passed to protect the game. If there was no danger of Lake Winnebago being fished out, the State would certainly make no endeavor to restrict fishing. If the fishermen were allowed to have their way in the matter they would be the class in the end to suffer. In a few short years their vocation would be gone. If the fishermen would only sit down and consider these things from an unprejudiced standpoint, it might save them lots of trouble and they would be money ahead. On the base of their previous record, however, it is doubtful if they will." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Locating Sea Fish.

KNOWLEDGE of the habitat of deep sea fish can only be obtained by feeling the bottom with repeated and laborious soundings, aided by that intuition which enables an experienced person to determine where they are by the color of the water and the configuration of the land Codfish and some other species can be traced in part by following the bait fish upon which they feed and which appear upon the surface and in the bays and estuaries at certain seasons. Sea fowl, seals, porpoises and hump backed whales are of great assistance to the investigator, indicating by their own presence the presence of other fish. CHARLES HALLOCK.

Bass in the Bay of Quinte.

I KNOW that there are good fishing grounds in Lake Champlain, and the fishing ground of the future will possibly be Georgian Bay, but to-day there is no finer fishing ground for black bass on this continent than the Bay of Quinte from Sept. 1 until the middle of October.

Mr. MacPherson, son-in-law of John Roach, took quite a large number of bass last year at Northport weighing from 4lbs. to 5lbs. 2oz., and I have taken many bass weighing 4½lbs., which is the highest that I have ever seen taken in the Bay. Trenton and Northport are the points of attack. C.

Bass at Plymouth Rock.

PLYMOUTH, Mass., Sept. 12.—The bass fishing about here has been fairly good during the summer, a number of 4 and 5-pounders having been taken from Billington Sea by different parties. The prize fish of the season, however, was a small-mouth black bass taken Sept. 10 by Mr. Lyman Ward from Darby Pond, weighing 5lbs. 14oz. C. C. HOOD.

The New Jersey Coast.

WARETOWN, N. J., Sept. 5.—Mr. T. L. Hagston, of Mass., and Mr. J. B. Hagston, of New York, are spending a few days at the Bay View House, bass fishing. Their catch has been twenty-two one day, and twenty-four next.

J. H. BIRDSALL.

The fishing holds good at Asbury Park, Barnegat, and all along the Jersey coast. It is the salt-water anglers' opportunity of a lifetime.

The Kennel.

FIXTURES.

BENCH SHOWS.

Oct. 4.—Danbury, Conn., Agricultural Society. G. M. Rundle, Sec'y, Danbury.

FIELD TRIALS.

Oct. 25.—Brunswick Fur Club's ninth annual trials.
Nov. 1.—Dixie Red Fox Club's third annual meet, Waverly, Miss.
Nov. 1.—New England Beagle Club's trials, Oxford, Mass.
Nov. 2.—Monongahela Valley Game and Fish Protective Association's trials, Greene county, Pa.
Nov. 8.—Union Field Trials Club's trials, Carlisle, Ind.
Nov. 9.—Central Beagle Club's trials, Sharpsburg, Pa.
Nov. 9.—Peninsular Field Trial Club's trials, Leamington, Ont.
Nov. 15.—E. F. T. Club's trials, Newton, N. C.
Nov. 16.—International Field Trials Club's eighth annual trials, Chatham, Ont.
Nov. 22.—U. S. F. T. Club's autumn trials.

1898.

Jan. 10.—U. S. F. T Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

THE MANITOBA TRIALS.

THE trials of the Manitoba Field Trials Club were run on chickens at Morris, Man., commencing on Sept. 6. Hot weather and scarcity of chickens affected the trials unfavorably, as in the previous week. So far as trials on chickens is concerned it was very fragmentary and inadequate. As between the range, speed, judgment and industry of the better dogs as compared to the poorer, it was an easy matter to decide, but as between the best dogs, one with another, in their work on chickens, the data was too meager for satisfactory conclusions. Mr. Thomas Johnson, of Winnipeg, famous as a breeder, owner and amateur trainer of setters and pointers, and a contributor also to the sporting literature of America, judged alone. He managed and decided the competition very well under the unfavorable circumstances. He proceeded with more deliberation than most judges, which in the excessively hot weather was rather an advantage than otherwise.

There were but few visitors in attendance: Mr. and Mrs. Bell, of Pittsburg, and from Winnipeg were the following: Messrs. Wm. Whyte, Gen. Supt. of the Canadian Pacific R. R., J. A. M. Aikens, J. A. K. Drury, C. Girdlestone, E. J. Bennett and M. Christie.

The Amateur Stake.

There were nine entered to start, two of which failed to appear. The order of running was therefore different from the order of drawing.

Hal, first, is a good-looking pointer, and on his work was easily the best dog in the stake. He ranged a useful width, had no idling tricks, neither frittering away time on false scents nor pottering in his bird work, and withal he worked pleasingly to the gun. He used his nose when ranging, carried himself well and showed accuracy, precision and stanchness on point work.

Ortolan, second, had a wide range, good judgment in conducting it and she carried herself well. She had no good opportunity on birds, and little of any kind owing to their scarcity. She, however, was always searching with attention and showed signs of being a good worker.

Duke's Rush and Swab divided third and fourth. The former had a good range, though he beat out his ground very irregularly, sometimes going wide, sometimes nearby, yet he was constantly at work, and he showed useful capabilities on birds, though he made some errors on them. His efforts were well sustained from start to finish. Swab had medium range, as a whole, and she had quite fair success in finding birds, but her manner of locating was inferior, and she made errors when they seemed easily avoidable.

The class of the dogs in stake, as a whole, was much superior to the average amateur stake, and in some respects it compared very well with the open events.

Mr. Archibald made his *debut* as a field trial handler in this stake and he showed remarkable aptitude. He handled his dogs quietly, kept on the course properly and attended nicely to his own affairs.

Owing to the scarcity of birds, the test was necessarily not so thorough on them as could be desired.

Following is the order of drawing:

Chimo Kennels' b., w. and t. setter bitch Ortolan (Orlando—Atalanta), C. F. Archibald, handler, with A. C. Reed's b. and w. setter bitch Ella Wheeler (Ponto—Swab), owner, handler.

A. C. Reed's b. and t. setter bitch Swab (Manitoba Toss—Pitti Sing), owner, handler, with Chimo Kennels' o. and w. setter dog Larry Noble (Ezra Noble—Cornelia G.), C. F. Archibald, handler.

Winnipeg Kennels' liv. and w. setter dog Duke's Rush (Duke of Manitoba—Cam Sing), W. C. Lee, handler, with Chimo Kennels' b. and w. setter dog Prince Rupert (Larry Noble—Atalanta), C. F. Archibald, handler.

E. J. Bennett's b. and w. pointer bitch Tannis (Rector—Minnie) with F. G. Simpson's b., w. and t. setter bitch Miss Brandon (Gladiator II.—Cam Sing). This brace failed to appear.

W. Whyte's liv. and w. pointer dog Hal (Yacht—Pansy), G. B. Borradaile, handler.

This stake was for all setters and pointers, the property of amateurs residing in Canada. Dogs which had won first place in any field trials of any previous year, or whose owners have trained for money, are barred. All dogs to be handled by owners or other amateurs. Prize, a handsome silver cup, presented by the patron of the club, his Honor, the Lieutenant-Governor of Manitoba. There were three places—first, second and third.

Monday.

A cool, moist wind blew from the east, and as compared with the previous week there were improved conditions in every way for better competition. In the forenoon more success rewarded the efforts of the dogs in seeking, though birds were far from plentiful. The day was clear and comfortable. Few birds were found in the afternoon.

First Round.

ORTOLAN AND ELLA WHEELER started at 7:46. Ella pointed uncertainly, then moved on, and two birds were flushed near by afterward. Ortolan flushed a bevy down wind on a wheat stubble. Up at 8:27. Ortolan was a very good ranger, and he ranged with sound judgment. Ella's range and pace were ordinary.

SWAB AND LARRY NOBLE were cast off at 8:33. Larry ranged wide, so wide indeed that he was much of the time beyond bounds, and showed imperfect interest to the gun. He found and pointed a bevy. Swab joined in the point, as a

single bird of the bevy flushed. Swab pointed a single. Up at 9:25. Swab had a narrow range, which was much reduced in the latter part of the heat.

DUKE'S RUSH AND PRINCE RUPERT were cast off at 9:30. Down 58 minutes. Prince ranged wide, and with good judgment. He had a pleasing way of going. Toward the last of the heat he was ranging less widely. Rush kept diligently at work from start to finish, and he covered a useful area of ground, though his range was less than Prince's. He has a short, choppy stride, but as he works well within his powers, he does not run himself down quickly. Only one bird was found in this heat. It flushed wild before anything definite could be gained from it.

Tannis and Miss Brandon, next in order, did not arrive, so the bye dog was next run.

HAL, the bye, was run with a setter for a running mate, which flushed a bevy, and on the scattered birds Hal made two good points and showed a very superior order of ability in roading, locating and pointing accurately. He ranged well and with judgment, although at the end of the heat he was narrower in his casts. Up at 11:05. Down 35 minutes.

Second Round.

Six were kept in the competition.

ORTOLAN AND SWAB started at 4:23. Swab pointed. Nothing found. Swab next made two flushes. Up at 4:59. Ortolan ranged well. Swab's range was medium.

LARRY NOBLE AND DUKE'S RUSH began at 5:13. Duke flushed a single up wind. Next he pointed a single well. Neither dog worked out the ground properly, each casting wide in the prairie, giving little heed to the stubble, near the edge of which were the best opportunities. Several birds were flushed by the wagons. Larry ranged too wide. Duke made quite a good showing in diligence and ranging, barring the matter of judgment already mentioned. Up at 5:45.

PRINCE RUPERT AND HAL began at 5:53. Hal was going across wind on the stubble when two birds flushed wild ahead of him; as he went nearer, another flushed wild; he caught scent a moment afterward, and dropped to a point on the rest of the bevy. Up at 6:08. Hal ranged well, and he showed knowledge and skill in his point work.

Third Round.

ORTOLAN AND DUKE'S RUSH ran 19 minutes, beginning at 6:21. No birds were found. Both ranged wide and fast, Ortolan the better.

ORTOLAN AND SWAB were started at 6:47, and ran till 7:08. No birds found. Ortolan was much the better ranger, though Swab was sustaining her work well, and her seeking was well sustained.

The Derby.

There were eleven starters. They were drawn as follows:

Tabasco Kennels' lem. and w. setter bitch Tabasco Butterfly (Antonio—Minnie T.), S. J. McCartney, handler, with J. J. Odum's b., w. and t. setter dog Sport McA. (Tony Boy—Blue May), D. E. Rose, handler.

R. J. Myers's lem. and w. pointer dog Chisholm (Von Gull—Croxie), D. E. Rose, handler, with Tabasco Kennels' b., w. and t. setter bitch Hurstbourne Joel (Tony Boy—Bonnie Bell II.), S. J. McCartney, handler.

Dr. J. R. Daniels's lem. and w. pointer dog Sam's Beau (Plain Sam—Dolly D. II.), Geo. Richards, handler, with E. McKenney's b., w. and t. setter dog Val's Mark (Val Lit—Cam Sing), owner, handler.

T. A. Montgomery's lem. and w. pointer bitch Giovanna (Ightfield Lonsdale—Ightfield Bunty), owner, handler, with Dr. M. F. Rogers's b., w. and t. setter bitch Pearl R. (Sam Gross—Donnashey), D. E. Rose, handler.

E. McKenny's b., w. and t. setter dog Val's Dexter (Val Lit—Can Sing), owner, handler, with Del Monte Kennels' o. and w. setter bitch Minnie's Girl (Antonio—Minnie T.), F. Richards, handler.

Wm. Elliott's lem. and w. pointer dog Doctor Tassie (Hal Pointer—Kent's Star), a bye, Geo. Richards, handler.

The Derby was for pointers and setters whelped on or after Jan. 1, 1896. Purse $225, divided into $100, $75 and $50; first, second and third, respectively.

Pearl R. won first. She captured the honors more through a consistent performance and good attention to the gun than through any specially notable superiority.

Sam's Beau, second, made a good competition, some of his work being commendable indeed, but he did not sustain his range well and was not always reliably steady on birds.

Sport McA., third, showed better capabilities than any competitor in the stake, but he marred his chances by working out of bounds, and he was not at all times reliable in his bird work. His endurance was notably good, and in speed and ability to beat out his ground he had no superior in the competition. Had he observed the gun better he would have been higher.

Tuesday.

Some slight signs of rain in the early morning soon disappeared. The weather was very warm and hardly a breath of air stirred. The afternoon was sweltering hot. The dogs needed water frequently. They were worked in the open prairie more than on any other day of either trial, and more birds were found in consequence. Still the work on birds as a whole was inferior.

First Round.

TOBASCO BUTTERFLY AND SPORT MCA. started at 7:02. Sport flushed twice, once excusably on mowed ground, once on the prairie. Sport pointed; nothing found. Both ranged lawlessly out of bounds, and the handlers had great difficulty in keeping to the course. The judge, however, did not permit himself to be stampeded in the least. Butterfly was steady, ranged wide, but was without judgment. She found no birds. Up at 7:49.

CHISHOLM AND HURSTBOURNE JOEL started at 7:56. Down 47 minutes. No birds found. They ran a poor heat in every particular.

SAM'S BEAU AND GIOVANNA were to run next, but the latter being in season, Val's Mark was substituted. They began at 8:51. Giovanna flushed a bevy and both chased. Next, Beau flushed a single and pointed a single. Each then flushed twice. Beau pointed two birds in the prairie. He was then steadying nicely to his work. Mark about 200yds. away at the same time pointed; nothing found. Next Beau pointed a bevy skillfully. Sent on, he drew accurately to a point on a bevy; Mark refused to back, and went in ahead and flushed. He stopped then and pointed. Some birds were flushed to the point. Next, he flushed a single. Up at 9:40. Beau was much the better ranger. He beat out his ground with judgment after he steadied down to work.

PEARL R. AND GIOVANNA were cast off at 9:45. Pearl pointed a single. Sent on, she pointed; nothing found; Giovanna backed. Up at 10:19. Pearl ranged the better, though Giovanna had good speed and range.

VAL'S DEXTER AND MINNIE'S GIRL ran a very poor heat. They beat about in a narrow area. Their work on birds was poor. Down 40 minutes, beginning at 10:21.

DOCTOR TASSIE, the bye, was started at 11:11. He flushed two birds, moved on and flushed some more. Next he flushed a single. He ranged well at good speed, and hunted well apparently, but his work on birds was poor. Up at 11:39.

The afternoon was so oppressively hot a late start was made.

Second Round.

Eight dogs were kept in the second round.

SPORT MCA. AND SAM'S BEAU were cast off at 4:36.

NABOB AND INDIA.

Sport took very wide casts, too wide for proper work, and being out of bounds so much hurt his chances. He showed extraordinary endurance under the hot sun. His speed and range were sustained throughout. With more experience and schooling he will make one of the finest of performers, if he fulfills his present high promise. He found and pointed a bevy well, the birds being scattered somewhat in the long grass and, therefore, difficult to locate accurately. It was sweltering hot to those in the wagons, and still hotter in the long grass. Sport was about 200yds. away when he pointed. He behaved nicely. It was a very good piece of work. Beau ranged moderately well and kept diligently at work. He found no birds. Up at 5:07.

VAL'S MARK AND PEARL R. began at 5:10. Pearl flushed a single, then roaded on and made a flush which seemed in a way excusable. Next she made a point to which nothing was found. Mark's range was very moderate. Pearl was the better in every respect. Up at 5:34.

DR. TASSIE AND CHISHOLM started at 5:46. Chisholm won after starting, practically quit working. He was ordered up at 5:58. Doctor ran well, but found no birds. His range, pace and judgment were fairly good, but he performed poorly on birds when he had opportunities. He was ordered up at 6:06.

BUTTERFLY AND GIOVANNA ran 20 minutes, beginning at 6:07. The latter ranged close and with no interest in the work. Butterfly ranged merrily, but showed greenness. She flushed a single and chased it energetically.

Final.

SAM'S BEAU AND PEARL R. were started at 6:32. Pearl made a point on two birds. In some long grass each made a flush. Each had fallen off some in ranging, though the evening had become cooler. Down 27 minutes.

The All-Age Stake.

There were nine starters in this stake, drawn to run as follows:

E. A. Burdette's b., w. and t. setter dog Cincinnatus Pride (Cincinnatus—Albert's Nellie), Geo. Richards, handler, with Jubilee Kennels' b., w. and t. setter bitch Dodo III. (Orlando—Atalanta), G. B. Borradaile, handler.

E. A. Burdette's b. and w. setter bitch Ann of Abbottsford (Gladstone's Boy—Bohemian Girl), Geo. Richards, handler, with Hobart Ames's b., w. and t. setter bitch Christina (Blue Ridge Mark—Lou R.), D. E. Rose, handler.

Chimo Kennels' b., w. and t. setter bitch Ortolan (Orlando Atalanta), C. F. Archibald, handler, with T. P. Jones's b., w. and t. setter dog Hurstbourne Zip (Tony Boy—Dimple), D. E. Rose, handler.

Ed. Gray's b., w. and t. setter dog Count Robert (Count Eric—Ann), George Richards, handler, with F. W. Dunham's l. and w. pointer dog Elgin's Dash (Kent Elgin—Mack's Juno), D. E. Rose, handler.

Chimo Kennels' b. and w. setter dog Prince Rupert (Larry Noble—Atalanta), a bye, C. F. Archibald, handler.

This stake was for all setters and pointers which had not won an All-Age Stake in any previous year. Purse $250, of which $125 went to first, $75 to second and $50 to third. The fees were $5 to enter, and $10 additional to start.

First was won by Hurstbourne Zip. He ran in much improved form as compared with his form of the previous week, and he was lucky besides in finding birds in each heat and under favorable conditions to make a good showing.

Ortolan, second, is a most pleasing worker. Her range is good without being extremely wide. However, it is quite wide enough. Her point work, what there was of it, was clean and good. She carried herself in a spirited manner.

Ann of Abbottsford made an ordinary competition in point work and steadiness. She ranged very wide, though in her first heat, going down wind, she ranged with poor judgment. On the whole, her performance was without any special marks of superiority, though she showed excellent capabilities.

Cincinnatus Pride had made a good showing when compared with Ann, and I thought he should have divided third with her, or even have had all of third. However, the honors were very even between them.

Wednesday.

A passing thunderstorm cooled the air for a time in the early morning, but the heat soon asserted itself, and the weather was about the same as on the previous day, though there was a fairly stiff breeze blowing from the southeast. The afternoon was so warm that a very late start was made. The hotel thermometer, on the shady side of the house, registered 92° when a start was made. Birds were scarce all day.

CINCINNATUS PRIDE AND DODO III. started at 7:40. Down 1 hour and 4 minutes. Both ranged wide, Pride too wide at times. Only one bird was found, and no work was done on it. Up at 8:44.

ANN OF ABBOTTSFORD AND CHRISTINA began at 8:51. Down 45 minutes. Ann pointed a single. Sent on. Ann pointed a single, and Christina coming up, flushed it. The heat was run down wind. Both ranged industriously, with poor judgment; Ann was the wider ranger.

ORTOLAN AND HURSTBOURNE ZIP ran 28 minutes. Down at 9:43. Both dogs ranged well. Zip pointed, roaded on hesitatingly up wind and pointed the bevy. The weather was hot and the birds lazy. They flew but a short distance to some brush and grass. Zip made three points on singles. There was very little merit in the work, as the birds were marked close and the dogs coached to them. Zip flushed a single. Ortolan pointed one. Zip ranged better than in any of his previous heats of these trials. Ortolan also ranged well.

COUNT ROBERT AND ELGIN'S DASH started at 10:19. Down 37 minutes. Both took wide casts. No birds found.

PRINCE RUPERT, the bye, was run with Alberta Joe for a short time. Prince was run 18 minutes, beginning at 11:00. His range was middling. No birds were found. It was then very hot and unfavorable for work.

Second Round.

Eight dogs were continued in the running. The work in this round was very unsatisfactory and inconclusive owing to the great scarcity of birds.

CINCINNATUS PRIDE AND CHRISTINA started at 5:41. Pride took long casts, too long for best ranging. On his second cast he pointed a bevy about 300yds. away. One of the birds flushed wild. He moved on and the rest flushed. Christina ranged pleasingly, covering a middling area up ground, but she lessened her range a great deal toward the last of the heat. She found no birds, which was an excusable circumstance. Up at 6:05.

ANN OF ABBOTTSFORD AND DODO III. began at 6:13. Ann made game; a single flushed about 100yds. ahead. Ann ranged wide. Dodo had a fairly good range. Up at 6:35

HURSTBOURNE ZIP AND COUNT ROBERT started at 6:42. Each made a point; nothing found. Zip ranged well, though his range was not quite so wide as it should be. Count ranged very wide at times. He needs more experience. Up at 7:00.

ORTOLON AND ELGIN'S DASH were run 9 minutes without finding, beginning at 7:01.

Thursday.

The weather was clear and bracing. A cool west wind, which veered toward the north from time to time, blew stiffly. Birds were found in fair numbers as compared with the previous days, though they still were all too scarce. The improved conditions made better work.

Third Round.

There were six dogs in this round.

HURSTBOURNE ZIP AND ANN OF ABBOTSFORD ran 20 minutes, starting at 6:51. Ann was going very wide in her casting. She found and pointed several hundred yards away, moved on, and the birds flushed. Next both dogs roaded about on the foot-scent. Zip was contracting his ranging, but the scent of birds stimulated him to greater exertion and he ranged better. Next Zip pointed a bevy. Both were steady to shot. Up at 7:01.

CINCINNATUS PRIDE AND ORTOLAN started at 7:14. Pride pointed a bevy nicely, finding it by diligent searching. Ortolan next found and pointed some birds well. Down 31 minutes. Pride ranged very wide and used poor judgment in working his ground. Ortolan ranged nicely and beat out her ground with fair judgment.

DODO III. AND ELGIN'S DASH started at 7:48. The former went very wide in her ranging. Dash ran without any apparent purpose or judgment, though he kept busily going. He frittered away time occasionally on false scents.

Fourth Round.

ANN OF ABBOTTSFORD AND ORTOLAN ran 13 minutes. They started at 8:25. Both pointed and made game. An old bird was flushed down wind of the place they pointed after they had gone on. Ann flushed and chased a single.

This ended the stake.

ST. PAUL, Minn., Sept. 13.—*Special to Forest and Stream:* Ann of Abbottsford won Northwestern Champion Stake.

B. WATERS.

Nabob and India.

THE two pointers in the spirited field scene which we publish this week are Nabob and India, bred by the Charlottesville Field Trial Kennel, owned by that sterling sportsman Mr. Edward Dexter, of Buzzard's Bay, Mass. Both pointers have been conspicuous in field trial competition and their names are therefore familiar to the readers of FOREST AND STREAM. The bitch India, we regret, died last winter. She was highly prized. The excellence of the picture stamps it at once as being from the brush of the talented artist, Prof. Edm. H. Osthaus.

American Kennel Club.

NEW YORK Sept. 6.—The regular quarterly meeting of the American Kennel Club will be held at the office of the club, No. 55 Liberty street, New York, on Thursday, Sept. 23, 1897, at 2 P. M.

A. P. VREDENBURGH, Sec'y.

Monongahela Derby.

PITTSBURG, Pa.—The entry for the third annual Derby of the Monongahela Valley Game and Fish Protective Association closed with 13 nominations: 8 English setters and 5 pointers, all whelped in 1896. This is the list:

ENGLISH SETTERS.

MACK NOBLE—Dr. W. B. Tasher's b., w. and t. dog (Tom Boy II.—Flora Noble).

LITTLE DORRIT—Beazell & Gladden's b., w. and t. bitch (Whyte B.—Dolly Varden).

FLY WINDEM—A. B. Ferguson's b., w. and t. bitch (Ruby's Max—Fly Wun Lung).

LADY B.—M. Bumgartner's b., w. and t. bitch (Rodfield—Florence Gladstone).

MINTO—Fox & Blythe Kennels' b., w. and t. dog (Tony's Gale—May B.).

MARDERA—Fox & Blythe Kennels' b., w. and t. bitch (Dion C.—Hopeful).

WINKS—J. T. Crawford's b., w. and t. dog (Joe—Dot C.).

SHAN—William Harrison's b., w. and t. dog (Joe—Dot C).

POINTERS.

NELLIE WILSON—Dr. J. R. Daniel's l. and w. bitch (Plain Sam—Dolly Dee II.).

SAM'S BANG—Dr. J. R. Daniel's b. and w. dog (Plain Sam—Dolly Dee II.).

KITTY DEAN—Monongahela Kennels' b. and w. bitch (Plain Sam—Belle of Lancaster).

GOLDEN ROD—Dr. H. D. Danford's o. and w. bitch (Jingo—Rosa De Hessen).

KENT'S VIC—W. S. Coulson's b. and w. bitch (Kent's Priam—Belle Fauster).

S. B. CUMMINGS, Sec'y.

Brunswick Fur Club.

ROXBURY, Mass.—The committee on field trial grounds has selected Barre, Mass., as the place for holding the coming field trials of the Brunswick Fur Club. Headquarters will be made at the Hotel Barre. The hotel is heated with steam, lighted by electricity, and is within easy walking distance of the hunting grounds. The rates will be $1 50 per day for those who carry a lunch to the field; $2 for those who take dinner at the hotel.

Mrs. N. Q Pope has presented the club with a beautiful silver cup in memory of her late husband, who was at one time president of the club, and always an enthusiastic and generous patron of the field trials. This handsome prize will be known as the Norton Q. Pope Memorial Cup, and will be awarded annually to the hound showing the best combined trailing, speed and driving.

The club now owns three cups that are awarded annually, and held for one year by the winners. Silver medals will also be given the first prize winners in the various classes. Entries for the Derby will close at Hotel Barre on Oct. 18; for the All-Age stake on Oct. 19 at the same place.

BRADFORD S. TURPIN, Sec'y.

POINTS AND FLUSHES.

Mr. A. P. Vredenburgh, secretary of the American Kennel Club, has returned from his trip to the Pacific Coast, where he was sent to investigate certain charges against members of the A. K. C. that have been made public in the columns of the sportsmen's press. The A. K. C was desirous of seeing whether any action on its part was necessary under the circumstances. Mr. Vredenburgh will make his report in full to the A. K. C, at its meeting on July 23. In view of that fact, he is naturally unwilling to give out any information for publication at this date. He expresses himself, however, as charmed with the treatment he received from all those whom he met during his stay on the Coast, and thoroughly satisfied with the result of his trip.

Mr. W. W. Brown announces in our advertising columns that his well known beagle Ch. Buckshot is for sale.

AT the dinner at the Hotel Cecil, which wound up the International Library Congress in London, Sir William Howorth, M. P. for Salford, told of another dinner at which he had figured in the capacity of author. He is the author of a bulky work on the Mongols, and shortly after its appearance had to take a young lady in to dinner. She expressed great delight at the prospect of sitting by him. Sir William was charmed, and asked the reason. "Oh," said his fair neighbor, "you are just the person to tell me what to do for my little dog's injured leg." In blank surprise, Sir William suggested that there must be some mistake; he knew nothing about dogs. It was the girl's turn to be surprised, and she exclaimed, "Why, I was told that you had written four volumes upon mongrels!"—*New York Evening Post.*

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

WIGGLES AND WOBBLES.

THERE is a wheel in the affairs of men, which taken at $13.29 leads on to misfortune and undying expense.

A rusty bicycle is a sure sign of indolence or neglect on the part of the owner, and a disregard of commercial values.

Many different ways have been devised to stop suddenly, though by far the best advice is to avoid the occasion for it. One writer in the L. A. W. *Bulletin,* recommends that the rider lift the wheel up in front, remaining in place till he reaches the ground in a sitting posture, still grasping the handle bars of the rearing wheel. He does not mention the effect it has on parts, or what to do for punctures made in them by cut glass, or what is the best way to stop in a mud-puddle. As a mere matter of sudden stopping, the method described would be a success, but a still more positive method would be to run down a cellar-way.

Little drops of water,
  Little grains of sand,
Make the ugly rust spots
  Which we scour by hand,
And the little tick-tacks,
  With their points like fire,
Bring us flabby windfalls
  When they prick our tire.

If you find that you can go with ease at a pace which distresses your companion, go slower. Do not make your pleasure his or her pain. When you are determined to dictate to the whole company, go slower. When your expenses are greater than your receipts, borrow a wheel—it is cheaper than to buy. A friend who will lend a bicycle out-Damon's and out-Pythiases the world.

CONSTANT READER, Milwaukee—*Ans.* A good polish for the frame is boot-blacking, though some riders prefer stove-polish A file and sand-paper will remove rust spots. To make tires puncture-proof, take rosin, 5lbs; beeswax, 2lbs.; white lead, 10lbs.; plaster-of-paris, 3lbs.; oil sufficient to mix. Fill the inner cavity of the tire with this mixture, and punctures will not deflate it.

What the railroads have done for civilization was possible only because they were better roads than all others. The best roads always have the most traffic, which means that more people know of them, more people use them, and all commercial interests with which they come in touch are many times enhanced by their beneficent effects. Whether one is near or far from market is not so much a matter of distance as of time. The farmer who is forced to use bad roads cannot succeed in the present keen competition to supply the world with food. THE IDLER.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

Copies of the FOREST AND STREAM *race report blanks, for recording and reporting races, will be sent to all clubs requesting them.*

The racing and measurement rules of the Yach Racing Union of Long Island Sound (the Seawanhaka rule, with allowance tables) can be had of Thompson & Co, 55 Dey street, New York; price 10 cents per copy.

The handbook of "Yacht Flag Etiquette" can be had of Rehm & Co., 157 Fulton street, New York; price 10 cents per copy.

YACHT RACING FIXTURES 1897.

THE following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.
Races of the Sound Y. R. U. are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

SEPTEMBER.

S 18. American, fall regatta for all classes.
18. Queen City, 22ft. class, Toronto, Lake Ontario.
21. Absequan, open, Atlantic City.
25-26. Cor. San Francisco, cruise, Dillon's Point, San Francisco.
25. Buffalo, closing cruise, Lake Erie.
25. American, closing race, Newburyport.

OCTOBER.

9. Miramichi, Gould cup, Chatham, N. B.
9-10. Cor. San Francisco, cruise, Corinthian Cove, San Francisco.
16. Cor. San Francisco, closing day, San Francisco.
17. Cor. San Francisco squadron, cruise, San Francisco.

IT is stated on authority that in the race of Sept. 4 off Newport no protest was made by Navaho, but that Vigilant was declared by the committee to be disqualified upon the declaration of her owner that she had fouled a mark; no other course being possible.

DURING the present month a series of private races will be sailed between the Herreshoff fin-keel Anoatok, Mr. Oswald Sanderson, and the centerboard Acushla, Messrs. Hanan, of the late 34ft. special class.

MESSRS DURYEA, Whitney, Morgan and other owners of the 30-footers are now consulting with the Herreshoffs over the establishment of a similar limited class of about 51ft. racing length.

THE owners of the Herreshoff knockabouts, Cock Robin and Cockatoo, Messrs. Foster and Eaton, have exchanged boats. Mr. Eaton was the original owner of Cock Robin, and built the new boat to keep at the head of the class this year. The two will meet in the series of the Knockabout Association off Marblehead, on Sept. 16, 17, 18, open to all yachts of the class.

Massachusetts Y. R. A.

THE Massachusetts Y. R. A. has about brought to an end another successful season, and in a short time it must take up the question of further changes and amendments to its rules. The operation of the rules during the present season is discussed as follows by Mr. W. E. Robinson in the Boston *Globe:*

The call for the October meeting of the Yacht Racing Association will soon be issued, and in view of the fact that if any changes in the measurement and classification rules are to be made they must be made at this meeting, the yachtsmen interested in the Association and its racing are discussing the matter and offering suggestions.

So far as the writer can learn, the present rule of measurement gives general satisfaction to the racing yachtsmen, and there seems to be no reason for changing it. The abolition of the tax on overhang is producing a boat much longer over all than the old ones, but since the new one is larger, "more of a boat," as the practical yachtsman says, the present rule can hardly be deemed other than a good one. Extra length and extra size mean also of necessity extra strength in construction, as well as more room on board generally, so that the rule of "waterline with crew on board" has still further recommendations to continuance.

There is, however, a growing feeling among the yachtsmen that a change in the classification is needed, and that a return to the old class limits of 18, 21, 25 and 30ft. is desirable from almost every point of view.

It was very frankly admitted by those advocating last year's change to 17, 20, 24 and 29ft. to suit the new rule of measurement, that such classification was but a necessary expedient to keep the boats in the same classes in which they had been racing the previous season, and to prevent confusion. This year, however, the same argument does not hold good for the retention of the present classification, for new boats have been built to the class limits, and the old ones which might drop into a lower class with a raising of the limit would only add interest to the sport.

If the classification were raised 1ft. all around it would follow as a matter of course that the Association must extend the time for the abolition of time allowance. This would be no more than justice to this year's boats, which would have to meet new boats 1ft. longer, while at the same time it would still keep several of the old boats in the racing which would otherwise be hopelessly handicapped.

On the broad ground of the advancement of the racing standard of the Association, the proposed return to the old classification has much to recommend it. It brings again into the field the once popular 21 and 30ft. classes; it comes nearer the classification of clubs not now in the Association, but which would find in the change an additional reason for joining; it closely approaches the classification of the Sound Y. R. U., with which the Massachusetts Association is working for a national association, and it gives a promise of permanence which cannot but inspire confidence in intending builders. Coupled with the re-establishment of the fifth class of 15ft. sailing length, it would be a progressive step in direct line with the Association's previous efforts.

About the only objection that can be urged, seems to be the old one that Handsel and the other 30-footers will thus be let into the first class; but in this connection a little plain talk may not be amiss.

No one who has followed closely the Association's formation and growth will deny that Handsel and the others were barred from the class so that Harbinger and other boats not up to the 30ft. limit might have a chance. That such action was wise at the time the subsequent racing has proved, but with Harbinger outclassed, even by the boats of her size, and Ashumet and Handsel owned in clubs which are members of the Association, the reason for barring them is no longer a valid one, and they should be given a chance at the Association's racings.

But put alone on the broader ground of a proper re-establishment of the 30ft. class, and an effort to revive some of the best racing that Massachusetts Bay has ever seen, the raising of the limit from 29 to 30ft. deserves earnest and serious consideration, and the writer but voices the sentiment of prominent racing men in urging this as well as the general change.

Lynn Y. C. Open Race.

LYNN—MASSACHUSETTS BAY.

Monday, Sept 6.

MASSACHUSETTS Y. R. A. RULES

IN spite of light and fluky weather, the open race of the Lynn Y. C. on Sept. 6 was a success, the times being:

	Length.	Elapsed	Corrected.
FIRST CLASS.			
Ida J., F. E. Beckman	28.04	2 11 29	2 10 56
Emma C., P. A Coupal	27.06	2 13 11	2 11 51

Alpine, C. J. Blethen	16.10	2 52 25	2 52 16
Ripple		Did not finish.	
Imp		Did not finish.	

The winners of Association championships for the year are: First class, Ida J.; second open class, Hoodlum; second cabin class, Muriel; third class, Rooster; fourth class, Vitesse; knockabouts, Gosling.

The Thirty-Foot Class.

THE final race of the pair racing series was sailed on Sept. 3 between Hera and Dorothy, the Dyers Island course being sailed in a strong N.E. wind, the first leg being thus to windward. The times were:

	Finish.	Elapsed.
Dorothy II., H P. Whitney	1 28 52	2 21 52
Hera, R. N. Ellis	1 34 22	2 27 22

This makes Dorothy the winner of the series. On the same day a special race was sailed for a prize of $100 offered by the Newport Y. R. A., over the same course, the times being:

	Finish.	Elapsed.
Vaquero III., H B Duryea	6 17 56	2 30 56
Wa Wa, J A Stillman	6 18 17	2 31 17
Puck, E D. Morgan	6 20 15	2 33 15
Hera, R. N. Ellis	6 20 31	2 33 31
Carolina, P. Jones	6 20 46	2 33 46
Dorothy II., H P. Whitney	6 20 58	2 33 58
Veda, C. Vanderbilt, Jr	6 21 32	2 34 32
Mai, O G. Jennings	Did not finish.	
Esperanza, A. S. Van Winkle	Did not finish.	

On Sept. 5 a private match was sailed between Mr. Foxhall Keene, in Dorothy II., assisted by H. B. Duryea and H. P. Whitney; and Reginald Brooks, in Wa Wa, assisted by J. A. Stillman, W. Butler Duncan, Jr., and H. P. Harriman. The Jamestown triangle was sailed in a strong S.W. wind, the times being:

	Finish.	Elapsed.
Dorothy II., F. P. Keene	5 21 12	1 46 12
Wa Wa, R. Brooks	5 22 26	1 47 26

The Seawanhaka International Challenge Cup.

THE Royal St. Lawrence Y. C., of Montreal and Dorval, holder of the Seawanhaka International Cup for the year 1898, announces that it will receive challenges for the cup in the 20ft. racing length class, and that, under the new amendment to the declaration of trust, the club will hold until Sept. 18 all challenges received before making a choice. If no challenge be received prior to that date, the first received after it must be accepted.

Corinthian Y. C. Cruise.

THE Corinthian Y. C., of Marblehead, celebrated the Labor Day holidays by a cruise of three days, the following yachts taking part:

Steam yachts—Penelope, Chelotah, Sally, Gyda, Viola, Noria, Helen. Schooners—Adrienne, Puritan, Frolic, America, Rusalka, Loyal and Ianthe. Cutters—King Philip, Saladin, Crystal, Ashumet, Hiawatha, Edith, Mildred, Nebula, Barbara, Indra, Lassie, Phyllis, Jessie, Lillian, Vidofner, Nettie, Brenda, Lurline. Yawls—Micca and Al Hawa. Knockabouts—Cock Robin, Geisha, Vagrant, Eugenia, Wanasa, Sue, Armoret, Rowena, Sally III., Maia, Mayona, Alert and Jennie Wren.

Under the management of the regatta committee, including C. Edgar Finney, chairman; George W. Mansfield, sec'y, and Messrs. D. C. Percival, Jr., Harman Parker and W. B. Stearns, three races were sailed. The first day, Saturday, Sept. 4, was devoted to a racing run from Marblehead to Gloucester, starting at 2:30. The most interesting feature of the race was the presence of the schooners America and Puritan, both so intimately connected with the America's cup. With these two were the schooners Frolic and Rusala, the latter a modern Lawley boat. America beat Puritan by 1m. 59s. actual time. In the second class, Ashumet won first and a leg for the Commodore's cup, with Saladin second. In the third class, Wanasa won first and a leg for the Commodore's cup, with Nettie second. In the fourth class Cock Robin won, with Sally III. second.

On Sept. 5 the fleet raced across from Gloucester to Hull, twenty-five miles, with a light and moderate S.W. wind. The winners were:

First class—America, leg for commodore's cup.

Second class—Mildred first prize and leg for cup; Crystal second prize.

Third class—Rowena first prize and leg for cup; Eugenia second prize.

Fourth class—Sally III. first prize and leg for cup; Cock Robin second prize.

Frolic protested America for putting her about when on starboard tack.

The final run to Marblehead was made on Sept. 6 in a fresh N.W. breeze, the times of the schooners being:

	Elapsed.	Corrected.
Puritan	3 21 25	3 21 35
America	3 23 49	3 23 49
Adrienne	3 34 26	3 29 26
Rusalka	3 47 03	3 32 03
Frolic	4 22 35	4 00 35

In the second class Chrystal won, with Saladin second; in the third class India won, with Brenda second; in the fourth class Mayona won, with Maia second.

The record of the three days stood: Schooners, America, Adrienne and Puritan; second class, Ashumet, Mildred and Crystal; third class, Wanasa, Rowena and Indra; fourth class, Cock Robin, Sally III. and Mayona.

The sail-off took place on Sept. 11, America and Puritan sailing even, both allowing time to Adrienne. America lost her topmast, but won from Puritan by 5m. 7s. elapsed time:

SCHOONERS.

	Elapsed.	Corrected.
America, Butler Ames	2 53 43	2 53 43
Adrienne, H. P. Smith	3 03 30	2 55 30
Puritan, H. P. Dennison	2 58 50	2 58 50

SECOND CLASS CUTTERS.

Mildred, Gordon Dexter	1 51 53	1 51 53
Crystal, E. T. Bigelow	1 55 07	1 51 37

THIRD CLASS SLOOPS.

Rowena, R. H. Rothwell	1 52 10	1 52 10
Wanasa, W. Boyson	Withdrew.	
Indra, P. P. Sharples	Withdrew.	

Winthrop Y. C. Championship Race.

WINTHROP—BOSTON HARBOR.

Saturday, Sept. 4.

MASSACHUSETTS Y. R. A. RULES.

THE Winthrop Y. C. sailed its championship race, postponed from Aug. 14, on Sept. 4, in a very light S.E. wind, the times being:

FIRST CLASS.

	Corrected.
Almira, L. S. Meston	
Hyperion, G. E. Leighton	Withdrew

SECOND CLASS.

Whisper, W. H. Stimpson	0 53 47
Myrtle, Wm. W. Latchie	0 56 36
Alma, C. A. Heney	0 58 07
Alert, J. R. Hodder	0 59 01

FOURTH CLASS.

Della, W. I. Kelley	0 42 47
Unknown, A. A. Martin	0 44 50
Eva, S. H. Freeman	0 47 51
Scat, Horace Waite	Withdrew.

The last championship race was sailed on Sept. 11 in a reefing N.E. breeze, the times being:

SECOND CLASS.

	Length.	Elapsed.	Corrected.
Nettie, Walter Burgess	28.10	1 11 17	0 46 55
Whisper, W. H. Stimpson	20.02	1 15 35	0 48 52
Myrtle, W. D. McLetchie	20.01	1 16 00	0 50 12
Alert, J. R. Hodder	23.06	1 15 10	0 51 31
Erycina, E. A. Cook	23.09	1 15 10	0 51 34
Alma, C. A. Heney	23.08	1 15 17	0 51 46

FOURTH CLASS.

Scat, H. Waite		1 00 09	. . ..

Whisper protests Nettie on measurement.

Cohassett Y. C.—Special Race.

COHASSETT, MASS.

Saturday, Sept. 3.

MASSACHUSETTS Y. R. A. RULES.

THE Cohassett Y. C. held a special race for the knockabouts on Sept. 3, the course being from outside the harbor, off Brush Island, to the lightship, thence to the Harding's Ledge Buoy and home, 12¼ miles. The wind varied between N. and E., of moderate force. The race was for two classes, without allowance and under handicap; the times being:

FIRST RACE.

Start, 1:40:	Finish.	Elapsed.
Cock Robin, C. H. W. Foster	4 06 08	2 26 08
Sally III., L. S. Percival	4 06 41	2 26 41
Hazard, H. M. Sears	4 06 48	2 26 48
Cockatoo, C. S. Eaton	4 07 23	2 27 23
Mongoose, A. D. Irving, Jr.	4 10 44	2 30 44

SECOND RACE—HANDICAP CLASS.

Start, 1:45:		
Tautog, J. F. Moors	4 15 22	2 30 22
Water Lily, C. F. Lyman	4 22 22	2 36 22
Mayona, C. O. Stearns	4 24 38	2 37 38
Nabob, S. P. Bremer	4 27 17	2 39 17
Dorothy, F. Brewster	4 28 55	2 40 55
Comet, J. S. Lawrence	Did not finish.	

Handicaps—Tautog allows Water Lily 1m., Mayona 2m., Dorothy 3m., Nabob 3m., Comet 4m.

The judges were F. H. Pratt, chairman; Hugh D. Montgomery, Ralph B. Williams, Alanson Bigelow, Jr., Daniel B. Tower and Arthur D. Higgin.

After the race the yachts sailed over to Marblehead.

Gosling was on hand, ready to start, but through a mistake her owner, who came down by train, missed her, and only found her and reached the line after the start.

Savin Hill Y. C. Open Race.

SAVIN HILL—BOSTON HARBOR.

Saturday, Sept. 4.

MASSACHUSETTS Y. R. A. RULES.

THE Savin Hill Y. C. sailed its last open race of the season on Sept. 4 in a light easterly breeze, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Ida J., F. E. Beckman	28.04	1 37 52	1 09 09
Emma C., Peter A. Coupal	27.06	1 43 37	1 14 07
Beatrice, John Cavanagh	24.11	1 52 57	1 20 51
Harbinger, W. F. Bache	28.04	1 53 04	1 24 07

KNOCKABOUTS

Mongoose, A. D. Erving, Jr.	21.00	1 51 59	. .. ..
Gosling, Norah & Clark	21.00	1 52 40	. .. ..
Hazard, Herbert M. Sears	21.00	1 54 52	. .. ..
Cockatoo, C. S. Eaton	21.00	1 55 14	. .. ..
Fly, W. O. Gay	21.00	1 55 55	. .. ..

SECOND CLASS.

Muriel, H. N. Nute		1 17 23	0 54 05
Giralda, Geo. E. Hills		1 22 38	0 59 20
Clara, Wm. D. Turner	Withdrew.		

THIRD CLASS.

Al Anka, C. H. Crane	19.11	1 15 50	0 48 52
Vamoose, Benner & Patten	19.11	1 18 37	0 51 39
Yahoo, K. H. Orton	19.11	1 21 18	0 54 20
Omene, W. P. Barker	19.11	1 21 41	0 54 43
Perhaps, J. E. Robinson	19.11	1 24 28	0 58 00
Pioneer, H. W. Crane	19.11	1 26 24	0 59 44
Arab II., W. F. Scott	19.11	Withdrew.	
Enigma, G. F. Maybury	18.03	Withdrew.	
May R., N. C. Robinson	19.10	Withdrew.	

FOURTH CLASS.

Vitesse, Chas. D. Mower	15.10	1 19 51	0 47 56
Alpine, C. J. Blethen	16.06	1 22 15	0 51 42
Fantasy, W. Allerton	16.11	1 23 09	0 52 43
Ripple, C. B. Pear	16.07	1 23 12	0 55 20
Glide, G. D. Silsbee	15.06	1 27 52	0 55 29
Sunbeam, H. B. Faxon	16.08	1 28 32	0 57 36

Al Anka, in this her first race after her trip to fresh water, won very easily. Fantasy protests Vitesse and Alpine for crowding at a mark.

The regatta committee included S. N. Small, George E. Silsbee, A. A. Swallow, A. B. Howland.

Hull Y. C. Open Regatta.

HULL—BOSTON HARBOR.

Saturday, Sept. 11.

MASSACHUSETTS Y. R. A. RULES

THE Hull Y. C. had the honor of closing the racing of the Massachusetts Y. R. A. for 1897 with its open regatta of Sept. 11, sailed in a fresh N.E. breeze, with heavy squalls. The times were:

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Handsel, J. R. Hooper	29.09	3 00 07	2 19 06
Ashumet		Withdrew.	
Fancy		Withdrew.	

FIRST CLASS

Elfreda, B. T. Hall	25.11	3 34 07	2 50 52
Little Peter		Withdrew.	
Asahi		Withdrew.	

KNOCKABOUTS

Hazard, H. M. Sears	21.00	1 15 02	1 15 02
Fly, W. S. Gay	21.00	1 15 56	1 15 56
Mongoose, A. D. Erving, Jr.	21.00	1 17 12	1 17 12
Sally III., L. S. Percival	21.00	1 20 36	1 20 36
Cockatoo, C. H. W. Foster	21.00	1 20 52	1 20 52
Gosling		Disabled.	

THIRD CLASS

Al Anka, C. H. Crane	19.11	1 28 33	1 01 35
Tacoma, Prior & Goodspeed	19.10	1 29 44	1 02 41

Starling, W. B. Stearns	16.00	Withdrew.

Victoria Y. C. Brigger Cup.

HAMILTON—BURLINGTON BAY.

Saturday, Sept. 4.

THE Victoria Y. C., of Hamilton, sailed a race for the Brigger cup, open to the 22ft. class, on Sept. 4, the course being 15 miles, in a light N.E. wind. The 20-footer Bonshaw, sailed by her designer and owner, Com. Jarvis, easily defeated all the old boats of 22ft. measurement. The times were:

Start 2:30:	Finish.	Elapsed.
Bonshaw	5 13 01	2 43 01
Scallawag	5 28 30	2 58 30
Koko	5 37 12	3 07 12
I'll Away	6 03 00	3 33 00
Midget	6 05 00	3 35 00
Rosemaryn	Did not finish.	

Cohasset Y. C. Championship Races.

COHASSET, MASS.

Sept. 4-6.

THE fourteenth race of the series for the 15ft. class of the Cohasset Y. C. was sailed on Sept. 4 in a variable S.E. wind, the times being:

	Elapsed.
T. B. Reed, Thomas Huse	1 50 00
Jap, Bouve & Pegram	2 24 10
Swallow, John Richardson	2 27 40
Blink, F. H. Pratt	2 28 50
Delta, R. B. Williams	2 31 00
Mermaid, W. R. Sears	2 32 30
Bee, A. Bigelow, Jr	2 32 40

Two races, the fifteenth and sixteenth, were sailed on Sept. 6, the wind being still light and fluky from the west. The times were:

MORNING RACE.

	Elapsed.
Delta, R. B. Williams	2 21 29
Mermaid, W. R. Sears	2 21 50
Swallow, J. Richardson	2 22 04
Jap, Bouve & Pegram	2 23 19
Hoodoo, Gammons & Wheelwright	2 24 34
Blink, F. H. Pratt	2 30 28
Honey, C. H. Cousens	2 30 52

AFTERNOON RACE.

Swallow, J. Richardson	2 28 05
Blink, F. H. Pratt	2 28 17
Bee, J. Bigelow, Jr	2 28 29
Jap, Bouve & Pegram	2 36 33
Delta, R. B. Williams	2 50 40

The last race of the season was sailed on Sept. 11, the times being:

	Elapsed.
Swallow, J. Richardson	1 10 51
Blink, F. H. Pratt	1 11 08
Bee, A. Bigelow, Jr	1 12 05
Delta, R. B. Williams	1 12 19

Swallow thus wins the championship cup.

New Rochelle Y. C.—Ladies' Regatta.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, Sept. 4.

THE New Rochelle Y. C. sailed a ladies' regatta on Sept. 4 in a moderate S.W. wind, the times being;

43FT. CLASS.

	Length.	Elapsed.	Corrected.
Banshee, H. C. Doscher	43.50	1 25 29	1 23 53
Iola, C. P. Towers	47.17	1 39 51	1 39 51

36FT. CLASS.

Olga, C. Buchanan	31.76	1 25 51	1 22 38
Waneta, J. B. Fallert	40.33	1 27 11	1 27 11

30FT. CLASS.

Twilight, E. Lambden	29.85	1 34 06	1 34 06
Bingo, W. A. Bavier	25.10	1 41 08	1 36 43

CABIN CATBOATS

Grace, John Lambden	22.46	1 36 47	1 36 47

OPEN CATBOATS.

Marguerite, P. A. Meyrowitz	22.00	1 47 07	1 47 07

Iola lost her topmast early in the race.

Bunker Hill Y. C.—Annual Regatta.

BOSTON—BOSTON HARBOR.

Saturday, Sept. 4.

THE Bunker Hill Y. C. sailed its 29th annual regatta on Sept. 4, the times being:

FIRST CLASS.

	Elapsed.	Corrected.
Mistral, F. M. Williams	1 08 30	0 52 0½
Mist, A. H. Merrill	1 08 15	0 53 55½
Clara, C. H. Bowman	1 24 00	1 06 10
Dexter, E. H. Harrington	1 26 30	1 09 54
Scotia, J. Eads	1 26 00	1 09 58
Miad, Hogan & Harrington	1 31 00	1 13 48½
Eva, W. Downes	Disabled.	
Gladys, J. Harvie	Protested.	

THIRD CLASS.

Marion, E. J. Hinckley	1 32 30	. .. ..
Sprite, P. J. Henchey	1 52 40	. .. ..
Sea Fox, P. Aberlay	1 57 30	. .. ..

The judges were: S. B. Badger, J. E. Hayes, H. B. Martin, S. Heintzelman and D. Mansan.

Larchmont Y. C.—Schooner Cup.

LARCHMONT—LONG ISLAND SOUND.

Saturday, Sept. 11.

THE $500 schooner cup, of the Larchmont Y. C., for 1897, brought out only two starters, Emerald having gone out of commission during the week. The wind was light and fluky and the racing in all classes was unsatisfactory. The times were:

SCHOONERS.

	Length.	Elapsed.	Corrected.
Colonia, C. A. Postley	93.13	6 17 32	6 17 32
Amorita, W. G. Brokaw	74.67	6 36 58	6 23 56

CUTTERS—51FT. CLASS

Syce, F. M. Hoyt	59.86	5 42 19	5 42 19
Vencedor, H. M. Gillig	48.37	Withdrew.	

SLOOPS—30FT. CLASS.

Goblin, C. M. Whitman	28.11	4 21 45	4 21 45
Kite, Adee Bros.	28.45	4 36 23	4 36 04

SLOOPS—20FT. CLASS.

Shark, Rouse & Hoyt	20.00	4 05 19	4 05 19
Wave, L. de L. Barber	20.00	Did not finish.	

Columbia Y. C. Race.

CHICAGO—LAKE MICHIGAN.

Saturday, Sept. 4.

THE Columbia Y. C. sailed the third of its series of five weekly races on Sept. 4, in a moderate S.E. breeze. The times were:

CLASS B

	Start	Finish.	Elapsed.	Corrected.
Blade	2 10 30	3 05 55	0 55 25	0 55 25
Atalanta	2 10 30	3 16 42	1 06 12	1 03 52

B	2 10 10	3 24 30	1 14 20	1 13 05
Syndicate	2 10 31	Disabled.		

Chippewa Bay Y. C.

Editor Forest and Stream:

Richard Eggleston, called Dick for short, he of the Lincoln National Bank of your city, recently returned from his vacation, spent, as usual, at his villa on one of the Thousand Islands. He brought and placed upon his desk two valuable prizes won by him during his vacation. One a sterling silver cup, offered by the proprietor of the Thousand Island House for catboats; the other a large and very handsome cup of sterling silver, called the Bell trophy, given by the Chippewa Y. C., open to all comers, sailed off the club house at Chippewa.

It was won by R. Eggleston's sloop Florence, sailed by himself, with other members of the club, in a hard blow—a two-reefed breeze. he called it—in which one boat was overturned, one split her mainsail, and another carried away her peak halyards; but Florence came in with colors flying.

He also showed a handsome pennant as a prize, won for something which we have forgotten. J.

Sachem's Head Y. C. Regatta.

SACHEM'S HEAD, CONN.—LONG ISLAND SOUND.

Monday, Sept. 6.

THE first annual regatta of the Sachem's Head Y. C. was sailed on Sept. 6, and proved a grand success. The skies were clear and wind fairly steady from the S.W. There were eighteen entries, divided into five classes. The starting guns were fired from the Viola, her owner. Mr. C. H. Wayland, acting as judge, assisted by Mr. Harry Camp, of Brooklyn, and Mr. Robert Seward, of New York. The work on the part of the judge and his assistants was perfect, and it is safe to say that no regatta was ever conducted with less friction than this maiden sail of the S. H. Y. C.

The battle royal was between the famous Stony Creek catboats Libbie and Tigress, and among the sloops of Class C, in which there were nine entries.

The club course No. 1 was sailed, as follows: Course 1—From starting line at mouth of Sachem's Head Harbor to markboat 150ft. south of Goose Rock Buoy; thence to markboat ⅛ mile north of Goose Island; thence to markboat 150ft. south of Indian Reef Buoy; thence to markboat at Goose Rock Buoy, and thence to and across starting line, which is also the finish line, 9⅝ nautical miles. The times are as follows:

CLASS A.

	Start.	Finish.	Elapsed.	Corrected.
Dare Devil	11 53 08	1 45 09	1 52 01	. .. ..
CLASS B				
Sachem	11 58 21	1 56 15	1 57 54	1 57 54
No Name	11 59 24	2 05 15	2 05 51	2 04 14
CLASS C.				
Sweetheart	12 04 39	2 07 34	2 02 55	2 00 42
Wasp	12 03 33	2 08 09	2 04 33	1 58 44
Caroline	12 04 45	2 13 11	2 08 26	2 05 34
Sayonora	12 05 24	2 16 29	2 11 05	2 11 05
Helene	12 03 45	2 16 46	2 13 01	2 07 40
Spindrift	12 03 21	2 18 10	2 14 49	2 10 24
Eva B	12 03 35	2 19 00	2 15 25	2 10 32
Petal	12 03 22	2 19 58	2 16 36	2 07 11
Kütchen	12 04 00	Did not finish.		
CLASS D.				
Libbie	12 10 19	1 49 20	1 39 01	1 39 01
Tigress	12 09 45	1 56 49	1 48 04	1 42 23
Poem	12 08 36	2 03 50	1 55 14	1 52 25
CLASS E				
Kydart	12 08 12	2 06 32	1 58 20	1 58 20
Die Hexe	12 08 25	2 08 14	1 59 49	1 55 36

In class A Dare Devil wins, having sailed the course with no competition. It is to her credit that she added to the interest of the occasion by sailing the course as though she had a competitor at her heels.

In class B Sachem wins. It is to be noted that the elapsed time of this fast little sloop was close to the best made over the course.

In class C Wasp wins on corrected time, Sweetheart having beaten her on elapsed time. Sweetheart takes second prize in this class.

In class D Lillie wins, and has the distinction of having made the best time over the course.

In class E Die Hexe wins on corrected time, Kydart having beaten her on elapsed time.

Duxbury Y. C.—Open Race—Davenport Cup.

DUXBURY, MASS.

Sept. 2, 3, 4.

THE postponed race of the Duxbury Y. C. was sailed successfully on Sept. 2 in a light breeze. The race in third class was for the Davenport cup. The times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Little Peter, H. Moebs	24.05	. .. ..	. .. ..
SECOND CLASS.			
Privateer, A. E. Schaaf	21.09	1 14 44	0 53 09
Fanny D., M. MacDowell	20.00	1 29 21	1 06 44
THIRD CLASS.			
Rooster, M. MacDowell	19.03	1 11 23	0 47 39
Arab, W. F. Scott	19.11	1 15 43	0 52 38
Wrinkle, S. U Small	19.11	1 17 19	0 53 31
Cleopatra, H. M. Faxon	19.11	1 17 34	0 53 46
Nancy Hanks, P. W. Maglathlin	19.02	1 21 49	0 58 01
Tacoma		Did not finish.	
Prior		Did not finish.	
Goodspeed		Did not finish.	
FOURTH CLASS.			
Attila, A. O. Higgins	14.02	1 25 28	0 56 12
Yankee, E. A. Walker	16.07	1 25 19	0 58 51
Ideal, C. F. Bradford	17 08	1 34 20	1 09 03
Dolphin, M. Morton	16.07	1 42 53	1 16 25
Fedora, C. Hunt	16.08	1 53 08	1 16 46
CLASS A.			
Major D., C. H. Drew	15.10	1 33 17	1 05 56
Aphrodite, J. Brewster	17.03	1 32 39	1 06 55
E. B. Weston, I. Simons	16.11	1 34 28	1 08 24
Alice B., J. F Low	16.00	1 40 00	1 12 51
Tom Jeff, G. Richards	16.02	1 48 22	1 21 25

The second race for the Davenport cup was sailed on Sept. 3 in a fresh N.E. wind, the times being:

	Elapsed.	Corrected.
Rooster, M MacDowell	1 54 09	1 06 41
Wrinkle, S. M. Small	1 58 06	1 11 55
Nancy Hanks, P. W. Maglathlin	2 00 32	1 12 56
Arab, W. S. Scott	2 01 18	1 15 02

The final race was sailed on Sept. 4 in a light breeze, Rooster again winning.

	Elapsed.	Corrected.
Rooster, M. MacDowell	1 17 38	0 53 54
Wrinkle, S. M Smith	1 22 10	0 59 03
Nancy Hanks, P. W. Maglathlin	1 29 31	1 05 43
Tacoma, Prior & Goodspeed	1 29 52	1 06 41

As told last week, Rooster was recently purchased by Mr. MacDowell especially for this series of races.

Rochester Y. C. Handicap Race.

CHARLOTTE—LAKE ONTARIO.

Monday, Sept. 6.

LAKE Y. R. U. RULES.

THE Rochester Y. C. sailed a race under a sealed handicap on Sept. 6, the handicappers being Norman Compton and T. B. Pritchard. The wind was light and fluky, and fell to a calm in the second round. Iris led through the first round, with Majel second, and Veritas third; but the fourth yacht, Kelpie, finally caught a light breeze and finished well in the lead. The times were:

	Start.	First round.	Finish.	Corrected
Kelpie	10 00 44	12 14 31	6 05 12	7 41 12
Iris	10 00 42	12 05 37	6 10 44	8 10 44
Dragon	10 00 30	12 16 48	7 51 00	9 21 00
Majel	10 02 00	12 09 48	7 56 30	9 26 30
Nox	10 00 56	12 15 24	8 14 40	10 14 40
Nixye	10 00 25	12 20 03	8 31 00	10 21 00
Pedro	10 00 53	12 21 04	9 05 00	10 55 00
Veritas	10 03 13	12 13 46	Withdrew.	
Zanita	10 00 09	12 14 39	Withdrew.	
Althea	10 00 18	12 16 55	Withdrew.	
Carita	10 01 16	12 17 02	Withdrew.	
Facile	10 01 30	12 20 53	Withdrew.	
Queela	10 00 15	12 33 40	Withdrew.

Weno	10 01 15	.. .. ..	Withdrew.	
SPECIAL CLASS.				
Chic	10 05 20	.. .. ..	12 27 19	2 22 19
Xingra	10 05 21	.. .. ..	Withdrew.	
Olga	10 05 40	.. .. ..	Withdrew.	
It	10 05 55	.. .. ..	12 52 30	. .. ..
Slider	10 06 15	.. .. ..	2 50 00	. .. ..
Kodak	10 06 25	.. .. ..	Withdrew.	

Pewaukee Y. C.

PEWAUKEE LAKE.

Sept. 4-6.

WITH the regatta of Sept. 11 the Pewaukee Y. C. will close a season of most successful regattas. At a special meeting of the yacht club, held at Lakeside, Monday, Sept. 6, at 4 P. M., it was decided to again challenge the Pine Lake Y. C. to sail another regatta for the celebrated Pabst trophy. Of course the event cannot take place this year, but this will give the Pewaukee Y. C. the first opportunity to capture that cup next season.

A communication from the Rev. S. S Smyth, of the St. John's Military Academy, of Delafield, requesting the Pewaukee Y. C. to assume charge of the proposed rowing regatta on Pewaukee Lake next spring, was referred to a committee appointed by Com. W. C. Clark.

Last Saturday's regatta was one of the prettiest of the weekly races that has taken place on Pewaukee Lake for a number of weeks. The wind was brisk from the southeast, which enabled the boats to go over the course with the least possible number of tacks. Idle Hour, owned and sailed by R. E. Giljohann, lowered the club's four-mile record of 43m. 58s., made by her in the regatta of July 3, by 55s. Good sailing was the feature of the day.

The times were:

CLASS A.

	Elapsed.
Idle Hour, R. E. Giljohann	0 43 03
Sirrocco, Wallber Bros.	0 46 12
Carmela, S. P. Fachutar	0 47 50
Lorraine, Schiller & Bauch	0 48 08
Lottie, L. G. Monkwell	0 49 03
CLASS B.	
Aida, A. C. Zinn	0 49 53
Sophia, W. H. Meyers	0 50 16

Judges: A. G. Muller, Jr., S. C. Morris and Dr. C. E. Winternuite.

On Labor Day, two very pretty regattas were sailed over the club's course. In the morning event, Kite, owned by Poppert & Peckler, was disabled before she had completed the first round. Idle Hour parted her throat halyards, and Carmela broke her jib stay, and Lottie got in the lee of the woods, and all were forced to retire on the last leg.

MORNING RACE—CLASS A.

Start, 10:35:	Finish.	Elapsed.
Tempest	12 13 09	1 38 09
Lottie	12 13 32	1 38 32
Lorraine	12 17 05	1 42 05
CLASS B.		
Aida	12 17 04	1 42 04
Sophia	12 20 32	1 45 32

Judges—D. C. Wilson, E. F Wallber, N. H. McGregor. Timekeepers—A. G. Miller and S. A. Morris.

The wind had fallen considerable by the time the boats were ready for the start in the afternoon, still there was enough to make the event close and exciting:

CLASS A.

Start, 2:35:	Finish.	Elapsed.
Idle Hour	3 32 19	0 57 19
Lottie	3 32 34	0 57 34
Lorraine	3 33 27	0 58 27
Tempest	3 34 14	0 59 14
Sirrocco	3 37 37	1 02 37
Carmela	3 38 45	1 03 45
CLASS B.		
Aida	3 42 02	1 07 02
Sophia	3 42 08	1 07 08

Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

WE have within the past three weeks published very complete reports of the annual meets of the three great canoeing associations, the American, the Western and the British. These reports must be accepted as reflecting to a certain extent the condition of canoeing at the present time, a condition which all friends of the sport must admit, however reluctantly, is very far from satisfactory. The sport has been established in England for full thirty years, and nearly as long in this country; it has been in high favor at times, it has profited by the hard and earnest work of many enthusiastic devotees, many canoe clubs have been founded throughout this country and Europe as well as in Australia, and three large associations have been formed and successfully carried on for years.

The meet of the American Canoe Association can hardly be set down as a great success either in attendance or racing, but at the same time there is nothing particularly discouraging in it. The business depression that has so long prevailed, the golf craze and the bicycle craze, have probably much to answer for in cutting down the attendance. At the same time there were enough present, nearly 200 in all, to make a lively and pleasant camp; none the less pleasant as a canoe camp from the fact that some of the outside attractions of previous meets, hotel dances, outdoor theatricals, and expeditions to outside points were absent. The camp was eminently a camp of campers, in camping dress, and depending on themselves for amusement and occupation. No doubt some would vote it slow, and it was by no means up to-date in the quantity and quality of its after-dark amusements as compared with some former meets; but it was a camp at which canoeists could enjoy themselves with very little interruption from foreign elements.

There were in camp some sixty canoes, the common open canoe being in the majority, and the members were on the water a good deal. All hands lived in tents; there was no attempt at camp cookery, but the mess tent was a plain and camp-like institution, with very good cooking and an absence of all stiffness and formality. While there were a good many outside visitors during the day, mere sightseers who came in small parties to inspect the camp, there was no general invasion of over-dressed hotel people, such as has proved a serious nuisance at times. Within the camp there was none of the over-dressing that has always been such a sore grievance of those canoeists who never come to a meet—and sometimes of those who do. The general arrangements were very well carried out this year, and it was possible to reach the camp easily and promptly and to secure all ordinary conveniences in the way of mess, camp floor etc.

There is no denying that the racing was not what it should be. A very long programme was laid out, and many of the events were run off after a fashion, but there were very few contestants, the total list of entries and lists of starters in each particular race being small. Some of the races amounted to mere perfunctory affairs, with no real competition, and might as well have been omitted.

The present programme gives full opportunity to every class of canoeist, from the crack sailing man down to the novice, and in all kinds of canoes. The young canoeist who comes to camp with an ordinary open paddling canoe can find races enough to make his stay interesting. The trouble is not with the rules or the programme, but with the men, they evidently do not care to race. Even of the few who make a show of racing there are some who go about it in a slipshod manner, bringing to camp a canoe in poor condition and without a name, taking no trouble to file a formal entry, and showing no particular interest.

It is no wonder that there is so little interest in the trophy and unlimited sailing, as the successful canoe in this work must be a fearful and wonderful machine, comparatively costly, only to be obtained by hard work on the part of her owner, and of no use whatever except for a few days racing at the meet.

Mab represents the highest point yet reached by the sailing machine, she is the work of one of the few men who are really up in the design and construction of this class of craft. Mr. Gilbert, who designed and built Mab, is first of all a very clever mechanic, an expert in fine woodwork; he is also an enthusiast in his love for small craft, and thoroughly familiar with the canoe and its larger sister, the St. Lawrence River sailing skiff. Mr. Archbald, the owner of Mab, is an expert canoe sailor, perfectly at home on a long sliding seat and familiar with every detail of a racing canoe. The new boat is the result of the united efforts of these two men, just as the beautiful Vesper canoes were produced by Mr. Paul Butler with the aid of a very expert builder.

There was a time when a man who was not himself a mechanic, but merely a good canoeist, could go to one of several builders and purchase a first-class canoe fully fitted, but such is no longer the case. There is no longer enough demand for the extreme racing canoe—a boat of high cost, and to be used only for a few races at the meet, being stowed away for the rest of the year—to induce the average builder to improve on his designs; and when at long intervals he is called on for an up-to-date boat, he is entirely unprepared to fill the order, and in view of the special nature of the work he would lose money if he did build. A man who wants a canoe to-day to meet or beat Mab must depend mainly upon himself for the design and the planning of fittings; and unless he is thoroughly familiar with the practical details of design and construction, in addition to being an expert handler, he cannot hope to win.

Assuming that a man is thus qualified, and that he is prepared to spend a great deal of time and money on a new racing canoe, there is very little inducement to do so. In his home club, at New York, Lowell, Springfield or Rochester, he will find no racing at all through the season, or, at the most, only a few old boats against which to test and work up his new one. When he finally gets to the meet, intending to start in the trophy, unlimited, and two or three more races, he finds no one in his own class to meet him, and has virtually a sailover.

Up to last season the Vesper canoes were good enough for anything afloat, and there was no inducement to Mr. Butler to build a new canoe. The models of Bee, Wasp, Fly and Bug, from three to six years old, were by no means up-to-date; but by dint of improvements in centerboards, seats and rudders, and of their always excellent rigs, they were still clearly superior to anything then afloat. The construction of Mab, only a few weeks prior to the meet, saw the old boats laid on the shelf; in spite of all attempts to modernize them, they were at a marked disadvantage beside her lighter and smaller hull, and its special fitness for carrying a large deck seat. This year Mr. Butler was not present at the meet; it is doubtful whether he will continue, under present conditions, to build new canoes, and there is evidently no one else in the States to take his place. Whether or no Mab will race next year without some certainty of a competitor is also uncertain.

The only possible remedy that we can see for this state of affairs, and we are by no means certain that it is not too late for even this to be effective, is the one-design canoe. It is just possible that if a start were made with a standard design for a good 16 by 30 racing canoe of modern design and fittings, but less extreme than Mab, that enough men might build to give a little new life to racing at the meets, and also at home throughout the season. Failing this, we see no chance ahead for any revival of canoe racing.

The passing of the racing is to be regretted for many reasons. Both under sail and paddle it is a noble sport, with all the exhilaration and excitement of yachting, making even greater demands on the skill of the canoeist, and by reason of the small cost and the convenience of carriage of the boats, within the reach of those of very limited means. As long as a first-class racing canoe could be bought of the builder for about $150, and the owner of such a craft could find plenty of racing at home as well as at the meets, and could use the canoe at will for an afternoon paddle or a week's cruise, canoeing was an ideal sport.

As one of the prime reasons for the annual meet, and one of its great attractions to the average non-racing canoeist, the racing is almost indispensable to the continued success of the Association.

All things considered, the outlook for American canoeing and for the A. C. A. is decidedly better than it was a few years back. The sport has had to contend with the rivalry of newer ones, with the bicycle and golf; the continued business depression has acted to reduce the club membership and to keep men from camp; and the management, or mismanagement, of the meets themselves at times, with an unruly and noisy minority in command, has driven away many who could ill be spared. There is little doubt that, having held its own so long in the face of these and other hindrances, a period of renewed prosperity is before the Association. For several successive years it has been blessed with officers who have been both able and energetic, who have turned a heavy debt into a material balance in bank; who have greatly improved the transportation and other arrangements, and who, most difficult task of all, have had the pluck to act firmly and effectively upon the first outbreak in camp of the Ta-ra-ra-Boom-de-ay spirit, to the marked improvement of the camp as a place of temporary residence for sober and decent canoeists.

The experience of several successive meets stands as an ample guarantee to all who are in doubt about joining the Association or who, being old members, are in doubt about the expediency of attending the meet. There is every reason to expect a well-located and well-arranged camp, with good transportation and mess, all reasonable luxuries in the way of camp floors, etc.; and a very pleasant and congenial company of canoeists. It is not to be expected that one coming back to a meet after an absence of years will find all of his old associates and the same familiar surroundings; but there is no reason at all, as far as the Association and its meets are concerned, why old members should not keep up their active connection, spending a week or two in camp, finding many old friends and making some new ones; and, though they may feel a little natural resentment at finding themselves back-numbers in the racing where once they were the leaders, there will still be plenty of good fellowship and hearty out-door fun and amusement.

The report which our Western correspondent sends of the Western Canoe Association is, we believe, in no way overdrawn, the story is much the same, unfortunately, from year to year, of a poorly selected camp site, a very small attendance, an absence of canoeists and canoeing, to say nothing of racing, and a predominance of foreign and discordant elements, out of all harmony with the true spirit of camping and canoeing. It is perhaps too much to expect that men in ordinary business, tied down to a fixed roof and a spring bed for fifty weeks of the year, will care to plunge at once into the roughest camp life for the remaining brief period, the transition both ways is entirely too sudden and abrupt to be pleasant. At the same time there is a happy mean between the unbroken wilderness and the social desert of the summer hotel lawn; a camp of tents with no permanent buildings, within reasonable steaming distance of a railroad, but not in the suburbs of a little town; where men can meet in the free communion of the woods and sky. The American Canoe Association was born and cradled on a hotel lawn, and at times it has returned, to its sorrow, to similar localities for its annual meet. but its strength has been drawn from the more isolated camps where towns and hotels were not forced too obtrusively upon the canoeists who wished to avoid them. Stony Lake, Grindstone Island, Bow-Arrow, Jessup's Neck, are the places dearest to the old members and most closely associated with the prosperity of the Association. There has always been in the A. C. A. a movement in favor of the "backyard" meet, to favor some local interest at the expense of the Association, and of the hotel-lawn meet, for those tender spirits who cannot be happy more than two miles from a Troy laundry, and these elements have at times forced the Association into experiments that have proved failures; but the general desire now seems to be for a comparatively isolated location—at least distant from hotels—provided that the local transportation is adequate.

The Western Canoe Association has had the same experience, but in it the feeling for the hotel and summer resort has been stronger, and has almost invariably prevailed; with what results, is now too painfully apparent. Whether any change is now possible, we are unable to say; almost any change from existing conditions must inevitably be for the better. If there are still a score or a dozen of real canoeists in the Association, it might be worth their while to combine and work for an experiment in a new line—a meeting in the woods, far from all hotels and other sideshows, planned to attract only canoeists. The attendance could not well be much smaller than it is at present, or the general interest in the business of the Association less; it is just possible that some good might come before it is too late.

The British Canoe Association is, in its organization and its relations, quite different from the two American associations. Though modeled on the same general plan—that originally worked out by the American Canoe Association—it has never secured a recognized position as the one governing body of British canoeing; on the contrary, it has from the first divided this honor with a local canoe club.

As the oldest canoe club, and one that has always labored for the interests of canoeing in all its branches, the Royal Canoe Club, of London, long ago secured recognition throughout Great Britain as the governing power in the sport—in fact, through a membership distributed over the kingdoms, and at times through the establishment of branches, it has to a great extent exercised the functions of a national instead of a local body.

When the B. C. A. was organized, as a matter of course as a national association superior to all clubs, it failed to receive the hearty support of all the members of the R. C. C.; the scheme of organization failed to provide for the regulation of canoe racing, and it has happened that the management of this important branch of the sport has ever since remained in the hands of the great parent club.

With all its slovenly and faulty legislation, it must be admitted that the attempt of the American Canoe Association to establish uniform rules and to regulate canoe racing, has worked successfully for eighteen years; at least as successfully as the same work would have been done by any club. To fulfill its true functions and to maintain its proper position, the British Canoe Association should control and encourage racing in the same manner; but this it has never attempted. Leaving the racing under the old management, that of the Royal C. C., it has devoted its efforts solely to the banding together of canoeists and the holding of an annual meet. While racing has never been entirely absent at these meets, it has never attained any great importance; it has been merely an incident of the camp, as this year. In the American Canoe Association, on the other hand, until a recent period, the races have been the most prominent feature of the meets, attracting many as competitors and affording amusement to all present. After all is said against the racing machine as displacing the old canoe and contributing to the neglect of cruising and camping, it must still be admitted that the racing has made a central point about which each of the many successful meets has hinged.

For one reason or another the British Canoe Association, well officered and strong in its *personnel*, with the hearty support of many good canoeists and experienced cruisers, has failed to attain such a membership in point of numbers as one might expect, and to attract canoeists to its meets.

These, as a rule, have been successful in bringing together a representative gathering of practical canoeists and small boat men at some picturesque and attractive locality, the social features of the camp being always pleasant. At the same time the attendance has been small, the racing has amounted to very little, and even that little has been by craft not strictly canoes; and the camps have always been in close touch with home comforts in the shape of carpets, pianos and such undesirable luxuries.

The present meet was an experiment in a new direction, from which much was to be expected, a real cruising meet, sailing each day or so to a new spot, but the craft were not canoes, though the men were good canoeists, and the number of men and boats was lamentably small.

It is a good many years now since we first recognized in the then novel sailing canoe (what has since chrystalized into the 16×30 decked canoe), a craft possessing many charms and many possibilities peculiar to itself. In the course of some thirty years conditions have changed greatly, the canoe-yawl, the 15-footer, the small power launch and the knockabout have all come in as rivals with the original canoe for the favor of the novice, the single-hander and the Corinthian of moderate means. At the same time we believe that there is still a wide field for the canoe and for canoeing, a field still worth working by each of the three associations.

As matters now are, there is no use of quibbling over an inch or two of beam or minor details of fittings; the one great point is to unite all who are animated by a common love for personal work on the water in small craft. Personally we believe that more can still be done by direct encouragement of paddleable craft of not over 30in. beam than by extending the field to take in a mixed fleet of wider and heavier craft; but this is a mere detail. The great thing is to secure the co-operation of all users of small craft.

In this work racing must play an important part, and good racing rules are an absolute necessity. These can only be had and held by constant attention and labor on the part of the officers and committees, and by interest on the part of racing men and owners. No rule is so good that it cannot be improved, and even though perfect for the time, conditions may arise at any moment which may demand material changes. Constant scrutiny and supervision of the rules in their practical working and careful, deliberate and methodical discussion and legislation, are essential to the maintenance of the rules, and these, even in the American Canoe Association, have too often been neglected in favor of hasty, incomplete and generally imperfect legislation.

Even more important than the racing is the annual meet itself, an assembly of gentlemen, living in tents as far distant as the needed facility of quick transportation will admit from cities and summer hotels, and finding amusement in clean, healthful outdoor sport. To make the necessary financial success of such a camp from year to year, assuring good transportation facilities, good mess and camp service of all kinds, the number present should run up to 200 at least. With that many in camp, a fair proportion of racing men may be expected, each man can find a group of associates to suit his special tastes, and there is a variety of amusement for all. The officers, too, feel that their work has amounted to something, which is not the case when elaborate arrangements, involving much labor and time, are availed of by less than a dozen people.

THE notice which we publish this week tells that the annual meeting of the executive committee of the American Canoe Association will be held in Brooklyn on Oct. 16. This is about three weeks earlier than usual, but in some respects the change of date is better; as a rule the weather in November is unpleasant and stormy. Last year at Toronto the first snowstorm of the season greeted the canoeists. In the middle of October there is a much better prospect of good weather, a very desirable accompaniment to the meeting, as the following day is always devoted to the entertainment of the visitors. The only objection is that the official reports as a rule are delayed to the last possible moment, and there is difficulty in getting them all by the middle of November. As, however, all the present officers retire by Oct. 1, and as the business of the Divisions and the Association was really over last month, there should be no difficulty in preparing the reports in time. It is in every way desirable that all reports should be presented and considered at the annual meeting in order that the exact condition of the Association in membership and finances shall be known to the committee. There is no good reason why a simple Division report, for instance, should not be ready before midwinter.

In the matter of new legislation, there is really very little to be done; the Association is now running admirably so far as its administrative machinery is concerned, the Board of Governors has proved a success in regulating the finances, which should be in quite a satisfactory condition; there is apparently no change necessary in regard to it or to the general association and Division government, as laid down in the constitution and by-laws.

Several proposals have been made for the amendment of the racing rules, and two or three points need to be cleared up, but there is no need for any important or radical change. The rules in the main are very satisfactory, the great trouble is that men will not build and race under them.

As to their amendment, there is no other canoeing or yachting body in the world that we are familiar with, which has such an admirable system for amending and perfecting its racing rules. As laid down in the by-laws, it is the duty of the regatta committee, the last act before vacating its office after a year of experience in making up the programme and managing the races, to present a full report of the practical operation of the rules, the details of the racing, and of such changes as are desirable in the opinion of the committee. In addition to this, the committee must include in the report all proposals for changes made by members. This report must be made public to all members of the Association through the official organs, at least two weeks prior to the amendments being voted upon by the executive committee.

In this way the valuable experience of the retiring committee, fresh from its work at the meet, is available for the amendment of the rules; every member of the Association has a right to offer amendments, and the committee has the charge and supervision of such amendments, thus knowing exactly what changes are contemplated.

The one defect in this scheme is that the provisions of the by-laws and racing rules are habitually disregarded; sometimes the regatta committee puts in no report at all, sometimes a mere perfunctory statement of races and winners; such amendments as are published are, as already instanced this year, mere crude suggestions that must be carefully put in shape by some one before they can be submitted to the committee for a vote. Some amendments, instead of being sent to the committee in season for advance publication, are presented to the executive committee during the meeting, so that they cannot be carefully discussed and voted upon, but must be submitted during the winter to a mail vote, without the necessary discussion and deliberation of a meeting.

In order to be voted upon at the meeting of Oct. 16, all amendments must be published in the FOREST AND STREAM of Oct. 2, and consequently must reach us at the very latest by the morning of Sept. 28. The time is short, but if the retiring regatta committee is really desirous of astonishing the entire Association and of bringing credit to itself by the thorough completion of its work, it is still possible to prepare such a report as the by-laws call for, setting forth the important details of the late races, the questions which have arisen, the conclusions of the committee upon the condition of the racing at the present time, and its recommendations of changes. These recommendations, with any received from members, should be carefully written out, in the English language, and in the exact phraseology in which they should appear in the rules.

Whether good or bad in themselves, most of the suggestions for the amendment of the rules are absolutely worthless on account of their vague and indefinite form; if a man is desirous that a rule should be amended, the least he can do before occupying the time of a very busy meeting is to take the A. C. A. book and turn to the rule, writing out in carefully chosen language the exact idea which he has in his mind. The probabilities are that he will find some difficulty in doing this in a way that will conflict with no other provisions of the rule; but if he cannot do it, there is no reason why he should expect others to do so. It is an easy matter to say offhand that a rule is bad and should be changed; it is a very difficult matter to embody this idea definitely and clearly in an amendment that shall harmonize with the remainder of the rule. The result of the usual hasty and careless method of voting on mere crude suggestions is very plainly visible in Rule I of the Racing Regulations, as it stands to-day, as well as in the several suggestions thus far made for its amendment by the executive committee.

A. C. A. Board of Governors.

Editor Forest and Stream:

THERE will be a meeting of the Board of Governors of the American Canoe Association at the Clarendon Hotel, Brooklyn, N. Y., Oct. 16, at 2 o'clock, P. M. Members of the board are requested to attend. ROBERT J. WILKIN, Pres.

C. V. WINNE, Rec.

"Canoe Cruising and Camping" is the title of a new work by Perry D. Frazer, published by the Forest and Stream Publishing Co. It contains more common sense to the square inch than any work we have ever seen. The author's advice, if followed, will insure any canoeist or camper a royal outing. It is well written and ably illustrated. It tells the novice what to take for camp use, for clothing and for sport. It is intensely practical. Price $1.—*Breeder and Sportsman.*

The Amendment of the Racing Rules.

WE have spoken elsewhere of the amendment of the racing rules, a matter which is now in the hands of the regatta committee and which must shortly pass to the executive committee. The present Rule I., defining, measuring and limiting canoes, was framed many years ago when canoeing was in a very different condition. In the interval it has been chopped and patched from year to year until it is mere makeshift, incomplete, contradictory and confusing.

So far as we can see, there is no demand at present for any material change of the rule; but it is very necessary that it shall be made more definite and explicit, especially as concerns the canoes entering in paddling races, whether manned by one man, two, four or more. In order to secure a proper amendment of the rule in the very short time remaining before the legal date of publication, we have attempted to recast it in a more definite and accurate shape, as follows:

RULE I. DEFINITION.—A canoe to compete in any race in the American Canoe Association must be sharp at both ends, with no counterstern or transom, and must come within the limits prescribed for its class.

MEASUREMENT.—The length shall be taken between perpendiculars at the foreside of the stem and the after side of the stern. The beam shall be taken at the widest part, wherever found, and shall not include the beading, provided that it does not exceed 1½in. in depth; if the beading exceeds this depth, it shall be measured as part of the beam. The word beam shall mean the breadth, formed by the fair lines of the boat; and the beam at and near the waterline shall bear a reasonable proportion to the beam at the gunwale. The draft shall be measured at the deepest point, wherever found. The depth shall be measured from the inside of the garboard next the keel to the lower side of a straight-edge laid across the gunwales or to a similar height in a decked canoe. The sail area shall be measured by dividing into triangles in the usual manner, the sail being stretched taut and flat on a level surface.

DIMENSIONS.—SAILING—To be eligible to sailing races a canoe must comply with the following limitations: The length shall be limited to a maximum of 16ft., with an accompanying maximum beam of 30in. For each full inch of decrease in length the beam may be increased by ⅛in. The draft shall not exceed 10in. There shall be no limit to the weight or drop of the centerboard, but when hauled up it must not project below the keel. *A canoe without a centerboard may carry a keel 3in. deep outside of the garboards and weighing not more than 36lbs.*; a centerboard canoe may carry a keel not exceeding 1¼in. The keel-band shall not exceed ¼in. inch in thickness, and shall be included in the measurement of depth of keel. Lee-boards may be carried by a canoe not having a centerboard. The sail area shall be limited to 130sq. ft.

To be eligible to the "cruising canoe" class, a canoe shall comply with the above limitations, and in addition shall be fitted with a well not less than 16in. wide for a length of 3ft. 6in.; with a sleeping space of 6ft., of which at least 5ft. shall be clear; and the sails shall be fitted to lower and furl. The regatta committee shall have power to rule out any canoe which, in their opinion, does not conform to the spirit of these restrictions.

PADDLING—To be eligible to the paddling races, canoes must be within the following limits:

One and Two Men (Single and Tandem)—Maximum length, 16ft.; minimum beam, 30in.; minimum depth 12in.; minimum weight, 50lbs.

Four Men—Maximum length, 20ft.; minimum beam, 30in.; minimum depth, 12in.; minimum weight, 70lbs.

War Canoes—Maximum length, 35ft.; minimum beam, —?; minimum depth, —?; minimum weight, —?; maximum crew, 15 men.

We invite, on the part of all who are or should be interested in the races of the Association, a comparison of the above with the rule as it now appears in the Year Book. We have attempted to embody the same ideas in a little different form and clearer language, with no material changes. The phrase in italics, limiting the depth of keel, may well be omitted now, the same point being covered by the limitation of draft. It is just possible that some recognition of the fin-keel and the weighted centerboard should appear in the rule, but we have not attempted to take up this new point.

Those portions of the rule which apply more particularly to canoes in the paddling races have been extended to cover new conditions, the introduction of four-men crews and war canoes; they are substantially in accord with the rather vague suggestions set forth recently by the committee of the Northern Division. The only open point, we believe, is the limit of weight, we have inserted 50lbs. as the minimum for the single and tandem canoes, a mean between the limit set several years ago as the weight of the average good service canoe of the open Canadian type and a proposal now made to lower the limit. We have taken the proposal of the special committee for the weight of four-men canoes, and we have left blank spaces for the limits of beam, depth and weight of war canoes, which should be filled in, if only for the sake of consistency.

It is quite possible that the above proposal is capable of amendment, either in mere phraseology and detail or in new and material additions. We shall be very glad to have further suggestions and criticism, in order that the amendment may be submitted in the best possible shape to the regatta committee in season to be embodied in the annual report and voted upon by the executive committee.

The following proposal to amend the racing rules has been sent us for publication by Thos. Hale, Jr.:

To amend racing regulations, Rule V., 2d paragraph: After the words "and the year expressed in four figures thereon," to omit the words "and the five best flags at the disposal of the regatta committee shall be given to the first five record men, provided ten or more finish; if less than ten finish, a prize shall only be given to each two, or fraction of two finishing."; and to insert the words "and the first five men finishing, or fraction thereof, shall receive prizes."

As now printed in the Year Book, the latter portion of Rule V. is badly jumbled up; we would point out that a rearrangement is desirable, the paragraphing, at least, being changed.

In the amendment offered by Mr. Schuyler, as printed last week, the limits should read "maximum length, 16ft.; *minimum* width, 28in; *minimum* depth, 10in. amidships; not less than 45lbs. weight.

A. C. A. Executive Committee.

To the Executive Committee of the American Canoe Association:

THE annual meeting of the executive committee of the American Canoe Association will be held at the Clarendon Hotel (Fulton, Washington and Johnson streets), Brooklyn, N. Y., on Saturday, Oct. 16.

The meeting will be called to order at 10 o'clock, A. M.

FRANK L. DUNNELL, Com. Elect.

By C. V. SCHUYLER, Sec'y-Treas. Elect.

NEW YORK, Sept. 7.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

A Rare Feat.

MR. ADOLPH TOEPPERWEIN, a young man who has practiced trick shooting with the rifle for some years, performed a feat on Aug. 12 at San Antonio that has not been equaled anywhere in the civilized world. On a former occasion Mr. Toepperwein broke 955 clay disks 2½in. in diameter out of 1,000 shots fired. The disks were tossed in the air by hand to a height varying from 20 to 30ft., at a distance of 10 or 15ft. from the shooter, he using two .22cal. Winchester rifles, old-fashioned black powder ammunition. On Aug. 22, however, this young trick rifleman totally eclipsed his former achievement and broke 979 targets and the world's record. He shot two rifles alternately until the 200th shot, when he accidentally broke the front sight off one, and finished the remaining 800 with one rifle, that at times became so hot as to almost preclude any possibility of handling. Out of the first 500 targets he missed but 11. He shot the fifth 100 without a miss, and the lowest number of hits out of any 100 was 95. He made runs of 117, 107, 106 and 141. After the shooting was over, Mr. Toepperwein regaled the spectators with exhibition shooting at coins of various denominations, hitting such small objects as nickels marbles, etc.

Mr. Louis Henermann, president of the Texas Baseball League, officiated as official scorer, and his affidavit certifying to the truth and correctness of same is before your correspondent. Summary:

First 100 disks shot at	98	Sixth 100 disks shot at	98
Second 100 disks shot at	95	Seventh 100 disks shot at	96
Third 100 disks shot at	99	Eighth 100 targets shot at	99
Fourth 100 disks shot at	97	Ninth 100 targets shot at	97
Fifth 100 disks shot at	100	Tenth 100 disks shot at	98—979

O. C. GUESSAZ.

Calumet Heights Rifle Scores.

CHICAGO, Sept. 5.—A strong wind blew from left to right across the range to-day, while the light was poor. The rifle scores made to-day were as below, Harlan winning in the A class, Mrs Marshall in Class B:

A class, 200yds.:

Schmidt	5	5	5	1	9	5	0	3	7	1—41
Booth	1	1	2	3	0	1	2	2	3	6—21
Harlan	6	3	1	5	2	3	7	6	1	8—42
Norcom	0	2	10	3	4	2	2	5	2	1—31
Houston	5	1	0	1	1	3	5	1	2	7—26
Davis	5	7	4	1	1	1	3	5	3	4 34

B class, ladies' medal, 100yds.:

Mrs. Marshall	3	3	3	5	3	6	3	7	9	3—45
Mrs Schmidt	4	4	3	4	2	4	3	5	3	6—38

PATERSON.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 21-23.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Co.

Sept. 22-24.—WATSON'S PARK, Chicago, Ill.—Tournament at live birds and targets. Programmes ready about Sept. 1. Write to John Watson, Station R, Chicago.

Sept. 23.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association for the benefit of the Massachusetts State Shooting Association. 100-target handicap for the "Charlestown pig."

Sept. 24.—KANSAS CITY, Mo.—Elliott-Gilbert match for the *Star* cup. Match commences at 2 P. M.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 28-Oct. 1.—PASSAIC, N. J.—Annual tournament of the New Jersey State Sportsmen's Association at Clifton racetrack. First two days, targets; last two days, live birds. Main event on last day is at 25 live birds, $25 birds extra, handicap; $500 guaranteed to three high guns. W. H. Huck, Sec'y, Rutherford, N. J.

Oct. 4-5.—WARWICK, N. Y.—First annual tournament of the Warwick Gun Club. Open to all. Targets. $50 average money to four high guns in all programme events. John M. Servin, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

Oct. 19-21.—DAYTON, Ia.—Second annual tournament of the Dayton Gun Club. First two days, targets; last day, live birds. "Cannot divide with professionals or manufacturers' agents."

Oct. 19-22.—BALTIMORE, Md.—Four days' tournament of the Baltimore Shooting Association. First two days, targets; last two days, live birds. $500 added money. Geo. L. Harrison, Sec'y.

Oct. 22-23.—HUNTINGTON, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Erie Gun Club.

Oct. 26-28.—COUNCIL BLUFFS, Ia.—Tournament under the auspices of W. D. Hardin, F. S. Crabill and C. B. Randlett. $300 added. Programmes later.

Oct. 29-30.—GRAND RAPIDS, Minn.—Tournament of the Itasca Gun Club. Dr. W. P. Brown, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

C. W. Dudley won the cartridge case put up for competition on Saturday last, Sept. 11, on the grounds of the Brooklyn, N. Y., Gun Club. Dudley broke 24 out of 25 making his score a highest possible by breaking 1 out of his allowance of 2 extra targets to shoot at. He tied with Carl von Lengerke (3), F. A. Thompson (4) and Banks (0), all of whom made highest possibles. On the shoot-off under similar conditions, he again broke 24 out of 25, winning easily. Dudley is shooting his single Francotte very strongly just now, and is likely to be a factor in the next race for the Recreation cup at Hackensack, N. J., early in October.

In regard to the Jersey Handicap, the big live-bird event set for the last day (Oct. 1) of the Jersey State shoot, W. H. Huck, secretary of the State Sportsmen's Association, Rutherford, N. J., writes as follows: "The Jersey Handicap, 25 live birds, $25, birds extra, not class shooting; handicaps 26 to 32yds.; $500 guaranteed by the Association; *all surplus added*. Entries for the Jersey Handicap, accompanied by a forfeit of $10 may be made to W. H. Huck, Sec'y, Rutherford, N. J., or will be received at cashier's office up to 6 P. M. Sept. 30. Nobody barred."

The Dayton, Ia., Gun Club will hold its second annual tournament Oct. 19-21. The first two days will be devoted to targets, the last day to live birds. The announcement states: "Cannot divide with professionals or manufacturers' agents."

The Elliott-Grimm cast iron-badge embroglio is still somewhat of a mystery. Our Western correspondent, Mr. Hough, has unearthed a copy of the conditions under which the said badge is held. As told in his Western trap notes in this issue, one of the conditions of challenge for this badge is that the forfeit must be put up in the hands of the *American Field*. Of this fact Mr. Elliott was ignorant, so deposited his forfeit with FOREST AND STREAM on July 8, in whose hands it remained until Sept. 11, when a check for the $50 was mailed to him at his request. Is this violation of the conditions, then, the reason why Mr. Grimm has kept silent? We hardly think so, for Mr. Grimm is too good a sportsman and too good a fellow, to seek to hold a trophy like the cast iron badge by virtue of such an insignificant breach in the conditions governing challenges for the same. We believe that he would, had he been free-handed, have notified Elliott of his mistake. Who then is back of this thing? Charlie Grimm must surely realize that this silence on his part has given rise to much talk among trap-shooters, and that the bulk of this talk has been by no means favorable to him. Another question that naturally crops up is this: Was the *American Field* itself ignorant of the condition requiring that the said forfeit money should have been deposited in its hands? Or was it silent for cause?

L. H. Fogarty, of the Endeavor Gun Club, of Jersey City, N. J., was one of the members of the club's team that journeyed to Freehold, N. J., to meet a team of the local gun club on Friday last, Sept. 10. The Freeholders treated the Endeavors most hospitably, and Mr. Fogarty asks us to publish the following acknowledgment of such treatment: "As one of the visiting team members of the Endeavor Gun Club, of Jersey City, to Freehold on Sept. 10, I must thank the Freehold Gun Club for the magnificent entertainment extended to our team by that club from the arrival of the team in Freehold. The "buss" to the banquet table, the Shrewsbury salts, the oyster pie, and the etceteras they entertained us with can never be effaced from the record of congenial trap-shooting. Mr. Davis handled the affair with consummate skill, and though he may offer an excuse for not knowing that the time-table of the Central Railroad of New Jersey was changed the day previous, that excuse need not be offered, as the beautiful ride from Freehold to Matteawan, some eleven or thirteen miles, in the effulgence of the full September moon, more than paid for the few hours' delay in getting back to New York. The Freehold shooters probably used Mr. Davis's lame excuse for not keeping us there all night! The day was the hottest of the season, and they warmed us well by 17 birds, and, children, there was a 'hot time that night.'"

Billy Wolstencroft seems to have a sort of first mortgage upon Austin cups. On Labor Day, 1896, he shot for a cup on the Endeavor Gun Club's grounds, donated by John L. Winston's firm of employers, the Austin Powder Company. He didn't win it that time, but he took it away from Dutchy Smith, the winner, a few weeks later, and held it until, according to the conditions attached to challenges for the cup, it became his property. On Labor Day, Sept. 6, 1897, he again came to Marion after another Austin cup, which was advertised to be shot for under similar conditions, viz.: Expert rules, 100 targets per man. He broke 90 out of his 100 and walked away with the trophy. Noel Money and 147 scored 87 each; Ferd Van Dyke 85. Good shooting all around, but Billy's skill with his new Greener and Schultze powder is at present almost unapproachable. He's bad medicine just now, that's a fact. Billy says that the new gun is the twin brother of the one he handled so effectively about ten years ago; and adds that he feels just like a twin brother to the Billy Wolstencroft of that era. He shoots like one, anyhow.

The programme for the Schmelzer tournament at Kansas City, Mo., Sept. 14-16, arrived too late for us to make any comment upon its contents prior to the commencement of the shoot. The cover states that the shoot will be "A grand reunion of amateur trap shooters; $1,200 in merchandise prizes; twenty-seven events; $12 pays your entrance fee for the three days' contest." Professionals and manufacturers' agents are barred from competing for the prizes, but can shoot along for the price of the targets. The price of the targets is not specified, but judging from the entrance fees, it looks like 3 cents for targets; probably, however, this rate would be reduced to one who could not compete for prizes. Shooters will be divided into three classes, A, B and C. Class A men will shoot from the 18yds. mark at unknown traps and angles; Class B at known traps, but unknown angles, from the 16yds. mark; Class C men will shoot at everything known from the 14yds. mark. It will be really interesting to see how this plunder shoot, pure and simple, turns out. There are five prizes in each event, one for each class of ties. Ties for first prize shoot off at the original number of targets; all other ties are decided miss-and-out.

There will be an all day shoot at Wellington, Mass., on the grounds of the Boston Shooting Association, for the benefit of the Massachusetts State Shooting Association. The chief feature on the programme is the 100 target handicap for the "Charlestown pig," handicaps 100 to 125 targets, entrance $3. Optional sweep of $1 on each 25 targets; known traps and angles. This "pig" requires some explanation, and we feel that we are qualified to offer same, having an interest in that article (which, by the way, is of brass), to the extent of one quarter of a dollar. The pig is hollow, and is built somewhat on the plan of a nickel-in-the-slot machine; that is to say, it has a slot, but is built for quarters only. When we saw it last it was in the hands of Capt. E. B. Wadsworth (Puck) in a car on the suburban line, from Montpelier to Barre, Vt. At a rough guess, the "pig" will hold probably $30 or $40—maybe more—and, as we understand it, it is now filled with quarters (for nothing less and nothing more passed through the slot), and is ready to be disposed of as per programme issued for the shoot.

On Monday of this week, Sept. 13, we had the pleasure of meeting Barney Worthen, of Charleston, S. C. Barney dropped into Von Lengerke & Detmold's store about 11 o'clock on the above date, and that's how we came to run across him. There are few, if any, better shots than Barney when it is day and when targets are being thrown. And judging from what we learned, it is his day pretty often just now. On Aug. 29 last he broke 122 out of 125, and in a strong cross wind at that; but Barney is quite capable of such a feat; witness his shooting at Savannah, Ga., on both days of the Interstate Association's tournament last May. He expects to leave for home on Wednesday of this week.

In our report of the trip of the New York contingent to the Montpelier, Vt., Interstate tournament, Aug. 25-26, we made an error in stating that the members of that contingent were the guests of Mr. W. L. Stone during their stay in Burlington, Vt., on the night of the 24th. We made that statement on the strength of the information given us when we went to settle accounts at the Hotel Burlington office on the morning of Aug. 25: "All bills have been paid by Mr. Stone." Mr. Stone, since reading our report of the shoot, has hastened to write us to the effect that he settled the bills, not as an individual, but on behalf of the Lakeside Rod and Gun Club, of Burlington, which organization constituted itself the host of the visitors on this occasion. We take this, our first opportunity, to acknowledge the courtesy of the club in this matter.

The *Arms and Explosives Magazine* of Aug. 2, a publication issued in Great Britain, contains a copy of the British Government's explosives report for 1896. Some interesting information is given in the article in regard to a series of samples of American smokeless powder, supplied by Mr. R. W. S. Griffith for the information of the department: "Four of these powders, viz., American E. C., Hazard, Du Pont and Kings, closely resemble well-known English powders, consisting in greater part of nitrocellulose, mainly of the soluble variety, with the addition of some nitrate of barium and potassium." The report also contains details of the results of tests made with these powders.

We are going to have some trap shooting in this locality before the hunting season sets in in earnest. The New Jersey State shoot, Sept. 28-Oct. 1; the Warwick, N. Y., Gun Club's shoot, Oct. 4-5; the Newburgh annual fall tournament, Oct. 6-8, and the Baltimore Shooting Association's four days' shoot, Oct. 19-22, make up a list that is not to be despised in these dull times. The Baltimore shoot, two days targets, $150 added each day, and two days live birds, $300 added, a total of $500 added money, with $500 guaranteed in the Maryland Handicap, 25 birds, $25, handicaps 26 to 31yds., should draw the boys together from many points a few hundreds of miles apart.

The Interstate Association closes its season for 1897 this week, with the tournament at Portsmouth, N. H., Sept. 15-16. On Saturday last, Sept. 11, we had a short talk with Manager Shaner, and he told us that this season had been the most successful in the history of the Association. The Grand American Handicap opened the ball in March with 135 starters out of 146 entries. Then came the seven target tournaments at Baltimore, Md.; Richmond, Va.; Savannah, Ga.; Mobile, Ala.; New Haven, Conn.; Lewiston, Me., and Montpelier, Vt., respectively. The curtain will be rung down at the conclusion of the eighth, on the evening of Sept. 16, at Portsmouth, N. H.

Our absence from the city for a couple of weeks, and the persistency with which correspondents will mail matter for publication personally, have caused delay in the publication of certain news matter; while other items have reached this office too late to be of any use, owing to their having gone chasing us around the northern part of this State. May we request our correspondents once more to mail *all* matter for publication to Forest and Stream Publishing Company, 346 Broadway, New York. It will reach our desk all right, and if we are absent will be attended to by our understudy.

Mr. C. W. Wisner, Vice President of the Warwick, N. Y., Gun Club, called on us on Monday of this week, Sept. 13. Mr. Wisner had with him a dummy of the programme which his club proposes to issue for its two days' shoot, Oct. 4-5. All that it would be fair to say at present is that it looks very much as if there was going to be a good time for shooters at Warwick on the above dates. Among other things, there is the sum of $50 to be divided as average money among the four or five high guns. All targets are to be charged for at the rate of 2 cents each. Warwick is an exceedingly pretty place, and shooters from a distance could not spend Sunday, Oct. 3 (the Sunday following the New Jersey State shoot), more pleasantly than in wandering around Warwick and viewing its many points of historic interest. Warwick is about one hour and fifty minutes' run from New York on the Erie R. R., so that it is easy enough to get to. It is also a very simple matter to get from Warwick to Newburgh, N. Y., where the shoot commences on Oct. 6; twenty-eight miles on the Erie R. R. is all that intervenes between the two places. The New Jersey State shoot, the Warwick shoot and the West Newburgh Gun and Rifle Association's annual fall tournament thus make up a nice little circuit for the fag end of a season.

A Chicago sporting publication has been telling its readers that there is a strong probability of the Interstate Association holding its Grand American Handicap for 1898 in Chicago. Surely in this case the wish is father to the thought, for we are assured on the best authority that the Grand American Handicap for 1898 will be held in the vicinity of New York, and, as usual, the week following the annual Sportsmen's Association Exposition in Madison Square Garden next March. The actual dates for the big event, and the place chosen for holding the shoot, will be made public in a few days.

The Rhode Island Trap Shooting Association, of Providence, R. I., and the Pawtuxet, R. I., Gun Club, have the right ideas for keeping up interest in trap-shooting in the localities named. Team races between clubs do more to keep the members alive than any number of prizes offered for monthly or weekly competitions. As a result of the contests that have taken place this season between the two organizations named above, several embryo crackerjacks have been discovered, some of whom will undoubtedly we heard from at future tournaments.

W. L. Gardner, of Norwalk, O., is one of those good shots from the Buckeye State who occasionally drop around this way and find time to break a few targets in their spare hours. Mr. Gardner has been doing some good shooting recently, and is booked to shoot a 50-target race with Carl von Lengerke on Saturday afternoon next, Sept. 18, at the Endeavor Gun Club's grounds, Marion, N. J. A good programme of events to suit everybody's fancy will be arranged, a full afternoon's sport being aimed at by the management of the Endeavor Gun Club.

Hon. Tom. A. Marshall, Mayor of Keithsburg, Ill., and winner of the Grand American Handicap last March, dropped into the city on Monday of this week, and shook hands all round. When we asked him if was coming again next March, he replied: "Sure. And there'll be others, too. I suppose it's about settled where it's going to be, isn't it? I was in hopes that we might have it out in Chicago next year, but if it's not to be so, I'll be on hand in time to answer to my name when I'm called to the score."

The Hunter Arms Company, of Fulton, N. Y., has sent us one of its catalogues (second edition) for 1897. It is very neatly gotten up and has plenty in it to interest men fond of the gun. Pages 18 and 19 are devoted entirely to nitro powders, rules being given for loading the same. These rules are based on practical tests made in the firm's own gallery, and will be found both interesting and useful to those who like to load their own shells.

The solidity of the firm of Laflin & Rand cannot be doubted when it becomes generally known that it has recently allowed "Old Reliable" Ed Taylor to start upon his twenty-second consecutive year in its employ! Any firm that can stand twenty one years of uninterrupted intercourse with Ed Taylor, and all the bumps and abrasions incident thereto, must indeed be founded upon something like bed rock. The twenty-second year commenced on Aug. 10 last.

We are in receipt of an invitation to attend a "melon feast of the Glenwood Gun Club, of Newburgh, N. Y., Sept. 16." The Glenwood Gun Club is a young organization, but numbers quite a large body of active shooters among its members. It has a splendid background, throwing targets from a magautrap right against the sky. Trolleys direct from the city run past the entrance to the grounds, within two minutes' walk of the club house.

Now that blackbirds can be secured easily, why wouldn't it be a good thing for Messrs. Daly & Chanfrau to get up a programme of events such as 7-, 10- and 15-bird races, with moderate entrance fees, just to let all the boys have a chance to try their hands at small game? We believe that such a programme would produce a good attendance, and make no charge for the suggestion.

Local papers are talking about a series of three matches that are to be shot in the near future with Grimm and Elliott as principals. All such talk is nonsense; Grimm and Elliott are not matched to shoot any races at all. Both Elliott and Mr. Rice have drawn down their forfeits, the net results of their respective efforts being *nil*.

The signature of some official of the gun club, generally the secretary, is always considered sufficient guarantee for the correctness of the scores sent in. In looking over some scores received a few days ago, we encountered the following foot note ("not for publication, but merely a statement of facts"): "These are true copies of original score sheets. We never 'doctor' our scores."

Messrs. W. D. Hardin, F. S. Crabill and C. B. Randlett, of Council Bluffs, Ia., will hold a tournament Oct. 26, 27 and 28. There will be added money to the extent of $300 for the boys to fight for; but what "boys," we can't say, as programmes are not out just yet.

According to a newspaper item mailed us from out West, Grimm and Gilbert have met at Algona, Ia., during the last week of August, in a race at 100 live birds per man, $100 a side. Gilbert won by 94 to 93.

Here's a new spelling of the word "magautrap," and it's a terror! In its report of the State championship team shoot at Cleveland, O., held the latter part of August, the Cleveland *Recorder* informs us that "morger traps" were used.

Fred Gilbert is after new honors. He has challenged Elliott for the Kansas City *Star* cup, and the match will come off on Friday, Sept. 24, 2 P. M., in Kansas City.

On Wednesday of this week, Sept. 15, the Bristol, Conn., Gun Club "will give an all-day shoot, and one of its famous barbecue dinners."

The regular monthly shoot of the Climax Gun Club will be held at the Crescent Oval on Sept. 22, Wednesday of next week.

SEPT. 14. EDWARD BANKS.

Parker Gun Club on Labor Day.

MERIDEN, Conn., Sept. 6.—Below are the scores made at the Labor Day shoot given by the Parker Gun Club. The weather was extremely hot, and several other attractions no doubt kept many from participating in the shoot, although we had a very good number, and some very fair shooting was done, as the scores show for themselves:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

FORESTER GUN CLUB, OF NEWARK.

Sept. 6.—The Forester Gun Club, of Newark, held a holiday shoot to-day at targets, by way of celebrating Labor Day. Thirteen events, all at 10 targets, were decided. The styles of shooting were: Nos. 1, 4, 7 and 10 at known angles; Nos. 2, 5, 8, 11 and 13 at unknown angles; Nos. 3, 6, 9 and 12 at reversed order. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

H. E. WINANS, Sec'y.

LABOR DAY AT MARION.

Sept. 6.—The annual Labor Day shoot of the Endeavor Gun Club was held to-day. The main event was the race for the Austin cup, 100 targets per man, expert rule, 147 handicap system prevailing. This handicap is worked as follows: The high man's figures set the highest possible; all those below him are allowed to shoot at as many extra targets as constitute the difference between their respective totals. For instance, Wolstencroft broke 90 and Capt. Money 82; Capt. Money's allowance was, therefore, 8 extra targets; he broke these and thus tied in the first round. Wolstencroft won the cup strictly on his merits, defeating sixteen competitors. The totals, together with the handicaps, shoot-offs, etc, are as below:

	1st 25.	2d 25.	3d 25.	4th 25.	Allowance.		Shoot off at 25 targets.	Allowance.
W H Wolstencroft	..	..	..	90	.....	—90	23	.....
N E Money	..	..	..	87	111	—90	20	110
147	..	..	..	87	111	—90	18	10
F Van Dyke	..	..	..	85	11111	—90	20	110
Capt Money	..	..	..	82	11111111	—90	18	11110

G H Piercy	17	..	..	..	.....		..	.....
L H Fogarty	17	..	..	..	.....		..	.....
W L Gardner	16	..	..	..	.....		..	.....

The above table shows how the shooters dropped out; some at the end of the first 25; some when 50 targets had been shot at; and so on. The scores of the allowances are given in detail. It will be noticed that in the shoot-off, Noel Money, Van Dyke and Capt. Money each lost their last target, when the breaking of that target would have tied Wolstencroft.

A series of 15-target events, unknown angles, 13 in all, were decided during the day, a total of about 7,000 targets being thrown from the two sets of traps. Scores were:

FREEHOLD DEFEATS THE ENDEAVORS.

Sept 10.—Owing to very short notice, the Endeavor Gun Club, of Jersey City, was unable to get together more than six men for the return match with the Freehold (N. J.) Gun Club. The two Piercys, father and son, and Ed Taylor were among the notable absentees. The match took place on the grounds of the Freehold Gun Club to-day, the Endeavor's representatives leaving Jersey City on the 11:30 train. On their arrival in Freehold they were met by Messrs. Henry Davies and J Laird, delegates from the home club, who conducted the visitors to a restaurant, where a dinner was set before them, the visitors' money being refused at the cashier's desk. This hospitable treatment was a fair sample of what they received at the hands of their hosts during their stay in Freehold; a stay that was prolonged rather more than usual, owing to the change in the time table, that took place to-day, being overlooked. This neglect necessitated a drive by moonlight to Matawan, where a train was boarded.

The teams of six men shot at 50 targets per man, 300 to the team. Freehold scored 249, an average of 83 per cent. The Endeavors' average was 77.3, or 232 breaks out of 300. The score for the series of three matches stands one and one, each club having won on its own grounds. The rubber will be shot on neutral grounds at some near date. Scores follow:

Freehold Gun Club.

AT ELKWOOD PARK.

Aug. 28.—The Pennsylvania Club cup was the main feature on the programme to-day at Elkwood Park This event was at 25 live birds, $25, handicap, cup and 40 per cent. of the purse to the winner; 30 per cent. to second and 20 per cent. to the third; ties at 5 birds.

Fred Hoey won with a clean score, taking the cup and $90 as a reward for his good work. Welch, Murphy and Ballard all tied for second and third moneys with 24 out of 25, each man losing 1 bird dead out of bounds. The three agreed to divide the money, drawing down $37.50 apiece. The scores were:

Fred Hoey (28)	2222222222212222222222222—25
R A Welch (30)	2221222222212222202112222—24
E G Murphy (30)	1211222221202222222122222—24
B Ballard (28)	2222 2211222221220212 221—24
Capt Money (28)	1220102121112210122112021—21
Dr Gagnon (26)	1112112111011011011221101—21
P Daly (29)	1202220011222122222222222—22
H Yale Dolan (22)	2112 2122220220 0
E Toland (27)	1200122102222 10

In a 10-bird race Hoey (29), Gagnon (26), Daly (29) and Ballard (28), all tied with 10 straight. On the shoot-off Hoey and Gagnon divided.

A $5 miss-and-out was productive of a long contest. At the end of the eighth round six out of the original nine starters were left in. Toland (27) was the first to drop out, losing his 9th bird. Gagnon (26) was the next to fall out, but his time did not come until he had scored 16 straight, his 17th bird getting away from him. Then Yale Dolan (29) dropped his 18th, Edgar Murphy (30) following suit in the nineteenth round. This left Welch (29) and Ballard (28) to divide the purse, each having clean scores of 19.

Sept. 3.—The Oakland Handicap, scheduled for to-day at Elkwood Park, was won by Edgar Murphy. Murphy, however, did not have an easy thing of it, as he was tied for first money and the cup by Welch and Daly. Each man had scored 19 out of 20. They shot off miss-and out, Daly losing his 4th bird and Welch his 9th. Murphy thus won the cup with a total score of 28 out of 29 from the 30yd. mark. Scores were:

		Ties.
Winston (30)	122•22010•22222•2222—15	
Welch (30)	2211211•2221•2211222—19	111121220

White (27)	0102222211211221110 0 -16	

Sept. 4.—R. A. Welch was the winner to day in the main event at Elkwood. He won the Labor Day handicap with 24 out of 25 from the 30yds mark. Walter Patten (26) and Edgar Murphy (30) tied for second money, Patten winning by scoring 5 straight. Scores in this event were:

Welch (30)	2221212122212122222202221 1—24
Patten (26)	1•2122221120112120 2•21222 22

Daly (29)	0120221220222•12222221 0•22—19
Murphy (30)	1222110212221102222 2•1222 —22

In a race at 10 birds, $10, Murphy won first money with a straight score. Four men tied for second money, viz., Daly (29), Patten (26), Welch (31) and Hoey (30), each having scored 9. On the shoot off, miss-and-out, Daly won in the 9th round. Patten lost his 9th, Welch his 8th, and Hoey his 3d.

Sept. 6.—Two big races were scheduled for to-day (Labor Day) at Elkwood Park. The first was the Holiday Handicap, at 20 pigeons; the second, "The Labor," a mixed event, 8 pigeons and 12 blackbirds. The Holiday Handicap was won by Bland Ballard, after a long struggle with Welch and Daly. Each man scored 20 straight as a starter; they then shot off at series of 4 birds. Daly (23) lost his 11th pigeon in the ties, Welch (30) going out in the next round. Ballard scored his 12th tie bird, making his run 32 straight, and won the cup In "The Labor," Daly (29) scored 20 straight alone. Scores in the Holiday Handicap were:

Holiday Handicap, 20 birds, $20; three moneys, 50, 30 and 10 per cent. Ties at 4 birds:

		Ties.

P Morris (25)	6	8	14	Fred Hoey (29)	7	6	13

Sept 7.—The six-handed match shot to-day on the Elkwood Park grounds was sufficiently close to be entirely interesting. Edgar Murphy, the winner, and P. Daly, the runner-up, both did some excellent work. Murphy ran 42 straight before he missed, but he then lost his 43d and 46th birds. Daly ran 39 straight, but lost his 40th and 41st birds, going out with 48, tying Murphy. On the shoot-off at 10 birds, Murphy won with 9 to 7. Bradley also shot well, scoring 46, and running 46 out of the last 27 shot at. The stakes were $10 per man, second to save his stake. Scores in detail follow:

		Ties.

LOUIS F. SCHILLINGER, Sec'y.

WALSRODE GUN CLUB.

Sept. 6.—Below are the scores made to-day by members of the Walsrode Gun Club Among the events on the programme was a prize shoot at 50 targets per man, known traps and angles $1 entrance. There were two prizes, viz., first prize of 100 loaded shells, and second prize, 50 loaded shells, donated by Henry Rheinhardt. The club also gave each member 50 targets and 50 shells free of charge. The first prize was won by Robert Baar, the second by Jacob Alexander. There was no happier man on the grounds than our friend Jac, when he beat out *our* "lit le sure shot" He is thinking of shooting a race shortly with the said little sure shot. The club will have a big shoot on Nov. 2, and all the members intend to be right in it.

The scores in to day's events were:

WHITE FELT WAD.

We have received a copy of the programme for the three days' tournament to be held at Watson's Park, Chicago Sept. 22–24. The programme for each day is as follows: Live birds: 7 birds, $3.50, three moneys; 10 birds, $5, three moneys, or over nine entries, four moneys; 15 birds, $10, four moneys. To the purse in this last event will be added 20 per cent. of the net purses in the first two events. The last event on the live-bird programme will be a miss-and-out, $2. Birds will be trapped at 20 cents each in this event, but will be charged for at the rate of 25 cents each in the first three contests, the price of the birds being included in the entrance fee. A full target programme will also be shot off each day in addition to the live bird programme. The schedule of events calls for 155 targets, at an average entry fee of 10 cents per target. Targets will be thrown at known and at unknown angles All ties in all events will be divided. Black powder is barred, but all guns shoot from the same mark.

Programme for New Jersey's State Shoot.

THE programme for the tournament to be held at Clifton race-track, near Passaic, N. J., Sept 28-Oct. 1, under the auspices of the New Jersey State Sportsmen's Association, is now ready for those who want to look at it. If you have not received one, write to the secretary of the Association, W. H. Huck, Rutherford, N. J., and get one, or else, do the next best thing, read FOREST AND STREAM'S brief synopsis of the good things in store for shooters on the above dates.

THE STATE EVENTS.

There are two distinct schedules of events for each of the first three days, State events and open events. For residents of the State of New Jersey, who are also members of the State Association, or members of clubs that are members of the Association, there are four trophy contests, viz: No. 1, the individual championship of the State at targets, 25 targets, unknown angles, $2.50 entrance; the trophy for the winner is a handsome cup presented by the American E. C. & Schultze Powder Co, Limited; No. 2, the three men team championship of the State at targets, 25 targets per man, 75 to the team, $7 50 entrance per team, unknown angles. The trophy is a cup donated by Mr. Reed, proprietor of Taylor's Hotel, Jersey City; the individual championship of the State at live birds, 15 live birds per man, $7.50 entrance, birds included. The medal emblematic of this championship is now held by W. Fred. Quimby, of New York, who will reap the benefit that is derived from the net purse; No 4, the three-men team championship of the State at live birds, birds included; by a peculiar slip the number of birds per man has been omitted from the programme. The conditions call for 10 birds per man, or 30 to the team. The trophy emblematic of this championship is now held by the Jersey City Heights Gun Club.

On the target days, Sept. 28-29, there are other events open only to members of the Association. On each day there is a 25-target event for valuable merchandise prizes. There are also two 15-target events each day, $1.50 entrance, and a 20-target event, $2 entrance, with $20 added to the purse.

The above completes the programme for the State events.

THE OPEN-TO-ALL PROGRAMME.

On the first two days—the target days—there is a full line of events on the open set of traps. Nos. 1 and 4 on the programme are 15-target events, $1 50 entrance; Nos 2, 5, 7 and 8 are 20-target events, $2 entrance, $10 added to each purse; Nos. 3 and 6 are 25-target events, $2.50 entrance, $20 added to each purse. This makes a total of $80 a day in added money.

On the third day, Sept. 30, the State events at live birds will probably occupy one set of traps for the greater part of the day. Another set of traps will be provided for open events, and the programme for this set is as follows:

Phœnix Introductory: 7 birds, $7, birds included, 4 moneys, 40, 30, 20 and 10, high guns, not class shooting.

Clifton Sweepstakes: 10 birds, $10 entrance, birds included, high guns, not class shooting. The number of moneys into which the purse will be divided will be determined by the number of entries received. This is fully explained in the programme. It will be sufficient to state that it is high guns, not class shooting.

Passaic Sweepstakes: 10 birds, $10 entrance, birds included, high guns, not class shooting The number of moneys into which the purse will be divided will be determined by the number of entries, as in the Clifton sweepstakes.

On the last day there is but one event for decision: The Jersey Handicap, 25 live birds, $25, birds extra, $500 guaranteed to the three high guns. All surplus will be added, and will be divided after the manner in which the Interstate Association divides the surplus in its Grand American Handicap. Provision is made on that basis for all entries up to fifty; should there be more than fifty entries, the surplus derived from all entries over that number will be added to the $500 already guaranteed to the three high guns. We like this plan very much, and we think that a careful perusal of the details of such a division of moneys will recommend itself very strongly to all who like to shoot in such races. Entries accompanied by $10 forfeit should be mailed to W. H. Huck, Rutherford, N. J., or may be made up to 6 P. M. on Sept. 30 at the cashier's office on the grounds. Post entries may be made on payment of $5 extra up to the conclusion of the second round. Two sets of traps will be used for this event.

All purses in the target events will be divided under the Rose system. In 15 target events there will be four moneys, with ratio points of 6, 4, and 3 to 2. In 20 and 25-target events there will be five moneys, with ratio points of 8, 5, 4, and 3 to 2.

The full list of merchandise prizes could not be gotten ready for the programme, but it will be distributed freely at the grounds, and an effort will be made to place a list in every shooter's hands

It is really impossible with the space at our disposal, to tell how to reach the grounds; but we can assure everybody that it is not a hard matter to get to Clifton race-track at all hours of the day. Shells should be shipped in care of Colin R. Wise, Passaic, N. J., who will see that they reach the grounds safely. There is ample hotel accommodation at Passaic and nearby cities, while the run to New York can be made in 40 minutes. For the accommodation of shooters, the Erie R. R. will stop several trains, specified in the programme, within a few minutes' walk of the traps. A conveyance will be on hand at that point to carry guns and shells to the grounds free of charge.

Feeling the inadequacy of this notice, we strongly recommend all who intend coming to the Jersey State shoot, to write at once to the secretary of the Association, Mr. W. H. Huck, for a programme.

ON LONG ISLAND.

NEW UTRECHT GUN CLUB.

Sept. 4.—To-day's regular club shoot of the New Utrecht Gun Club was well attended. Gus Grieff scored a double win by taking first prize in Class A in the club shoot, and winning outright the Bennett cup Dr. O'Brien won in Class B in the club shoot Scores:

Club shoot, 25 targets, unknown angles:

G. E. POOL, Sec'y.

BROOKLYN GUN CLUB.

Sept. 11.—The regular weekly shoot of the Brooklyn Gun Club was well attended, notwithstanding the extremely hot weather A special feature of these weekly gatherings at Union Course, Brooklyn, is the prize handicap event at 25 targets per man This week the chief prize was a cartridge case to hold 100 shells. The winner to-day was C. W. Dudley, who shot a great gait, overcoming the hoodoo that has hitherto spoiled his efforts at the magautrap of the Brooklyn Club. Among the visitors was W. L. Gardner, of Norwalk, O., a gentleman who has had but a short career at the traps, but who bids fair to give some of the Buckeye crackerjacks a good deal of trouble in the near future when it comes to breaking bluerock targets Below are the scores made in the main event:

C W Dudley (2)	01111111111111111111111101	—25
E Banks (0)	11111111111111111111111	—25
C von Lengerke (3)	11111111101111110111011111111	—25
F A Thompson (4)	11110111101111101111111011111	—25
W L Gardner (0)	11111111111111111011111	—24
L T Williams (3)	11111111101111011111011111001	—23
J S S Remsen (0)	11110111111111011111110111	—22
C C Beveridge (3)	11110111101101111101111100	—21
*Dr Littlefield	11011101110111111111111100	—20
*E A Althus	11101111111011110111110011	—20

* Did not shoot their allowance, having no chance to win.

On the shoot-off, under similar conditions, Dudley broke 21, Banks 21, Von Lengerke 17, and F. A. Thompson 16. Thus Dudley won without any trouble.

Dr. W. P. Brown, secretary of the Itasca Gun Club, Grand Rapids, Minn., writes us as follows: "Some time since, I mailed you a postal card stating that 'There will be a hot time in Grand Rapids, Itasca county, on Oct. 29-30, 1897.' I now wish to state that the Itasca Gun Club will hold its first annual tournament on the above named dates. We will try and give to the sportsmen that attend a royal good time, not only at the tournament, which has a goodly number of prizes offered, as well as a large amount of added money; but after the second day's sport is over, those who are anxious to kill a deer or moose will have an excellent opportunity to do so, as our new law allows the killing of antlered moose or caribou from Nov. 5-10, 1897. Any person desiring any information relative to the shoot, or to the hunting and fishing in Itasca county, or in any of the surrounding country, may obtain the same upon addressing the Secretary, Itasca Gun Club, Grand Rapids, Minnesota."

St. Paul Twentieth Annual.

First Day.

ST. PAUL, Minn., Sept. 7.—In the wide amphitheater of the basin-like valley at the fair grounds between the twin cities, lit by a blazing sun and swept by warm though energetic gusts of wind, the St. Paul Gun Club to-day began the twentieth annual tournament of its long and honorable life as one of the representative shooting bodies of the West. All around the club house, at the rim of the flat, hot valley, there surged, as each year there surges, the multifold life of the annual Minnesota harvest festival, the State fair, which brings so many thousands together from the various corners of the Northwest. This annual fair is something taken soberly by the hardy, brown men who make up the attendance, and perhaps the festival of harvest time has an import not caught by those who have not lived through the short, blazing summer, and faced the long and icy winter of the Northwest. Each year the twin cities, those two wonderful cities, which are the taking-off place for the jump across the plains, hold open house for the men who have stacked their wheat and want a little playtime. Each year the carnival is held for out dweller and inlander. And each year the gun club holds its tournament as one of the expected features of the fair.

The tournament this year had rather more than the usual flabby interest which goes with the typical trap shoot, the best of which is usually the least interesting, because each is like all others The item of "professionals barred" at least left room for discussion, which is to say, it offered an item of news. The shoot was one, therefore, at which one saw strange faces, heard new names. If there is anything better than this kind of a shoot, it is more of them.

To-day twenty eight men out of forty who might be classed as tournament possibilities shot straight through the programme for the day, thus making a showing not at all bad for amateurs. With the scattering entries of the few who went in for one or two events, the entire list of shooters present ran over fifty. Among those who, for one reason or another, did not finish the ten events, were Messrs. McHale, Schaefer, Kennedy, Wells, Opsal, Novotny, Brown, Barnes, Walker, Walz, Baldwin and Jewell. Some of these were assisting in the management, some were late and obliged to go away early by reason of business duties. Some quit because they thought they couldn't shoot well enough. Among these one of the stand-bys, Mayor H. B Jewell, of Wabasha, who came to the shoot with a brand new gun whose curves he finally concluded he had not yet mastered sufficiently well to enable him to hazard his chance of re-election as mayor by going on record with scores below the Wabasha standard of excellence. Mayor Jewell suppressed his scores, packed his gun, and hurriedly started home to square it with his constituents

High average for the three days was the honor most coveted and a pretty race for the prize, a model '97 Winchester shotgun, was witnessed, the top score, 136 out of 150, being made by a new man, Martenson, of Britt, Ia., a boyish-looking youth from the land of coon and chickens. The secretary of the club, Mr. H. C. Lawrence (Catamaran), ran second; Mr. Shattuck, of Minneapolis, third; Mr. C. E. Robbins, the hot shot from Fargo, N D., fourth. A list of twenty odd average prizes was offered for the high guns.

The conditions of special note were the Rose system, four moneys, 10 and 12-gauges to start at 16yds, each day, winner of first in any event to fall back 2yds. in next, and a double winner to fall back 4yds., no handicap exceeding 20yds. All events except at doubles were unknown angles. Bluerock targets were shot and two sets of traps were at hand, though the second set was not much used. The running of the shoot was on the whole good, though the records were split into three different books, the most desired of which was always sure to be absent, so that full reference scores were unobtainable even by the secretary himself. A record book and three sheets of carbon would have made the shoot a joy forever, but as I said, we don't want too much uniformity when we are looking for news.

Among the visitors from some distance should be mentioned Mr. Royal Robinson, secretary of the Limited Gun Club, of Indianapolis, who will go a long way to attend an amateur shoot. Mr. Robinson's name I mention with joy and pride, as he is the only man I have ever been able to discover who thinks the way I do, to wit: that trap-shooting should be a sport and not a business. We are going to elevate her about the same time the Cherry sisters elevate the stage.

As the columns of FOREST AND STREAM have shown, Minnesota leads the Union for its lady shooters, by which term is not meant merely dear creatures who can pose, squeal and pull a trigger, but ladies who can go into the firing line at a tournament and more than hold their own. Mrs. Day, of Duluth, was not here, but Mrs Shattuck, of Minneapolis, shot in a few events very creditably. Mrs. Shattuck will go in for the State medal competition on the last day, and is not without a show for it. In the club competition in the Minneapolis Gun Club she won one of the season prizes and came within reaching distance of winning all three of them.

The distribution of the regulars of to-day is as follows: St. Paul, Holt, Hirschy, Ramaley, Monk, Wallace, Bennett, Daly, York, Catamaran, Burk; Minneapolis, Shattuck; Duluth, Nelson and Finn; Indianapolis, Robinson; Park Rapids, Minn., Taber and Cram; Bismarck, N. D., O'Shaughnessy; Fargo, C. E. Robbins; Columbus, Wis., Derring; Osage, Ia., Petit and Colby; Meckling, S. D., Spatz and Taylor; St. Louis, Clark; Britt, Ia, Martenson; Kingsley, Ia., Higgins; Crookston, Cowing.

Following are the scores of those who shot through the day's programme, with total for each:

Events:	1	2	3	4	5	6	7	8	9	10	Broke.
Holt	10	13	8	19	12	16	7	12	15	10	122
Hirschy	7	14	8	17	11	13	10	11	17	14	122
Nelson	7	9	9	13	13	14	7	13	14	13	112

Finn	4	10	8	15	13	19	10	13	18	7	117
Burk	8	13	7	18	13	17	10	14	13	12	125
Shattuck	7	13	8	20	12	17	9	11	19	13	129
Cowing	6	11	9	18	10	17	7	13	12	11	113

Second Day.

The weather continued hot, and the wind, coming from behind the score, whipped around the ends of the buildings in a way that made the targets dodge and dip in most erratic ways. The targets were thrown low and hard, and the shooting was by no means easy. The regulars held up remarkably well, twenty-two out of the twenty-eight finishing the programme. Martenson, the Iowa boy, fell 5 birds behind his score of the day previous, though he still went out 3 birds to the good of Lawrence (Catamaran), who pounded away steadily all day and was evidently out to close the gap and win the average. Derring, the Columbus, Wis., man, climbed up into third place, and Pettit took fourth on the two days' total. Young Hirschy, the obliging cashier, found time to shoot, and ran up into fifth place. Several new shooters took a hand at one time or another, so that, all counted, the number of guns actually engaged at the shoot is a large one.

Among the spectators were three deaf mutes, whom we may suppose to have been the happiest individuals there. One of these, Mr. Chas. Thompson, of St. Paul, is a wealthy man and a shooter. He shot in a number of events and shot very well. The puller watches his motions closely, and seemed never to balk him. A slight distension of the cheeks and a faint and inarticulate sound are the only other signs by which his intention of calling "pull" can be determined.

Two lady shooters were at the score to-day, Mrs. Johnson, of Minneapolis Gun Club, and Mrs. Murray, of Stillwater. The latter shot in only one event. Mrs. Johnson received much applause when she stepped from the score with 14 out of 15 to her credit. She shoots very calmly, with immobile features, and apparently with no nervousness whatever. Her position is very good, and her time on the targets even and prompt, few at the score breaking their birds closer in than she Mrs. Murray was handicapped by a strange gun, obviously too crooked for her, yet her performance was very good, 11 out of 15.

The perils of trap shooting were shown in the instance of Mr. Royal Robinson, who, while approaching the score, was accosted by a red-headed and cross-eyed boy, who offered him a "lucky stone." Immediately after this Mr Robinson's gun got out of order, and he was obliged to lay it aside. Borrowing another, he had shot it but a few times before the fore end fell off, and refused to stay on any more while in his hands. Beware red-top boys, unless of known vintage and of ocular rectitude.

Following are the scores of the regulars to-day, with total of each for the two days:

Events:	1	2	3	4	5	6	7	8	9	10	Broke.
Martenson	10	10	18	9	12	20	9	14	19	10	267
Catamaran	10	13	18	10	12	16	9	14	16	13	264
Derring	7	14	17	7	12	18	8	15	20	14	257
Pettit	9	13	14	10	10	19	5	13	18	15	255
Hirschy	9	15	17	8	15	18	9	12	17	12	254
Shattuck	8	13	17	5	15	17	9	13	15	12	253
Robbins	9	14	17	6	14	14	8	11	17	13	251
Cram	5	15	18	6	11	18	7	12	15	10	249
Taylor	9	14	16	9	10	14	9	11	18	14	246
Burk	9	9	14	10	13	16	8	13	15	11	243
Bennett	9	13	18	7	12	16	8	10	18	12	240
Clark	9	12	15	9	11	17	10	14	15	10	238
Ramaley	9	13	17	9	14	16	5	11	15	10	237
York	7	11	16	8	12	17	8	13	15	11	237
Baldwin	7	11	9	7	11	17	9	12	16	13	336
Taber	9	14	12	8	11	15	7	12	17	15	231
Holt	10	11	16	5	12	14	7	10	11	10	228

Colby	7	11	14	7	11	15	7	11	14	10	226
Wallace	6	12	16	6	9	13	6	6	17	10	209
Walker	5	9	10	8	13	12	9	9	14	9	205
Monk	4	7	10	6	11	14	8	7	14	12	191

Third Day.

The morning was hot and bright, but at about 3 in the afternoon there came one of the sudden changes in weather of which the Northwest makes a specialty. A stiff bank of clouds came up in the west, and the thermometer dropped swiftly till the whole crowd was a shiver. Ladies put on the coats of their escorts, and the men hunted up their sweaters. At 6 o'clock heavy rain began to fall, and the tournament was brought to an untimely suspension As there seemed plenty of time, there was some delay after the close of the open programme, so that it was late when the first shooter went to the score in the State event for the individual championship, at 26 singles and 12 pairs. By the time the singles were run off the light began to fail. Each shooter was directed to shoot 3 pairs down, and as this progressed the background grew very bad. In the second call of this order rain began to fall, but when it temporarily ceased shooting was resumed. In the third call the end came, and a black rainstorm broke over the grounds, ending the light and the shoot, so that all that was left was a hurrying and bedraggled mass of humanity struggling for place on the cars. The fair grounds were crowded, and the finish of the day was far from pleasant.

This untimely happening made it necessary to carry the State diamond badge over to another day, and the ticklish question arose as to what was just in the premises, as of course the conditions were harder this evening than they would be in the morning of the next day. It was finally agreed to begin the shooting at the middle of the doubles, thus throwing away that part of the third round of 3 pairs which had already been completed. This may work something of a hardship on Dr. H. W. Spratley, who had 12 out of the 18 scored in his doubles, and who was thus forced to throw away 4 out of his last 6, he having scored 3, 5 and 4 respectively in his three rounds. Shattuck, who left the singles with 23—2 behind Dr. Spratley—held him even in the doubles, also scoring 12 out of the 18, and also sacrificing 4 out of his last 6 by virtue of the shoot down. Thompson, the deaf mute, though 4 birds back of the leader in the singles, was high man in the doubles with 13, and was unfortunate enough to lose 5 out of his last 6 by the carry-over. Mr. C. E. Roobins, of Fargo, N. D., was chosen as referee for this event.

Taber, of Park Rapids, won the diamond badge last year, and as he takes the entrance money of this year, it is worth just $100 to him. He courteously paid the entrance fees of the three lady shooters, Mesdames Shattuck, Johnson and Murray, who did by no means the poorest work, even in the doubles. Their shooting at different times during the day was watched with the greatest interest by a very large assemblage that packed the platform and lined the rails. In the badge shoot, Taber, winner last year, and Trent, winner of the year before, fell back of the average, going out of the singles tied on 19.

MARTENSON WINS THE AVERAGE.

Young Martensen, of Britt, Ia., who comes from near the homes of Fred Gilbert and Charlie Grimm, and whom the shooters laughingly dubbed "The Terrible Swede," proved too fast for the field, and held his lead in the contest for the three days' high average. Lawrence (Catamaran, of St Paul) pounded along doggedly, but could not close better than 13 birds back, at second place. The other place-holders changed, Hirschy, of St. Paul, running up into third, and Shattuck, of Minneapolis, pulling into fourth. Derring, of Columbus, Wis., made a grand spurt in the homestretch, with the record run of the entire tournament, scoring 49 out of his last 50; but this only landed him fifth, and 19 birds behind Martenson. There were 20 finishers in the programme, the day's list being 28, 22, 20, a very creditable and plucky showing indeed for an amateur shoot. Indeed it is unlikely that a very large number of the cracks and sure-thing men would have cared to plug along through, after they found themselves 50 or 75 birds behind the procession.

Two special programme events were shot which evoked additional interest, a race at 10 singles and 5 doubles, in which Mrs. Shattuck got into the ties for second place, and a team race, 25 singles, three-men teams, locality open, $15 added money. In this race the three lady shooters, Mrs. Shattuck, of Minneapolis, Mrs. Johnson, of Minneapolis, and Mrs. Murray, of Stillwater, entered as a team, finishing with a total of 40, within touch at least of two other teams, who scored 42.

Following are the scores of the day, those of the regular programme shooters showing also the total of each shooter for the three days, out of 331 targets shot at:

						Broke.
Martenson	10	15	18	13	18	341
Catamaran	8	12	17	11	16	328
Hirschy	10	13	17	14	19	327
Shattuck	8	14	17	14	17	323
Derring	9	11	17	11	17	322
Pettit	7	12	15	11	18	318
Cram	9	7	18	15	15	313
Robbins	8	11	15	11	17	323
Bennett	8	16	15	13	18	310
Taylor	7	14	18	11	14	310
York	9	18	13	14	17	308
Ramaley	9	10	20	13	14	305
Clark	6	11	17	12	16	300
Burk	9	8	12	11	12	295
Taber	7	12	16	12	14	292
Baldwin	5	12	12	12	16	291
Finn	10	12	14	16	15	290
Holt	9	10	9	12	14	282
Wallace	6	14	17	13	15	274
Monk	6	10	12	17	16	252

Ten singles and 5 pairs, $2:

Hirschy	17	Weiland	13
Trent	17	Walker	13
Bennett	16	Paegel	13
York	16	Derring	12
Baldwin	16	Cram	12
Mrs Shattuck	16	Burk	12
George	15	Monk	11
Edwards	15	Spratley	11
Martenson	15	Wallace	10
Shattuck	14	Cowing	10
Ramaley	14	Hamilton	10
Markham	14	Hoch	9
Taber	13	G W B	8

Team shoot, 3-men teams, 75 targets, $6 per team:

Pettit	18	Monk	18
Kabo	19	Wallace	19
Churchill	21—58	Kennedy	15—52
York	19	Edwards	13
Shattuck	21	Ramaley	21
Derring	18—58	Walker	18—52
Spratley	19	Baldwin	19
Murray	17	Burke	17
Taber	21—57	Taylor	16—52
Martenson	17	Paegel	16
Robbins	16	Johnston	14
Trent	21—54	Richter	12—42
Catamaran	20	G W B	11
Hirschy	20	Peterson	15
Bennett	13—53	Troeh	16—42
Mrs Shattuck	16		
Mrs Johnson	13		
Mrs Murray	11—40		

State championship diamond badge event, 50 bluerocks, entrance $6.50, 26 singles and 12 pairs.

1. Diamond badge for one year, and proceeds of same at next annual tournament, 1898.

(Score unfinished, given for singles only.)

Spratley	25	Mrs Shattuck	19
Shattuck	23	Mandigo	19
Kennedy	23	Novotny	18
Upham	22	Mrs Murray	18
Ramaley	21	Block	17
Thompson	21	Cram	17
Hirschy	20	Peterson	17
Walker	20	Burkhard	16
Taber	19	Mrs Johnston	15
Trent	19	McClure	14

Fourth Day.

Rain fell in the early morning, but the weather cleared, so that shooting was resumed in the State diamond badge shoot. As was predicted by many, trouble ensued over the arrangement of the evening before, by which the scores of the last round of 3 pairs were nullified, and the event proved a hardship to the man who apparently had the badge in hand at the close of yesterday. Dr. Spratley had his score of 5 out of 6, in his last round, cut off, and this lost him the medal. This morning he could not gather, and got only 6 out of his 12 birds, 3 out of his last 6, so that he made only 13 total in the doubles, and went out with 38. Shattuck, who was 2 behind Spratley in the singles, gained 3 birds on him in the doubles, and so won the badge with the score of 39. J. P. Upham, the boy shooter, made the best record in the doubles for this morning, 9 out of 12, but this landed him only 37, tied with Mandigo. Next to these was M. F. Kennedy, who ran out with 36.

Shattuck and Manderson, main winners, both used L. C. Smith guns, and the former shot Du Pont powder. Manderson's load not learned.

The club threw 22,000 targets, which at 3 cents, left a good margin over the $575 added. The officers of the club did faithful and efficient work, and are entitled to the thanks of the shooters, although there were regrets, not always concealed in the bosoms of the latter, at seeing all that money made by the management and not divided out among the shooters, to whom the earth and the fullness thereof would naturally seem to belong.

Following are the completed scores in the diamond badge shoot for the individual State championship:

	At 26 Singles.	At 12 Pairs.	T'l.		At 26 Singles.	At 12 Pairs.	T'l.
Shattuck	23	16	39	Walker	20	14	34
Spratley	25	13	38	Ramaley	21	13	34
Mandigo	19	18	37	Thompson	21	13	34
Upham	22	15	37	Hirschy	20	13	33
Kennedy	23	13	36	Cram	17	13	30
Novotny	18	17	35	Burkhardt	16	13	29
Taber	19	15	34	Peterson	17	8	25

Following are the officers of the St. Paul Gun Club: M. F. Kennedy, President; Dr. L W. Lyon, Vice-President; H. C. Lawrence, Secretary; W. L Perkins, Jr., Treasurer; Paul Gotzian, T. L. Wann, B. F. Schurmeier, Directors.

E. HOUGH.

Philadelphia Trap-Shooters' League.

THE fifth tournament of the Philadelphia Trap Shooters' League was held on the grounds of the Keystone Shooting League, near Holmesburg Junction, Sept. 4. There was an excellent attendance, ten clubs being represented by 6-men teams, and one club by a 4-men team, a showing that it would be hard to equal in any other city in the States About 7,000 targets were thrown during the day, two sets of traps being in constant use.

There were several visitors from "outside"; Capt. A W. Money, of the American E. C. and Schultze Powder Co., Ltd.; Ed Taylor, of the Laflin & Rand W-A Powder Co; A. G. Courtney, of the Remington Arms Co; J L. Winston (147), of the Austin Powder Co.; Hood Waters, of Baltimore; I. W. Budd, of Pemberton, N. J.; John Shaaber, of Reading, Pa.; etc.

W. H. W. (the initials under which Billy Wolstencroft shoots) and 147 (the talismanic title of J. L Winston) figured very prominently in the averages for the day. Wolstencroft lost only 11 out of 175 shot at, an average of 93.7 per cent., while Winston shot at 180 targets, losing only 12, an average of 93.3. John J. Hallowell, Hood Waters, Harry Thurman and Capt Money each shot at 240 targets and made averages respectively as follows: 91, 90, 89 and 88.

The team race was productive of some very good scoring. This race was a handicap affair, the Keystone Shooting League and the Independent Gun Club teams being scratch, while the other teams were allowed extra targets to shoot at. Points are scored according to the number of teams that compete, each club being credited with a number of points equal to the number of teams that it defeats. In case of a tie, as was the case with the Keystones and the Penn Gun Club, which tied for seventh place, each team takes half the points, or in the case above cited, 3½ points. At present the standing of the clubs is as follows:

	1st.	2d.	3d.	4th.	5th.	Total.
Florists'	8	5	7	6	9	35
Frankford	2	4	8	9	10	33
Penn	9	7	3	7	3½	29½
Wayne	0	1	10	10	8	29
Independent	10	10	2	½	5	27½
Roxborough	5½	6	5	4	7	27½
Silver Lake	7	8	6	5	1	27
Southwark	4	0	9	8	0	21
University	1	9	4	2	0	16
Glenwillow	5½	3	0	3	2	13½
Forest	3	2	1	½	6	12½
Keystone	0	0	0	0	3½	3½

Scores in the team race were as below, the Frankford Gun Club's total of 163 being reduced to 150, the highest possible:

Frankford Gun Club (195)—Betson 29, Bourne 26, Swartz 26, Redifer 28, Butts 27, Cameron 27—163

Florists' Gun Club (165)—Hallowell 25, S. P. Life 24, Cartledge 27, Smith 25, Burton 24, Anderson 23—148.

Wayne Gun Club (221)—McMichael 32, Daly 25, Soistman 29, Kane 19, McConnell 19, Green 22—146.

Roxborough Gun Club (184)—Pepper 20, McFalls 23, Giles 24, Free 22, Gilmour 24, Blundin 27—140.

Forest Gun Club (221)—Hothersall 27, Worthington 29, Baum 17, Bender 22, Riotte 21, Morrison 20—136.

Independent Gun Club (150)—W. H. W. 25, Landis 24, Ridge 22, Shaaber 24, Wilson 15 Thurman 24—134.

Keystone Shooting League (150)—W. Stevenson 22, Ross 20, I. Wolstencroft 24, J. Wolstencroft 23, Henry 20, Longnecker 21—130.

Penn Gun Club (161)—J. Yost 18, Higginbotham 25, T. Smith 21, Ritter 22, F. Gross 21, P Yost 23—130.

Glenwillow Gun Club (205)—Stumm 27, Butler 20, Weinman 24, Whitehouse 11, Winkler 26, Cowan 20—128.

Silver Lake Gun Club (164) Vincent 26, Hahn 23, Numbers 17, Woodstager 20, Smith 16, Lane 24—126.

University Gun Club (188)—Paul 18, Kane 17, Steel 21, Singer 21—77.

The University Gun Club had only four representatives, so shot at 128 targets instead of the regular allowance of 188 for six men.

Where an allowance of extra targets is allowed to a team, that number of targets is divided by 6, each man on the team shooting at an equal number. But where, as in the case of (*inter alia*) the Frankford team, there was a remainder of 3 targets after a division by 6 had been made, the three first men on the team shot at an extra target each.

PENN.

Bedford Rod and Gun Club.

BEDFORD, Ind., Sept. 7.—The club's shoot this afternoon was marked by the decision of two matches. The first was between Stipp and Braxtan, 50 targets per man, expert rules, for the price of the targets. Stipp won by 2 targets, breaking 44 to 42. The second match was between Sherwood and Thompson, which resulted in favor of Sherwood by 23 to 18.

Three practice events were also decided as follows:

No. 1, 25 targets, unknown angles: Stipp 23, Sherwood 20, Thompson 17, Thornton 15, Norton 15, Palmer 8.

No 2, same conditions: Sherwood 20, Thompson 16, Palmer 11, Thornton 10, Martin 9, Norton 8.

No 3, 10 pairs: Braxtan 14, Thompson 9.

Scores in the individual matches follow:

Braxtan.....1110111111011111111011101111111111111110101110—42

Stipp.....1111111111111110101101111110011111111111111110111111—44

Sherwood and Thompson also shot a race at 25 targets, the result being in favor of Sherwood, as below:

Sherwood.....1111111111111111111110110—23

Thompson.....1110101111010111010101111—18

Next week will see a race between Stipp and Thompson on one side and Braxtan and Sherwood on the other. Conditions: 100 targets per man, five traps, unknown angles, for $15 per side. Stipp and Thompson will also shoot for same sum, same conditions against a team of three men, Sears, Richard and Hatfield. All growing out of a challenge issued by Stipp and Thompson to any two men in this county.

SHERWOOD, Sec'y.

Rhode Island Trap-Shooters.

PROVIDENCE, R. I., Sept. 2.—The second challenge of the Pawtuxet Gun Club for the pennant successively held by the Rhode Island Trap shooting Association against all comers, was shot to-day on the grounds of the latter club, and was won by a close margin of five birds by the Rhode Island Association team. The contest was the sharpest and most interesting of all the matches yet. The contest was anybody's until the last man shot out his string. The Pawtuxet team are to be congratulated for their persistent and courageous determination to win back the much-desired pennant. They have challenged the Rhode Island Club again, and if the terms of agreement can be so construed as to allow their challenge to be accepted this month, the Rhode Island Club will be pleased to grant it, and the match will probably take place the last Thursday of this month Appended is the summary of the score:

Conditions: 25 known and 25 unknown angles:

Rhode Island Trap-Shooting Asso.	Kn'wn angles.	Unkn'wn angles.	Total.	Pawtuxet Gun Club.	Kn'wn angles.	Unkn'wn angles.	Total.
F I Greener	20	21	41	W Sheldon	20	23	43
R C Root	21	20	41	F L Corey	21	19	40
S Winslow	21	16	37	A Hawkins	19	17	36
P Randell	16	19	35	H W Bain	17	15	32
E Whitaker	16	17	33—187	S Greene Jr.	16	13	29—183

J. F. RUSSELL, Sec'y R. I. T. S. A.

Parker's Seventh Annual Tournament.

DETROIT, Mich., Sept. 12.—Parker's seventh annual tournament was not so well attended as some of its predecessors. It seems impossible to get together nowadays one of the old-time gatherings. In the spring of '91, at a shoot given here, the entries in some of the events reached 103. This shows that some of the best tournaments have been held right here in Detroit, but at that time tournaments were not nearly so numerous as they are now.

While the attendance at this shoot was not large, those who were present had a very pleasant time, and were at no great expense. The programme was not such as to draw shooters from any great distance, there being no added money. However, there were some very handsome and valuable prizes, consisting principally of ammunition, trophies, and articles useful to the sportsmen; so that the fortunate ones were well repaid for their trip.

The local shooters endeavored in every way to make it pleasant and agreeable.

On Wednesday night all the visiting shooters were given a yacht ride on Com. Scotten's stanch and handsome little steam yacht Wanda The trip lasted from 7:30 until 12, and as the yacht is capable of doing 14 knots an hour, some idea of the distance covered can be gained. The trip was down the Detroit River, clear into Lake Erie. A perfectly clear atmosphere and a full moon added much to the pleasure of the trip.

CONDITIONS.

The shoot was held on the Pastime Gun Club's ground, a beautiful level strip of ground with ample facilities for accommodating any number of shooters. The background was very good; of course, there may be some who do not agree with us. There were a few trees on the bank of the Detroit River that offered an excuse for some who had just missed a straightaway, though perhaps not a very plausible one.

There were two sets of traps in position arranged on the Sergeant system. These were empires and that kind of targets were used. It will be generally understood that the 21yds. rise style of shooting was after Jack Parker's idea—plenty hard. Perhaps some will recall the efforts of the experts to bankrupt Jack several years ago, when he paid a fixed amount for a place.

THE TALENT AND OTHERS.

There were present Milt Lindsley, his wife, Wanda, and Harry King, of Cincinnati, representing the King's Powder Co. and Peters Cartridge Co.; R. O. Heikes, of Dayton, O, taking care of the Winchester interest and shooting E C.; Jack Fanning, formerly of San Francisco, but now of Batavia, N. Y., Gold Dust's hustling and popular representative; Harvey McMurchy, of Syracuse, who so ably takes care of the Smith gun and its interest; also C. D. Hagerman, of Wymore, Neb.; Thomas Graham, of Sault Ste. Marie, Mich.; Elmer Apperson, of Kokomo, Ind.; J L Head, of Peru, Ind.; W. H. Osmun, Pontiac; D. Carpenter, Battle Creek; C. H. Clark, Wyandotte.

GENERAL AVERAGES.

Seven men shot through the entire programme for the four days, and it follows naturally that Heikes, who led the procession each day, is on top in this respect also. Thereby he adds a little more jewelry to his collection, as an elegant gold button goes with the honor. Fanning is second with the good average 91.2, but only two birds ahead of Graham, who has 90.9. There was a great strugle between this pair for second position. Renick won a button similar to that of Heikes'; this was given to the amateur making the best average in all events, but shooting for merchandise only.

	1st Day.	2d Day.	3d Day.	4th Day.	Shot at.	Broke.	Av.
Heikes	168	167	173	168	720	676	93.8
Fanning	163	161	168	162	720	657	91.2
Graham	156	165	167	167	720	655	90.9
McMurchy	146	155	149	162	720	612	85
Wood	140	158	144	131	720	573	79.5
Renick	142	137	143	141	720	563	78.1
King	121	142	122	116	720	501	69.5

First Day, Tuesday, Sept. 7.

The opening day of the tournament was really all the management could desire, though the attendance was rather light. The principal event of the day was the two-men team race. The scores made by the different teams was a matter of much comment, as well as a surprise to the contestants. Just think of 82 out of 100 winning first, with a combination like Heikes and McMurchy to go against. Then, too, this pair had to be content with second place, as Sailor Sharkey (Fanning) and Graham beat them out one bird. Heikes and Fanning scored 45 each, but their respective running mates scored 37 and 36. By Graham beating McMurchy a bird, Fanning and Graham get a suit of clothes each.

The score in the team race was as follows: Fanning 45, Graham 37—82. Heikes 45, McMurchy 36—81. Corbett 42, Fox 37—79. Parker 43, Wood 34—77. Osmun 43, Scollen 32—75. Head 40, Dewitt 33—73. Renick 36, King 32—68. Clark 34, Milton 31—65. Tuttle 32, Klein 31—63. Quandt 29, Fullbaum 28—57.

The high average for the day was made by Heikes, 93.3; Fanning is next with 90.5. Then comes two amateurs, Graham 86.6 and Head 85.5.

Twenty-six shooters in all participating, and their respective scores and averages are shown in the table appended. No. 5 is the team race; it is not customary to include such events in the general average, but at this tournament one has to compete in all events to be eligible for average money, and that is why we have included this event in computing our averages.

FIRST DAY'S SCORES.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.
Targets:	15	15	20	20	50	15	25	20			
Heikes	15	12	20	19	45	15	23	19	180	168	93.3
Fanning	13	13	18	19	45	14	23	19	180	163	90.5

Slotts	..	..	..	..	13	..	15	..	75	...	....

Second Day, Wednesday, Sept. 8.

The feature of to-day's programme was the 50-bird race for the handsome Gillman & Barnes medal. The conditions governing this event are 50 targets, 21yds. rise, use of both barrels. This proved to be quite a contest, and was eventually won by Graham on the great score of 47 out of 50. This is very likely the record on this kind of shooting, and it is safe to predict that it will be a long time before it is equaled or excelled. Graham was in great form in this event; he ran his first 24 straight and then dropped his 25th. Then again he lost his 50th target in his last string of 25. McMurchy was also in evidence in this event, as he scored 46.

Heikes again leads in the average for the day with 1 less than on the previous day, though his average for this day is more creditable, as 50 of these targets were 21yds. rise. Then, too, his average is somewhat greater, as he scored 19 out of 20 in two extra sweeps, one of which was a double event at 5 pair. He has one run to his credit of over 70 straight, as he scored 79 out of his last 80, including the extras above-mentioned. Graham shot in elegant form throughout, and is second with 91.6. Fanning is third with 91.1, and Wood is fourth with 87.7.

The weather was bright and clear, but unusually warm for this latitude at this season of the year.

Thirty-six shooters participated, a number somewhat greater than yesterday. The following names do not appear in the table, as they shot only in one event or failed to make an average of 55 per cent.: Wanda, Anspack, Genecke, Lyman Kemp, Tuttle, Esper, Johnson, Cady, Eron and Stoll.

The programme for to-day was precisely like that of the previous day, with the exception that the 50-bird event was shot under different conditions, a mention of which has been made above.

SECOND DAY'S SCORES.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.
Heikes	15	13	19	17	43	15	25	20	180	167	92.7
Graham	15	13	17	18	47	14	24	17	180	165	91.6
Fanning	14	14	20	19	41	13	24	19	180	164	91..
Wood	13	14	17	16	43	15	25	15	180	158	87.
McMurchy	12	13	13	15	46	13	21	17	180	155	86.6
Head	15	12	19	15	40	11	18	14	180	144	80
King	12	13	16	16	34	13	20	18	180	142	78.8
Renick	14	7	19	20	35	11	19	12	180	137	76.1

Mercier	..	..	..	..	..	24	13	18	15	110	70	63.7
Cicotte	..	..	..	..	30	9	16	14	110	69	62.7
Cavonaugh	..	..	..	..	..	10	14	..	40	24	60
Boyd	..	..	..	..	..	..	12	14	45	26	57.7

Third Day, Sept. 9.

Heikes not only maintained the pace he has set all along, but even cut out a faster clip to-day. In the van, of course, but look at that percentage, 96.1 for 180 shot at. Fanning is second with 93.3, while Graham is third with 92.7. Then comes Schwind with 87.2. The 50-bird event was a handicap event, with extra allowance of birds to shoot at. First prize in this event was a diamond watch charm, donated by the King's Powder Co. Here Heikes was again very much in evidence, as was Graham, also a scratch man. Each of these scored 48, a total greater than any one else could reach, even with their extra allowance of targets. This is one of the few instances where a scratch man won out in a handicap. Fanning, also scratch, scored 47; Fleicher scored 46, and 1 of his 2 extra allowance, which made him 47. Schwind broke 44, and 3 extra ones, so he had a total of 47, too. The tie between Heikes and Graham was not shot off, as Heikes very generously relinquished his claims to the trophy.

The weather was red hot, as the natives here put it. Linen suits and fans were about the proper thing to-day. Quite a number of shooters other than those whose names appear in the table below participated. The following took part in but one event, or failed to make an average of 55 per cent.: Lorenz, Miller, Loranger, Shaw, Clark, Hayes, Bryan, Cooper, Schroeder, Apperson, Wolff, Roche, Slotts, Wanda and Doran.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.
Targets:	15	15	20	20	50	15	25	20			
Heikes	15	14	19	20	48	15	23	19	180	173	96.1
Fanning	15	12	19	19	47	15	23	18	180	168	93.3
Graham	15	12	20	17	48	14	22	19	180	167	92.7
Schwind	15	11	20	15	44	14	20	18	180	157	87.2

Klein	..	..	..	..	34	..	14	9	95	57	60
Chamberlain	..	..	..	..	29	9	..	..	65	38	58.4

Fourth Day, Sept. 10.

The shoot to-day was similar in many respects to that of the previous days, the programme being identically the same; while the weather was, if anything, a little more sultry. As usual, Heikes also was high average. The 50 bird event was a handicap affair, though only one of distance, the scratch man shooting from the 21yds. mark. Therefore, Heikes's score of 46 in this event, which landed him in the duck boat, is really better than it looks on paper. Graham, too, shot well in this event, but lost his last bird, when it appeared to be not a very hard one and when there was no 45. Corbett, with 44, won a half case of hair restorer, as did Marks, who scored 43. There were ten prizes in this event; the principal ones are those mentioned above.

Heikes had high average, closely followed by Graham, who was second, a bird behind Heikes. McMurchy and Fanning tied for third place, McMurchy running the last 45 straight, though the table shows the last 60 straight. He, however, made that 15 straight in the sixth event before he shot his last string of 25 in the fifth event.

The aggregate number of shooters participating to-day was twenty-nine. Bryan and T. Cavanaugh shot in but one event. The other Cavanaugh, whose name appears in the table is a thirteen-year-old boy, who handles a gun very well for a boy of his age.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.

North Milwaukee Gun Club.

MILWAUKEE, Wis, Sept. 4 —Below find scores of a team shoot at live birds, held on our grounds, among the members of our club this afternoon. The birds were a fine lot and unusually good flyers. The conditions were: Six men a side, 15 birds per man, 30yds. rise. The contest was very exciting from start to finish; the winning team scored 81, while their opponents scored 77. At the conclusion of the match, there not being enough birds for another score, the losing team challenged the winning team to shoot a match at bluerocks The challenge was promptly accepted, and 10 targets per man was agreed upon, at known traps and known angles This match was also very exciting, being very close. It was finished with honors in favor of the former losing team, thus dividing honors for the afternoon's shoot:

S. M. DUVAL, Sec'y N. M. G. C.

Massachusetts Association.

HAVERHILL, Mass., Sept. 4.—The third shoot, series '97 and '98, of the Massachusetts State Shooting Association, was given on the grounds of the Haverhill Gun Club, in this city Wednesday, Sept. 1.

The day was all that could be desired, and the attendance was a fairly good one, though not what had been anticipated. Nearly forty shooters participated in the shoot at some time during the day, although some of them were a trifle late for the whole programme. The first contingent of shooters from out of town arrived at the grounds by 9:30 A. M. and at 10 o'clock, as had been announced, shooting commenced.

The programme called for 240 targets, and it was shot straight through, and two or three extra events as well, besides those on the card.

At 1 o'clock a bountiful lunch was served by caterer Currier beneath the shade of a tent pitched on the club grounds, which was heartily appreciated by the hungry sportsmen, and then the work of smashing the asphalts was resumed.

Herewith I hand you the events in tabulated form, and the scores made:

Regular programme:

The chief features of interest were in the three-men team race, 10 birds per man; and the individual race at 20 birds, for prizes given by the M. S. S. A.

The scores for the former were as follows:

Boston Shooting Association—Dickey 10, Herbert 10, Leroy 8; total, 28.

Haverhill Gun Club—Stevens 9, Miller 9, Ed George 6; total, 24.

Hingham Gun Club—Henderson 9, Allison 8, Howe 4; total 21.

East Boston Gun Club—H. Taff 7, Bailey 6, Longmore 4; total 17.

In the individual match Dickey and Leroy, of the Boston Club, and Leighton, of the Haverhill Gun Club, tied with a score of 19 out of 20.

The three high guns for the day were Leroy first, Dickey second, Herbert third.

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Leroy	230	215	93.48	Herbert	230	206	89.57
Dickey	230	212	92.17				

GEO. F. STEVENS, Sec'y-Treas. Haverhill G. C.

Match at Cresson Springs.

MOUNTAIN HOUSE, Cresson Springs, Cresson, Pa., Sept. 4.—Below are the scores of a live-bird race shot to day on the grounds of the Cresson Springs Golf and Gun Club between Mr. B. F. Jones Jr., and Mr. C. S. Guthrie, both of Pittsburg, Pa. This was the wind up of our annual handicap shoot. Mr. Jones won by a large majority, scoring 46 to 38.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Sept. 1.—At the regular weekly shoot of the Rochester Rod and Gun Club held this afternoon, Messrs. E. C. Meyer, L. V. Byer and Dr. Weller took part in two live-bird sweeps. The first was at 15 birds, $5, two moneys; the second at 10 birds, $3. Below are the scores, showing the flight of each bird:

Western Traps.

ELLIOTT TAKES DOWN HIS MONEY.

CHICAGO, Ill., Sept 4.—J. A. R. Elliott called at this office this week, and states that he will take down at this date the money deposited in the hands of FOREST AND STREAM—$50—to bind a match with C. M. Grimm for the Cast-Iron badge. He says that he has waited beyond the thirty days' accepting time named in the conditions, and also up to the sixty days' shooting time specified, and that he may now claim the badge as forfeited by Grimm.

Having looked up the conditions of the Cast-Iron badge contests, I find them to read as follows:

CONDITIONS GOVERNING THE CAST-IRON BADGE.

"We, the pigeon shooters of America, hereby agree to put into a purse $25 each man and shoot at 100 live birds per man for the championship of America under the following conditions:

"First—That the shooters who enter this contest subscribe and pay for a badge to be known as the Cast-Iron championship badge of America, said badge to be of no great intrinsic value, but simply emblematic of the American championship.

"Second—The winner of this badge shall be subject to challenge and shall shoot, when challenged, within sixty days from date of said challenge, or forfeit the badge to the man so challenging.

"Third—The man challenging for this badge shall forward to the *American Field*, together with his challenge, as forfeit, the sum of $50, as evidence of his sincerity, and the holder of the badge shall either cover the forfeit and accept the challenge within thirty days or forfeit the badge to the challenger.

"Fourth—The American Shooting Association's revised rules shall govern all contests for this championship, except that no gun larger than a 12-bore shall be used, and the rise shall be 30yds. for all guns

"Fifth—Each contest for this championship shall be shot at 100 live birds per man, for $100 a side, the holder of the badge to name date and place within thirty days after being challenged, and the match to be shot between the hours of 1 o'clock P. M. and 6 o'clock P M.

"Sixth—This badge shall never become the personal property of any man, but shall be subject to challenge as long as America holds together.

"Seventh—In case this badge is challenged for by a resident of any other country than America, the stake to be shot for shall be $500 instead of $100.

"Eighth—The first contest for this medal and championship shall take place at Watson's Park, Burnside, Ill., on Thursday 15, 1894, commencing at 10 o'clock."

I pointed out to Mr. Elliott that he had failed to comply with one condition of the contest for this badge, namely: that requiring the money to be put up in the hands of the *American Field*. He said that this was something which had escaped his memory, as he had not seen the conditions for some time. He added, however, that since he had seen them in full, he would not submit himself to compete in any such "narrow, contracted a competition." "No money of mine shall ever go up in the hands of that paper," said Mr. Elliott, "and if that is the ground on which Mr. Grim fails to answer my challenge, he can keep the cast-iron badge and be cast-iron welcome to it I for one will not recognize a contest or a so-called championship emblem which has not the first principle of an open competition about it. It is necessary these days that the strings be taken off of such things, or they don't go among the shooters. You may say for me that I will not shoot under any such conditions, and that the badge may go where it likes so far as I am concerned. I presume this is why Mr. Grim would not answer my challenge. I never could understand it before. I will go after any kind of a championship emblem in sight but that one."

BUCKEYE-LIMITED, AT DAYTON.

The third inter urban contest between the Buckeye Gun Club, of Dayton, O., and the Limited Gun Club, of Indianapolis, Ind., was shot at Dayton, O., Aug. 31, the race resulting in a defeat for the visiting team, 483 to 465; the conditions being 50 targets per man, known traps, unknown angles, no emblem being up, and no money except the price of the birds. In the first of these pleasant contests, the Buckeyes won on their own grounds, April, 1896. The next race was won by the Limited men at Indianapolis, New Year's Day, 1897. The third event goes to show the Dayton men at least the stronger on their own grounds. A fine time was enjoyed at Dayton by the visitors, the local men entertaining the Hoosiers at a grand banquet.

WEEK'S TRAPS AT CHICAGO.

In its club shoot to-day, Sept 4, Eureka Gun Club, of Chicago, shot all its events on the magautrap, their expert traps having all been stolen from the grounds about a week ago by parties unknown but much desired This sort of "unknown traps" is something the club men don't like, and they will gladly pay anybody who will tell them how to find where they are. The divers performances upon the magautrap are specified below. The attendance was small, many members being now absent shooting in Indiana, Dakota or Minnesota. Stannard, Glover and Morgan were absent, shooting on the Douglas Gun Club team in the *Shooting and Fishing* cup contest. About 1,100 targets were thrown. Following are scores made to-day:

AT OMAHA.

Following were the scores at the weekly shoot of the Omaha, Neb., Gun Club Aug 28:

Crabill	11111101111111111111111111—24
Randlett	11111111111111111111011110—23
Hardin	11111101111111111101111101—22
Beresheim	11111101111111011111111101—22—91

The Du Pont Gun Club, of Omaha made the following scores at its shoot Aug. 30

The Du Pont Gun Club shoot Monday at the grounds was an interesting one. Brucker made the record of the day with 25 straight in a match shoot. These were the scores in the regular club events.

Twenty-five targets: Brucker 20, Beachcomber 21, Salsbury 22, Curtis 20, Townsend 20

Twenty-five targets: Fogg 23, Brewer 22, Young 21, McLeary 15, Humphrey 4, McDonald 11.

Twenty-five targets: Watt 18, Salisbury 21, Dvorak 17, Young 21, McDonald 20.

Teams made up of Ray and Townsend shot what was going to be a 25-bird match, but were tied up to the 3?d bird, and the match was postponed for conclusion at the next shoot

COUNCIL BLUFFS GUN CLUB.

Council Bluffs Gun Club, of Council Bluffs, Ia , made the following scores at its weekly shoot last Thursday:

Randlett (0) 19, Crabill (0) 22, Beresheim (0) 24, Heinrichs (0) 18, Hardin (0) 21, Oliver (0) 11, Hart (11) 19, Stewart (9) 17, Beno (2) 18, Zimmerli (6) 23, Mather (10) 17, Kingsbury (4) 23.

The score of the regular club shoot follows: Crabill 17, Randlett 15, Beno 10, Beresheim 18, Oliver 7, West 16, Kingsbury 16, Heinrichs 14, Zimmerli 12, Hardin 17.

EAST END, TOLEDO.

The East End Gun Club, of Toledo, O., held its regular shoot Monday, with the following results: First event, 25 birds: Hess 18, Eiben 15, Specht 18, W. Jennings 23, Birdsall 20, Stein 16, Norduff 19, Gardner 17, B. Jennings 20, McCullough 18, Arnds 15 Second event, 25 birds: Specht 12, Hess 22, King 12, W. Jennings 22, B. Jennings 21, Eiben 19, King 12, Norduff 22, Gardner 19, Birdsall 22, Arnds 8, Volk 23.

PLUNDER ON THE RANGE.

On the range in Texas the "merchandise" idea has arrived all right, as witness the following scores at the last shoot of the Burnet Gun Club, of Texas, at Burnet, Aug 26:

G. Munn 13, wins sack of flour. Johnson 16, wins pair of pants. Proctor 17, wins $10 cash purse. Kinkead 13, wins fifty loaded shells. Harrell 11, wins silk handkerchief. Breazeale 13, wins $1 worth of coffee. Hubbard 13, wins box of fine cigars. Darby, Sr., 11, wins subscription to Burnet *Bee*. Moode 4, wins 50 cents worth cabbage leaf cigars. Grove 1, wins one box toilet soap (booby prize). S. Munn 14, wins one pair fine shoes. Galloway 7, wins pocket knife. Boggess 9, wins 50lbs of ice. Darby, Jr., 16, wins fine hat.

The last named, Darby, Jr., is a small boy, not over fourteen years old, weighs 69lbs., is 43in. high, and is one of the best shots in the club.

AT KEOKUK.

At Keokuk, Ia , the Blue Rock Gun Club held its monthly shoot Aug. 30, scores as below:

Five birds: Schwiete 4, Johnson 4, Downing 3, Goins 3, C. Woodbury 2.

Ten birds: Schwiete 8, Goins 8, C. Woodbury 6, Downing 6, Johnson 5. In the shoot-off at 5 birds: Schwiete 5, Goins 4.

Sept. 4.—At the last weekly shoot of Calumet Heights Club the attendance was fifty-six. By evening over 1,500 targets had been shot. The wind came in strong toward the score, so that the flights were erratic, though good scores were made in spite of the unfavorable conditions. On Chicago Day, Oct. 9, there will be a big extra prize shoot, live birds and targets, at the grounds of this big active organization Suitable valuable prizes will be put in competition. Following are the scores of Aug 29:

Medal shoot was at 25 targets, unknown angles: Turtle won in class A, Norcom in class B, and Harlan in class C:

Class B.

Norcom	11111111100111011111111111—22
Marshall	10110111111011111100111111—20

Class C.

Harlan	11101100110111111111111111—21
Schmidt	10100111111001111111110110—18
Davis	01000100110100101101011101—12

Two team races were also shot, the second being really the shoot-off of the tie in the first race. Lamphere's team finally won with 85 to 79, after both teams had made far better scores in the original match. Scores, 25 targets per man, unknown angles:

Lamphere's team—Lamphere 24, Norcom 22, Metcalfe 21, Marshall 18, Chamberlain 18—103.

Paterson's team—Paterson 23, Knowles 22, Young 21, Harlan 19, Schmidt 18—103.

Shoot-off: Lamphere's team—Lamphere 19, Chamberlain 19, Norcom 17, Marshall 15, Metcalfe 15—85.

Paterson's team—Paterson 20, Knowles 17, Young 16, Schmidt 14, Harlan 12—79. (Although no note accompanies these totals, we conclude that the shoot-off was at 20 targets per man. F. and S.)

A match at 50 targets per man, unknown angles, was also shot with the following result, Metcalfe being allowed 5 misses as breaks: Lamphere 47, Paterson 45, Metcalfe 39+5—44.

In another event of a like nature, with Metcalfe allowed 7 misses as breaks, the following scores were made: Paterson 44, Metcalfe 35+7—42, Schmidt 40, Chamberlain 27, Young 20 out of 25.

Sweeps were shot as below:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	15	10	10	15	Targets:	15	10	10	15
Paterson	9	9	8	10	Harlan	11	10	6	10
Metcalfe	14	8	6	13	Schmidt	8	7	4	8
Norcom	8	6	7	11	Lamphere	..	7	9	..
Young	11	6	5	..	Knowles	..	..	4	12
Booth	15	8	..	..	Davis	..	..	..	5
Marshall	10	9	3	12					

Nos. 1 and 2 were at unknown angles; No. 3 at 5 pairs, unknown traps and angles; No. 4, simple shooting

The members of the Calumet Heights Club remaining at the club's grounds on the 6th inst (being Labor Day) had a few matches at the traps, in which low man paid for targets and other things.

The following scores were made, and in the case of Metcalfe in first event three dead birds were added to score, and in second event two dead birds were added. The shooting of Houston and Paterson was at scratch.

Thirty singles, expert rules, and 10 pairs:

Houston	11111	01111	00111	11101	11011	00111—23
	10 10	10 00	11 10	10 11	11 00	—11—34
Paterson	01001	01110	11011	10111	11111	11110—22
	10 11	10 10	11 01	10 11	10 10	—13—35
Metcalfe	01110	11011	10010	10111	10110	01000—17
	10 11	10 11	11 10	11 11	01	16—33

Fifteen singles, expert rules, and 5 pairs:

Paterson (0)	10111	11111	10111	11 11 11 10 11	—22
Metcalfe (2)	01010	11111	01001	01 10 01 00 11	—14+2—16
Houston (0)	11101	01110	01011	11 10 10 01 00	—15

GETTING READY FOR THE CONTEST.

Preparatory to contest for the *Shooting and Fishing* cup, which was held Sept. 4, between the Garfield and Douglas gun clubs, both of Chicago, the team representing the Garfield Gun Club in a practice shoot held on their grounds the 1st inst., the following scores were made at 30 single targets from five unknown traps, known angles, one man up, and 10 pairs from three center traps:

	Singles.	Doubles.		Singles.	Doubles.
R Kuss	24	17—41	A C Paterson	23	16—39
T P Hicks	24	16—40	Dr S Shaw	25	9—34—196
E E Neal	28	14—42			

Making a total of 196 out of a possible 250, or a percentage of 78.40 per cent. for the team Out of the 26 targets missed in the singles, 14 were thrown from No. 1 trap It was a moderately low, swift bird, and was largely overshot. The substitutes on the team were:

	Singles.	Doubles.	T'l.		Singles.	Doubles.	T'l.
C P Richards	18	10	28	Mr Stickles	18	12	30

Other substitutes failed to show up. In another practice shoot at doubles Kuss broke 26 out of 15 pair; Hicks, 23 out of 15 pair; Neal, 22 out of 15 pair; Paterson, 17 out of 10 pair; Shaw, 17 out of 10 pair.

GARFIELD-DOUGLAS FOR THE CUP.

Sept. 4.—The contest for the *Shooting and Fishing* cup, held by the Garfield Gun Club, and challenged for by the Douglas Gun Club, of Chicago, was shot to-day on the grounds of the latter club, at La Vergne, a suburb of Chicago. Garfield Club retained the cup, with the score of 189, beating Douglas rather decisively This winning score of Garfield Club is precisely the same as that by which Garfield lost the cup to Eureka in 1893. At that time the "East" scored 241 against 227 by the "West." In the Illinois State competition, Eureka Club, shooting Heikes, Paterson, Von Lengerke, McDonald and Bingham, made 198 total. The Garfield team *personnel* at that contest was Coppernol, Richards, Teft, Hicks and S. Palmer, who scored the same as Shaw, Paterson, Hicks, Kuss and Neal did to-day. Following are the scores of to-day's race:

Garfield Gun Club.

E E Neal	11101111111111111011111111111011—27
	11 10 00 10 11 10 11 10 11 11 —14—41

GARFIELD MEDAL.

At the regular medal contest to-day (Sept. 4) members of Garfield Club made the following records at 25 targets, unknown angles:

C P Richards	10111001111111111101110101—19
T Hicks	11101011101110011111111111—20

R Kuss	11111111111101111111111111—24
E E Neal	11111111111111111111110101—23
A C Patti	00001011111110101111101—17
O von Lengerke	11101101101111101111100111—19

GARDEN CITY HANDICAP.

To-day (Sept. 4) Garden City Gun Club went further on with the season records in the club handicap shoot for the gold watch season prize. It is likely this may be the last shoot of the season, as some of the members are leaving for points outside the city; for instance, Mr. H. Levi, who goes this week to Aberdeen, S. D., for a chicken shoot. In to-day's shooting the feature was the work of Mr John Amberg, who scored 13 out of 15 targets, calling pull while his gun was still open, and closing gun after calling. Following were the scores of to-day:

Watch handicap, 25 targets, unknown angles: J. Ruble (18) 23, J. Amberg (15) 23, Goldsmith (14) 20, A. Smith (15) 18, Hutchinson (15) 15, H. Levi (14) 12.

Fifteen targets, unknown angles, gun below elbow until target is in the air: J. Amberg 13, Helleman 11, Ludlow 9, Ford 9, Bosh 8, Levi 8, Hutchinson 6, Goldsmith 5, A. Smith 4, Clark 4.

CICERO GUN CLUB.

To-day, Sept. 4, Cicero Gun Club had but a small attendance, many members being out of the city. Only three men qualified for the medal shoot, 25 targets, unknown angles: Knott 20, Lowrey 19, Barnard 15.

CLUB MEETING.

The semi-annual meeting of the Calumet Heights Club was held on evening of Sept. 1 at the Briggs' House, Chicago, for the transaction of general business. President Harlan presided. One important matter was fully discussed which related to question as to whether the keeper should be on an adequate salary as steward, and club furnish everything necessary for dining room, also targets, birds, etc., for shooters, and club receive the profits, or continue as at present with keeper on a nominal salary, furnishing meals, keep targets, cigars, shells, etc., he receiving profits by the sale of same. The Board of Directors were empowered to investigate and act to the best interests of the club.

WAUKEGAN SHOOT.

Waukegan Gun Club, of Illinois, held the opening shoot on its new grounds, pulling off a very pleasant little affair, among others the following scores being made, all at 10 birds:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
CHoffman	9	..	..	6	8	..	10	9	Clarke	..	5	4	..	..	7	8	..

J Hoffman	..	9	8	..	..	9	7	7									

LONG LAKE SHOOT.

Long Lake Gun Club, of Long Lake, Ill., will hold a rattling good little shoot Sept. 12-13, and a few of the Chicago Club shooters will go up for the tournament and stay over to have a try at some ducks. A good programme is out. M. J. Furlong is secretary. E. HOUGH.

1206 BOYCE BUILDING, Chicago

Paducah Gun Club.

PADUCAH, Ky., Sept. 3.—The scores given in tabulated form below were made on the grounds of the Paducah Gun Club, at La Belle Park, yesterday and to-day. Nos. 1-4 were shot yesterday; Nos. 5-14 to-day.

Of the fourteen events, Nos 1, 5 and 6 were at 10 targets, $1 entrance, two moneys; No. 2 was 25 targets, $2 entrance; Nos. 10, 11, 12, 13 and 14, 10 targets, 50 cents entrance, two moneys; Nos. 3, 4, 7, 8 and 9 were all at live birds, as follows: No. 3, 15 birds, $5; Nos. 4 and 7, 5 birds, $2; No. 8, 10 birds, $2, two moneys: No. 9, 4 birds, $1.50, two moneys. All ties divided.

Answers to Correspondents.

No notice taken of anonymous communications

J. P., Alabama.—We do not know where you could get bloodhounds. None are being advertised now.

C. C M., Brooklyn, N. Y.—Can you tell me what to use to dry up a pointer's teats? Ans.—Camphorated oil Your druggist can supply it.

G. M., Wharton, Tex.—As I am a regular reader of the FOREST AND STREAM, and in order to settle a controversy, will you please publish in your paper of the next issue the weight of the largest tarpon caught of which you have a record? Ans.—The largest tarpon known to have been taken with rod and reel was the one captured by Mrs. Geo. T. Stagg, caught at Ft Myers, Fla., weighing 205lbs. This was the fish shown in FOREST AND STREAM'S exhibit at the World's Fair. Senator Quay took, at St. Lucie, Fla., on Aug. 17, 1896, a tarpon weighing 265lbs.; we understand that it was taken with hand-line.

VON W.—Please give me a list of all the names given to the pin-tail duck. Is the sprig-tail the same? Ans. The list of "all the names" is somewhat extensive. Trumbull, in "Names and Portraits of Birds," notes for various localities: Gray duck, pied gray duck (for full-plumaged male), gray widgeon, sea widgeon, pin-tail, split-tail, sprig-tail (shortened to sprig), spike-tail, pike tail, picket-tail, pheasant duck or pheasant, sea pheasant, water pheasant, smee, smees, smethe, long-neck, sprig tailed widgeon, widgeon, kite tailed widgeon, winter duck, cracker, spreet-tail, pile-start, pigeon-tail sharp-tail, ladybird and harlan (Great Britain). From which it appears that the pin-tail and the sprig-tail are the same and many more.

PUBLISHERS' DEPARTMENT.

A New Through Passenger Route for Colorado, Utah and California.

THE Chicago *Times-Herald* of Aug. 27 says that on Sept. 12 the new traffic alliance between the Chicago, Milwaukee & St Paul Railway and the Chicago, Rock Island & Pacific Railway goes into effect, and on that date the former will send its first Denver sleeper out of Chicago. This will be attached to its regular night train for Omaha, and will be delivered there to the Rock Island. On Oct 2 the tourist car route over these two lines, the Colorado Midland and Southern Pacific, will be inaugurated. Tourist cars will be run once a week between Chicago and San Francisco For further details regarding this new route call on or address Geo. H. Heafford, General Passenger and Ticket Agent, C., M. & St. P. Ry., 410 Old Colony Building, Chicago, Ill.—*Adv.*

Good Chicken Shooting

will be found at numerous points along the Northern Pacific Railway this fall, notwithstanding the heavy summer rains. Present advices are to the effect that in the vicinity of Fergus Falls, Perham, Detroit, Sauk Center and Little falls, in Minnesota; and Wahpeton, Pembina and Valley City, North Dakota, chickens will be a good crop. At Aitkin, Little Falls, Perham and Detroit, partridges will be plentiful. Ducks will be found in large numbers all along the line. Season opens Sept. 1. Chas. S. Free, Gen Pass. Agent, St. Paul, Minn.—*Adv.*

The Johnson Sleeping Bag.

THE sleeping bag is growing in favor among campers as its merits are becoming better known. A new bag of decided merit has just been put on the market by Messrs. Henry C. Squires & Son, and a description of it will be found on the back cover page of this issue. The Johnson sleeping bag is so made that it can be well aired and well sunned; and this is of course a very decided advantage.—*Adv.*

A Dare County Opportunity

for a sporting club site or farming enterprise is advertised to day by Mr. A. W. Simpson, of Buxton, in the famous wildfowling and fishing county of Dare, North Carolina.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 25, 1897.

VOL. XLVIX.—No. 13. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any address which may be furnished us for that purpose.

I read an anecdote the other day of Dr. Beale, the Bishop of Durham, which seems to me full of good sense. When writing one of his important works he was asked when it would be finished. He replied with great good humor and perfect sincerity: "Oh, I will undertake to take hold of that and push it to an accomplishment as rapidly as possible after the fly-fishing season is over."

Henry Russell.

THE GENEROUS STORE.

WHAT a generous store of reading is contained in the columns of FOREST AND STREAM every week—surely the best and most acceptable ever put into print for sportsmen readers. The fund of experience, observation, fact, fancy and opinion comes from every quarter of the great continent, and reflects multifarious phases of field life. Many a word written and spoken and a growing host of readers attest the appreciation in which the paper is held. Now, as for many years past, the FOREST AND STREAM is the accepted representative of the field sportsmanship of America and its interests.

THE FOULING OF MARKS IN YACHT RACING.

The recent fouling of a mark by Vigilant, and the consequent loss of an important race, has brought out numerous comments upon what is called a "technical" foul, which to many minds is supposed to be a devious device of yachting theorists, and opposed to the true interests of sport. The *Marine Journal* takes the following view of the matter:

In the recent race off Newport Vigilant beat Navahoe fifty seconds. Unfortunately, the old International cup defender's boom when jibing struck one of the buoys which marked the course, and enabled the owner of Navahoe—the losing boat—to claim a foul and thereby be awarded the race in conformity to yacht racing rules. In a contest like this, however, sailed for the purpose of seeing how two of the first built Herreshoff flyers held their own, would it not have been more sportsmanlike for the owner of Navahoe to have withdrawn his protest after the owner of Vigilant had acknowledged his foul, as it did not make a second's difference in Vigilant's favor, or that minute measure of time against Navahoe? Every yachtsman knows that Navahoe won the race, while being fully aware that Vigilant proved herself the fastest boat. This is as unsatisfactory a race, though on a much smaller scale, as that between Defender and Valkyrie III.

This is very pretty in theory, but it is not, and never can be, yacht racing. The racing rules of all clubs are most definite and peremptory on this point, stating that a yacht must go fairly over the course without touching a mark in any way. Every racing man knows this rule, and presumably has it in mind, with the penalty of disqualification hanging over him, all the time he is sailing. He knows that, unless in close quarters and pocketed by other yachts, he can avoid all danger of the penalty by making a fair wide turn of each mark. If he prefers to shave close and so save a few seconds over a more cautious opponent, he has a perfect right to take the risk; but he has no right to cry about "technical" fouls if by an error of judgment or by some unforeseen accident he should touch the mark.

It would certainly be most unjust to the man who has sailed the course fairly, keeping well clear of every mark and losing some time, however little, thereby, if all his pains went for nothing, and his opponent was allowed the privilege of disregarding the rules and shaving each mark, with the penalty suspended in case of a "technical" failure.

A little reflection will show that there must be some penalty for touching a mark however slightly, otherwise collisions with marks and markboats would be the rule in racing instead of the exception. Thus far, too, no other penalty than absolute disqualification has been devised; and harsh as this may seem, it is inevitable. It is not possible to place a time penalty on fouling; so many seconds for touching the flag on a mark, so many for hitting the markboat herself, so many for capsizing her, and so many for sinking her and drowning those on board. Yacht racing has not yet reached this stage of advancement, and for a time at least there seems no alternative but to enforce the rule of instant self-disqualification on touching, to the slightest degree, any part of a mark; of course, unless forced by another yacht.

The enforcement of this rule sometimes works to the disappointment of all parties, as in the late races for the Seawanhaka cup, where Glencairn was disqualified beyond all remedy by her fouling of the mark at the line. Every one wanted to see a race—Momo's men had no desire to score even a single race in such a way; but there was absolutely nothing to be done. As soon as she touched the mark, Glencairn was out of the race by all yachting law and precedent, and Momo could only sail the course alone and score one if she finished it within the time limit. The action of Glencairn's skipper under the circumstances was most praiseworthy. Rather than spoil the whole day and disappoint the many people interested, he continued over the course, though with the knowledge that under no possible contingency could he be officially recognized as in the race.

A similar mishap occurred the year before to Mr. Duggan in sailing Sothis, at Ogdensburgh, the boats were moving very slowly, with barely steerage way; Sothis had passed the mark, a light skiff, when a slight scend of the sea threw the latter out and she struck Sothis. The foul was not seen by the committee, but was reported by Mr. Duggan on the finish of the race and it was generally recognized that Sothis was disqualified. The only contention in the matter was between Mr. Duggan and the second man, Mr. Butler: the latter declining to take the handsome $300 cup, and Mr. Duggan insisting he should do so.

From all accounts, Vigilant's mishap seems to be partly hard luck, she would have gone clear save for an unexpected jibing of the boom, but such is often the case. A man may make all his calculations to turn the mark at a safe distance and they may be upset by a strain of tide, a drop in the wind, or a scend of the sea that throws boat and mark together in an unlooked-for manner. At the same time it is obviously impossible to make allowances in such case, only one line can be drawn, either the boat goes clear of the mark or she touches it. Why she touches it (unless forced by another boat) or how much, cannot be considered; each yacht must stand by her own accidents in this as in other details of racing.

In international races the question of fouling and disqualification is a most important one. All hands are out to see a race; a failure and resail is in every way regretable; neither party wishes to score a point by default. At the same time there exists no possible provision by which yachts can be recalled and a race restarted after a foul, either of a mark or of one yacht by another. At the time of the famous Valkyrie-Defender collision no end of sentimental twaddle was indulged in, even by yachtsmen, about "technical" fouls and the possibility of the recall of both yachts by the regatta committee. Such an action would have been utterly contrary to law and without precedent, and would have been universally condemned by yachtsmen. In such a contingency, of a foul of any kind at the start, as in the case of Valkyrie and Defender, and of Glencairn in the late races, the only party free to act is the other yacht; she may if she choses lie to or withdraw as soon as she perceives that her opponent is disabled or disqualified, the two making a new start later on. At the same time such action is purely voluntary; there is nothing, either in the law or the ethics of yacht racing which would compel a yacht to withdraw merely on account of the disqualification or disabling of her opponent.

Even among practical yachtsmen there exists a peculiar idea that a yacht is at liberty to start more than once in a race, and instances are not uncommon where such a practice has been recognized by race committees. A yacht makes a start and bumps into a markboat, whereupon she deliberately comes about and tries again. Such a practice is absurd and entirely prohibited by the rules; if a yacht fouls a mark on the line she is out of the race, and unless there are grounds for doubt as to the responsibility being shared by another yacht, she has no right to continue over the course.

The talk in the case of Vigilant has been confined entirely to outside parties; the principals, one and all, treated the incident in a business-like manner; Mr. Chubb reported to the race committee that Vigilant had fouled a mark of the course, and the committee thereupon declared her disqualified, and awarded the prize to the next yacht which completed the course in accordance with the rules.

PREACHING MURDER.

RECENT atrocious murders in Massachusetts, Rhode Island and elsewhere, have provoked extended discussion of the prevalence of village hoodlumism, the increasing impatience of restraint among young men, and the alarming growth of lawlessness and disorder so characteristic of many New England neighborhoods. A new and startling light is thrown upon the demoralization by the utterances of anarchistic journals, notably a Boston publication, *Fiber and Fabric*, and the Providence *Evening Telegram*. Both are moved to comment upon the recent murders of game wardens in a manner which, if not actually commending the deeds of the murderers, nevertheless excuses and makes light of them. "One or two men," says the *Telegram*, in an editorial which we quote elsewhere, "are already in New England prisons for the offense, and a very small part of the population of their States look upon them as great sinners." Nobody considers breaking the game laws a crime, it explains, and "what wonder then that the violator saves himself at the cost perhaps of the warden's life."

This is preaching murder, pure and simple; and we submit to students of New England lawlessness that such journalistic incitements to murder are more significant than the murders themselves of the extent to which the demoralization has progressed.

SNAP SHOTS.

Dr. Geo. W. Massamore, the very efficient Deputy Game Warden of Maryland, presents some facts concerning the pollution of the Potomac River, which should have the immediate attention of the Legislatures of Virginia, West Virginia and Maryland. It has always been the custom in this country for tannery, mill and factory projectors to conduct their enterprises without the slightest heed to public rights in the waters; and while individuals following this custom may not be blamed perhaps, the community itself is at fault for having permitted the ruin of its natural resources. It is taking us a long time to get beyond the prodigal backwoods, frontier settlement disregard of economy in such affairs; and in many cases it is now unfortunately too late to repair the ruin which has been wrought. There is a better way to treat a fish-producing river than to turn it into a sewer.

If the United States went to war a whole regiment might be enlisted from the Maine licensed guides, and a capital body of men it would be too. More than eleven hundred of them are now enrolled; and the Commissioners tell us that the guide question is gradually settling itself; little opposition has been manifested except in two or three localities; and even there it has not amounted to so much in actual strength as in newspaper reports of it. The Commissioners believe that the system will very materially benefit the cause of protection.

The Paris Exposition of 1900 will have classes for exhibits of sporting arms, products of the chase, fishing tackle and products and pisiculture. The United States should be represented by some of our fishing tackle; in that line we compare favorably with any country on earth.

This is proving a great year for salt-water fishing all along the Atlantic coast from Maine to Florida. Fishing in the Indian River waters of Florida is said to be improved, owing to the opening of the inlets along the lower East Coast; and tarpon are found there in increasing numbers.

The Sportsman Tourist.

DOWN IN MAINE.

As another shooting season approaches, the usual question of where to go is probably causing many an annual woods visitor much anxiety, not unmixed with a certain enjoyment which the selection of the location for a camp or cruise always bring.

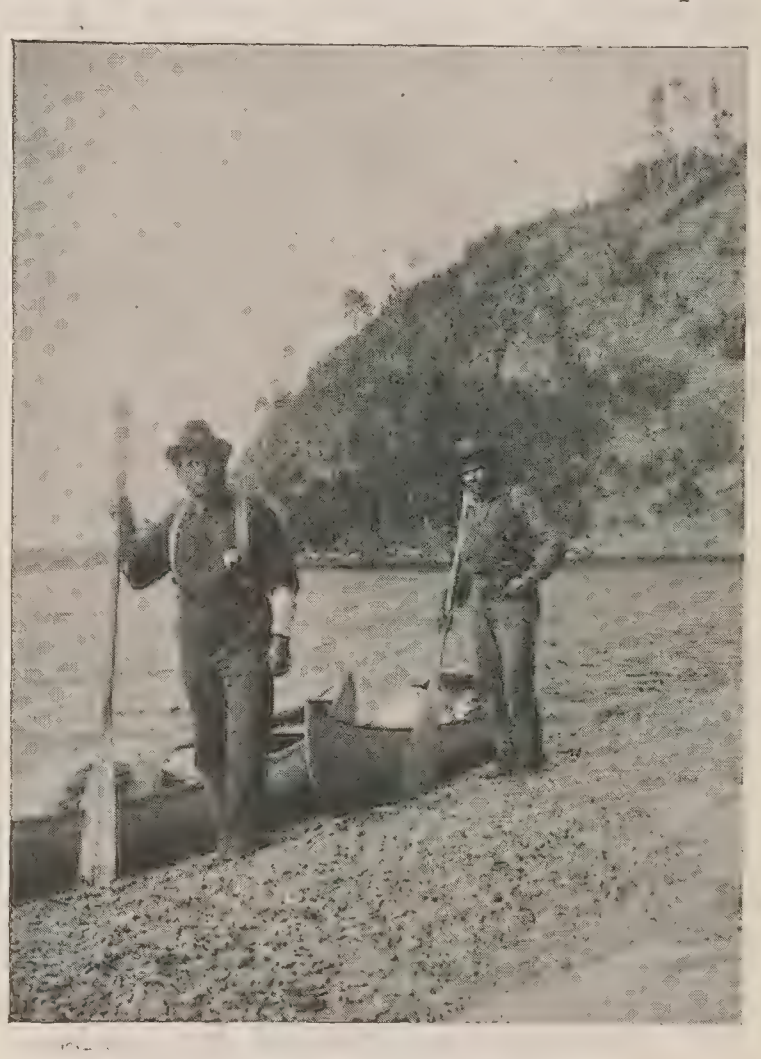
Last fall I made a cruise of two weeks which ought to afford all the variety of canoeing, camping and big game hunting that any reasonable person could ask for, and for the benefit of any whose vacation time is limited, yet who wish to cover considerable territory without extremely hard work, this is written.

The trip can be nicely made in two weeks from Moosehead Lake, and could be done in two weeks from Boston if there was a good pitch of water in the rivers. The scenery is grand, the fishing fair, and big game very plentiful. There is only one portage—that from Round Pond into Allagash Lake—and that is over a good road. A number of side trips could be made from this cruise to grounds where splendid shooting could be had, particularly into Shallow Lake for ducks and deer, and up the Allagash Inlet to Desolation for moose. There is also another section—a splendid big game region—which can be reached from Allagash or Chamberlain lakes, and which is seldom visited, as it is supposed to be almost inaccessible. A carry of two miles over an extremely blind and crooked trail took us to a dead-water that lead back into this section nine miles further back. We did not have time to make the nine-mile canoe trip, but saw an abundance of moose sign about the dead-water, and there was no evidence that the trail had been used for years. Our address for the last two weeks of October will probably be at the head of this dead-water.

Our party consisted of Frank E. Wolfe, myself and my little English setter, Gypsey Belle II. This was Frank's first experience in the New England forests, and I judged from the curiosity which Gypsey excited that she was the first setter to visit the Allagash. She was guessed at everything from a spaniel to a shepherd, but that she was a deer dog of some kind no one doubted.

We left Boston at 9 P. M. over the popular B. & M.; arrived at Bangor soon after daylight, stopped there just long enough to get breakfast, and were off for Moosehead. At Oldtown several members of the Penobscot tribe boarded the train with axes, yokes and paddles, and it began to look as if we were really getting among good people. We found them very interesting and willing to give us much valuable information about the section of country we were headed for. At Greenville we took the steamer for Kineo, where we arrived at noon, after an enjoyable sail up the lake. On the way up we arranged to take with us one of the Indians who came up on the train with us. This was John B. Mitchell, who is known among his people—and among his friends—as "Johnny Bear." At Kineo we had time to get dinner and buy our supplies before the boat left for Northeast Carry. At Kineo Johnny engaged as our second guide his partner, "Old Joe Aus'n." Whether his name was Austin or Orsen or something else we could never make out. He spelled it X. Pronounce it to suit yourself.

From Northeast Carry we had our canoes and duffle driven over to Luce's, on the West Branch; and dropping down to the mouth of the Lobster we made our first camp, twenty-one hours from Boston. This first camp convinced us that our trip was to be a most delightful one, and that conclusion was arrived at after enjoying our first meal in camp, followed by a "big smoke." The pleasure of a trip into this country depends so largely upon the guides that I feel obliged to give you a slight pen picture of the two men on whom we were dependent for almost everything for the next two weeks. Most every chronicler of a fishing or shooting trip writes of having the "best guide in Maine," and I can fully appreciate the feeling which prompts him to such a declaration. We probably did not have the "best guide in Maine," because there is probably no such guide there, but we certainly did have a combination that could hardly be improved upon—don't seem as though it could.



I feel rather diffident about writing anything of John Mitchell, but I trust that what I say of him will be interpreted in the spirit in which it is written.

Johnny Bear, as he apparently preferred to be called, is a middle aged, compactly built man, with a remarkably strong face, on which is truthfully stamped uprightness. He not only speaks English, but speaks it well, and is seldom at a loss for just the right word. He is a remarkably well posted man, and talks entertainingly on any subject which a man has any business to talk about in the woods. I didn't try him on theosophy or the nebular hypothesis, being a little rusty on them myself; but he did give me some interesting points on political economy, as practiced in the government of his tribe. Where I feel most at liberty to speak of Johnny, is in regard to his skill as a cook; and I could cover that subject the quickest by saying that he is the best outdoor cook I ever saw. There are plenty of men who can fry potatoes, boil a pot of tea, or even broil a bird, trout or a rib of venison over an open fire; but when you find a man who can turn out of a tin oven, three times per day for two weeks, a pan of biscuits of the most delicious brown, and light as feathers, then you have found a man who is a cook "for fair." Johnny Bear did this in spite of wind, rain or wet wood, without so much as the suspicion of a failure, and his stewed tomatoes and Kosombo were simply revelations in the possibilities of gastronomic research. Kosombo! I have but to close my eyes to smell the delicious aroma of that *pot-pouri* even now.

"Old Joe," is an Indian, from the way he fries potatoes to the style of wearing his belt; next to being an Indian he is a hunter. He has had little to do with white people, having made his living by hunting and trapping until within a few years, and consequently is a little backward about expressing himself in English—when he has nothing to say—but he has no difficulty in carrying on a conversation when he has something to say to you. Not being able to read, Joe is dependent on the Penobscot folk-lore for his stock of general knowledge, and he proved a perfect mine of information on such matters as the meaning of the Indian names for the lakes and rivers, etc. Joe told us of being at Chamberlain Lake with his father forty years ago, and he has lived in the woods a great part of every year since. Small wonder then that there is little to be known of the woods which Joe does not know. Both of these men are splendid canoemen, and willing to undertake cheerfully anything you may suggest, and another strong point in their favor is that neither of them uses any liquor. They never tired of answering our numerous questions, and when one was asked which they could not answer, they never hesitated to come out flat-footed and say "I don't know."

We broke camp early the next morning and paddled down the majestic West Branch, past round-domed Kokodjo, stopping a few minutes at the Moosehorn and Ragmuff to try for trout, but failed to raise any. We lunched on Big Island, then down the Horse Race, through the Fox Hole, over Pine Stream Falls, and so on into Chesuncook. From the shore of the lake we had our first view of Katahdin and the Sourdnehunks, and our last of civilization. From the head of Chesuncook we entered the Umbazooksus Stream, turned to the left up the Cauquomgomic and reached the first falls in the late afternoon. Here was the most beautiful camping spot we saw on the whole trip. At the upper end of the short carry around the falls is a small, level plat of sward that seemed as if made on purpose for a camp site. The series of three falls is extremely picturesque, and the pools are ideal trout pools. The afternoon had grown quite cold and the trout rose sluggishly, but frequently enough to show that on a favorable day they would yield fine sport. We had the usual "big smoke" around the camp-fire that night, but the music of the falls so successfully essayed the part of "The Sandran" that we rolled up in our blankets early, and were soon in sonorous rivalry with Joe and Johnny in "calling moose."

We awoke to a glorious morning, and while Johnny was getting the breakfast we exposed a few plates and visited the little cove, to find where several deer and a moose had been down to drink and feed during the night. How big that first moose track did look! After breakfast we put in above the falls and paddled up the winding stream, reaching the horserace, where we made camp about 3 P. M. Every stream in this country has its horserace. The banks of the Cauquomgomic are heavily wooded, the current, except in a few places, is slow, and the trip up was very enjoyable. We saw a few wood ducks and many tracks, but no big game. After making camp, we toted a part of our stuff up to Cauquomgomic Lake, and left it there, covered with a rubber blanket. On the return trip Gypsey found the first partridge seen on the trip, and we had a "broiled bird" for supper. Our camp was on a high bluff overlooking the river, and having plenty of time and the prospect being for another cold night, Joe made a wigwam out of the big tent, while Johnny showed us what he called a good cooking fire. As Old Joe said, "All hot, no smoke." We made a picture of the camp, with the fire in the foreground, and the smoke from it is barely discernible, though Johnny was baking biscuit, stewing tomatoes, frying flippers, and broiling a bird at the time. While this was in progress, Frank and I took a plunge in the river, followed by a brisk toweling, and were then ready to forcibly demonstrate our appreciation of Johnny's cooking.

JOHNNY BEAR AND OLD JOE AUS'N.

The morning showed signs of rain, and we made an early start; the guides poling up in the canoes, Frank, Gypsey and I over the trail to the lake. It soon began to rain, and arriving at the lake we made a lean-to of bark from the dam, and under this waited for the canoes.

From this lake we entered Round Pond stream, and here saw the first signs of lumbering. Swampers had cleared the trees and brush from the banks of the stream, and the result of their work was anything but pleasing. When we came to the meadows there was any quantity of deer and moose sign. The banks were all cut up with their tracks, and the lilypads had been nipped off, and in some cases the roots torn up for miles at a stretch. Some of this had been done by muskrats, some by deer, and much of it by moose. The guides showed us very quickly how to distinguish the work of each animal. I thought of this when reading the recent interesting articles on deer and lilypads in Forest and Stream. When old Joe tells me that moose eat lilypads as well as deer, I am prepared to believe it implicitly.

We passed a place where the stream broadened out into a sort of shallow pond almost entirely covered with reeds and rushes, and here was quite a large camp with several ladies in the party. Why any sane man should camp in such a place, with nothing but grass and rushes in sight, I could not understand; particularly when having ladies along, for the gentler sex set great store by pleasant surroundings. I asked Johnny about this. He smiled significantly, and said: "Oh! I guess it's getting pretty near the 1st of October."

We crossed Round Pond in the rain, and finding the camp at the mouth of Poland Stream occupied by a party of night fish peddlers we made camp a short distance up the carry to Allagash. I think these fellows were fish-peddlers, as they had a nice new tin horn under their canoe and a nice new lantern with a big bright reflector. Possibly this was a headlight off some stray locomotive; it was nearly big enough.

Everything was drenched, and we looked forward to a very disagreeable night. After the tents were up Joe started off into the woods with his axe, and Frank and I tried the trout below the Poland Stream Falls. They were pretty small, and we soon gave it up and returned to camp to find that Joe had completely carpeted our tent, bough-bed and all, with huge sheets of birch bark, laid inner side (dry side) up, and we were as dry as could be.

The next day we carried over into Allagash, all doubling the route twice. We each made up what we considered was a back-breaking load while the guides washed the dishes, then we watched Joe make up what he called a "Mohawk pack." First he spread out the large tent, on top of that the smaller one, then their two bags of clothing, a sack of canned goods, a wooden tub holding about a half bushel of provisions of various kinds, and several packages that lay handy. Then he began to roll up the tent, first from one side, then from the opposite, and when he had folded in the ends and given it a final roll, he had the ends of the tent ropes sticking out of the bundle at just the right places for tying the whole securely. It was a work of art, particularly the rolling and folding He took his axe and cut some broad pack straps from a handy cedar, arranged one for his chest, another for his forehead, swung the Mohawk on to his broad shoulders, picked up a sack of potatoes in one hand, the bag of flour in the other, and struck out for Allagash. We found him there with the tents up when we got there.

In the little cove to the right of where the carry comes out on Allagash we had the first and best fly-fishing of the trip. The padole up the lake to the mouth of the Allagash stream was delightful. The lake is somewhat in the shape of a square with rounded corners, the shores are densely wooded and the water is clear and cool We camped opposite the pinnacles and spent several days in exploring the now famous cave and prospecting up the Allagash inlet. The cave is a mighty poor thing as caves go, in fact it is not a cave at all, but a series of enormous seams running from the top of the east pinnacle down into the mountain for several hundred feet, and is as damp and dirty as one could wish. I spent a part of two days there making flashlights of the different recesses, and spent the two weeks following my return in bed as a consequence. However, it is a wonderful freak of nature, and well worth a visit, at least my visit there was worth considerable to my physician.

We went several miles up the inlet and saw many fresh signs of beaver, deer and moose, in fact we started two moose and several deer were paddling through the alder grounds. There are large trout in the stream, and it is said to contain salmon, but this we were unable to verify. This camp we left with reluctance and dropped down the Allagash River to Chamberlain Lake. While walking around a bit of bad water we came upon a freshly built beaver dam. It looked to be quite loosely put together, but it held water all right. We tried to get up to a meadow which this dam overflowed in hopes of getting a sight of the animals and their houses, but were unable to do so.

When we first started out, the guides asked many questions about Gypsey, and it was plain to be seen that they had their suspicions about her. One day Old Joe called her down to the bank, where fresh deer tracks were as thick as hair, and pointing to the tracks he tried to interest Gypsey in them, but she only wagged her tail, and paid no more attention to them than any well-behaved setter would. This apparently convinced Joe that she wasn't a deer dog, whatever else she might be. Just before reaching our camping place, a mile above Chamberlain Lake, we flushed a partridge, which lit in a birch sprout beside the river. I took up my gun, and as the canoe was passing knocked him out. Now don't throw up your hands; it's no pot shot to kill a bird from a canoe that is dodging the rocks down the swift water of Allagash, even if he is sitting on the limb of a swaying birch, and my conscience did not trouble me a little bit. Gypsey was in the rear canoe, and when told to fetch she went overboard, and when she came back across the river, wading and swimming, with a big cock partridge's wings covering both her eyes, the Indians were greatly pleased. We could not stop for her in the swift water, but she was at the landing to meet us, and that partridge went into the kettle with a pair of black ducks and a couple of his near relatives in short order. I think that this was the greatest kettle of Kosombo Johnny turned out on the entire trip. I never could understand where he got the curry.

While we were making camp, Joe said he heard a moose up on the ridge, and after supper we went out to try to call him out. We had not gone a quarter of a mile from camp and Johnny had made but a few calls when we heard one coming. He came into the water, but a cow, which he had left in the woods, called him back again, and we thought our fun was over.

Frank and Joe had drifted up into a little cove and were watching a buck feeding, when we heard another moose coming. We whistled to the other canoe, but could not attract their attention owing to the noise of a little waterfall near them, so we pushed off and started across the stream to get a good look at the new-comer. I asked Johnny if this was not the same moose, but he said not, that this was a larger one. He came down the bank with a crash, and slumped into the water with as much noise as a yoke of steers would make. When the others saw us start across stream they followed, and we all got quite close to the beast before he scented us and plowed his way across the bog with loud grunts. Frank and Joe continued down the river to make another call and Johnny and I returned to camp, reaching there at 8:30, having had an easy chance to kill two moose. I thought this very remarkable, but Johnny said a good moose caller could call out a moose any time, day or night, if there was an unmated one in the vicinity, and before the trip was ended I could well believe it. Joe called several times down near the lake but got no response.

While skirting the western shore of Chamberlain Lake we saw our only caribou, and got up within easy shooting distance of him. He was feeding, and moved about with quick nervous steps, very unlike any other animal we saw. When about two miles north of Ellis Brook we ran into a school of trout, jumping in all directions We tried them with all colors and sizes of flies, but could only raise one of them. They were splendid fish, from 2 to 4lbs. in weight. Several broke water quite near the canoes, so we got a good idea of their size. They were extremely tantalizing.

From Chamberlain we turned up Mud Pond stream and camped on the western shore of the pond. In the morning

we carried into Umbazooksus, and were once more in Penobscot water. On Umbazooksus stream we met a large party of lumbermen going in with supplies, and about half way down the stream we passed quite a large camp. There were signs—unmistakable signs—of moose in this vicinity. We stopped for dinner nearly opposite this camp and ran into a brood of partridges in some birch sprouts, and here Gypsey was able to get in some fine work, much to the edification of the guides, and we easily secured the foundation for another big kettle of Kosombo. Down the stream we started many bunches of plover and some yellow legs.

From Mud Pond to Chesuncook the country is very uninteresting, although game was plentiful, and we were glad when we struck the Cauquomgomic stream again, completing the circle. We camped that night at Pine Stream Falls, and the following morning continued up the west branch, with a few stops for fishing. A young gentleman from Philadelphia passed us as we were loading, and a short distance above the falls a tremendous bull moose waded across the river right in front of his canoe. We slept that night on the same bed of boughs we had used on our first night out. We reached the northeast carry just in time to miss the Sunday steamer, and put into Moosehead, paddling part way down to Kineo, when a heavy storm nearly swamped us and we were compelled to make camp.

Frank and I were drenched with the spray which came in over the bows, and having on our last change of underclothing, we hung them about the fire to dry while we took a swim in the lake. Three days before we had an inch of snow and ice formed in the water-pail a quarter of an inch thick, but our cold spray bath of an hour or more had so reduced our temperatures that the lake seemed quite comfortable. Johnny thought the wind would die down about midnight, and suggested a start at 3 A.M., but at 3 there was quite a heavy sea running and we did not get started till 5. This night we were kept awake more by deer about the tents than on any night of the trip. They stamped and whistled all night long. We reached Kineo in time to get dinner and climb the mountain before the boat left for Greenville and home.

WOODS COOKERY.

AN IDEAL CAMPING PLACE.

From Amateur Photos by C. Harry Morse.

THE CHESTNUT RIDGE

And Along Its Foot.—VI.

At the eastern base of the Chestnut Ridge, on the edge of the broad interval between that upland and the parallel range of the Laurel Hill, there stood, fifty years ago and more, an old-fashioned tavern known in my early years as "Meanor's." It was a typical roadside inn, one of many that stood along the line of the old Northern turnpike, whose swinging signboard was the promise of rest and refreshment to man and beast. I remember the house well and the weeks of a pleasant summer I spent there in the halcyon days of Franklin Pierce. The turnpike road, wide, smooth and sandy, lay along in front of the hostlery, and wound like a broad gray ribbon up the side of the Ridge until it disappeared among the trees. Across the road was a large barn, and beyond, stretching in the direction of the Conemaugh, were wide, sloping fields, where the sheep nibbled the grass or reposed in the heat of the day in the shade of the trees. Pleasant is it to abide among the sheepfolds, "to hear the bleatings of the flocks."

Any one seeing this old turnpike now, neglected, reduced in many places to the width and condition of a mere township road, cannot conceive what it was like in the days of long ago. Then a constant succession of wheeled vehicles of every description, of horsemen and pedestrians, moved along this famous highway. At stated periods the gaudily painted and gilded stage coach—the Pioneer or the Good Intent—dashed by with its spanking team of four horses, with their jingling harness, its Jehu sitting up aloft, cracking his long whip or occasionally winding his bugle, whose notes lingered musically among the hills and trees. Looking back now it seems like a dream of fairyland.

But Linden saw another sight. It was not always summer and sunshine on the Allegheny ridges. Whatever may be the fact now, formerly the snows came early and fell deep. The wagons proceeded with difficulty or ceased business altogether. The stage-coach labored along through the snow, the passengers happy to make three or four miles an hour. Sometimes it was necessary to discard wheels altogether and mount the body of the coach upon runners. It then became for the time a great sleigh, none the less pleasant to ride in.

I remember that when Louis Kossuth passed through our country about the end of the year 1851, the snow was so deep that he was obliged to cross the Allegheny ridges in a sleigh. When he reached our town we all gathered in the street and about the hotel, and by dint of yelling and shouting attested our admiration of the great Magyar. Many years afterward in a book, "Red, White and Black," by Mme. Pulzsky, one of Kossuth's retinue, I saw that we were characterized as "a lot of Irish," whose enthusiasm was anything but agreeable to the distinguished strangers. This was a little mortifying when I recalled how many hours I had stood around in the snow waiting for a chance to demonstrate my good-will.

Like De Quincey, "I dally with my subject, because, to myself, the remembrance of those times is profoundly interesting."

One December day, fifty years ago or so, there was a very heavy snowfall on the ridge. From early dawn the flakes had fallen softly, softly but persistently, until now the landscape was covered with a thick, fleecy mantle of snow. Occasionally gusts of wind had rushed across the scene, gathering up the snow from the exposed points and laying it down in the hollows and more sheltered spots, until in places the drifts were 3 or 4ft. deep. It promised to be a rough night. Along in the afternoon a solitary pedestrian descended the Ridge, picking his way through the drifts, glad enough at last to find a refuge at the inn. He was a young fellow, tall, active, handsome, except for a restlessness in his eyes that made him not altogether pleasant to look at. Before advancing into the room he cast a quick glance around, and then apparently satisfied, he walked up to the bar and asked for a glass of brandy.

"Lots of snow," said the landlord, handing out the bottle. "Yes, indeed," replied the stranger. "Must be hard walking," remarked the landlord. "Very," answered the other. "I was trying to make my way down to Nineveh," he continued, "but I guess I shall have to give it up. Can I stay here to-night?" "Yes; we have room for you," replied the landlord. The young man unbuttoned his coat, pushed back his hat from his brow, and seated himself by the fire, but in such a position that he could see everything in the room.

The snow continued to fall. Half an hour later, amid a great outcry on the part of the driver, and a fierce struggle on the part of the horses, the stage-coach that should by that time have been in Blairsville, pulled into the wagon-yard in front of the inn. At the first sound, the young man sprang to his feet and hastened to the window. The stage door was opened, and the occupants, six or eight ladies and gentlemen, got out. The young man scanned them closely, and when they entered the room, he hung about the door leading to the back premises of the tavern. He was evidently not at his ease in his inn. The coach was effectually "stuck" for the present. The horses were bestowed in the barn, and the passengers became unwilling guests for the night. But there was no help for it. And they might easily have been worse accommodated. As the evening closed in, after supper, it was proposed to have a dance. A violin and bow hung on a nail behind the bar.

"Here is a fiddle," said the landlord, "if anybody can play." A very short inquiry revealed the fact that the strange young man could manipulate the bow. The tables were carried out of the dining-room, the chairs shoved against the wall; the young man, who seemed to have a predilection for the back door, stationed himself near that point; the violin was tuned up, the people chose their partners, the fiddle sang out its cheerful notes, and the frolic proceeded. The fiddler was an admirable performer and caller of the figures, and soon made himself quite a favorite among the dancers. Several sets had been danced, when a halt was called; the ladies sought their chairs, and the gentlemen the bar. It was in this lull that a heavy step was heard at the door, as of some one stamping the snow from his feet; a moment later the door opened, and a burly form entered the bar-room.

"Why, how do, Sheriff?" cried the landlord, as he recognized the new-comer. "How are you, Dave?" he replied, shaking the snow from his coat and sending a swift glance through the company at the same time. "A thimbleful of whiskey," he said, and the bottle and glass were pushed across the bar.

"A bad night to be out, Sheriff," remarked the landlord. "Yes;" said the other. "After a horsethief;" he added, in a confidential tone. "Had traces of him up the hill, and thought he might be in here."

"Nobody has come here with a horse to-day," said the landlord. "No," answered the Sheriff. "The horse was sold in Blairsville, and the thief left this morning afoot." "Aha!" exclaimed the other. "What kind of a looking man was he?" "A young, good-looking, black-eyed fellow, I was told," replied the Sheriff. "Why, there was a young fellow like that came here this afternoon," said the landlord. "He was playing the fiddle for the dancers a few minutes ago. I guess he is in the dining-room now." "I'll look in," said the Sheriff, and he did; but no young man was to be seen.

"Where's the fiddler?" cried the landlord. But nobody knew. "He must have gone out," said the landlord. But nobody had noticed. They were all interested now. "Turn out, everybody, and help," cried the Sheriff; and the men, donning their hats and great coats, turned out of doors to look for the missing fiddler.

"Get the lantern, Dave, and let us search the barn," said the Sheriff. The wind was blowing and drifting. The barn was duly searched from top to bottom, but no fugitive was found. "Look in the stage-coach." The stage-coach was examined, but nobody was hidden in that. "Now the wash house." The wash house was also explored, but it was tenantless as the stage-coach.

"Bless me! where's my horse?" cried the Sheriff. "Why, where is your horse?" exclaimed the landlord, by way of answer. "I tied him right there, in the shelter of the wash house," said the Sheriff.

Sure enough! where was the sheriff's horse?

When the officer's step was heard at the door, the young fellow was on the alert; when the landlord uttered the word "Sheriff," he slipped noiselessly out of the back door, and before the Sheriff had disposed of his thimbleful of whiskey, the young fellow had untied the animal, leaped upon its back, and was plunging through the snow toward the east. No vestige of his flight remained upon the ground, and nobody had any idea in what direction he had gone. It was dark and stormy, and nothing could be done.

A week afterward the Sheriff's horse was found in Johnstown, in possession of an honest old Conemaugh township farmer, who was boasting what a bargain he had got: a good horse, saddle and bridle, all for $50. In the meantime the young man had left for parts unknown and no trace of him could be found.

Pittsburg, Pa.

SHEEP AND SNOWSHOES.—XI.

A Winter Hunt at the Summit of the Rockies.

With the Wolfhounds.

In the year of 1896 the State of Montana paid $8,000 bounty on gray wolves alone. These animals are a menace to the live stock industry and have been pursued relentlessly for years, but in spite of this seem to be numerous as ever in some parts of the State. Joe Kipp told us that he had killed a great many with his pack of hounds, not far from his ranch, and he was anxious to give McChesney and myself a taste of the sport of wolf-coursing. Billy Kipp volunteered to take us out, and after one day of rest we three made a start with a half dozen of the best dogs of the pack, great shaggy yellow hounds of decidedly useful look. Some of these dogs were monsters, and were scarred all over in token of their work with the big and dangerous grays of these plains than which a dog can meet few more dangerous antagonists.

We rode something like forty miles or more that day and jumped four coyotes and one antelope, none of the game close enough to enable us to sight the dogs, which scattered wildly about, crazy to run, but showing the usual sight-hound's inability to get sighted. We saw no gray wolves at all, and indeed were not on their main range, which was properly about twenty-five miles to the north of us. We had not time to take two days for a wolf hunt, though I presume we should have had some fun. One of our dogs followed off the antelope and we did not see her till we got home that night. Nothing of great interest transpired during the day, though a touch of excitement was for a time threatened by a little accident with my mount, a typical cow pony of some dignity of character. Riding along across the prairie, a loose knot at the side of the bit fell apart and let down one side of the bridle rein. As I leaned forward to fasten it up again the horse threw up his head and began to go a bit, and the others not knowing that anything was wrong, he broke away in front and bolted across the country in spite of all I could do, refusing to be guided by the touch of the rein, as all cow horses are taught, and refusing also to be circled with any kind of a pull. At last he went crazy at the unusual situation, and taking the bit well into his mouth bolted off on a career

of his own, in which I could no more stop him than I could have stopped a locomotive. Seeing I could not do anything by getting hold of the side of the headstall, and was only tiring myself trying to check him, I sat down and began to ride it out, urging the runaway as hard as I could across a certain muddy flat which lay below a risky hill down which he had run at full speed. I knew he could not last forever on that sort of going, but he did pretty well for a mile or so until Billy Kipp, realizing what was up, pushed his horse into the race, and after a good little run swung up by my side and caught the horse by the broken side of the bridle, which had been all the time quite beyond my reach. There was some sport to this little ride, for all in all I think that was the worst country I ever rode over, and where the snow was not melted away it was extremely dangerous, being literally honeycombed with badger holes, of which I have never seen so many at any part of the plains. It is astonishing how careful and expert the cow horses are at evading these holes, and of course the way to ride is to pay no attention to the holes, but to trust it all to the horse. Where a hole is covered with the snow, neither horse nor man can guard against it. Billy cautioned me against riding too fast across snow-covered country, and said he had often had falls in such riding. Ordinarily, however, the cowboys of that region cut loose, snow or no snow, and take their chances. They told me that Billy Kipp was about the best cow-puncher on the reservation. I am promised a visit from Joe Kipp and Billy some time this fall, when they come in with a train of cattle, and I hope they will bring my cow horse along, so I can give him a turn down the Boulevard, where the badger holes are not so thick.

Plans for a Goat Hunt.

Our party was now somewhat scattered, Schultz at his ranch, Billy Jackson gone home, and the rest of us at Joe Kipp's ranch, near the railroad, where we had a good visit with Bear Chief, who came in to call on us. Time was getting short, and I was very uneasy about being away from home so long; but word came in that there was to be a council of the Indians at which we must be present. Schultz was, moreover, much troubled over the fact that McChesney had not yet killed a head of game, and urged him to make one more try, going into the mountains nearer the summit and by way of the railroad a little further to the west. Here he was sure he could get a goat and perhaps a sheep. McChesney was due at home, in Troy, N. Y., but wired home and learned that he could strain things and be out four or at most five days more. So we hurriedly made it up that we would all make a rush trip after goats near the summit, it seeming a shame to leave when we were so close to success in getting a specimen of this rare animal, and that, too, during the winter season, when it is more difficult to get one even under legal surroundings. The result of it all was that we threw together a light outfit, and at midnight pulled out for the mountain again, taking the west-bound train, which happened to be delayed some hours. It was morning when we reached the summit of the range, at the little station called Summit, where we went in order to pick up Joe Kearney, a guide better acquainted than any of us, except Boak, with that part of the mountain. Scott, the trapper who was to have gone with our party for the whole trip, was away on his trapping line, and was not expected back for some time; but Kearney was in and was willing to go with us. We stopped at the section house for breakfast, that being the only hotel and the only house, with one or two exceptions. Here there was a very cross woman in charge, who didn't seem to care whether we lived or died, so reckless and so wretched was her cooking, and so proud and disdainful her demeanor. Out in Montana women are scarcer than they are in some other places in the world, so they at times get awfully stuck on themselves, they say. Anyhow, this woman was clearly above our class, and wanted us to know she realized it. Poor Schultz had to bear the brunt of things, and when he came to buy a few supplies of her she robbed him to the queen's taste and he didn't dare chirp. The dialogue was something like this:

Woman—"Lessee, 13lbs. of beef at ten cents is a dollar ninety, aint it?"

Schultz—"Yessem."

"An 4lbs. o' sugar at ten cents is ninety cents."

"Yessem."

"An' 20lbs. o' flour at five cents is a dollar fifty, uh?"

"Yessem," said Schultz. Then she soaked him in making change and left him with sweat on his forehead. Oh! that was an awful woman!

We intended to hunt, of course, on the reservation, which, so nearly as we could trace the line, was on that side of the mountains on which the waters ran to the east. This would have left our hunting grounds only eight or ten miles from us, perhaps, had it been possible to cross the ridge of mountains which lay between us and the place where we expected to get at our game. Kearney, however, declared that it would be impossible to get over this ridge, easy as it looked to us from a distance, because the whole front of the mountains was a sheet of ice, and the climb was far steeper than it appeared. He said the best way would be to go down the west side of the slope and ascend Ole Creek by a gradual rise until we got near its headwaters and could then cross the summit to the places we wanted to get at, some bold, bare mountains where the goats were most apt to be found. This would take us into a point which was far on ahead of us when we were in on the Upper Two Medicine country, and which we could not have reached from there at that season of the year. Schultz was not familiar with this country, but Boak had been across it, and Kearney knew it well.

How to March and Camp in Winter.

We now were getting things down to a hard-pan hunting basis. We had no team to haul supplies, and could not take any pack animal along. It was necessary that we carry absolutely all our supplies on our own backs. We could not even take a tent, and were forced to face the weather with only such shelter as we could make in the woods with our own hands. Of blankets we could not take full supply, and of grub we could take only a limited amount, of course, as a man cannot pack much more than about 40lbs. or so in this mountain work on showshoes; or at least only a hardened mountain man can do much better than that. McChesney had never carried a pack on the trail, so Schultz cut him down to a light load, dividing his sleeping bag and allowing him but the scantiest of personal plunder. We all well knew that a pack which starts light grows heavy on the trail. There were now five in our party, Boak also going with us, and showing himself a singularly plucky man for one so handicapped by age and infirmity. One of the pleasantest memories of the trip is that which I have of Boak in camp our first evening on the goat trail. He had gotten into camp very tired with his pack and his snowshoes, but still alive enough to sing. He laid aside his hat, and the steady fall of the snow had still further whitened his rumpled hair. He had gone to the creek to get some water, and managed to break through the ice and get wet. As he stood up to his waist in the snow as he scrambled up the bank, and swore melodiously and fluently, he made a unique and striking figure.

We made a long, long march the first day out, and before we went into camp we were favored enough of fortune to see our first game, a big white nanny goat and a kid, which stood high above us on some rocks about a quarter of a mile away, and looked down at us rather unconcernedly, as though they did not care much one way or the other about us, though finally they turned away and slowly walked up over the crest of rocks and disappeared. This sight of game, the first goats McChesney or I had ever seen, put us in good spirits, and at supper we talked of what would happen when we got up into our hunting grounds and had followed this rare white game into its final fastnesses in the heart of the Rockies. Boak and Schultz freely offered bets that McChesney and I would both kill goats, and I took a little wager with him, hoping I should surely lose, though I knew the time was very short for us to make our hunt. We spent our first night up near the head of Ole Creek, under a brush shanty which we built at some expense of labor, but which proved to be good enough for tired men to sleep under. The night was naturally a trifle cold, somewhere around zero I presume, though the snow had softened a little during the day and made the shoeing none of the best. By morning the crust had hardened again, and we pushed on up into the mountains with less trouble. It was now getting toward the spring season, and the Chinook blew at times, so that the shoeing was execrable with the close-webbed shoes. Kearney had his home-made "bear paw" shoes along, and he did very well with them. How on earth he ever managed to navigate in his rig of full length rubber hip boots was more than I could see, but he said the snow always wet him through in any other rig. Indeed, he got wet anyhow, for in this work one is under the snow now and then as well as on top of it. The nice pictures you see in the magazines about fellows skimming daintily along on top of the snow without mussing themselves up in the least are studies made for the most part in the atelier of the artist and not in the workshop of nature. Everybody got wet, everybody got tired, and everybody but Boak got hot and testy, as hunters often do in camp, though they never do in stories.

Snow-Slides.

In the morning of our second day after goats, we crossed two trails of interest: one the trail of a mountain lion, and one the trail of a snow-slide. Shep, our dog, firmly declined to run the lion trail, which was no surprise to me, for he had once refused to run a lynx trail for me over on the Two Medicine country. He was a cheerful dog, but a good deal of a bluff as a lion-killer, much to our disgust. As to the snow-slide, it looked nasty enough, and Kearney comforted us by remarking that it was just getting to be the season when the slides would begin to run. We saw long, bare spaces on each mountain side about us, where the rocks, trees and earth had been torn out in long grooves, miles in length, by the ripping slides of the heavy snows. I presume there are few actual dangers in the mountain worse than the snow-slides, and I have noticed that all mountain men are very respectful in speaking of them. There is no animal in the Rockies which a man needs to really dread, and he need fear little what may befall him, even in the winter time, if he goes to his work properly fitted for it; but the snow-slide is something against which one cannot guard, which gives no warning; which leaves no possibility of escape, and which is certain death, in almost every instance to the man who is caught by it. As we got further into the steep and sharp-faced mountains where we expected to find our goats, we saw more and more "dead-snow" slides—great heaps of snow, sometimes thrown into lumps and balls as large as a house, and lying perhaps half-way across the creek bottoms, into which the mass had rushed in its wild flight. Sometimes the snow comes down so deep, that it runs up on a tree trunk like so much water in a wave. Then, as the main body of snow rushes on down, the surface sinks with the wave, leaving the mark a score or two score feet above one's head as he looks up the tree trunk. This wave of snow may roll clear across the valley at the foot of the mountain side, and dash far up the side of the opposite mountain, then to settle back and subside like agitated waters, at last becoming quiet. Rocks and trees go with such a slide, and there is no escape from it if one is unlucky enough to be near it.

In our country the slides seemed to have been started for the most part by the melting of the snow on the bare, black rocks at the rims of the peaks. The water trickling down under the snow would finally start a little of it to sinking, settling, and then to sliding, and what began in little, ended in large slips of the heavy covering of snow which lies over these mountains—a covering whose immensity is something which is not expressed in simple figures. One needs to see a valley full of a snow-slide in order to appreciate it at its real worth. We had such a little affair just about a quarter of a mile from where we were camped. When we looked at a few of these things, and studied the bold and icy peaks, which crowded in around us in this wild corner of the world, we were almost ready to concur with the mountain men, who said that we were now having a touch of about as hard hunting as any game of the mountains could offer.

Habits of the Mountain Goat.

It was on March 28, I believe, that we first got into the ridges where we were to hunt, and on that day McChesney went with Kearney up into some stiff country which promised well for goats. When you hunt sheep in winter you want open and bare country where the grass can be reached, but the goats seem to prefer to winter on the roughest, barest, iciest rocks they can find. A goat is a natural blame fool, and so it always sticks its white hide against a black rock whenever it can, so that a hunter can see it a couple of miles. If it would keep on the snow it would be far more difficult to detect. The goat seems to pick out these rocks because they carry a few spears of dried grasses and an occasional bunch of the short, dry moss on which it feeds. Both the goat and the sheep will eat pine top browse, and the first goat tracks we saw were among the forest trees at the foot of a high scarp of rocks, to which the animals retired after feeding. It is the habit of the mountain Billy, when resting, to lie out on a rock about 1,000ft. out in the air somewhere and waggle his whiskers in content while he stares on down the mountain side in search of any possible enemy. He never seems to care about what is going on above him, for usually there isn't any above. Indeed, he is not built for looking up, but for looking down. His head is set on the middle of his front, like a buffalo's, and if he wants to look up-hill he has to sit down to do it. If the hunter gets up close to him, he does not seem to be much afraid of either the man or his dog, if he happens to have one along. The trappers usually take along dogs on their winter trips, but no old hunter or trapper will ever let a dog go after a goat. The big, white, stupid animal which lies or squats out there on the rocks, apparently indifferent of its fate and too lazy to move, is quick as lightning with its head and neck, though so tired in its legs. It never takes trouble to run from a dog, but waits till it comes up, and then with a rake of its long, black, needle-pointed horns impales the dog at once. The hunter then shoots the goat, and afterward anathematizes himself for doing it. The flesh he will not touch, and the hide he cannot sell. Therefore, the tone of the mountain hunter in speaking of the white goat is one of amusement and contempt. He thinks it the most stupid and worthless of all animals, and cannot see why anybody should take the trouble to kill it. He says, what is obviously true, that all there is to goat hunting is the climbing. If you are game enough to get up to where the goats are, you can easily kill them if you care to. For the mountain sheep the hunter has far more respect. He prizes it as a grand game animal in every way, cunning, swift and wild, good in the chase and good in camp after the chase. One must climb for the sheep, too, but we had found that he need not climb in country so forbidding and dangerous as this which was now pointed out to us as the winter home of this curious, white-robed freak of the mountains, which we wanted to interview upon his own doorsill.

Troubles of Winter Climbing.

As we separated for our hunt I took a look at the wild peak on which McChesney and Kearney were to hunt, and mentally concluded they would have their work cut out for them that day if they got to the country which was described as most likely to produce game. But soon all thought of my companions was lost in concern over the immediate surroundings into which Schultz and I were plunged. We passed on beyond the peak which was to be hunted by the others, and tried the ascent of the next mountain beyond, which seemed to be fairly easy in its approaches. We went up for an hour or so over timbered country, much of the time on our hands and knees, for the shoes would not hold on so steep grades. Sometimes the crust would hold us up for a time, but as the sun began to strike our side of the mountains the snow softened, and our ascent became threefold more difficult. We did not walk, but wallowed, plunging in up to our waists, sometimes lying panting for some minutes before we could get out and go ahead. All the time we wormed on around the side of the mountain as we went up, and at length we struck a place where a big snow-slide had come down, and where the masses of snow lay in a huge jagged frozen stairway. Up over this winter causeway we clambered joyfully a long way, taking off our snowshoes and climbing from lump to lump of the frozen snow. I could not help thinking of the persistence of man, the hunting animal. We had no business at all to be in there hunting these animals at that season of the year, yet here we were, climbing right over the top of the terrors of the Rockies, the snow-slides, and all for a shot at an animal which we couldn't eat if we got it. Yet it should be observed that, so far as any danger from snow-slides is concerned, the safest place one can get is on top of a "dead" slide, for there will not be a second slide where the snow has once slipped.

Our frozen slide lasted us till we got a good big start up our mountain, reaching a point from which we could see a vast panorama of white peaks all about us. On ahead lay a wild-looking region into which it did not seem any human being could ever penetrate, so cold and forbidding were the high bare peaks. Into this wild country our side cañon led, but we were not to venture so far away from our camp, which, rude as it was, was a very interesting place at that time. We attempted only to get up to the top of our peak, cross it, and then descend to camp upon the opposite side. We thought we might find some goat country up on top of our mountain.

We were not, however, destined to make the summit of our peak. Our snow-slide led us up a long way, and then we forsook it and tried a long, bare slope which took us within 200yds. of the upper rim rock. Here we left the open slope, where the snow was underlaid with sheer ice, and got over to the timber again, for Schultz said the snow might start down that smooth slope any moment if we went plunging around out there. Very often our feet would touch and slip on the ice that underlaid the snow. But when we got the timber we found the ascent so steep that we could not make it, the snow not being hard enough to support us without the shoes and the pitch being too steep to get up with them. We wallowed around for a while and balled up, and finally sunk down in the snow to rest, as we had done a hundred times before during the climb to where we were. Our resting place was directly below a big rock and a little clump of trees which grew above it on the mountain side. Just beyond this rose the sharp rock face which we wanted to get over. Along the face of this, in the warming sun which shone fiercely down upon the flashing sheet of white and the face of the black rocks above it, we could see tiny trills of water running where the direct rays had reached the ice and snow of the crest. Schultz did not miss the situation in any detail, and at last said: "I'm dead leery of this place, here. We'd better get down out of here as quick as we can. She's liable to turn loose any minute."

Now I do not like to get within a couple of hundred yards of anything I want and then turn back from it, and so perhaps was influenced more by impulse than by judg

ment when I declined to take Schultz's view of the case. I told him we were so near the top that we ought to go over now sure, and pointed out to him that it was surely safer up above the snow-slides than it was below them. Moreover, I explained to him that I had had a few thousands added to my life insurance before I came on this trip, and maybe it would be a good thing for my folks if the snow-slide did catch me, as a live newspaper man never is worth much anyhow. At this Schultz grieved openly, saying that his folks had no one to look to but himself, and that he had no life insurance; so he thought we'd better go down. "Go down," said Schultz, "Go up," said I; and so we had it. And as we argued, blamed if she didn't let go, just up above us at the foot of the rock, and sent a little slide rippling and shuffling and rolling right down by us, the edge of the roll spreading well about as it widened below the big rock under which we lay upon the snow! This made each more determined in his position, Schultz that it was safer below, I that it must surely be safer up stairs above such little avalanches as that we had just seen. At last Schultz said he'd like to do anything on earth to oblige me, so with a sort of good-bye-vain-world look on his face he left the cover of the rock and started up the pitch above us. And then she turned loose on the other side, and this time the roll of the snow spread well up to our knees as we stood on the shoes above the rock. Schultz made a few plunges and wallows, and I saw we could not make it further except by plunging through the snow and not getting over it. A few more plunges, and Schultz said it could not be done, so we turned back, and chanced all sorts of snow-slips getting down over the face up which we had come, though I presume that this was really the sensible thing to do. We were both tired and wet, not talkative when we got to the camp, which Boak had fixed up, but that worthy soon set us right with a cup of tea and a bite of beef and beans.

McChesney and Kearney had a climb very much like ours, but with a shade more of success. They found that there were really goats wintering in this country, and struck the trail of eight or ten goats, finding where they had been rooting around in the snow under the short pine trees. They saw only one goat, a big Billy, which was calmly threading his way down the sharp rocks below them, some 300yds. distant. They tried to head him off and get a shot, and counted on getting him surely; but the same fatality which had attended McChesney all through the trip stayed with him still. The goat, instead of coming on up the ravine where he was expected, turned up a side coulee, and got above and away from the hunters while they were waiting for him to appear. This was too bad, for it did seem as though the coveted head ought to fall to Mac at last; and we were all sorry enough that the old goat had for once in a way showed a little cunning, and gone away from danger instead of into it, as sometimes they are about as apt to do as to try to escape.

Damp Night in Camp

That night we were all very wet, the damp quality of the snow making itself felt in this rolling and plunging about in it all day as we were forced to do in the climbing. Kearney was wet to the waist in spite of his rubber boots. McChesney's buckskin-topped rubbers were soaked like so much brown paper. My socks were getting a little tender from frequent dryings at a hot fire, and showed thin places through which the snow found ways. As I had no tops to my rubbers, and as the snow was now too wet to keep out in that way, I went to work and sewed some canvas tops to my rubbers, having by good fortune found a sail needle and bit of string in my war bag. This rig I found to be all right, and by wrapping my legs well in the wide canvas tops and lashing the whole with thongs, I found I had a very comfortable and dry footgear, soft and fit for shoeing and yet impervious to wet snow.

We had had a warm day, a sort of Chinook, and that night it came on to storm in a most threatening way; first a heavy, blinding snow, then a change which turned it into rain. This was really serious. The lean-to we had made of boughs for the night's camp was all well enough for snow or wind, but it could not turn rain. If our blankets got wet we were in trouble, for the warm storm was sure to be followed by a cold one, and to lie out in winter with wet blankets and wet clothes would be more than any of us cared to do. There was no escaping the situation as it was, however, for we had nothing to make a roof of except our snowshoes, and they leak in a heavy rain. McChesney was philosophical, Schultz a trifle gloomy, Kearney cheerful, and Boak openly hilarious. "All you want to have is faith," said Boak; "it ain't goin' to rain very much." Nor in point of fact did it, though it rained enough to start our roof to dripping; and the action of the fire on the damp snow kept up a pretty constant dribble over us all night long, or until the threatening change in the weather reached us.

Again After Goats.

The next morning was anything but mild. A terrible black storm settled down in the mountains and swept over our heads as we lay in camp, the wind roaring through the trees in anything but comforting fashion. We were twenty miles from a cover; it was getting very cold and very black in the mountains, and worst of all, we hadn't got that goat, and only had part of a day to get him. At least, McChesney said he would have to start back that afternoon at latest, though he wanted just one more try up there where they had seen the billy the day before. Bad enough was the prospect when we turned out of our cheerless bivouac and started out on our cheerless hunt. The wind, cold enough at the foot of the peak, was cutting in its intensity as we got up higher, and blew the flying rift of icy powder almost into the skin whenever we were obliged to face it. Yet once more we found fresh goat trails, though once more we failed to find goats. The storm shut in worse and worse, so that we could not hunt. If we had had a good day, we should have killed McChesney's head that day, for we knew we were close to the game, but as it was, the weather was too thick to see anything, and all knew it was useless to try to get a shot, for the game could smell further than we could see. Moreover, the goats that had been feeding low down among the trees at the timber line had now taken fright at something and gone up to the high rocks. We thought possibly they had been troubled by the mountain lions, whose fresh tracks, made the previous night, covered the ide of the mountain where we hunted. We saw a great eal of lion sign in there, but could do nothing with the og.

A little after noon we all rounded up and concluded to give up the attempt to hunt, McChesney finally admitting his fate and accepting it like a very game sportsman. He was sorry he had killed nothing, but this was his limit, and he had to get back to the railroad and start East as quickly now as possible. Therefore, at late afternoon of that day he and Schultz left us and pulled out for home; nor have I seen McChesney since, though I hear from him often by letter, he always wanting to try that winter trip over again.

Short Rations.

We were now again nearly out of grub, and Schultz promised to come back at once and meet us with more meat and flour as soon as he had taken McChesney to the railroad. I had still a couple of days available before the council at the agency, it being now Tuesday, and the council date being set for Saturday following. I decided to use these last days in trying to get my goat, and next week I shall tell, in the last chapter of this long series, whether or not I did get him. I remember very distinctly that I felt very gloomy when McChesney and Schultz turned down the trail on their long walk toward home. It was cold in camp, and we had no decent shelter for such weather. We were nearly out of food, the beef being all gone except some scraps. We had a little sugar and plenty of tea, but outside of this we had nothing but a little bag of flour, and investigation proved that this had no baking powder in it. We had been baking bannocks, or "dough-gods," as Boak called them, mixing up flour and water with salt and cooking the whole in the frying-pan, which made almost our only cooking utensil. At our last meal before our companions left us we had little to eat but dough-gods and tea, and thereafter it seemed we were to have nothing else until Schultz with the relief expedition got back to camp again. I am not especially fond of tea, and I don't like dough-gods as a steady diet, but in the winter and on a mountain hunt almost anything tastes good. Attempting to eat my portion of this hard bread, I had the misfortune to break off a tooth, and was assailed with a most abominable toothache, one of the worst things that can strike a man when he is in the wilderness, where help or mitigation is impossible. As I sat on the browse bed under the rude roof of our bough house, hungry, but with small prospect of anything to eat, with the cold wind screaming in the tree-tops and with my companions vanishing down the trail in the thickening light of the storm, it did seem to me for the time that maybe I hadn't lost any goat after all, and I wondered if I was really having a good time.

But then came Boak, with his steady cheerfulness and his watchword about having faith. He told me to tie up my aching face, and he put on another pot of tea, and then, with a rough kindness which I shall never forget if I live to be 100 years of age, he came around to where I was sitting humped up, and pulled off my shoes and hunted up a dry pair of stockings, and told me to lie down on the blankets and holler if I wanted to, but to have faith.

"I'll bet you any kind of money you kill a goat to-morrow," said Boak. "We're in now to where they are, an' you've got to git him."

Kearney, a very quiet man, and, as I had occasion to observe, a very good man in the mountains or about the camp, when asked what he thought was the probability of getting a goat, was, as usual, non-committal. Maybe we would get one, maybe not; but he thought the goats near our camp had now been disturbed, so that it would be harder to get them. If I could stand it to move camp a little further up, in between the two high peaks which appeared across the flat just over beyond us, he thought we would be sure of a goat, provided any were wintering on those peaks, as he thought very likely there were. If we stayed where we were we might get a goat, anyhow, but the chances were not so good. So, badly as we felt at our poor circumstances, we three remnants of the party pulled out and up that evening, and, tired well-nigh to the limit of endurance, made camp again still nearer to what we took to be the home of the animal we wanted. It was another night under a bough shelter, with no tent, with not even proper food now, and one of us with a malady which bid fair to prevent his hunting on the morrow. We were not enthusiastically happy when we went into the blankets that night, and for my part, I slept but little. When the fire was high, I dreamed of places where it was warm and comfortable, and when it had fallen low again, I dreamed that I was frozen and quite beyond all human aid. This, however, was nothing but a dream.

Natural History.

THE SENSE OF DIRECTION.

Editor Forest and Stream:

Your correspondent Shaganoss has aroused me to a sense of my duty as I see it. He has advanced a theory in relation to direction which I believe is full of error, because his conclusions are based on false premises. I trust he will not deem me guilty of egotism, if I claim the ability to correct some of his conclusions by pointing out his false premises. His interesting paper, "The Wild Animal Instinct of Direction," contains a word that affects me as a red rag affects a bull. I refer to that equivocal, worn-out word, instinct. As applied to the lives of wild animals, it is such an elusive, meaningless term, that it seems a pity it should be used so often by writers on natural history. The word instinct savors of the supernatural, and was invented in ancient times to separate man from the brute, when the lower animals were supposed to lack reason. The word heredity is a far better word, for it renders intelligible all of fact that the word instinct implies, without resorting to imagination and the supernatural.

I can meet your correspondent on common ground in his theory that wild animals possess the power of direction. I am a firm believer in the sixth sense, the *sense of direction*. Your correspondent, if I understand him correctly, believes that an animal, blindfolded and carried to a distance, would, in most cases, strike a bee line for home through the instinct of direction. I can neither understand or entertain such an idea. An occurrence of that kind would have to be classed with the miracles. The sense of direction, as I know it, does not imply a supernatural power.

I believe that most animals possess the power to strike a bee line for home, after wandering for days through field or forest, not by the aid of a blind instinct, but through a sense of direction. The ability to keep the direction of home in mind, to never lose bearings whatever the surrounding conditions. But the animal must not be handicapped by the loss of sight or any other sense. I claim that the sense of direction is dependent on the other senses, just as these senses are dependent on each other.

Man possesses the sense of direction in a marked degree. This I know from my own experience. I can tramp through a strange forest day after day and never lose my bearings. It is a sort of woodcraft that practice fosters. The sense of direction, for the most part, acts secretly and we are not aware the we are under its influence unless our attention is attracted to results or surrounding conditions.

Eleven years ago, when Magnolia Swamp was unknown to me, I wandered, or rather pushed my way, through its dense shrubbery from daylight till twilight in search of magnolia blossoms. It was a rainy day, but I did not lose my bearings. As a fact, I did not think of direction more than two or three times during the day. After I retired that night my mind was engaged for some time in recalling the peculiar features of this strange swamp (the only swamp in the New England States where the *Magnolia glauca* grows in a wild state) I found that I could recall a great amount of detail that had escaped my notice during my wanderings. This was no new experience, for I had often studied the phenomenon of the sense of direction after a day in the forest. In recalling this day's work my memory brought out a mass of detail relating to the appearance of clumps and shrubbery, the direction taken when searching for new clumps, distances, etc., details that did not engage my thoughts at the time. Unknown to me, these minor things were registered on the brain. Through these involuntary impressions sense of direction is made possible. If the sportsman, after a day in the field or forest, will do some deep thinking, he will be surprised to find that he can make a fair map of his day's sport and bring to mind many minor details unthought-of before.

It will now be understood that my sense of direction controls movement, or, to state the idea fairly, it is the province of the sense of sight to see, of hearing to hear, of feeling to feel and of the sense of direction to direct. All directed movements are registered on the brain and are of great assistance in defining bearings and locality. The untrained mind cannot separate movement from the five senses. If a waterfall is heard and approached, then hearing directs the footsteps. If an object is seen and approached, then sight is the motive power, and so with the other senses. The error in this reasoning is evident when we learn that these senses have no connection with the muscles that control motion. We may see an object, but to approach it depends upon the will. The will may act directly upon the motor muscles, or it may register or express its desire and the motor muscles will perform the work while will may be otherwise occupied. It is the capacity of the motor centers to intelligently perform the work parceled out by the will, which I claim constitutes the sense of direction. In the simple act of walking will is seldom in proof. We walk automatically, but at the same time there is an intelligent control over the direction of our footsteps. What is this but the sense of direction?

You may move to a strange city. Your business office may be a long distance from your residence. At first you employ a guide, but after a time you become familiar with the various streets, and act as your own guide. Later you may leave your doorstep engaged in a brown study and reach your office without a thought of a street, or knowledge of anything but the matter in your mind. Unknown to you, sight pointed out the landmarks, and the sense of direction did the rest.

The sense of direction, as I understand it, is the power that controls movement when will is not employed.

The writers and lecturers on "Body and Mind" are all agreed on one point—that there are motor centers outside the brain that may act independently of the will while obeying its orders. On this theory I base the sixth sense, because it is impossible to explain intelligent movement by any other mode of reasoning.

I believe that wild animals possess the sense of direction to a degree that makes some of their acts appear to us to enter the domain of the supernatural. The circumstances which surround their lives necessitate the cultivation of a sense of direction. It is the evolution of a want.

I have given my ideas of a sixth sense for what they are worth, and now refer the whole question to the readers of Forest and Stream, knowing that it will receive intelligent consideration.

I hope I have made my meaning plain. I have endeavored to do so without making use of hair-splitting technical terms.

Now, if Shaganoss will give me his impartial attention I really think that I can convince him that some of his conclusions are wrong because his premises are false. He concludes that birds are endowed with a supernatural gift, which he calls "instinct of direction," because of the mystery of migration. He writes:

"That the migratory birds, when the time comes for migration, do not have to stop and think which way they will go. They just get up and go. They may be frightened and become confused, as by being frequently shot at, but once 'beyond the danger line,' their instincts regain control, and they will resume their journey in a direct line for their ultimate destination, and that, too, without stopping to think which is the right way."

If this were true. If birds could launch themselves into the air and go South without thought, and if turned aside miraculously regain their course without a thought as to the right way, then indeed would I be forced to admit the supernatural, to acknowledge that the days of miracles were not past, but I should be a miserable being the rest of my days. It would upset all my preconceived ideas of Dame Nature and her laws.

Really, friend Shaganoss, before we resort to miracles to explain migration, would it not be well turn to natural laws—laws that are explained by intelligent thought ought to decide such questions.

I have ever found the birds as intelligent in relation to the needs of their lives as we are to our lives. Migration is not an exception to the rule.

If man migrates he does so intelligently. Why not grant to birds the same faculty?

For the sake of illustration we will take the swallows, birds known to all, and describe their method of migration.

Remember, that the old birds have been South, that they know the way and do not doubt their ability to pilot the young birds to the new home. They also know, from experience, the perils and hardships of a long flight while battling with wind and weather. Full well they know that young birds, just out of the nest, would not last a day's flight if raw and untrained. So they intelligently proceed to train the young birds into a suitable condition. Early in the morning, after the young are fed, they are marshaled along the wires and fences and drilled in the art of flying. At first they fly in small squads, just a family group, but later they gather into companies and practice until the companies are massed in one grand army corps. When the young birds are thoroughly drilled, that is, are hard of muscle and capable of keeping their place in the ranks, to touch elbows, as it were, the old birds are ready to lead the way South. To avoid straggling the departure is made in the night.

Up to this point we see no indications of instinct. The acts of the swallows are as intelligent as would be the acts of human beings under like circumstances. If a general had raw recruits to deal with he would drill them just as the swallows drill their raw recruits.

Perhaps the maneuvers of swallows gave mankind the idea of military tactics.

When we consider the journey of these birds South, why should we claim that their acts are guided by a supernatural power? Why not allow intelligence in flight as well as in preparing for flight?

We can readily understand how the old birds, that have made several journeys and must be familiar with all the landmarks, may make the journey without the aid of a supernatural power.

We must remember that the sense of sight in birds is developed to a degree unknown to mankind. It often happens that I startle a ruffed grouse from its perch in the night. In such case it hurls itself through the shrubbery with amazing speed. When I think of the keenness of sight that enables this bird to avoid twigs and limbs, I know that my sight is nothing but blindness in comparison.

Some birds fly high, and the earth is like a map beneath them, with a well-defined line between land and water. Birds that are familiar with the route ought to experience no difficulty in finding the way. Even the limited sight of man would serve unless handicapped by a dark, stormy night.

Young birds left to themselves will not go South. Young robins often get left in this vicinity. They are birds of the last brood usually; the parent birds are killed before the young learn to associate with the flocks in the neighborhood. They stay through the winter because they have no knowledge of the South and no guide to lead the way. Ducks hatched under hens from wild eggs will not go South. I once lived near a farmer that hatched out six black ducks. The farmer did not feed them, and they lived through the summer on a trout brook. In winter they huddled into a fence corner under some shrubbery. They had no instinct to send them South, although their flight feathers were perfect; but they possessed intelligence enough to seek the cattle tie-up for warmth whenever they found the door open.

Shaganoss assumes this instinct of direction in the honey bee, because it returns to its hive in a "bee line" after hours of wayward flight. He seems to infer that the bee, the pigeon, and some variety of ducks, rise and circle in the air to leave landmarks "out of sight," so that this remarkable instinct may work more freely. Would it not be well to apply natural laws to these cases? Suppose we infer that these animals rise and circle to find familiar landmarks, just as a human being would act if he had the power of flight and had lost his way. Human beings climb trees, when lost, to look for landmarks. Why should we deny to bees and birds the very methods we make use of whenever the occasion requires?

As to bees, I do not know that they circle to find landmarks. After years spent in hunting, or "lining bees," as we called the sport in Maine, I can speak with no uncertain knowledge. The power to circle in search of landmarks is limited. If a bee is carried too far from its hive, beyond its power to circle and find landmarks, it is lost and never returns to the hive. I have proved this time after time. The carrier pigeon's power to circle is a most remarkable feature, but nevertheless it has its limit. Pigeons that are used for long distance flight are trained over the whole distance in short flights, so the bird may become familiar with landmarks.

Our cats and dogs that return to us when carried sightless to a distance, may return through the sense of smell. Cape Ann fishermen tell me that dogs scent the land fifty miles at sea. If we grant to animals the power of observation which we possess, and then take into consideration their keen sense of smell, we can account for many things that seem mysterious. However, dogs and cats are lost every day in the week.

Again, Shaganoss infers that man has lost this instinct of direction from the interesting fact that he sometimes gets his points of the compass mixed. I will not split hairs with him on this matter, but will let science dispose of it if possible. Science tells us that every object we behold—in fact, every conscious experience or observation—is photographed on the brain, and remains while there is life. Now Shaganoss is carrying around on his brain a picture of that lake with the points of the compass all wrong. As it was his first visit to the scene, the picture on his brain was forcibly impressed, all subsequent pictures are dim in comparison. When memory is connected with that lake, the first picture stands out in bold relief. If he is on the spot and is hurriedly called upon for any point of the compass, that first picture on his brain mixes him all up.

Old people recall events that took place in youth, while they cannot remember recent events. I suppose the reason for this peculiarity of memory is because the picture impressed on the brain in youth, when the faculties are perfect, are brighter than the pictures impressed by faculties dimmed by old age. First impressions are always the strongest, and it is almost impossible to oust them through impressions that are less emphatic.

Shaganoss is not alone in his mixed points. I know a section of a stream where the sun rises in the west and sets in the east; I can swear to it. HERMIT.

GLOUCESTER, Mass.

Brutes' Moral Sense.

Editor Forest and Stream:

I DID not think by expressing the opinion that brutes have no moral sense, that I would stir up so much argument against my proposition. I decline to argue the subject further, being unwilling to tax the patience of an indulgent editor. Whether or not it could be ascertained that brutes have moral sense, it matters little to us. However, a belief of it—as I said—would tend to make man more cruel to them. I must say I am unable to see the force of my opponents' arguments, but if their logic is accepted by others, they are quite at liberty to rest in their belief.

As to some of the emotions of brutes, we can be certain they are exactly analogous to those of man, such as anger, revenge, love, and evidently jealousy; but as to the emotion of pride, such as man feels, we can only suppose exists. What we call the exhibition of pride in the strut of the turkey, the prance of the horse, or the crow of the cock, may be the consequence of exultation—exaltation of spirits.

N. T. ELTING.

Wild Pigeons in Nebraska.

LAST week, while driving through a grove along the banks of the Nemaha River, in Johnson county, Neb., about eight miles from Burr, near Cook, I saw a flock of from seventy-five to a hundred of the wild passenger pigeons, the first seen for twenty years. W. F. R.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

A SQUIRREL HUNT IN SOUTHAMPTON.

ON Aug. 26 I left Richmond on the 8:50 P. M. train for Emporia, a pretty little town about sixty-five miles from Richmond, situated on the Meherrin River in Greensville county, Va. At Petersburg I was joined by Mr. Dabney, who was also seeking sport in the way of squirrel shooting. We were to join Capt. J. R Lifsey, of the Atlantic Coast Line, and Mr Barnett, M. C. B of South Rocky Mt., N. C., shops, at Emporia, Va; and our point of sport was about fifteen miles southeast on Meherrin River, squirrel shooting. This is one of the best places for squirrels in the State, and no one living is more fond of the gun and rod than Capt. Lifsey and his genial companion, Mr. Barnett. Mr. Dabney and myself were being royally cared for, and at 10:44 P. M. we reached Emporia on time. We found Capt. Lifsey on hand, and waited until 2:20 A. M. for Mr. Barnett, who was expected on the north-bound train. The time soon slipped quickly by, for the Captain was telling us some good stories about our hunting grounds, and about the number of squirrels we expected to kill. Our intention was to spend five or six days shooting squirrels.

We made an early start for the gum swamps, and after traveling three or four hours arrived in camp. The day was warm and bright, and we were agreeably surprised upon arriving at camp to find quite a gay turnout of old Southampton's beaux and belles, and the old folk with the little ones, at a lovely green, shady nook, situated on a pretty bass stream called the Goose Pond. We were to have a big squirrel muddle—such as the Southampton farmer and hunter know how to prepare. I had never before been treated to an entertainment like this, and was at a loss at first to know the right thing to do; but felt free after seeing so many pleasant people; and the welcome they were extending us made me feel at home, for they were the most polite and hospitable people I ever met.

The Captain called my attention to a very fine bass lying in a boat which had just been brought to anchor near our place where the muddle was being prepared, and asked me if I saw any difference between it and a chub. After examining the fish I told him I saw no difference, for the people here called this fish a chub when it was really a small-mouth bass. Several hauls were made with a seine, and all the fish of different varieties one would care to see were brought to shore.

We were to have a fish fry also. I began to think that these good people intended to kill us with kindness before we could level our guns at some squirrels. Hunters were continually coming in with three and four and sometimes a half-dozen squirrels; while three or four men were kept busy preparing the fish, others were dressing the game, and some were bringing in watermelons that would make an Afro-American smile with joy. Finally at 2 o'clock everything was in beautiful shape. The tables were set for a multitude, and about eighty of the best people in old Southampton county sat down to dinner. To see the delicacies piled on the tables which were brought by private conveyance, together with the big squirrel muddle and fish fry combined, made one think of the little fancy that lingered once in a certain poet's mind that "the tables they groaned with the weight of the feast." I believe every one felt hungry, and I know that every one appreciated that dinner, and when it was over all seemed to have enjoyed themselves immensely.

The sun was fast bidding the day adieu, and slowly the crowd dispersed after wishing us much pleasure and success. In a moment every hunter was donning his hunting coat and getting a supply of shells for an hour's squirrel hunt before dark, for when it gets dark in the swamps it is darkness sure enough. The Captain and myself went in one direction to some scaly-bark trees; Mr. Barnett and one of the guides went another way, and Mr. Dabney and the other guide pursued another place to find the squirrels cutting scaly-barks. We had not been long in the swamp before the Captain found two up one tree. I killed one and he the other. We then flushed a flock of wild turkeys and tried to get shots at them, but they were too shy to allow us to get near enough. The Captain was anxious for me to get a shot; he did not care much to get one himself, for he has killed a good many and I had my first turkey to kill. Darkness found us all at camp, and only twelve squirrels had tumbled to the racket. We would have killed more, but owing to the lateness of the hour and so much shooting during the day by parties shoot ing squirrels for the muddle, that the little scaly-bark rodent had sought a hiding place and failed to show himself freely.

After supper, as we were seated outside the camp door with good cigars, the story-tellers entertained us. One of the guides gave us a very graphic account of a young lawyer's first effort at oratory before a county jury. He grew quite dramatic at times and his gestures were real amusing. I was so fatigued I soon fell asleep and came near falling out of my seat once or twice. The Captain was lively and looked cheerful, for he loves a good story.

Early in the morning we started before breakfast to get a shot at the turkeys we had flushed the evening before. At sunrise we were busy calling turkeys and one old hen responded, but she was so cunning we could not fool her, and we failed to get a shot at turkeys. We soon started for a large scaly-bark tree, which stood not far from camp, and while approaching we could hear the squirrels cutting scaly-barks. They saw us before reaching the tree and quickly stopped cutting to hide behind a limb or branch of the tree. Mr. Barnett saw one and shot it, and at the report of his gun the whole tree appeared to be alive with squirrels. It was load and shoot as quick as you can! We killed eight, and some three or four made their escape. I believe I killed the first squirrel and the shot was quite a good one, so much so that I received a very nice compliment from the genial Captain, who was standing near by watching the excitement. One old squirrel which was cut down in the early firing proved to be quite shot-proof. After it had been shot out of a tall tree, and had fallen to earth with a thump enough to break it up, a dog chewed on it awhile and the Captain struck it a heavy blow back of the head. Well, after getting to camp and pulling the squirrels out of our coat pockets, the old fellow was just getting his right mind back again, for he came near biting off two of my fingers. A quick jerk saved me from having a sore hand. I thought we would have to try the axe on him, but another stroke finished him entirely. There are some of the toughest squirrels in these swamps I ever saw. If you have not a strong shooting gun and shot of good size you will not be in it at all. I saw some almost shot in two trying to climb trees.

After breakfast we had a deer hunt, but, unfortunately, we did not jump any, but came upon a flock of wild turkeys, and Mr. Turner, one of the guides, killed one with his Winchester rifle. We reached camp about 2 o'clock, and after a good rest went after squirrels again, and many were killed. Mr. Barnett made two fine shots, and likewise Mr. Dabney made a good score with his 14 bore. The Captain could reach them in any tree at almost any distance. I have seen him shoot squirrels out of trees from a distance that looked almost unreasonable for a gun to kill so far, but such is the glory of having a good shooting gun. The Captain is a fine all-round sportsman and an ideal hand with a gun.

Monday another deer hunt was made, and Mr. Turner killed a very fine one. A great many squirrels were brought also. Tuesday, after a good hunt, we broke camp and came home. Every one was more than pleased with his outing. After summing up the total game secured during this hunt, we find we killed ninety-eight squirrels, one deer and one wild turkey. A. P.

MANCHESTER, Va.

Directions for Making a Squirrel Muddle.

By request A. P. sends us the recipe for a squirrel muddle, given him by Capt. Lifsey, as follows:

A muddle of forty squirrels should be cooked in a four-gallon pot, or the size of pot to be governed by the quantity of squirrels, say one gallon for every ten squirrels.

The pot should be filled one-half or two-thirds full of water and brought to a boil. Then put in the squirrels cut in small pieces (say into six parts), and keep boiling in clear water, adding water whenever it gets low, so as to keep the squirrels well covered while boiling. They should be allowed to boil until they are quite cooked, then add salt and pepper to suit the taste. Red pepper in pods is best, one pod generally to every ten squirrels. If not salt enough, it can be seasoned to suit individual taste when served. After the salt and pepper have been put in, add corn and tomatoes (a quart of each). Young corn cut from the ears (roast ears) in season are preferable, but canned corn will do.

After the corn and tomatoes, a teacupful of fried meat grease to each gallon of muddle should be added; the grease from a Virginia-cured side makes the best flavoring. The muddle should then be cooked until thoroughly done, being continually stirred while cooking.

Before the pot is taken off the fire, the water should be allowed to boil own enough to bring the muddle to the proper thickness, so that when taken off it can be eaten with spoons.

It generally takes from one and a half to two hours to prepare a squirrel muddle; and when well cooked it will be found a rare dish.

The word muddle comes from the continual stirring while it is being cooked and the appearance of the dish after it is cooked. J. R. L.

TAKING STOCK FOR A MOOSE HUNT.

WITH a week's supplies, I drove twelve miles to the river, where Tom was to meet me with his canoe. Tom is the guide who is going with the party for whom we are now cruising, and he is a good one. We started up the swift-running river, the water clear as crystal. Many points of beauty meet the eye as the canoe is poled up stream, the water fighting hard every inch of the way. We made thirteen miles, which is a big day's work up this stream; pitched the tent and had supper, which was greatly added to by a lot of fine trout taken on the way.

Supper over and the things snugged up, Tom says: "Guess we'll talk to the moose a little." Getting a piece of birch bark to suit his purpose, he rolled it in the shape of a horn, and soon the mountains and valleys for a mile around were echoing the sounds. Being tired with our day's exertions, we were soon in the land of dreams and forgetfulness.

Something awoke me. Hearing a noise as though a large animal was slowly walking along thoroughly aroused me, and giving Tom a nudge we listened. Carefully undoing the strings of the tent we peered out. 'Twas so dark nothing could be seen, and fearing it was a bear which might carry off our grub outside the tent, I threw back the flap, making a noise, when we distinctly heard the footfalls of a large animal moving away. Our provisions were brought inside and we were soon asleep again, not waking till daylight. On going out and looking around we found that a small tree had been uprooted, and there in the clear earth were two footprints of a moose which had been so close that he could have put his nose on the tent, as perhaps he had,

This is counted too early in the season to call, and we did not expect him to pay any attention to us, but he came either from our calling or just by chance.

We went up stream and reached Mud Lake. Paddling quietly along close to one shore, keeping a watch, we soon had our patience rewarded by seeing a noble moose, with a great head of horns, walking in toward the lake on an old lumber road. Coming to a cleared place on the bank, he stopped; taking a good, long, steady look at us, slowly turned and, in no hurry, moved again into the woods. We cruised many small lakes and ponds, finding plenty of fresh signs of moose and caribou, and on their banks beaver have their homes. We put in eight days of this, and although we were up at daybreak, it seemed that night came too quickly.

Going back down stream reminded me of our boyhood days, when we would pull our sleds up to the top of the big hill in the winter for the fun of sliding down. Just so here. Places where it took us an hour to climb up we would fairly fly down in five minutes. The ride down is nice, but going up is slow. Mr. Miles, the civil engineer who has come across country locating the line for the new railroad spoken of in a previous article, reports wonderful abundance of moose in some parts of the intended road. There is plenty of them, but it takes work with skilled men to capture this lordly animal of the forests.

There are a few places easy to get to from here. Some can be reached in one day where caribou and deer are plenty, where the languid city man, who can hardly muster health sufficient to attend to business at present, would come for a month or two, he would surprise himself and friends on going back a brand new man, as full of life and vigor as the natives, who never have breathed other than the pure air from these their native forests.

A. J. Raymond.

Edmundston, N. B., Aug. 17.

CHICAGO AND THE WEST.

News from the Chicken Fields.

St. Paul, Minn., Sept. 11.—No reason as yet appears to make one doubt the general accuracy of last week's forecast on the chicken crop of this section. I have conversed with or heard from many more parties who have returned from shooting trips, and almost without exception they report results far below their expectations.

At Grand Rapids, Wis., 100 shooters went out on opening day, but all reported the shooting very poor, the coveys being broken up and mostly old birds remaining. This, of course, means that the sooner was there and got the cream of the sport.

At Hancock, Wis., very fair shooting was had on opening day by a few shooters, the birds all being the sharp-tailed grouse, not the simon pure chicken.

At Palmyra, Wis, there is a "farmers' trust," a league formed for the purpose of stopping non-resident shooting in that vicinity. On opening day two Milwaukee shooters—Judge Malloy and P. Barth—killed thirty-six birds in the league's territory, in defiance of the alliance. Are we to suppose that the Judge's title was really earned at bench or bar?

The numbers of shooters are so great, and the supply of birds after all so limited, that a bit of country which has a supply of birds does not last long after it is once located. Very often it does not last so long as the first day of the season. Thus, at Brown's Valley, Minn., where the field trials were held, there was an abundance of birds last July, and everybody supposed that there would be plenty left for the runnings. Such proved to be very far from the facts. In some way the farmers got the notion that the field trials meant an onslaught of city shooters with no intention except to use their dogs in determining who could kill the most chickens, and this thought sat ill with the local mind. The farmers determined to forestall the invasion, and they did so pretty effectually, wiping up the birds over all that part of the country some days before the date of the trials. So I am advised by Mr. S. A. Smart, of the Great Northern Railroad, local secretary of the Continental Field Trials Club.

A splendid sporting region once lay all about the famous Kandiyohi Lake country, west of these cities, both for duck and chickens. Especially good for chickens was the strip some forty or fifty miles wide, straight west, out toward Hutchinson, Glencoe, etc. This country is now reported shot out, especially at all points near the railroads. Yet at Wilmer, not far from the Kandiyohi lakes, chicken shooting was good last week. Mr. Carrington Phelps and myself contemplated a wagon trip out over this strip of country, between the two lines of railroad; and we thought that by taking the middle of the strip, away from the towns, we should get good shooting, though we had never yet had opportunity of putting this to the test. It is certain that this fall, such a trip would afford all kinds of shooting at ducks, for the whole State of Minnesota is this fall full of local ducks.

I hear again that Bird Island is good for ducks in abundance, and also some chickens. This is in lower Minnesota, and the gist of opinion now is that stated last week, that the legal season for chickens in lower Minnesota has been a failure.

At and near and west of Larimore, N. D., there are some birds, and again it appears that upper Minnesota and Dakota were the best sections of the Northwest this fall. At Pembino, N. D, Prof. Edmund Osthaus, Mr. Clarence Draper and Mr. Ned Cavalier, of the field trials party at Morris, Man., had very fair sport at chickens. They got thirty-seven in one day, and all the ducks they cared for.

Near Pembina is a large marsh, which is worth taking into account. Here Mr. W. S. Bell and Maj. J. M. Taylor had very fine sport at snipe, getting eighty yellow-legs and jacks. I am disposed to think Pembina has been about as good a place as any this fall.

Mr. C. E. Robbins, of Fargo, very well posted on game matters, says one had to go west and south of that point to get any shooting. The Ed. Bowers and Clint. Smith party, who camped out in the sandhills west of Sheldon, got over 200 birds.

At a point near Montevideo, in Chippewa county, Minn., the chickens are still fairly numerous, according to the reports of a machinery salesman, who lately drove across a good strip of that country.

Near Hawley, in Clay county, Minn., the shooting at chickens has been good.

In Ottertail county, Minn., the chickens have been on hand in numbers above the average, and that is one of the best sections to head for, though it has been much shot over for years. Above Fergus Falls the birds have been fairly plentiful. Near Tintah Junction there should be sport, according to the report of the local warden.

It was in Clay county that one of the largest bags was made last week, 203 birds in two days. This was done by Messrs. W. B. Douglas, of Moorhead; R. D. F. Polk, G. B. C. Evans, Hon. Henry Feig and Dr. F. Shipman, all of St. Paul. They divided into three parties the first day, and came in with fifty-two, thirty-seven and eighteen birds, respectively.

Lake Park, Becker county, Minn., once very good, has now been shot out by marketmen.

White Earth Indian Reservation, once very good, has been shot by sooners of the Indians and breeds, who sell to the trader, who ships to market.

Deputy Warden J. A. Jones, of Ottertail county, Minn., reports one bag last week of eighty-two chickens to three guns in two days, and another of 120 chickens in three days to three guns, all by St. Paul men.

Executive Agent S. F. Fullerton and Judge Orr went out together on opening day for a whirl at the chickens. They got twenty-four.

An Important Case.

An important case in game protection matters has just come up in the State of Minnesota, indeed, probably the most important in its bearings ever fought in the Commonwealth. It is the old case of the Indian over again. It is the policy of the State Game Commission to concede that the Indians have the right by treaty to kill and consume game on their own reservation without control by the State, but that as soon as they or their game shall be found off the reservation, the State may assume control. Indeed, any other interpretation of the law would leave the law itself practically a nullity. Already much game is killed off the reservation, carried into the reservation and shipped thence to market under cover of the Indian rights. Some time ago Agent Fullerton seized such a shipment, 630 chickens and 420 partridges, and now he and his associates have been sued on this account by Mrs. Julia Selkirk, Indian trader for the White Earth Reservation. Attorney T. E. Byrnes, of St. Paul, who is employed by the Game Commission, is much interested in this case, and thinks he can win it. Much depends on this, and if the Indian lady wins, it may be expected that the keen game dealers of St. Paul and Chicago both will not be slow to take advantage of it until they are finally knocked out.

Interstate Work.

Warden Fullerton, of Minnesota, is a deputy warden for Warden Bowers, of North Dakota, and *vice versa*.

When Warden Bowers learns of a shipment of game made into Minnesota he notifies Deputy Fullerton, and the latter seizes the game. The State's Attorney of Minnesota has held that a State can thus follow its own property from one State to another—even from North Dakota to New York. This novel principle is yet new, but its significance may be seen.

Comity.

Let it be understood that there is perfect understanding and perfect comity between the game dealers of the Twin Cities and the game dealers of Chicago. Each knows the issue every time, and they help each other. Game dealer Cobb, the head of the craft in the Northwest, knows perfectly what is going on in South Water street, Chicago. Dealer Cobb does not quite agree with those who think South Water street is not handling illicit game with continuous regularity, swiftness and despatch.

Nearly Lost the Law.

Minnesota nearly lost her game law the past season. A determined lobby—backed by Cobb, Turner and the Le Claire brothers (Baltimore Packing Co.), and led by a woman lobbyist—fought the bill in whole and part. They sought to cut off the appropriation, and for the time did succeed in cutting off the right of the Game Commission to hire an attorney. The fight for decency was led by Mr. W. B. Douglas, of Moorhead, chairman of the game committee in the House, and by Sam Hansen of the Senate committee. These made so good a fight that the law was restored and preserved as it now is, one of the models of the Union in game law. In token of the appreciation of such yeoman services, the sportsmen of Minnesota have made each of these gentlemen a present of a high grade shotgun, each to select his own make. Sam Hansen chose a Greener, and will in due course receive this from the works. Mr. Douglas chose a Parker, and this gun I saw at the wholesale house which ordered it. It is a beautiful piece of workmanship, $250 grade, perfect in every particular and beautifully engraved, the gold plate bearing the inscription: "To Mr. Douglas, from the Sportsmen of Minnesota." A few of us went down with Mr. Douglas, Agent Fullerton acting as presentation man, when Mr. Douglas first saw this gift. He was naturally pleased, after the fashion of an infant with a new red wagon. The success of the men concerned in this fight in the Legislature, not the least of whom was Mr. Fullerton himself, was indeed matter for mutual felicitations.

Minnesota Sooner Convictions.

There were thirty-nine convictions secured against sooners in Minnesota during the month of August, or at least, that number have been turned in by the deputy wardens. This showing is a fine one. Deputy Warden Stephens, of Detroit, has been one of the most successful, and his name is becoming a terror in his part of the State.

Non-Resident Licenses.

Minnesota has a non-resident license as against North Dakota and Wisconsin, which have non-resident license laws upon their statute books, and in several instances already the license has been collected from Wisconsin men who have come into Minnesota to shoot. The game wardens of these contiguous States are of much assistance to each other. Thus, when Warden Bowers, of North Dakota, was here this week visiting Warden Fullerton, they learned by chance that Deputy Warden Blanchard, of Moorhead, Minn., has lately been in the habit of issuing permits to certain favored friends in North Dakota who wished to cross the line and shoot in Minnesota. This will be stopped at once. These permits have been issued to Geo. Dobell, of Fargo, and of course without authority.

It Will be Enforced.

As was stated last week, some fifty non-resident licenses have been issued in North Dakota this fall, probably much more than that when all the counties are heard from. Last winter there was a penalty clause attached to the non-resident act, and the man who does not settle when he is approached by the warden is very apt to wish he had. This law is being enforced strictly, and there is no getting around it. To those who have asked whether or not this North Dakota license can or will be collected, I would say: Yes, it can be and will be. Intending shooters may bear this in mind.

Dr. J. E. Hinkins and A. A. Paterson, both of Chicago, have just returned from Pontiac, Livingston county, Ill, where they have been spending two and one-half days with Victor Emery and Hal Oppermann, chicken shooting; they found plenty of birds, but the hunting was hard on account of the intense heat. The dogs worked faithfully, but with difficulty, as the ground was very dry, and there was no available water except that which was carried on the wagon. The number of chickens killed were twenty-six on the 15th inst., twenty-three on the 16th and seventeen on the 17th, or sixty-six in all. The territory covered was about fifteen to eighteen miles each day. While hunting chicken they ran across numerous bunches of quail, many of which were only half grown apparently; all bids fair to good quail shooting after Oct. 1.

Attempted Evasions.

Recently Warden Bowers caused the arrest, near Castleton, N. D., of a Mr. Leslie, of Ft. Dodge, Ia., and a Mr. Hallock, of New York city. Each of these loosened $25 from his person.

A more widely known instance occurred in the case of young Horace Lowry, son of the St. Paul street car magnate, and his three friends, who were found near Carrington, S. D., a little over a week ago shooting with resident licenses which cost only 50 cents apiece. Warden Bowers told them he would have to take them to town unless they wanted to purchase a higher grade sort of license. They dug up $100 between them.

Another Party.

Mr. Fred M. Stephenson, of Menominee, Wis., with Messrs. W. R. Cox and F. Deane, of Chicago, have gone for a five weeks' trip to the Jackson's Hole region after big game.

A Warden Murdered.

A dispatch of Sept. 3 from Denver, Colo., reports the murder of Warden W. B. Wilcox, whose body was found near where he had planned to arrest a party of eleven men who have been butchering game in the Williams Basin all summer. The warden had been shot in the head and his body left lying in the woods.

A rumor was current a short time ago that certain malcontents near Detroit, in Minnesota, had planned to shoot Warden Stephens, who had become hated by illegal hunters and fishers on account of his fearless work in his office. It was even reported that he had been killed. At last accounts, however, he was very much alive.

More Chicken News.

Fargo, N. D., Sept. 16.—Still further confirmation is at hand of the belief expressed in Forest and Stream since the opening of the season, that the early reports of abundance of chickens in Minnesota and Dakota were unwarranted. I have traveled half across the State of North Dakota and have found no reliable chicken country and have heard of none. A few bags have been made near Fargo, mostly along the southwest branch of the N. P., in the hilly region and nearly as far south as Lisbon, S. D. This I believe to be the best chicken country in North Dakota this year, unless that near Pembina be excepted.

There are a few birds in Minnesota not far from Fargo. This week three Fargo shooters, Charles and Art Bowers and Elmer Bellmeyer, made a hunt of one day about ten miles from Moorhead and bagged thirty-one birds. This is one of the best bags made this season near Fargo.

To-morrow I expect to meet Mr. S. F. Fullerton, State Warden for Minnesota, at Campbell, Minn., for a try after chickens; of which more in due time.

The Ducks are a Reality.

The chicken crop has been mostly a myth, but the ducks are a reality. At this moment there is not time to write at any length of the trip in North Dakota with State Warden Geo E Bowers, but I will say to all who are planning a fall trip, that it will be far more than worth the $25 license fee to have a shoot in this State this fall. The ducks are to be found in thousands. I have never seen so many birds in any part of the United States. The crop is the best for many years. Guides and sportsmen say this is because of the license law, which last year cut off an enormous amount of shooting.

Caught the Deputy.

Deputy Milt Crary, of Crary, N. D., a town near Devil's Lake, sometime ago arrested a young man for killing a few ducks ahead of the season. A little while ago, after the season had opened, this same deputy was arrested at the instigation of this young man, under the charge of shooting without a license. He claims now that he had sent in the money for his license, and that the auditor had not forwarded same to him. More than this, Crary made the bad break of pleading not guilty, and taking the position that he was going to test the law. This novel case of one of his deputies undertaking to test the law under which he was working, was too much for Warden Bowers, who read the riot act to Crary. The latter is now trying to square himself with the warden, the law, and his fellow-townsmen all at once.

Fairly Correct.

The following forecast of the chicken and duck crop was made Aug. 27 by the Northern Pacific R. R., based upon reports of station agents, the best source of information then at hand. I am inclined to believe, from what I have learned during a brief stay in the Northwest this week and last, that the predictions were fairly correct, though of course each day changes the status of the chicken crop. It is now late to plan a chicken trip, but as to the ducks it may be depended upon that not for many years has there been such a supply. I can personally say that no man who goes to Dawson, N. D., this fall will be disappointed. The list of points follows:

PRAIRIE CHICKENS.

Poor—In vicinity of Crookston, Aitkin and Brainerd, Minn., and at Forest River, Jamestown and Dawson, N. D.

Fair—In vicinity of Little Falls and Battle Lake, Minn.

Good—In vicinity of Sauk Center, Fergus Falls, Perham and Detroit, Minn., and at Wahpeton, Valley City and Pembina, N. D.

GROUSE OR PARTRIDGES.

Good—At Little Falls, Perham, Aitkin and Detroit, Minn.

DUCKS.

Good—At nearly all points. Especially at Brainerd, Aitkin, Battle Lake, Fergus Falls, Perham, Detroit and Crookston, Minn., and at Dawson and Valley City, N. D.

Land and the Game Supply.

Editor Forest and Stream:

Your editorial in last issue, entitled "A Better Way," is a shot mighty near the truth. There is no good reason "why we should allow all the good hunting country on this continent to pass into private control." Unfortunately, however, most of it has so passed, and your point is well taken when you say "the time to undertake the permanent keeping of this territory is *now*." Why not go further?

All the laws wisest legislators can formulate, the best efforts of the most disinterested associations, even the acknowledged power of such a publication as yours, cannot, under existing conditions, save the wild things of earth and air and water. Where are the vast herds of buffalo whose footsteps once shook the Western plains? Are the elk, deer and antelope to be seen where they once were? Even our prairie chicken—isn't he surely doomed?

Mark the trail of the pioneer, the home-hunter; you will find it all over our vast country. When he comes, the wild life goes before him. Far from the center of culture and civilization; far from school house and church; far from markets so necessary to his material wellfare; far from improving intercourse with his fellows, cheap land has led him on. Does he prefer this lonely life of toil and deprivation? Not a bit of it. Stern necessity and nothing else has driven him away from the haunts of man, and scattered him, so to speak, far and wide.

Man is essentially a land animal. Without land he cannot exist. Close to every busy community there is land in abundance held out of use Yet, the very existence of such communities gives a greatly increased, and increasing, value to all neighboring land. Here arises the speculative value of land, and it is held out of use, or out of full use, in expectation of a rise.

Thus the man with nothing in the world but his ability to labor, coupled with the possession of a more or less rude outfit, is forced to seek those remote sections where land is cheap or can be had for nothing, and when he comes the wild life goes.

Were we upon a basis of equity and justice with respect to land; did our laws but recognize that the land was the free gift of the creator to all his people, then human beings would not be driven to live in the haunts and after the manner of wild things, the lower forms of life would have ample room and opportunity to grow, wax fat and multiply, disturbed only by the occasional visit of some wandering Nimrod on health or pleasure bent.

As time rolls on, private ownership of land in this country will tend to fence in bird, beast and fish, just as it has already done in England, and the mere possession of gun and dog will draw upon the owner the surveillance of "my lord's" gamekeeper. ROBERT W. SCOTT.

PHILADELPHIA.

Notes from Boston.

BOSTON, Sept. 18.—Mr. A. E. Mills tells me of excellent shooting on Prince Edward Island. His boyhood home is there, and he spent his vacation there, having just returned to business in Boston. As soon as he reached home his father told him that there were flocks and flocks of upland plover in the old hay field, full-grown and not very shy. The old shotgun, long since lain by, was got out the night beforehand, and at daylight Mr. Mills was tramping over the stubble fields of his early recollections. He heard the plover and crept carefully along, as much in ambush as possible, till a good flight went over him, almost too near. The old gun brought down four at the first shot. Reloaded, the flight was back again, with more birds. Mr. Mills went home to breakfast much pleased. He says that duck shooting in the same neighborhood promises to be excellent. A number of flocks were by him sighted, and the local gunners believe they are very plenty.

The partridge season has opened in this State, and will open in Maine on Monday, the 20th. Here the shooters have made some very fair bags. Gardy Ames and Ben Goodwin were out in Reading on the opening day and got seven ruffed grouse. They are crack shots and noted for their success in partridge shooting. They found the birds unusually shy, with the leaves thick, making shooting difficult. E. M. Gillam and F. W. Hallowell were out in the same town on the morning of the opening day. Mr. Gillam's dogs pointed about twenty birds, but when flushed they invariably took for the brush, or back in an unexpected direction. The hunters were obliged to leave the sport and go to Boston on business without a bird to show. They will soon give the shy fellows another try.

A gentleman, much interested in dogs and bird shooting, just in from an extended trip in New Hampshire and Vermont, says that game is scarce in nearly every section he visited. The common explanation is that the young birds—possibly the eggs—were destroyed by the stress of wet and chilly weather in the spring and early summer.

Smelting off the shore, all along from the Cape to Saco Bay, is a popular sport just now. Hook and line is the favored tackle, since there is a law against any sort of netting. Shrimp are used for bait, and to take three or four dozen for breakfast any morning is the common thing with almost any sportsman so situated that can easily reach any sort of a favorable tidewater creek or inlet. E. A. Dow, of Woburn, has taken a good string for a number of mornings lately. He owns a yacht and plenty of boats, and fishes off the harbor here. SPECIAL.

Oakland Game and Fish Protective Association.

OAKLAND, N. J., Sept. 17.—*Editor Forest and Stream:* The snaring of ruffed grouse in the Ramapo and Campgaw mountains, and the spearing of fish in the Ramapo River and at the head of Pompton Pond during the last few years, has increased so much that the shooting and fishing has been almost entirely ruined.

A meeting was called on Sept. 14 at Oakland, and the Oakland Game and Fish Protective Association formed, with the following officers: President, John Lloyd; Vice-President, E D. Page; Treasurer, A. Van Houten; Secretary, Noel Money.

At the meeting it was resolved that the Association shall give $10 to any one furnishing evidence to convict any person of snaring partridges, trapping or ferreting rabbits, spearing fish illegally or shooting quail, ruffed grouse or rabbits out of season.

The appointment of Mr. John Lewis as deputy game warden has been asked for by the Association, and we expect that it will take only a few convictions to put an end to the partridge snaring and spearing.

NOEL E. MONEY, Sec'y.

Preaching Murder.

Editorial in the Providence (R. I) Evening Telegram, Sept. 9.

So good a man as the editor of *Fiber and Fabric*, a Boston trade paper, seems to think killing game wardens is not much of a crime. In his paper last week Mr. Wade, who probably never killed an animal of any sort in his life, for that would not be sport for him, refers to the killing of a game warden and asks why he was killed. "Simply," he says, "because no human being, even though he were worth millions, has exclusive right to wild game. Game keepers have always been roughly handled and always will be, therefore wise men are never game keepers. A man may herd a million sheep and no one will ever assassinate him, for the reason that sheep are property, and game is not property. America has gained thousands of good citizens who left their native heath because they had thrashed a game keeper and were identified"

Since that was published there has been another murder of the same kind. One or two men are already in New England prisons for the offense, and a very small part of the population of their States look upon them as great sinners. The fact is the enforcement of game laws is bound to bring trouble. Once in a while a man who is caught openly violating the law, like the Philadelphian at Naragansett Pier is caught and let off with a sentence which means nothing to him, not even disgrace. But usually the crime of killing game in violation of law goes unpunished. Respect for all law is diminished as it is by the farce of unenforced prohibition. The game warden in the pursuit of his official duty runs up against a man whose reverence for the statute book has been gradually lessened, and if the man sees State prison staring him in the face, for a crime which nobody considers a crime, what wonder he saves himself at the cost, perhaps, of the warden's life. It is wicked, but it is one of our recently imported fashions which is responsible for it. Better farms and homes than great game preserves.

The Bowley's Quarter Pheasants.

A STATEMENT having been given out that the Bowley's Quarter Ducking Club, of Maryland, would set trap-guns to protect its pheasants, President Nathaniel E. Janney writes to the Baltimore *Sun* in denial: "To relieve the Bowley's Quarter Ducking Club from the false position in which it has been placed by a statement, in the form of an interview, in the *Sun* of the 13th instant, as to means to be resorted to for the protection of English pheasants on the property owned by the club in Middle River Neck, I beg to say the club has no intention, and has never had a thought of resorting to such un-American means as trap-guns and savage dogs for obtaining protection of its property. The only protection asked is that of the law and the good-will of our neighbors. If these fail us, we will abandon the raising of these fine game birds.

"To be obliged to do this would be mortifying after years passed in overcoming difficulties in the way of successful breeding and render useless a plant perfected by time and much expense, to say nothing of the loss to the farmers of the State and the general public of the benefits of the free distribution, annually, through the Maryland Game Protective Association, of pheasant eggs for breeding purposes, under the existing agreement, toward the gradual stocking of the entire State without cost.

"We have proved by results that we can successfully breed these magnificent birds. Our failure has been in the ability to protect them from destruction by night marauders on our land, notwithstanding we have been well seconded in this particular by the Maryland Game Protective Association.

"The common prejudice against a preserve could hardly apply in our case because of the existing agreement with the State Game Association to share with the citizens of the State the results of our work."

Opening Day in Massachusetts.

FITCHBURG, Mass.—Everyone in town who owned a gun cleaned it up, and loaded some shells, and everyone who owned a dog gave him a good "licking" Tuesday night; and on Sept. 15, about 5 A. M., the several sporting outfits moved out of town to where the birds had been marked in the various likely covers. It turned out a glorious day, but the leaves are too thick yet for comfort, and the birds that were bagged were earned. Messrs. Fields, Kimball and Cutter killed thirteen partridges and one woodcock; Messrs. Cummings and Wallace, nine partridges and three woodcock; Prof. Curley and E L. Herson, four partridges and one woodcock; the Putnams, father and son, two partridges; and Messrs. Crocker and Colony, five partridges. I was out myself with Mr. I. O Converse, and we scored four woodcock and two partridges. So you see we have got some birds up here; but, after all, what do the birds amount to in numbers? It's the sport, the woods, the old clothes and the dogs. If I had a picture to go with this letter, of Mr Converse's black pointer, Lu, backed by my Gordon setter, Rex, in a cover of white birches, you'd all buy a dog to see him do the same thing. They stood on a woodcock; it was a picture that a sportsman cherishes through the season, and—well, we got the woodcock, and of course that is important. Why don't someone start a series of "Dogs I Have Shot With?" We would all like to read them up this way, and of course, there are others. NOX ALL.

Maryland Game Wardens.

ANNAPOLIS, Md., Sept. 17.—Upon the recommendation of Game Warden Norris, Governor Lowndes has commissioned the following deputy game wardens in Maryland:

Baltimore county—B. L. Stansfield, B. H. D. Bull, Augustus Bruehl, Joseph Plummer, Charles T. Bevan.

Washington county—Samuel Pennel.

Worcester county—Wm. S. Dennis.

Carroll county—Frank J. Devilbiss.

Anne Arundel—Robert H. Chaney.

Harford county—D. P. Hollingsworth, Charles E. Wiggers, Walter P. Reckord, Brinton F. Warner, Joseph B. Hoskins.

Frederick county—Charles H. Birely.

For any work on outdoor sports send direct to the Forest and Stream Publishing Co., who are the largest publishers and importers of such books in America. Their illustrated descriptive catalogue will be sent free on request.

Quail in Nebraska.

BURR, Otoe County, Neb., Sept. 11 —Have been traveling out from Burr over the country for the past few weeks, and prior thereto I was engaged through eastern Kansas. I never saw so many quail as I have in the past two months. I have found one or two coveys in the road in every draw or depression (what we used to call a swale in New York State), and every day I start a flock or two of prairie chickens out of the road.

Here is a note from the Kansas City *Star* of Sept. 5:

"Wedged fast in the cowcatcher of the big engine which pulled the Union Pacific train from the West into the Union depot this morning was a full grown quail, which had attempted to cross the track of the engine while it was rushing across the plains at the rate of forty miles an hour. 'I have never before seen so many quail in Kansas at this season of the year,' said the grimy engineer, as his attention was called to the engine's catch. 'We pass through great coveys of them every morning,' and it is no unusual thing for us to knock out half a dozen or more between Lawrence and Kansas City. It is not often, however, that they remain on the pilot.'" W. F. R.

New Haven Association.

NEW HAVEN, Conn , Sept. 20.—*Editor Forest and Stream:* A number of New Haven sportsmen have decided to join hands in a vigorous attempt to enforce the game laws. For years there have been only occasional attempts, many of them half-hearted, made to enforce the laws, and they have been broken by almost every one except those who were gentlemen enough to realize that the laws were intended to give every one an equal chance at the game We have formed an organization known as the New Haven County Game and Fish Protective Association, and every man is in it to stay. We have offered a reward of $25, subject to reasonable restrictions, for evidence which will convict, and we are going to put every case that comes up through to the bitter end. We expect to have the end bitter for the poacher, but if we do get it ourselves it will only be a dose of quinine to stimulate us to work harder. CHARLES G. MORRIS, Sec'y.

An Adirondack Game Warden Murder.

WHITEHALL, N. Y., Sept. 18.—William Jackson, a deputy sheriff of Schroon Lake, was killed last night near Paradox Lake while trying to arrest three brothers named Lajoie, charged with violating the game laws. Jackson's body was also mutilated with an axe.

Sept 20 —Frank Lajoie, the murderer of Deputy Sheriff William Jackson, was captured by a volunteer force of several young men from Schroon Lake, near Whitney's Clearing, Paradox Lake, at 3 o'clock this afternoon. Lajoie went to his mother's house about noon for something to eat. He was exhausted and said he would give himself up. He offered no resistance. Lajoie and his two brothers, who are held as witnesses, will be taken to the county jail at Elizabethtown.

Sportsmen's Exposition.

NEW YORK, Sept. 16 —*Editor Forest and Stream:* The secretary-treasurer of the National Sportsmen's Association has left for the West to close contracts for special features for the coming Exposition, to be held March 12 to 19, both days inclusive, at Madison Square Garden, New York city.

J. A. H. DRESSEL, Sec'y-Treas.

A Quebec Moose Opportunity.

THERE is an opportunity for one person to join a Quebec moose hunting expedition. One of the members (guide and canoe engaged) has been obliged to abandon the trip, thus making room for another. The start will be Sept. 27. Further particulars at this office.

Camp-Fire Flickerings.

"That reminds me."

The Green Mountain Gyascutus.

SPORTSMEN who are intending to visit Vermont next month for the purpose of hunting deer, will do well to provide themselves with weapons suitable to cope with more formidable game. For to say nothing of the ferocious bears, lynxes and porcupines with which our forests abound, there is the more terrible gyascutus, which, though the fact is not generally known, is still to be found roaming our mountain sides as frequently as the mastodon the wilds of Alaska. This singular beast is briefly described in the Century Dictionary as follows: "An animal said to be of tremendous size and to have both legs on one side of the body much shorter than on the other, so as to be able to keep its balance in feeding on the side of a very steep mountain."

A writer of the last century, whose name is not given but quite probably that veracious chronicler, the Rev. Hugh Peters, thus writes of it: "A most monstrous and wonderful strange Beast hath his habitation on the declivities of these mountains, to traverse which he is singularly well adapted, the foreleg and hinder leg of one side being so much longer than those of the other side that he standeth or lyeth at ease on very steep places, and also moveth very swiftly thereon. He cannot turn himself about, but goeth ever in one direction, except as he goeth backward, which he can do with great speed upon occasion. His head, which hath an ornament of sharp antlers, is carried loftily, and the eyes being set outward and backward, he seeth as well behind as before, and for means of attack and defense in the rear, he is provided with an exceedingly muscular tail, which hath a sharp horn at its end, said to be enormous, but as to that I know not, for I have not seen this wondrous Beast, but only his tracks, as great as those of an ox, and in like manner divided, but with claws at the end. His stature is above that of a horse, and he is of a fierce and implacable temper, as is denoted by the wounds wantonly inflicted on the trees both by his cruel antlers and his waspish Tail."

The visiting sportsman is as likely to fall in with the gyascutus in the fortresses of the Green Mountains as to find here such herds of deer and gangs of bears as are reported by some journals, therefore it may be well for him to bring along a rifle of large caliber and a stout hunting knife, or a hatchet of the G. W. pattern, wherewith to defend himself from the backward charge of the beast. It is evident that the gyascutus may be more safely approached on either side than at either end, but this may not be considered sportsmanlike.

AWAHSOOSE.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

OUR CAMPING GROUND.

THERE is a spot where plumy pines
O'erhang the sylvan banks of Otter,
Where pigeons feed among the vines
That hang above the limpid water.
There wood-ducks build in hollow trees,
And herns among the matted sedges,
While, drifting on the summer breeze,
Float satin clouds with silver edges.

'Tis there the bluejay hides her nest
In thickest shade of drooping beeches,
The fish-hawk, statue-like in rest,
Stands guard o'er glassy pools and reaches.
The trout beneath the grassy brink
Looks out for shipwrecked flies and midges,
The red deer comes in search of drink,
From laurel brake and woodland ridges.

And on the stream a birch canoe
Floats like a freshly fallen feather—
A fairy thing, that will not do
For broader seas or stormy weather.
The sides no thicker than the shell
Of Ole Bull's Cremona fiddle—
The man who rides it will do well
To part his scalplock in the middle.

Beneath a hemlock grim and dark,
Where shrub and vine are intertwining,
Our shanty stands, well roofed with bark,
On which the cheerful blaze is shining.
The smoke ascends in spiral wreath,
With upward curve the sparks are trending,
The coffee kettle sings beneath
Where smoke and sparks and leaves are blending.

Upon the whole this life is well:
Our lines are cast in pleasant places.
And it is better not to dwell
On missing forms and vanished faces.
They have their rest beyond our bourn;—
We miss the old familiar voices.
We will remember—will not mourn:
The heart is poor that ne'er rejoices.

We had our day of youth and May,
We may have grown a trifle sober;
But life may reach a wintry day,
And we are only in October.
Then here's a round to every hound
That ran his deer by hill or hollow,
And every man who watched the ground
From Barber Rock to Furman fallow.

—*Nessmuk, in "Forest Runes."*

MEN I HAVE FISHED WITH.

George W. Sears (Nessmuk).

JUPITER PLUVIUS! How it did rain! We had seen it coming while at supper, and I said to my companion, Hon. James Geddes, of Syracuse, N. Y., "Jim, we must deepen the ditch around this tent or be drowned out. That's an angry sky, and the sun is only just down, yet it is dark as midnight. It's no ordinary shower that is promised us."

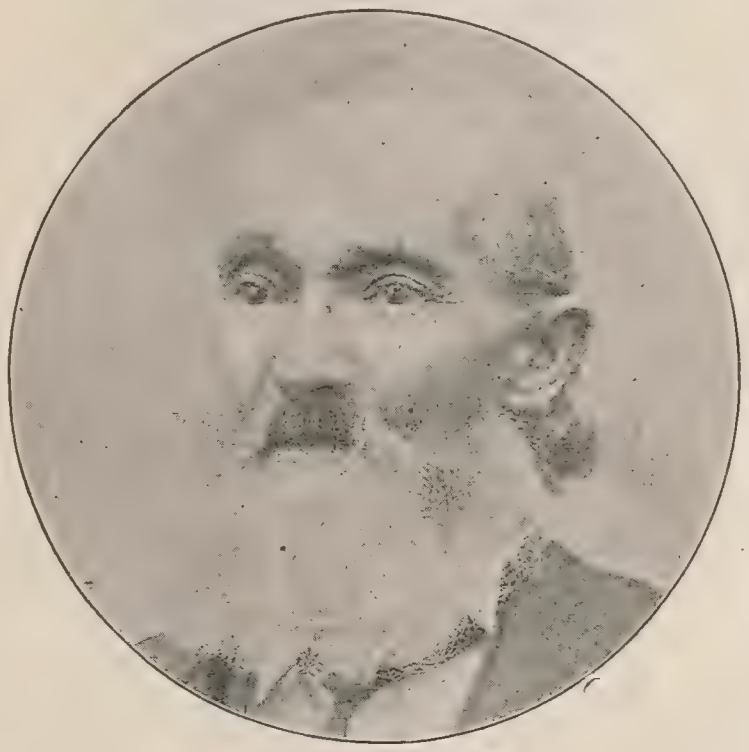
"That's so," replied the Hon. Jim, "and we've got to do it right quick, too. It's lucky that the land falls away so much from our tent; we will not have to dig far to have complete drainage."

We went at it with case knives and tin plates, and finished widening and deepening the ditch on the back and sides of our wall tent—the front needed no ditch—when the first wind which precedes such a storm began to roar in the treetops, and in a few minutes the advance guard of St. Swithin began letting great drops resound through the forest. We felt secure; wind could not harm us unless it felled a tree across our tent, and as it was to be a camp for a week or more I had avoided all old and partially dead trees whose roots might also be partly dead, and before the rain beat the wind down we were inside, the door-flap buttoned and a candle lighted. I had prepared for the light by getting one of the flat "fungi" ("funguses," I want to call 'em, and only use the Latin plural to show my learning), and by dropping some melted candle on this and quickly standing the cold end in it, there was a candlestick. We had just got comfortably down on our blankets when the storm burst in all its fury. "Jim Geddes," said I, "you made an offensive remark to me before this storm got under way. We will have no quarrel over it because you intended no offense, and only a fool takes offense where none was intended, but when you reconsider your words you will see wherein you were wrong."

"Well, I'm surprised! Tell me all about it. We don't want to fight in this little 10×12 tent when all nature is engaged in a combat outside. There! Did you notice how quick that clap o' thunder followed the flash? That hit near us; but go on and tell me what it was that I said that has injured your feelings? I never thought you were so thin-skinned."

I looked at the surprise pictured on his honest, good-natured face, and said: "While I make no claim to being thin-skinned, I don't care to have my knowledge of woodcraft credited to accident. I selected this camp-site and put up the tent while you were taking trout for supper, and when the storm was in sight, you said: 'It's lucky that the land falls away so much from our tent.' Now, my dear Jim, luck was not in it at any stage of this game. That's the trouble. The word 'luck' sort o' soured on my stomach, and I couldn't digest it. Do you get my meaning?"

"I've got it," said Mr. Geddes, "and I still maintain that your skin is too thin to make a woman's glove. Just listen to that rain! Did you ever hear anything come down harder? Hark! What was that?"



"Oh, I don't know! Some echo of thunder in the mountains, for here in the Adirondacks the sounds of a storm will appal one not accustomed to mountain echoes."

"Hush! There it is again!"

We listened. Then came an unmistakable: "*Da Whoop!*"

"Somebody down at the landing," said Jim, "and he must be quite damp."

We left all our clothing, except our shoes, in the tent and went down to the lake to learn what sort of man might be abroad in a storm like this. The wind had subsided, but the rain still came in torrents. We called, and a man said something which was drowned by the roar of the rain in the woods and on the lake. The next flash of lightning revealed a man waist-deep in water holding to the side of a canoe. He was about 20ft. away and I rushed in and led him to the landing, which was a small opening in the bushes. After we had pulled his canoe well ashore we led him to the tent, which was easily seen by its light, for a candle shows up well through canvas on a dark night, and then we looked him over. He was a little man, about 5ft. nothing; about fifty years old, but one of those thin, wiry fellows without an ounce of fat, who look as old at forty as they do a score of years later. He was chilled in his wet clothing while we were aglow, and we got him stripped and under the blankets as soon as possible and gave him such restoratives as we had Divested of clothing he was nearly as big as a pound of soap after a hard day's washing, and until he became warm he

GEORGE W. SEARS (NESSMUK).
From the portrait in "Forest Runes."

had merely answered questions as to the things in his boat. He did not want them brought up. They could get no wetter. We questioned him no further and awaited the pleasure of our guest to begin the conversation.

Finally he said: "It's lucky for me that I saw the light in your tent. I had lost my paddle and the wind was making a plaything of my canoe. When I saw the light I jumped overboard to swim and drag the canoe, but I couldn't find a landing and was wading about when you came."

"Were you going up or down the lake?" asked Geddes.

"Neither, I'd been fishing on the other side and started to come across, to where I left some duffle, when the storm caught me."

I caught the word "duffle," which I had never heard until I had read Nessmuk's articles in FOREST AND STREAM, and I knew that he traveled in a canoe and camped alone, a very economical way of enjoying life, and a delightful one if we add a companion, to those who can care for themselves in the woods. So, without much chance of error, I said: "If I should hazard a guess, it would be that you are a Pennsylvania man, who goes alone when he goes at all, writes up what he sees, thinks or imagines that he sees or thinks, and signs himself 'Nessmuk.'"

"That's a bulls-eye guess, how did you make it?"

"Well, partly because you called your camp stores 'duffle' and partly because you travel alone in a toy canoe, and again because you are built to sail in chopping bowl. And let me introduce my friend, Mr. Geddes, of Syracuse, and myself. My name is Mather, at present I am the fishery editor of FOREST AND STREAM, and have written for it from its first number, last year I was with the Adirondack survey as ichthyologist and wrote up our trip and discoveries. I also wrote a series of sketches headed: 'Trouting on the Bigosh.'"

"Yes," said our guest, "I've known of Mr. Geddes at the sportsmen's conventions. What did you say your name was, Murphy?"

"Correct; you have a good ear and a good memory. My family is descended from King Brian Boroimhe, who defeated the Norsemen in 1014 near Dublin, and whose name has been corrupted into Brian Boru and then into Murphy, just as your family name, Sears, became shortened from Seersucker, the fabric of linen and silk, to its present form. There was no need to retain the last part of the name, because it was known of all men."

The rescued man raised himself on his elbow and said: "You've got it straight, Fred, and now, let up, as the rain has done, and I will make a fire and dry my clothes."

We opened the tent, for the rain had ceased, and only for the drip from the trees there was no sign of the terrible storm. The earth was damp, but the drainage was good, and a fire soon threw its heat into the tent as our guest dried his clothing in the smoke. I was glad to have a chance to study him at close range. You may read what a man writes, but he only shows you the side he cares to have you see, the dress parade side, so to speak, or you may meet him daily for years and your vision will get no further; but camp with him a week when provisions are low and weather is bad, and if there is only one hog's bristle on his back that bristle it will be erect and assert itself. Permit me to leave old Nessmuk to dry his clothes while I go into executive session and moralize on camp companions; I do so want to write it that I hope a few readers will glance over it.

We are so built that few men are really *persona grata* to us. They may seem so in everyday intercourse where the mask of civilization is worn and they diplomatically pose as friends until the winds of adversity blow upon us, when they know us no longer. That is the average man of whom some one has said: "The more I know of man the more I think of dogs."

In the morning we all had dry clothing, and started out after breakfast to fish in our two boats. Nessmuk had a little frail canoe, while ours was of the regular Adirondack pattern and weighed about 80lbs. But the rod that our friend proceeded to join up was a wonder; it had originally been one of those four-piece abominations which are called "trunk rods," with joints shortened to allow the thing to be carried in a trunk. Originally it had been about 10ft. 8in. long, now it was 7ft. 6in., without a regular taper and too stiff to cast a fly. "What do you call that thing?" asked Geddes, as he picked up the rod and looked it over critically.

"That's a trout rod made after my own ideas, and it just suits me to a T. It's a good ash and lancewood rod cut down as I ordered."

I handled the rod and said: "It's elegant; the finest thing I ever saw. I didn't quite understand it at first, but just look it over carefully, Jim, and you will see that a canal driver can whale his mules to the queen's taste with that. You came up by the Black River Canal, didn't you?"

"I'll show you what it is for when we get where the fish are, and it will beat your long, limber-go-shiftless split-bamboos and give 'em ten in the game. There too willowy, too limber, too esthetic, too costly, and to high-toned to cruise in the Nipper; but just wait."

We waited, and towed the Nipper until we got to where its skipper thought its paddle had drifted in the storm. He found it on shore, and then, with a light breeze, just enough to make a ripple, we drifted and began to fish. We watched the old man. He had a reel and a gut leader on his line, and soon said: "Lend me a couple of flies, I have lost mine." We stocked him up, and began taking trout freely. I was busy replacing a fly, when Geddes whispered: "Look at old Nessmuk, he never tried to cast a fly before."

I looked. He was standing in his canoe, balancing himself as it rocked, trying to get out his line, which would sometimes fall 10ft. from the boat and sometimes in his boat. He saw our flies go out 30 and 40ft., and saw the trout rise and strike, to be reeled in. He thought he could do it, but had to own up. He paddled alongside, and said: "I never tried this rod with flies before, and it doesn't seem to work. There are no angleworms in the Adirondacks, and I think I'll have to ask you for some trout fins and livers for bait."

We tossed a couple of small trout into his canoe, and he removed the flies, put on some bare hooks, baited them, and began fishing. Geddes said: "The old fellow is a bait fisher and nothing else. He would have drifted off by himself if he had bait, but we drifted with him, and he had to own up. He said that his rod was not a fly rod. That's most certain, but it's dollars to doughnuts that he couldn't get a fly out with either of our rods. I'll ask him to try it."

"No, Jim," I said, "don't do it. It would only embarrass him, and make him feel uncomfortable. He is a first class woodsman, and has made the mistake of trying to cast a fly with a rod which cannot cast one, and he has tried it before two experts and failed."

"You're right," said the great-hearted Geddes; "he's a good old fellow in his way, and we don't wish to make him uncomfortable. He's 'bit off more'n he can chaw,' as the saying goes, and we will turn our backs and not see it. He's not only using bait, but see the little twig he has tied on his line as a float. That's the last evidence of primitive methods."

Nessmuk took a few trout, and before noon we went back to our camp and had a grand woods dinner of hard tack, bean soup with salt pork and fried trout. If I had never been within 1,000 miles of New York I would say: "The dinner exceeded the wildest dreams of Delmonico," for the man of Nessmukian type thinks that there is only one place to eat in New York, and somehow gets the idea that good cooking and service culminate under one roof. I can show him quiet, out-of-the-way places—but we have strayed from the camp on the Fulton chain of lakes.

When dinner was to be cooked Nessmuk shone as a bright particular star. He took charge, hustled around and did all the work, while we looked on. He cleaned the fish, washed and boiled the beans, while Geddes and I lay off, chatted and slept, Jim's last remarks being: "He's a mighty good man in camp."

A year later I wrote Nessmuk about the rod that he used that day, and under date of May, 1884, he described it as follows: "It was 10ft. 8in. long when I bought it, and it was in four pieces. I had the butt shortened to a handle, the other joints cut down 4, 5, and the top to 4in., but I think that if the rod is not as symmetrical as some others, it will snatch a trout or a bass bald-headed if I once hook him."

He was right. The only trouble in sight was to get the lure placed in attractive shape before the trout, and we voted him a pot-fisher. He left us after dinner and went back up the lake to his duffle. I think he preferred to be alone in the woods, although he wrote me under date of May 27, 1884, as follows:

"When you saw my rod you made fun of it, but it just suits me. It is not expensive, and if I smash it—Bismillah!—it is well. Can you meet me on the Tiadatton next month? Take your eye and throw it along the map of Pennsylvania. On the upper waters of the Susquehanna you will find a perfect maze of mountain streams, and there are 18,799 of them not large enough to find a place on the map. With all these springs and rills, cold as ice and little known of man, wherein you may camp without let or hindrance, cut timber, catch trout, smoke, sleep, laze and loaf, and no man shall say you nay. Among the affluents you may reckon the Sinnemahoning and Big Pine Creek. Big Pine Creek is the Tiadatton, and Tiadatton is Tuscarora for River of Pines. See? Now, the Tiadatton is not the Bigosh, although, by gosh, its a mighty good Bigosh, and is my Bigosh. Down the Tiadatton I am going in my new boat, the Bucktail, and

'My camp-fire shall
Glisten and shine
To the low alto song of the evergreen pine.'

"The Bucktail will be known of men before October. Only this, and nothing more. One old woodsman to another, a trifling letter, but sent off-hand. Couldn't you cut me off somewhere this summer?"

That's a true Nessmukian letter and shows how good-naturedly he took our chaffing. The "Bigosh" was an allusion to my sketches: "Trouting on the Bigosh." A few days after sending the above letter he sent me a deer's tail and wrote:

"Here's the Bucktail's burgee. Hail her when you meet her. 'Da-Whoop!' Shall I tell you how the original owner of this tail passed me on the very top of Bald Hill and how neatly I cut him down with the old muzzle-loader? No, I forbear! He did pass me, without a scratch, made a rattling race, was watered at 'long rifle' and squelched by an army musket; twelve buckshot and a bare-footed boy. I was glad to save a fore quarter, my hound and—the tail."

It was not convenient to meet him on the Tiadatton that year, but later I ran into his camp on the Fulton Chain, and I would have known it was Nessmuk's camp if I had not heard that he was ahead of me. A little tent of very light duck, which was just big enough for a small man to crawl into, was his shelter. A gum blanket and a woolen one were his bed, with no leaves nor balsam boughs under it, and a frying-pan, small tin pail to serve as a camp kettle, another containing salt pork for frying, a tin box of hard tack or pilot bread, and a coffee-pot was all that was in sight, and all made of the lightest materials and just sufficient for one man. I gave his war cry; "Da-Whoop!" and soon he came paddling around a point and landed. After salutation I looked over his boat and outfit.

And such a boat! He had been experimenting in boat building with the sole idea of reducing weight, which he had to pack over the Adirondack carries, where the portages vary from a few yards to three miles or more. The Nipper was very light, too light for most men, it weighed about 25lbs. The Bucktail, which I never saw, he told me weighed 19lbs., and now I beheld the Sairy Gamp, so named he said: "Because she never took water." This latter creation of the Nessmukian brain and hand was, as I remember it, about 8½ft, long and weighed between 10 and 11lbs. These figures are from memory, my volumes of FOREST AND STREAM are boxed and in storage and I am writing at a distance. This boat formed part of the exhibit of FOREST AND STREAM at the World's Fair, being loaned for the occasion by the National Museum of Washington, where it has been deposited.

In the boat lay the little double-bitted axe which he devised and which bears his name when made to-day, a two-piece bait rod, about 8ft. long without a reel, the line tied to the end of the rod, boy fashion, and a few trout.

"I was just thinking of coming in to get dinner when I heard your hail, and I want you to stop and fish with me this afternoon. Oh, you needn't bother to count the trout, I've got some more dressed and in a tin pail in a cool spring, never fear about that."

He had read my thought correctly, and his statement that he had a base of supplies in the woods decided the question. I was alone in a boat hired from a "camp" for the sole purpose of getting on the trail of Nessmuk, and I would stay. I went for dry wood while he went for his stores. We got up an excellent dinner. Having but one frying-pan, he roasted the trout in the ashes, first wrapping them in a wet newspaper and putting a piece of pork inside of each fish. He brought out several pairs of giant frogs' legs and fried them in the pan.

"The trout'll take longer to cook," said he, "and we'll eat the frogs first while the coffee's boiling, and then we'll try a few trout, not too many, because I've got a few ribs of mountain mutton to top off with."

I began to feel that I had underrated the resources of this old woodsman when I mentally counted the trout in his boat and thought there was about enough for one, and he was not expecting company. It was late in June and the law forbade the killing of deer for many weeks to come. He had no rifle nor gun of any kind, and I knew he would not subject himself to suspicion by bringing a gun into the woods at that time of year, so I said: "The mutton is probably from farmer Dunning's flock; he has many head roaming these hills."

"Well, yes," said the old man, "I met Alvah yesterday and he gave me quite a bit of a fore-quarter; in fact, all I would take, for he said he had more than he could keep fresh and was glad to find some one who wanted it and could keep his mouth shut. What made you think of Alvah Dunning?"

"Merely this. I took dinner with the old man yesterday and he had a bit of 'mountain mutton' and I know, and so do all other men in this region, that old Alvah lives in these woods the year round and believes that he has a right to kill a deer to supply his needs. I would not partake of venison out of season at any table in the woods except that of Alvah Dunning, and I would enter a complaint against any other man who had venison in June, if I knew it. But the old trapper does not kill for sport and firmly believes that these woods belong to him by virtue of a residence in them of over half a century."

"That's my opinion," replied Nessmuk, "he will never exterminate the deer by taking an odd one out of season, and the people here know it, but the law cannot make a distinction between him and the so-called sportsman, who would come into the woods and kill 100 deer, to brag of, and leave them to rot."

The fried frogs and the baked trout had preceded the "mutton" chops, and all had gone where they would do the most good to two hungry woodsmen. We lay in the shade and slept; for what is so good as a nap after a meal? And then there is little use in fishing for any fish in midday. The camp was well placed on a point on the north side of the lake, where the summer breezes from most points of the compass kept it free from black flies and mosquitoes. Nessmuk had that knowledge of all those little things which enable a man to be comfortable where others would be miserable—things hardly worth mentioning, but which separate comfort from discomfort, and which only a thoughtful, observant man would ever learn.

I fished with him that afternoon, and he took me to a spring hole where trout were plenty and we had good sport; he fishing with venison for bait within 10ft. of the boat, and I using the fly where it did not interfere with him. He was the same old "snatch 'em in" pot-fisher, and enjoyed it; but he loved the woods and their solitude, and was perfectly able to take care of himself in them alone, with either rod or gun. He was bright, poetic and witty. His volume of "Forest Runes," published by the Forest and Stream Publishing Co., contains some of the most vigorous, manly verse in the English language. That is a very broad statement, but it is a deliberate one. The same company has also published a little book entitled "Woodcraft," by Nessmuk, and he was entirely competent to write upon the subject.

Nessmuk was one of those self-reliant men, who are the only ones who ever make good woodsmen. He was jolly, generous and convivial. He may have been a good shoemaker; of this I know nothing; but he was a good handler of light canoes, into which I would never trust my life, and I have crossed Broadway at Fourteenth street and eaten "goulash" in a Hungarian restaurant. I merely mention these things to show that I can take desperate chances if necessary.

After the events recorded in this more or less veracious sketch, old Nessmuk came down the Hudson River, camping all the way, until he reached New York city, when he beached the Sairy Gamp and pitched his tent in Central Park, procured wood from some source and proceeded to cook his supper. A gray-coated park policeman, who is generally known as a "sparrow cop," ran him in, and he spent the night in a cell at a police station.

What if his neighbors say that he was idle and preferred loafing in the woods to doing anything else? That is nothing to me; I enjoyed his society, which, if he had been thrifty, would never have come my way. I only know that I would like to meet him in the woods and on the streams

NESSMUK.
From "Woodcraft."

again. I don't know his neighbors, and don't want to know them. The little village of Wellsboro, Pa., has undoubtedly produced many more "substantial" men than George W. Sears, but never a more intellectual one. Like Edgar A. Poe, his neighbors, in Harlem, cannot understand why people make pilgrimages to his cottage. To them Poe was only a poor victim of an appetite, and this outweighs all his other qualities.

Some day a delver in poetic lore will dig up some nuggets from Nessmuk, and the wonder will be that we never heard of this man before. I think that I have presented over a dozen copies of "Forest Runes" to friends who would appreciate them, and then I have had from him many verses not intended for publication, which I have greatly enjoyed.

Mr. Sears died on May 1, 1890, aged sixty-nine. Readers of FOREST AND STREAM showed their regard for him by a testimonial fund by which a handsome memorial bronze, designed by Mr. Geo. T. Brewster, was provided for his monument in the village cemetery of Wellsboro.

FRED MATHER.

[The Central Park camping incident, while told with substantial correctness, was of much earlier date.]

PENNSLYVANIA COMMISSION.

AT the convention of fish protective associations at Harrisburg, Pa., Sept. 15, to devise means for carrying on the work of the Fish Commission, there were present Gov. Hastings; S. B. Stillwell, of Scranton; James A. Dale, York; W. E. Meehan, Howard A. Chase, William P. Thompson, E. H. Frishmuth, Warren G. Sellers, William H. Green, Charles Wetherill and Dr. Bushrod W. James, all of Philadelphia; Col. H. C. Trexler and Lewis L. Roney, Allentown; John Price Wetherill, Bethlehem; Dr. Frank Monroe, Chester; John P. Austin and J. A. Smith, Renovo; W. O. Soult, Lewistown; Dr. W. B. Shaner, Pottstown, and others.

Col. Trexler presided, with Mr. W. G. Sellers secretary. Gov. Hastings addressed the meeting as follows:

"I desire to say to you with reference to the purpose of your assembling here to-day that an emergency has come upon us which must be met by the people of the Commonwealth who are interested in the continuance of the hatcheries of the State and the propagation of our food and game fish. The appropriation usually made by the Legislature for the propagation of fish was lost purely by accident. I took the trouble to make a careful examination into the matter, and I beg to assure you and the people of the State that it was simply an accident—an oversight—and we are now confronted with this emergency.

"We have four hatcheries in the State to-day. Two of these hatcheries are at Corry and Allentown, and I am informed by the president of the Commission that we have brood fish of the value of at least $40,000, and we have no money that we can get from the State to even sustain those brood fish, to say nothing of continuing the hatcheries at Erie and at Bristol. Now, my judgment is that the people of this Commonwealth are too patriotic to permit those fish to be lost and our fisheries interests in this State to collapse for a period of two years. I believe that if this matter is properly presented to the people of the State, that we can have by voluntary contribution as much money as will be reasonably necessary to continue our hatcheries and to continue the work that this Commission is now performing so industriously and so intelligently.

"I am informed by the President of the Fish Commission that if $20,000 is raised, that that would meet the emergency that is now before us; it will require about $10,000 for each of the two years. I will say to you—not as the Chief Executive of the State, but as a citizen, as your fellow-citizen—that my judgment is that the next Legislature will probably refund this money. I cannot give you any assurance of it whatever, and whoever makes any subscription to this $20,000 that we propose to raise will have to make it without any guarantee from me or from the Fish Commision, and no promise of the return of this money has been made either by myself or the Fish Commission, but I would suggest to you that a proper presentation of this matter be made to the people of the State, and that it be spread broadcast through the newspapers, and that personal appeals should be made to any of our fellow-citizens who are interested in the continuance of the propagation of fish.

"When we come to look at it, it would take only forty gentlemen who would give $500 apiece to help us out, I am not only willing to be one of the forty, but I now authorize your secretary to take my subscription for this amount; and I will say to you further, that I am authorized by the Attorney General of this State to make a subscription in his behalf for the same purpose, for $500. That will leave but $19,000 to raise.

"If you will permit me to suggest to you, I presume that it would be wise to prepare the memorial to the people of the State and let it have the weight and influence of the Fish Commission and all other organizations in the State that are interested in the propagation of fish. Do not confine your subscriptions to $500, but take what the good people of the Commonwealth can give to you, whatever the amount may be, and in whatever manner I can help you, either as an individual or as the Executive of the State, I am ready to be commanded by you; I am ready to help you in every possible way, and I have no doubt—I have not the least doubt—that when this matter is fairly presented to the people of the State you will have the $20,000 without much trouble.

"I desire to thank you most cordially, both as the Executive of the State and as your fellow-citizen, for this very patriotic effort upon your part to save the fisheries interests of the State."

Mr. Meehan showed that fish to the value of $60,000 would be destroyed if the Commission's work should not be continued; the value of the fish in the Corry and Allentown hatcheries he put at $40,000.

Pledges were received from various associations and clubs reaching the aggregate of over $11,000. All money is to be sent to Henry Demuth, of Lancaster, the Treasurer of the State Fish Commission.

It appeared from statements of delegates that many clubs had not been together during the summer, and that they would contribute to the fund during the fall. Dr. Bushrod W. James, of Philadelphia, made a motion, which was adopted, instructing the secretary to urge upon all clubs and associations prompt action.

Mr. Austin, of Renovo, suggesteed that a form of receipt be prepared which would make reimbursement by the Legislature an easy matter.

Dr. Dale's motion for the appointment of a committee of five to draft bills for the consideration of the fishermen of the State before the next session of the Legislature was adopted. On motion of Dr. Dale the drafting of a proper form of receipt for subscriptions was referred to the committee on memorial.

Mr. Thompson, of Philadelphia, suggested that each club and association should appoint a trustee for this fund, to whom all money should be payable.

The question of legislation for the fishery interests of the State was discussed at some length. Mr. Sellers, of Philadelphia, outlined a plan for the organization of fishculture associations, which will act in harmony with the State Fish Protective Association. He thought in this way more effective work can be accomplished in securing necessary legislation. Mr. Chase indorsed what was said by Mr. Sellers regarding club membership. He stated that the Fish Protective Association has a handsome permanent fund, which is used in practical work.

Mr. Sellers said one idea of the consolidation of the various fishing clubs in a central organization like the State Fish Protective Association is to interest all in fishculture, and to have annual conventions alternately in Harrisburg and Philadelphia, meeting here during the sessions of the Legislature.

Mr. Thompson suggested that the organization of clubs would also result in the more intelligent propagation of fish, in that the availability of streams for the propagation of certain fish would then be considered.

Mr. Smith, of Renovo, took the same view, and it was generally agreed by the convention that united work on the part of societies and clubs interested in fishculture would result in better things. A State league of clubs was the central thought.

The question of private fishing clubs—those that control leased streams—being affiliated with the State Fish Protective Association was discussed somewhat. Several delegates related incidents showing that these private clubs are doing great good, and that they are, in a general way, helping along the work of all engaged in promoting the fishery interests of the State. Local associations, it was remarked by a half-dozen delegates, are necessary to secure effective legislation in the enactment of a proper general law.

Dr. James presented very clearly the idea that there must be unity of action and harmony. He said there could be no general law until some concessions are made and the various elements in all the counties are brought together.

Dr. Dale, of the State Fish Commission, thought it would be well to have a committee to prepare a general law or laws and refer them to the various clubs for revision and amendment, so that when the Legislature meets the bill can be presented with something like harmonious support. Mr. Meehan spoke in the same vein and asserted that there would always be bitter opposition to too drastic a bill.

Mr. Charles Wetherill said the calling together of the sportsmen of the State to consider these matters by the State Fish Commission was a compliment to the sportsmen, and the steps to be taken ought to be taken very carefully. He thought that the arrangements for raising the fund necessary having been completed, an adjourned meeting should be held, when the subject of legislation could be more carefully considered.

On motion of Mr. Thompson, of Philadelphia, it was declared to be the sense of the convention that all associations of the State should have full membership and affiliation with the State Fish Protective Association, with the view of assisting in the enactment of proper laws.

Mr. Meehan read a paper on the relations between the State Fish Commission and commercial fishermen. He suggested that if the commercial fishermen on the Susquehanna and elsewhere were to send strong and reasonable delegations to discuss the matter with the Fish Commission some understanding could be arrived at which would be satisfactory all around. He suggested, in conclusion, that "it is time that the strained relations which exist between the Commission and the commercial fishermen be replaced by good feeling and hearty, unanimous, cooperation for the increase of the food fishes of the State, to the profit alike of the people, the fishermen and the Commonwealth."

The chair appointed the following committees: On Memorial and Other Papers, Wm. E. Meehan, Philadelphia;

John Price Wetherill, South Bethlehem; H. A. Chase, Philadelphia; Dr. Monroe, Chester, and Attorney-General McCormick. To Draft Laws, James A. Dale, York; John A. Smith, Renovo; Wm. E. Meehan and M. G. Sellers, Philadelphia, and L. L. Roney, Allentown.

WILD TROUT SPAWN, METHODS OF COLLECTION AND UTILITY.

A paper read by Commissioner J. W. Titcomb, of Vermont, before the American Fisheries Society.

THE method of securing an ample supply of wild brook trout spawn is so easy in localities where the parent fish abound, and so little has been said about this feature of trout culture, that I make bold to give my experience in this work.

Perhaps I should apologize for describing in an article before this Society a method of fishing of ancient origin which has for many years been applied by fishculturists to the capture of trout, fontinalis and anadromous fishes, but I have never seen this method written up in detail as modified for the capture of trout, and it seems a necessary part of a chapter on trout culture under the title on which I have written. I have reference to the first method I shall describe for the capture of the parent fish.

It is well known to all fishculturists that trout vary in their habits of spawning, or, rather, in their selection of spawning grounds. While brook trout in brooks almost invariably ascend to some point beyond their natural abode, or into some spring brook tributary to the main stream, it is not always the case that brook trout in lakes and ponds seek the tributary streams for their spawning grounds. It has been my experience that brook trout living in ponds quite as frequently spawn in them as in some tributary stream, even if the latter apparently affords good spawning grounds. In Vermont the earliest run of trout begin to spawn about the middle of September, although they have begun to seek suitable spawning beds at least a month earlier. It is, therefore, necessary for the fishculturist to guard against the ascent of the fish long before he is ready to trap them if he is looking for stream spawners. This is accomplished by the use of a weir stretched across the stream where the trap is to be located, as early as the middle of August. As this weir can be used as the upper side of the proposed trap later in the season, it is desirable to construct it with that object in view.

Location.—The location of a trap should be made at a point where it is least likely to be inundated or washed out by freshets, which would allow the escape of many fish when they are most likely to be running in greatest numbers. A point on the stream near its mouth is advised, or at some place below any possible spawning bed, but not near enough to the outlet to be affected by back water from the pond. It is desirable to have a slight fall of water at the entrance to the trap. In order to avoid washouts, the selection of a point where the channel is broad is preferable. The slats of the weir occupying about four-fifths of the natural waterway will act as a barrier to raise the water above its natural level, more or less.

Construction.—The trap is a V-shaped inclosure described by the mathematical term, "re entering polygon," made of slats varying in dimensions with the size of the stream and the force of the current. I used slats 1in. square, planed on two sides, driven into the bed of the brook vertically, about ½in. apart, and nailed to horizontal timbers or hewn logs. This framework of horizontal timbers consists of one course laid at water level and a parallel course at the extreme height of the weir. The general idea of such a trap is the same as the pound net, there being an opening of 4 or 5in. in the angle of the V. A gate can be arranged in the entrance with a lever reaching to some point obscured from the view of the entrapped fish, which can be lowered whenever the trap is approached for inspection. This method of trapping trout is not new, but requires more precautions than for the capture of other fish less active and gamy, and a few words of caution to the inexperienced may be desirable. Build your trap to resist the greatest freshet the stream is liable to develop. The run of trout at such times will be greatest. Be careful to get a foundation that will not be undermined by the constant washing of the current between the slats. It is usually best to entirely surround the sides of a trap with slats rather than to depend upon the natural embankments. It is not necessary to use narrow slats for the sides of the trap, as no water passes through them, and the only object is to secure an inclosure from which fish can be easily dipped out. For a stream 6ft. wide I should build an inclosure about 6ft. square, the V extending into the inclosure about 3ft.

In many localities it will be found possible to dig side ditches above the trap and inclosures, at right angles with the stream, in order to convey surplus water away from the trap, and lessen the danger of washout or inundation. The bottom of such ditches should be considerably above low water mark to carry off surplus high water.

A convenient place for the pens is just above the trap, so that the trout can be dipped from the latter into the former. They are constructed of the same material of which the trap is made, the upper side of the trap inclosure being used as the lower side or end of a series of pens. These should be made in shape and size to suit the location and number of fish expected to be captured, and the same precautions should be taken with them as with the trap to guard against washouts. In many instances, the bed of the brook is hard gravel and stones of large size, preventing the driving of the slats into it. In such cases it is desirable to make an apron at the base of the slat-work, upon which the water will fall as it passes through them, and prevent washing out of holes underneath the slats. This apron can be made of boards as an artificial bottom to the trap or pens, but a cheaper and quite as serviceable method is to place evergreen boughs or green underbrush at the base of the slat-work, covering the same with crushed stone or small stones from the bed of the brook, and then with coarse gravel. This feature of construction is very important. If there is a hole in the trap or pens large enough for trout to escape, they will surely do so. In fact, they will dig out under the slat-work if not properly guarded against. It is well to have planks extending over the trap and pens, on which one can conveniently stand to dip out the fish. Adjacent to the trap and pens, a rough board shanty can be constructed, or a tent can be temporarily used. There will be many stormy and cold days, however, and I advise having a shanty with facilities for heating it, and with a bunk where the attendant can sleep. Add to this equipment a reflecting lantern. Field stations of this description are usually some distance from habitation, and the ordinary comforts of camp life should be available to insure good work of the spawn taker.

I have described one of the field stations operated by the U. S. Fish Commission in Vermont. The cost of such a station equipped for work will vary from $30 to $100, according to facilities for obtaining materials of construction, etc. At this station the first run of trout occurred on Sunday, Aug. 23, when 1,650 trout ascended the brook during a rainstorm. Few trout were caught after this date until Sunday, Sept. 6, when about 1,000 more were taken. On Sept. 11 my records show that 3,335 trout had thus been taken. The fish continued to run in schools every rainy day, with a few stragglers every day until the end of the month. Oct. 15 some of the slats to the trap were removed after 7,138 trout had been captured. There is no other tributary to the pond where these trout could run, except in the wet season. In the latter part of September it was discovered that a large number of trout were ascending a "dry brook," so called, in large numbers. At the request of the owners of the pond, these trout were not disturbed, although it is doubtful whether their spawn would ever amount to anything deposited in such a stream. The discovery was occasioned by the fact that the trout had stopped running in the stream in which the trap was located, the inference being that they had learned of their danger and sought new spawning grounds. Whether such is the actual case, cannot be decided until after another season's work. The pond from which these trout ascended into the trap is an ordinary mill-pond of about forty acres, used to float logs into a mill, and with no screen at its outlet. The trout average about five to the pound, and the females of this size yield an average of 560 eggs. About 1,000,000 eggs were taken here, a part of which were eyed in a tent supplied with water from an adjacent spring, a part being transported to the St. Johnsbury station as soon as stripped. In connection with a collecting station distant from the hatchery, it is advisable to have a few troughs set up for eyeing the eggs before transportation, if suitable water can be obtained for the purpose. The natural brook water is ordinarily of low temperature, and too full of sediment to warrant using it for such temporary work. If an adjacent spring is available, troughs can be set up in a tent or shanty, and the eggs thus eyed in from thirty to forty days before the most severe winter weather sets in. For this work I use deep troughs, and stack the trays ten deep. The first stripping of eggs occurred Sept. 26, when 66,000 were taken. The second and largest stripping occurred Oct. 7, when nearly 500,000 eggs were taken, and the trout had all been stripped and liberated on Nov. 7. During the season only eighteen trout died. The cost of operating this stating during the season, including team hire and transportation of eggs to St. Johnsbury station, was $256 83, exclusive of services of one regular station employee two months. This cost included the cost of construction of trap and shanty, some of which would not enter into the expense of another season. For this privilege of taking trout liberal returns are made to the waters in fry.

Lake and Pond Spawners—The method of taking trout from spawning beds in ponds differs materially from the method just described. The following is a description of a field station and methods of operation where the trout spawn in the lake:

One of the first important features is to have suitable retaining pens in the lake, where the trout will be undisturbed and secure from poachers. I am describing a station at a lake of 1,500 acres area, subject to high winds and rough water.

The first year that collections were made at this station a breakwater was constructed of lumber and stones as a partial shelter to the retaining crates, the latter being anchored in shallow water and weighted to the bottom so that they could be approached by a walk from the shore, where a small tent had been erected in which to strip fish. The crates were always a source of annoyance for fear they would be robbed or broken up by high winds. The fishing was conducted in calm weather, day and night, and the stripping in stormy weather. Lake or pond spawners usually deposit their spawn later in the season than the brook spawners, and the weather is inclement for outdoor work, such as stripping trout. As a result, the percentage of eggs eyed at this station was not what it should have been. The following season a boat house was constructed with retaining pens within it, and of sufficient size to give ample room for spawn taking operations. In this house a stove was set up, and thus the work of taking spawn could proceed without discomfort during the most severe weather of November and December. Of the eggs taken at this station last season, 97 per cent. were successfully eyed.

The feature about the boat house to be considered in connection with the work, aside from the comfort of the employees, is the method of building retaining space for the brood fish. Two piers were constructed about 6ft. wide by 24ft long, and laid parallel to each other 8ft. apart. The material for the piers consisted of water-soaked logs taken from the lake, with the addition of a few trees cut near by. The logs were piled crib fashion, fastened with drift bolts and filled with large stones. The two piers were tied together at each end by stringers of logs, and constituted the foundation upon which the boat house was built. The space between the two piers, or the inlet to the boat house, was occupied by four crates, each 6ft. long by 4ft. wide by 4ft. deep. The log piers are not at all water-tight, only large stones being used to sink them, and with the 8ft. opening at the sea end of the boat house, furnish ample opportunity for aeration of the water in the most calm periods. To guard against heaving by ice, which freezes 2ft. thick on the lake, the outside of the cob piers was covered with planks fastened vertically, but sloping out in the form of a battered wall, so that the ice cannot get a hold on the piers sufficiently to move them. The planking should not extend but a few inches below low water level, or it might interfere with the aeration of water in the crates. The trout were thus free from poachers, and also from the prying eyes of curious people. It may be remarked here that wild trout should not be disturbed in confinement any more than is absolutely necessary. Between 400 and 500 fish were retained at a time, one crate always being kept empty for use in transferring unripe fish.

Methods of Capture—The implements used in the capture of lake spawners consist of spacious but easy-running boats, tooth-nets, dip-nets and jack-lights. I erroneously designate as "tooth"-nets, gill-nets of a mesh too small to gill the fish.

The above described station was equipped with one each 100ft. and 200ft. gill nets of 1¾in. mesh (⅞in. knot to knot) and 6ft. deep, colored blue. Fishing was conducted day and night, or when the weather was favorable, lee shores being selected if the wind blew, it being necessary to have the water calm enough so that the fish could be seen upon their beds. The dip-nets resemble large landing nets, the hoop or net frame being 15 to 20in. in diameter, made of ⅛in. gaspipe, and the net being 2ft. deep, of as coarse a mesh as the size of fish to be dipped will permit without gilling them. It should be of rather fine thread and barked or colored blue. The latter color is best for work at night. After a fisherman has had experience with dip-nets, he will have his own ideas about the style of net, dimensions, etc.; but the general description given above will hold good with all. The technical description of a dip-net for ordering from the manufacturers is as follows: "52 meshes round, 28in. long, 1¾in. mesh, 16-6 cable, barked, with twine strung through the top 5ft. long."

I have tried several forms of dip-net frames, and finally settled upon the ½in. gaspipe as the best for lightness, strength and durability combined with cheapness. A better, but more expensive net frame, can be made by the same method that pitchforks are made, only continuing the process by drawing the tines of the fork around until they complete the arc of a circle. This form of net frame has the advantage of being strong, light and more slender than the gaspipe for rapid work under the water. The handles of the dip-nets should be of light and strong material, and I have found nothing equal to the bamboo for them, using 8 or 10ft. from the butts of fishing poles.

The jacklights are an important feature of this work, the larger part of which is done at night. The one I use is a gallon can fastened to a gaspipe standard so that it can be raised or lowered, also revolved in the arc of a quarter circle. To this can is attached a supply pipe to conduct kerosene oil from the can to a perforated burner suspended over the water. This conductor has a globe valve in it to regulate the supply of oil. The conductor is ¼in. gaspipe about 12in. long. The burner is ½in. gaspipe 6in. long, with cap at the end. The perforations in the burner are $\frac{1}{32}$in. in diameter, and should not exceed twenty in number. The burner is made of larger pipe than the conductor to it, as a convenience in winding asbestos wicking, which is loosely wound upon it and fastened with fine wire. Cotton batting or bagging can be used for this purpose, but is not as good. The burner when wound with asbestos resembles in shape a bobbin of cotton. A shade is necessary to protect the fishermen from the heat and glare of the light, and for convenience should be detachable. Galvanized sheet-iron is good for this purpose. For night fishing the light is suspended over the bow of the boat, the standard being screwed into a cast-iron foot, which latter is attached to the boat by means of a lag screw. The same method of fishing is employed whether by day or night, the jacklight being the only additional feature at night. The gill-net is then thrown around the spawning bed, the fishing boat is run inside, and a man with a dip net stands in the bow ready to dip the fish. He directs the guidance of the boat, which is propelled by one oarsman. The fish are easily seen on their beds in from 1 to 5ft. of water, and remain undisturbed until the dip-net approaches them. If they lie facing the net, they can be easily picked up. Sometimes a pair can be taken together. When several are on the same bed, those that are frightened away invariably start directly for deep water. In their sudden plunge they run against the gill-net, are caught by their jaws, and in their struggles wind up in the net. The cork floats of the net are painted white to facilitate seeing them at this stage, and the fish thus caught is easily taken by holding the dip-net under it and then shaking out the gill-net. The sport is exciting, and fishermen forget the time of night, even if the thermometer registers far below freezing point. This method of fishing with dip-nets was first employed in taking the lake trout (*S. namaycush*), and has been in vogue in New Hampshire for several years, the use of the gill-net not being required. It required much urging and practical illustration before the spawn-takers would believe that brook trout could be dipped up in the same manner. As fast as dipped up, the fish are put into tanks of water and kept in the boat until forty or fifty trout are captured.

Common sugar barrels will do for tanks. Seines can be used to advantage if the spawning grounds are smooth enough; but the majority of them are not. It has been my experience that the dipping process is less expensive than seining even on smooth grounds. The fish run best the first part of the night, and night fishing is conducted from dark until midnight. The spawning season of brook trout varies the same as it does with those spawning in streams, and is apparently affected by the height of the water. The first fish captured in the lake last season were taken Oct. 29, 1896. The last ones were taken Dec. 2, after which time the lake was frozen over. The trout could be seen at work on the beds long after the ice closed over the lake, and, in fact, until after Jan. 1, 1897.

The total number of trout taken with dip-nets was 1,457; average weight of each fish, a little over a pound. The number of males exceeded the number of females in the proportion of two to one. This has been the experience in the work of three seasons. The first stripping occurred Nov. 6, and the last Dec. 11. Total num- of females stripped, 362; total take of eggs, about 500,000. The eggs were eyed in a shanty fed by springs near the lake, three troughs of trays in stacks being used for the purpose. As a matter of information, twenty-nine female trout, stripped of spawn at this field station Nov. 26, 1896, were measured and weighed and the number of eggs yielded by each recorded. The girth, as given in the following table, was taken before the trout were stripped and with a scale which might not be regarded as entirely accurate, but approximately so. Some of these trout had apparently dropped part of their eggs before being captured:

Length in inches.	Girth in inches.	Weight lbs.	Weight ozs.	No of Eggs.
13	7	1		1,394
18	7½	2	6	2,665
10	7½		6½	492
11½	6½		8	615
17	11	2	1	2,563
17½	11	1	14½	2,358
8½	4		3	130
12½	7¼		11½	1,312
12½	7		10	820
11½	6¼		8	410
11½	6		8	615
10½	5½		6½	308
12	7		9½	820
16½	9	1	10½	923
11	6		8	615
13	6¾		11½	1,025
17	10	2	1	2,665
13	6½		11½	923
11½	6¼		11½	820
12	6		10	718
16	9½	1	9	1,845
10	5¾		6¼	656
16	10	1	14½	1,948
16¾	10½	1	12	2,563
14½	8	1	2½	1,845
13¾	7¾		14	1,074
16	8¾	1	8	1,845
17	10¼	2		2,665
15	9¾	1	8	1,948
Total for 29 trout....		31	6¾	38,580

The average weight of fish taken throughout the season will exceed that deduced from the above table, the males averaging in weight much more than the females. There is a very marked difference in the size of eggs of brook trout taken from different waters, and the size of the eggs does not depend upon the size of the fish. The variations in size of eggs taken at three field stations last season were in the proportions of 34, 41 and 42 to the square inch, respectively. The eggs numbering 34 and 42 to the square inch were taken from fish averaging five to the pound, while the eggs 41 to the square inch were taken from trout averaging over a pound each.

I will not discuss the subject now, but I believe that after successful field stations like those I operate have become permanently established, it will be advantageous to study the conditions surrounding the spawning grounds of each and see if the eggs do not require different conditions of water supply in artificial work, such as volume of water to each trough, etc., to produce the best results.

Utility.—In the collection of brook trout I have always borne in mind that eggs can be purchased at very low prices, after they have been brought to the eyed stage; in fact, it is difficult to attempt to compete with the commercial fishculturist in the cost of wild trout eggs laid down in the hatchery as eyed eggs, because the cost of eggs thus collected should not exceed the cost of the eggs of the domesticated trout, either being figured as eyed ova laid down in troughs where they are to be hatched; otherwise it would be expedient to buy eggs already eyed. There are some advantages about having the eggs of wild trout. The latter, if in suitable waters, would naturally be stronger fish than the inbred fish of the commercial hatchery. In answer to this argument, the commercial fishculturist will tell you that he frequently makes exchanges of eggs and fish and uses many precautions to keep up his stock of hardy fish. As a rule, the eggs of domesticated trout will eye and hatch a larger percentage than wild trout. Much depends, however, upon the facilities for taking the eggs of the latter, which means also the methods of taking the fish and retaining them until stripped. The lowest price I have been quoted by commercial fishculturists for eyed ova of brook trout is $0.70 per M. in lots of a million or more. To this price must be added expressage on the eggs to hatchery where they are to be propagated. To sum it up into one sentence, the utility of collecting wild trout spawn depends upon whether the cost of eggs thus collected is less than the cost of purchased eggs. Another point to be considered, is whether the spawn deposited naturally would yield a large percentage of fry.

I have mentioned a so-called "dry brook," in which the trout congregated in large numbers at one of my stations. One month before these fish ascended it, I personally examined it. It was then apparently a surface drain fed by a slight seepage of water from the muddy soil along its banks, but practically dry. I decided that it would be impossible for trout to ascend it, even during rain storms, and still believe that no spawn deposited in it would ever mature. I have visited several ponds where the trout cannot possibly ascend the feeding brooks until high water. When they do succeed in making the ascent, they have no time to prepare their beds, but must return to the lake in from twelve to twenty-four hours. The results from eggs naturally deposited in such places is practically valueless. In the case of lake spawners, the same spawning grounds where I operated were being cleaned by later spawning trout for a month after I discontinued my collections. The eggs of the fish I took, if deposited naturally, would have been eaten by the later comers or by the suckers and minnows which follow after them.

Many private clubs have well-stocked ponds and a man to look after them, and yet purchase eggs for restocking. The utility of saving the spawn going to waste in such places needs no further argument. The cost of wild trout eggs will vary, as a matter of course, and I have not found suitable or what I call paying stations without trying several which were afterward abandoned. I have not written this article to encourge competition with the commercial trout culturist, but to encourage a larger production of trout with the means available in State Commissions or private preserves. I am unable to say whether the collections made in this way are less expensive than carrying a stock of brood fish, as in vogue at State hatcheries and institutions of a similar character, but this method can be used to advantage as an auxiliary to such institutions.

POLLUTION OF THE POTOMAC RIVER.

Editor Forest and Stream:

The pollution of the water in the Potomac River, by pulp mills and tanneries, is a serious matter, that threatens the destruction of the black bass, the king fish of our fresh water streams, that affords healthful recreation to thousands, and supplies a most delicious article of food. But worse still, if these unsanitary conditions are allowed to continue, epidemics of typhoid fever and kindred diseases are sure to follow, endangering the lives of the citizens living along the river. Duri g my recent official visit of inspection along the Potomac the question of protection and propagation was almost overshadowed by the polluted condition of the river, and the indignation of the people against allowing pulp mills and tanneries to run their refuse into the river. From Piedmont to Cumberland, the water is very much discolored on account of the refuse from the tanneries at Piedmont. The color of the water is dark brown, and the odor emitted is very disagreeable. Bass fishing in this part of the river is a thing of the past, which fact is deplored by the residents.

Cumberland, the Queen City of Western Maryland, gets her water supply from the Potomac. This water is not fit for bathing and ordinary household uses, much less for drinking. I believe the authorities of Cumberland have gone to the Courts asking for an injunction, restraining the proprietors of certain manufacturing establishments from allowing impurities to run into the river. This is a move in the right direction, but, the proper thing to do will be to go before the Legislature next January and have a law enacted that will permanently abolish these abuses so far as Maryland is concerned. Then follow this up by going before the Legislature of West Virginia, the year following, and have that State pass a similar law for the Potomac River. Then the water will return to its pure, clear, sparkling, natural condition, and Cumberland will have as pure water as any city in the land.

From Cumberland to the South Branch the water was very much discolored; the tanneries at Paw Paw, W. Va., no doubt, assisting materially in the discoloration. It is an undeniable fact that bass are rarely caught in this stretch of the Potomac, the water being too impure for them to inhabit that part of the river. The water in the South Branch being pure, the conditions are better below where the North and South Branches unite; but the brownish color from the water in the North Branch may be seen as far down as Hancock. After leaving Hancock the water becomes clearer, improving gradually, and soon becomes clear. This condition continues until the pulp mills at Harper's Ferry are reached. These mills run all their refuse into the river; the chips and shavings float down and cling to the rocks, gravel beds and tufts of grass, driving the bass from their favorite haunts. The coloring matter in these chips and shavings is extracted by soaking in the water, so that the discoloration is quite perceptible; but, fortunately, the pure water from the Shenandoah, that empties into the Potomac at Harper's Ferry, neutralizes this impurity. From Harper's Ferry to Little Falls, near Washington, there are neither tanneries nor pulp mills, and it is here, and from Harper's Ferry to Hancock, that the best fishing is found. Along this distance of 150 miles of the romantic and picturesque Potomac, one of the finest natural bass streams in America, hundreds of the disciples of Sir Izaak Walton may be seen every day during the open bass season, whiling away the hours in healthful, manly sport, forgetting the cares of business and the anxieties of this busy world Hours pass like so many minutes. One's appetite takes on such a sharp edge that a cold lunch at midday is relished more than a swell dinner at a fine restaurant. When the club house, farm house or camp is reached at night, supper is hardly disposed of before Morpheus takes possession, and the ten hours of nature's greatest restorer—sweet sleep—that follow, rest the mind more than a dozen nights of broken, restless sleep at home. The sensation of a strike fills the angler's soul with joy, and landing a 3 or 4-pounder after a vigorous fight of five or ten minutes (such as bass only make)—well, I will not attempt to explain a "feller's feelin'"—you know how it is yourself, if you have ever landed one.

The Maryland Game and Fish Protective Association did a great work in bringing about legislation on the part of Maryland, Virginia and West Virginia for the protection of bass in the Potomac. The laws are vigorously and satisfactorily enforced. Transferring 15,000 bass from the Chesapeake and Ohio Canal was another splendid scheme of the Association, that was made so successful by the great liberality of the Washington anglers. The Maryland Game and Fish Protective Association stands ready to continue the good work of protecting the bass in the Potomac—the anglers' paradise of Maryland.

Is it not a very serious matter to contemplate the possibility that unless the pollution of the Potomac is dealt with summarily, all the bass will disappear? Washington, the capital of this the greatest nation on earth, is supplied with drinking water from the Potomac, and the health of her citizens endangered. The impurities in the water are not so great as far down as Washington as they are higher up, but the conditions are bound to grow worse, unless the polluting substances that run into the river are stopped. Is it not a shame that the health of the citizens of a great city, the capital of a great republic, is menaced by the condition of the water they drink? I am told that this matter was brought before the last Congress, and a committee was appointed to see what power Congress has in the premises. If it is found that Congress has no jurisdiction in the matter, on account of the sovereign rights of Maryland and West Virginia, then let us hope that the United States Government will use her influence with the Legislatures of Maryland and West Virginia in securing legislation that will prohibit polluting the water in the Potomac. This will give the citizens of Washington an abundant supply of pure water, and the Potomac will become one of the greatest bass streams in America, that can never be depleted by legitimate angling.

GEO. W. MASSAMORE.

SEA MULLETS ON THE HOOK.

A GREAT catch of sea mullets is noted off the coast of North Carolina. These delicious fish made their appearance in Bogue Sound and adjacent waters on Sept. 3, and on that and the following day hundreds of barrels were netted by the crews of fishing vessels. Two hundred barrels were caught at Rice Path, 200 barrels at Bogue Chapel, 100 barrels at Bogue Inlet, 180 barrels at Brown's Inlet, and 200 barrels in the waters around Swansboro, all in Carteret county. The crews lost lots of their fish, spoiled from not having salt on hand.

Later on the mullets worked their way up Pamlico Sound into the Neuse River at New Berne, and a big school struck in at the Government dock, where the watchman and a friend happened to be fishing with hook and line, and greatly to their surprise began to bite freely. In a very short time they lifted out 190 of them, which measured from 5 to 10in. in length, and although subsequent attempts have repeatedly been made to catch them with bait, none have been seen or caught.

The episode is altogether phenomenal. The sea mullets are strictly pelagic fish, altogether different from the shore mullets, which are so generally utilized as bait by our anglers in Florida and the Gulf of Mexico, and are very toothsome and sweet. Only once before have they been known to appear in these waters in like manner. Indeed, they very seldom come into the land from the deep sea. Holbrook mentions a visitation of sea mullets in the Apalachicola River in September, 1871. Whenever they do strike into shoal water they prove to be bold biters, and will take shrimp, crab or cut-fish bait. Jordan classifies the two species as *Menticirrus albinus* and *M. littoralis*. They are nearly related to our Northern kingfish (*M. nebulosus*).

CHARLES HALLOCK.

Triton Club Trout Fishing.

MESSRS. CHENEY and Rathbone have returned from their fishing trip to the Triton Tract in Quebec. Mr. Cheney writes: "I think I had the best trout fishing I ever had in my life. We caught thirty five trout in Moise Lake weighing 117¼lbs.; Rathbone twelve of 44¼lbs, and I twenty-three of 73¾lbs. Ten of mine weighed 45½lbs., and ten of R.'s 41lbs. Twenty-five weighed 101¼lbs. We killed but thirty-four, one 2lb. fish I returned alive to the water, as we killed only what we could eat in camp, and as we got out of pork our four men and ourselves ate a good many trout. We saw seven caribou, but did not have a gun with us."

Men I Have Fished With.

MR. MATHER'S delightful sketches are soon to appear in book form. See announcement on another page, and register your name for a copy.

Death of Clarence M. Teller.

His many sportsmen friends will be pained to learn of the death of Clarence M. Teller, of Baltimore, which occurred on Sept. 13, under tragic circumstances thus related by the Baltimore *Sun*:

"Mr. Teller, was found dead shortly before 9 o'clock yesterday morning in a clump of bushes, near a little stream, on the Franklin road, about three miles northeast of Catonsville. The discovery was made by John Groot, who was one of a searching party which had been looking for Mr. Teller all of Monday night.

"Early Monday morning Mr. Teller left his home, telling his wife that he was going into the country to catch minnows, which he used for bait when fishing. He had made an appointment with Mr. Robert Grist to go fishing at Lake Roland Monday afternoon.

"When darkness set in and Mr. Teller had not returned home, his wife became alarmed. A number of friends started out in search of him, but not the slightest trace of his whereabouts could be found until Mr. Groot came across his fishing net and a small tin pail beside the stream.

"It was thought by the searching party that Mr. Teller had fallen into the stream and had been drowned, and the stream was dragged. Mr. Groot walked about 50ft. from the stream toward the woods, and there, beside a small sapling which had been cut down by Mr. Teller, lay the body. In Mr. Teller's right hand was tightly grasped a small saw, which had been used to cut down the sapling. He had been dead about twenty-four hours. A jury of inquest was summoned, it being made up of those who took part in the searching party. A verdict was rendered that Mr. Teller had died of heart disease."

Mr. Teller was born in Westchester county, N. Y., Oct. 13, 1826. He had lived long in Baltimore. He was one of the organizers of the Monroe (N. Y.) Ducking Club; he was well known in sportsmen's circles, and was a life-long subscriber to FOREST AND STREAM from the beginning of the paper in the early seventies.

Basswood Bass for Count Fishermen.

THE Toronto *Saturday Night* has some pertinent suggestions about the depletion of the Muskoka and other waters by score fishermen:

"The guides realize what is happening. They have seen the slaughterers at work day after day, week after week for years on Rosseau and Joseph lakes, until now bass are scarce there and people have to go out of the way for good fishing. But what can a guide do? Unless he will take his patrons to a place where they can haul fish out with both hands and make as fine a showing in a photograph as did some rival crowd, then he gets a black mark and other guides are preferred. To maintain his reputation and gain a livelihood, he is compelled to assist in the work of exterminating black bass, although his good sense rebels against it. I know as well as anybody how hard it is to quit fishing when you have caught the half-dozen that are really needed in the camp or cottage, but I know, too, that the real sportsman when he finds himself cut off from civilization, unable to make use of 100 fish, yet surrounded by shoals of them, will at once set himself the task of avoiding rather than capturing the average fish. He uses all his skill to elude the bass of 2lbs. and under, and tries for 5 or 6-pounders. He makes it a test of craft to do this.

"The hotel keepers in Muskoka should get some nice bass made out of basswood, for use in photographs. They could be of all sizes, and, by rearrangement, would look like different fish in each picture. There was a time when the fisherman lied about his catch, but now he produces a photograph; and perhaps it would have been as well had he continued to lie instead of becoming a slaughterer. His tall yarns were not believed, nor did they injure any one but himself; whereas his greed in catching canoe-loads of bass merely to use them in a photograph is injurious to the interests of all. There are, I believe, regulations that would, if enforced, prohibit, the wholesale destruction of bass, and in the interests of Muskoka's future as one of the finest pleasure resorts on the continent, something effectual should be devised and applied."

Little, but Everyone Counts—for a Fine.

HUDSON CENTER, N. H.—*Editor Forest and Stream:* Von W. strikes the keynote in his article of Sept. 1 when he advocates throwing back the fingerlings. But my experience leads me to believe that our laws are violated oftener by men than by boys. It seems to be a mania with some to boast of the number of trout they have caught.

A short time ago I was on the cars on my way from Concord to Manchester, N. H. A man came into the smoker with his rod and trout basket. I entered into conversation with him (he was a man nearly sixty years old). He told me that his catch consisted of forty-odd trout. I convinced him that it was necessary for me to look his fish over; among them I found twenty-two small trout with their heads cut off. I arrested him and took him off the train at Manchester. I cut off the head of a larger trout, and by matching that to the smaller ones convicted him. His sentence was $40 and costs.

Our brook trout fishing has been about on an average this last season. The brooks have been full to overflowing all summer. We are anticipating fine fishing next season.

Landlocked salmon fishing has never been better. Black bass fishing has also been excellent. To-morrow, the 15th, the opening season commences on most of our game. The foliage was never so thick at this season of the year as at the present time. Deer are very plenty in the northern part of the State, with a fair sprinkling all over the State right up to the Massachusetts line. The law was repealed last winter that prohibited the use of ferrets, so that ferrets may be used lawfully in hunting the small gray rabbit. From what we can learn, there will be an average supply of ruffed grouse; woodcock never more plenty.

N. W.

Fishing on Tomahawk Lake.

MR. B. W. Sherman and wife, of Chicago, have just returned from their lodge on Tomahawk Lake, Wis., where they have been since July 1. On Aug. 31 Mr. Sherman landed two 'lunge's weighing 7 and 11lbs. On Sept. 6 Mrs. Sherman, after getting three alongside of the boat and losing them, landed one weighing 17lbs. On Sept 7 Mr. Sherman landed a 21-pounder; Mrs. Sherman landed, the same day, one weighing 21½lbs. and a 4lb. pike.

Mr. Sherman tells me that at no time since July 1 has the 'lunge fishing been so good as the time above mentioned.

A gentleman, whose name could not be obtained, landed a 39lb. 'lunge in Squaw Lake last week.

MY DOGS.

My dogs and I have had our day, and the night has come to us all, first bringing rest and everlasting sleep to them one after another, then to me only the darkness of night, while the sun still warms me, the breath of summer is in my nostrils, and the sound of diurnal creatures' voices and movements is in my ears. I cannot undertake to say whether the dogs or I have the best of it, but only know that I have many pleasant memories of them which they may or may not have of me.

Most of these old friends and comrades lie here before me under the green turf of a narrow patch of brush intervale, between a great buttressed elm and an old butternut, each with a rude stone at his head, bearing his age and the date of his death. At least there were such inscriptions but the earliest may be weathered to illegibility.

This is a pleasant place to lie on a summer day with the brook bubbling over the pebbles and sending back its song in faint reverberation from the depths of its hidden passage beneath the rocks, the south wind whispering in the heavens overhead, a wood pewee singing its slow, drowsy song, a flicker lazily hammering a dead branch of the elm, and now and then a wandering bumble bee droning in and out of hearing.

It is a pleasant place for dogs to sleep, or a man to dream in, as I realize sitting between the buttresses of the elm, with the voices of breeze, brook, bird and bee lulling me to dreamy memories of my dogs.

I have an impression that the Society of Friends, to which our family belonged, bore tacit testimony against keeping an animal, which perhaps was considered useless, or worse, merely ornamental and taking to vanity, for in my early childhood no dog has slept at our house, nor do I remember seeing them at the homes of but few of the Friends whom we visited.

Our neighbor, Friend Wheeler, had a fat and very shaggy old black and white dog named Trusty, so staid of demeanor and so constant in attendance at First and Fifth day meetings with his master, that it seemed to me he must be a birthright member among Friends, though the strangely contrasted colors of his coat were quite "out of plainness." He, lying at his master's feet and enduring as quietly as any of us, the largest silent meeting, was the only one of his race that I ever saw there.

My first intimate acquaintance with a dog began when I was about ten years old, and my eldest brother, who was many years my senior, bought a puppy at weaning age. When he went to get her at McNeil's Ferry, he took me with him. To me it was like a journey into a far country, passing along strange roads, by the dwellings of unknown inhabitants, and coming at last to the lake, which awed me with its greatness, so near me and stretching away northward to the sky and to unguessed mysteries beyond the blue rims of lake and sky, where shining sails arose or sank. The ferry-boat, propelled by horse-power, came wallowing across from the further shore, where the spires of Essex shone, and there was a bustle of arrival, and again of departure.

My brother left me to the contemplation of these strange scenes while he went for the puppy, with which he presently returned, and leaving her in my charge went away again on some affair of his own in the neighborhood. She was a cunning little formless bunch of brindle and white, and charmed me at sight. I was too much absorbed in watching her untrained gambols and in bringing her back from perilous explorations of the roadway to the safety of the sidewalk to note for a while how time sped, or to feel lonesome, till the shadows shortened to noon and I felt internal indications of the hour, and began to realize that I was a very small boy, very much alone in a strange neighborhood. Then there came to my ears from some outbuildings not far off, the angry baying of a dog, which I doubted not was the puppy's mother coming in search of her stolen baby, nor that she would hesitate to tear a small boy to pieces if she found one in possession of it. I might leave the puppy and fly for my life, but I felt that it would be dishonorable to prove unfaithful to my charge. The paling of a beautiful garden ran close beside me, but I could not get the puppy over it, much less myself. There was not a soul in sight to help, for every one had gone to dinner but the puppy and I, and how I wished that we had. There seemed but one way of saving both, and I hesitated but a moment to adopt it.

Clasping the puppy tightly in my arms, I fled as fast as my legs would carry me to the great house to which the garden belonged, and bolted in at the first door I came to without the ceremony of knocking. I found myself in the presence of two or three ladies, who must have been greatly surprised at the sudden appearance of a scared little boy and a puppy, but they received us very kindly, and gave us food and assurance of safety, and then took me through the greenhouse, where I remember there was a fig tree in bearing, and I was taken to the garden, which with its profusion of those rare flowers was the wonder and admiration of the countryside. Under the guardianship of the owner, Mr. McNeil, who treated us with great consideration, I wandered with my smaller companion in my arms, feasting my eyes on the beauties of the place till my long-lost brother returned and somehow found me, and magnanimously forgave me for running away from him. I was thankful enough when we were in the wagon and whirling away from the dangerous precincts, which I was glad to quit in spite of their wonders and rich beauties. The winsome puppy conquered the anti-canine prejudices of our family at sight, and immediately became a great favorite. She was named Juno, and except for an occasional youthful indiscretion such as killing a fowl or chewing up a shoe, she never did aught unworthy of her great name. She was called a bull terrier by her breeder, who no doubt believed her to be of that breed, and there was no one to contradict him in a community all unlearned in dog lore. She was considerably above medium size, her color brindle with white breast and feet, her eyes clear and kindly, the undershot of her jaw just enough to give a spice of sauciness to her intelligent countenance, which had no expression of ferocity, nor had she, as I remember, a single characteristic of the bull terrier, save indomitable courage.

She developed an especial fondness for gingersnaps and hickory nuts, and the clatter of one or the cracking of the other always awakened her liveliest interest. She got the notion that she must have a pillow of some sort when she slept, and when lying in the house would rest her head on the lower round of a chair. If the chair was moved she would still hold up her head, waiting for it to be replaced. She was a vigilant watch dog, but never meddled with any one who kept his hands off our belongings. One day our neighbor, the doctor, came to borrow a spade, and there being no man about to get it for him, he began searching the hallways for it. Juno followed him wherever he went, and when he found the spade and took it, she laid hold of his trousers leg and held him until he dropped the tool, when she at once chased him. She had a numerous progeny, but left none worthy to fill her place. When not having lived out more than half the allotted years of a dog, she passed into whatever hereafter is allotted to these most faithful and affectionate friends of man. There were many days of mourning in our house when her life ceased to be a part of ours, and her memory is fondly cherished by the two members of our family who have fifty years outlived her.

ROWLAND E ROBINSON.

THE NORTHWESTERN TRIALS.

THE champion stake of the Northwestern Field Trials Club was run on Thursday afternoon and Friday forenoon, Sept. 9–10. There were fourteen starters, all famous dogs, and so well known that the particulars concerning owners, handlers, etc., are unnecessary here. Many of them were given in the report of the trials of the previous two weeks.

The conditions in part were favorable for good work. That is, the weather was all that could be desired. The conditions in respect to birds and competition on them were very unfavorable. Birds were scarce and, therefore, there was great difficulty in testing pointing and locating.

Messrs Thomas Johnson and B. Waters judged. Most of the competitors were satisfied with the judging. In fact, they were pleased to say it was well done.

Ann of Abbottsford, a winner in the previous trials, and heretofore described in that connection, won after a most thorough contest. Her honors were not won cheaply. The last heat, between her and Ortolan, would be a most punishing one to the average dog, but they went through it without the slightest distress or lessening of effort. Ann made a most excellent showing, as is more fully mentioned in the report of the final heat.

Following is the order of drawing: Tick's Kid with Ortolan. Elgin's Dash with Prince Rupert. Dodo III. with Hurstbourne Zip. Sam's Beau with Christina. Swab with Tony Gale. Ann of Abbottsford with Pearl R. Sam T. with Sport McA.

Sam's Beau was bitten in the leg and lamed after he was entered. Sam T. was suffering from a badly injured eye and was withdrawn. This necessitated changing the order of running.

The prize was a silver cup and a diploma. The conditions were that a dog to be eligible must have been a first or second prize winner in a recognized field trial. No entrance fee.

First Round.

TICK'S KID AND ORTOLAN were started at 1:32. No birds were found in the forty-seven minutes they ran. Ortolan was far the better ranger. As the ground was very unfavorable, part of it mowed, part being stubble, and the rest known to be without birds, the judges considered it an unfinished heat and took both dogs in the next round for further trial.

ELGIN'S DASH AND PRINCE RUPERT ran thirty minutes, beginning at 2:22. No birds were found. Prince ranged irregularly. Dash ranged with poor judgment and pottered betimes, though he showed good speed.

DODO III. AND HURSTBOURNE ZIP started at 2:56. Dodo pointed a single and Zip backed. Dodo flushed a single. Zip made a point and a flush on single birds. Zip at times frittered away effort on false scent. Both ranged middling well. Up at 3:36.

CHRISTINA AND SWAB started at 3:45. Down 27 minutes. Their range was middling and about alike. No birds found. They classed better than ordinary.

ANN OF ABBOTTSFORD AND SPORT MCA. began at 4:14. Sport, some distance away, flushed and chased. He was wild and lawless. Ann roaded and pointed well some running birds. Sport made a poor point on a single. He, much of the time, ranged out of bounds heedless of the gun. Ann showed good judgment in beating out her ground. Up at 4:34.

TONY GALE AND PEARL R. were cast off at 4:39. Tony pointed a single; Pearl backed. Sent on. Tony pointed; Pearl backed unsteadily, then went in ahead. Nothing found. Next, Pearl pointed an old bird well. Gale drew and pointed on a sparrow. He wasted time now and then, stopping on gophers and other trifles. Pearl ranged well, though showing a frivolous behaviour at times. Gale ranged with inferior judgment. Up at 5:07.

Second Round.

Eight dogs were retained in the running, some of which were continued because their trials had not been satisfactorily complete in the first round, some because they were considered better than others. It will thus be noted that the retaining of dogs in the second round did not necessarily imply that they were all better than some left out; it implied only that they had not had so complete a trial as the judges desired that they should have. This will probably set some people right, who thought they knew a thing or two more than the judges did about the matter.

TICK'S KID AND DODO III. started at 5:21. They ran 7 minutes, ranging close and idling. Dodo was not well.

ORTOLAN AND HURSTBOURNE ZIP were cast off at 5:30. Ortolan made a point to which nothing was found. Next she found and pointed a bevy. It was quite a good piece of work. She far outranged and outworked Zip, so much so that he was hopelessly out of it. Down 17 minutes.

ANN OF ABBOTTSFORD AND CHRISTINA were cast off at 6:01. Ann roaded and pointed an old bird, which was lying very close, and which puzzled her not a little to locate. Christina roaded and pointed, but did not have the birds accurately located. As her handler walked up to her he flushed two birds. Up at 6:24. Ann showed much the better range and judgment. Christina ranged well and made a good showing, but was distinctly outclassed.

SWAB AND PEARL R. started at 6:25 and ran 17 minutes. Swab flushed a single. Pearl was the better ranger, and showed a higher class form of work.

Third Round.

Three dogs were in this round, of which one was Pearl R.

Friday.

The weather was clear, cool and pleasant, an ideal morning for field trial competition. Ann and Pearl were to run together, but Pearl did not appear, though the judges waited 48 minutes for her.

Final.

ANN OF ABBOTTSFORD AND ORTOLAN.—This heat was most thoroughly contested, and was an extraordinary exhibition of range and endurance. It was truly an admirable finish, and sustained well the purposes of the stake. The dogs were cast off at 9:09, and the course was up wind in open prairie. Each dog at once started vigorously, and they worked with perfect independence of each other. Ortolan found and pointed a single bird well, and was steady to shot. Next Ortolan made a most vigorous chase after a jack rabbit, but it did not in the least exhaust her; for she kept on seeking birds without any lessening of pace or range. At the same time Ann pointed and chased the bird when it flushed. At this stage the heat was in favor of Ortolan. By strict attention to her work and doing it well, Ann redeemed her chances later. Ann came back and dropped near where she had pointed; as her handler walked up to her he flushed a bird. Sent on. Ann, by beating out a lot of ground, found and pointed a bevy well. She was steady to shot. They were both ranging out well. Ortolano pointed. Ann coming in about 50yds. ahead and to one side, pointed independently. Ortolan left her point, took a short cast, took the scent again and drew straight up wind to flush on a single. Sent on, Ann went on and located the rest of the birds 50 or 60yds. ahead. Ortolan was completely outworked on these birds. Sent on. Birds were very difficult to find, and in their eager search both dogs were casting wider and wider. Neither wasted any time on gophers or small birds. They ranged intelligently and were much alike as to range and speed, but Ann had greater ability in finding. Sometimes they were fully a mile away, though it was the opinion of some that they were two miles away. Ann, coming in from a long cast, pointed and held her point stanchly till her handler went up to her. She had a bevy to her point, and the heat here ended. Time, 10:39. Down 1 hour and 30 minutes. It was one of the very best heats ever run in a field trial on chickens, and, so far as it is within my knowledge, it is the best one run on chickens, considering the equality of speed and range, the great area of ground covered, and the energetic searching displayed from start to finish. It required unlimited pluck to run under the discouraging condition of a dearth of birds. Few dogs have the heart to work so continuously with so little reward for their efforts. Many dogs will work when they can find with a reasonable degree of effort. Few will work when so many miles of prairie must needs be covered to show any results in finding. It was a great race and an admirable finish to a champion stake. On point Ann was lacking in style, but not in purpose. When the heat ended both dogs were going vigorously, and showed no intention of quitting. Both handlers and dogs were applauded generously at the conclusion.

Dogs of the Day.—II.

THERE is a new member of the life guards at Windsor Park Beach. He does not draw a salary nor does he wear any man's collar.

To be sure, the law compels him to own a small tag with a number on it, but it is locked up in a box, for neither dog catcher nor policeman would lay his unhallowed hands on Sir Cæsar, the life-saver. He is a splendid St. Bernard, belonging to Capt. Billie Johnson, the famous oarsman and swimmer, who is on duty day and night to rescue the imperilled bathers at Windsor Park Beach.

Cæsar is now regularly installed as a member of the life-saving crew, having finished the preliminary training. Far out into the lake he can carry the heavy life-line in his powerful jaws, for his fat gives him marvellous buoyancy and his great strength the finest propelling power. His legs are as strong as a lion's and as tireless as the flippers of a seal. He has learned to plunge out to the side of an exhausted swimmer and by a rapid maneuver face the shore and wait for the drowning man to clutch, and then paddle with all speed to the shore. Capt. Billie has taken infinite pains to teach him this trick, as untrained animals, in their eagerness to save, are apt to grasp a drowning man and force him under water with their heavy paws.—*Chicago Times-Herald.*

Dogs of the Day.—III.

STRANGE dogs create such a disturbance in the Central Park menagerie that every effort is made to keep them out. The animals in the cages are made nervous and restless by them. It was knowledge of this that caused head keeper Shannon to run to the Arsenal for his gun this morning when he saw a small dog in the lion house. The dog was running about, and had apparently been there all night.

The dog was not large, but it was plucky; and when it awoke this morning it ran straight to the hippopotamus cage and barked at Caliph, the big hippo. That animal swung its head around close to the edge of the cage and the dog ran away. When Shannon opened the door the dog ran past him and toward the rabbit pen. He barked at the rabbits until he had frightened them half to death. Then Shannon came back with his gun. The dog saw him and ran at him, but the keeper fired and the dog rolled over dead.—*New York Commercial Advertiser.*

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

POINTS AND FLUSHES.

As a testimonial of appreciation and approval, the Western Canada Kennel Club presented a gold locket to Mr. Frank Richards for his courtesy in judging their amateur trials at Lasalle, Manitoba, recently. One side of it bore his monogram, the other an inscription commemorative of the event. It was valuable in itself, and still more valuable to Mr. Richards, from its pleasant associations.

The recent trials in Manitoba have fully demonstrated that the dates in the last of August and early September are too early. The weather then is too hot, much of the grain is uncut, and the birds, having sufficient food in the open prairie, have not settled down to any fixed habitat with reference to a food supply in the grain fields. There is, of course, at a later date, the disadvantage of a diminished supply of birds caused by the shooting, but this could be guarded against by securing control of a large section of chicken country and preserving it.

Mr. Edward Dexter, patron of the Northwestern Field Trials Club, has donated a $200 cup for the club's next champion stake. This should excite the keenest competition, as it is one of the most valuable trophies, if not quite the most valuable, ever offered for field trial competition.

The *St. Louis Republic* reports the death of Towser, a tramp dog, famous in the city of East St. Louis. Towser, though of mature years and large experience, died a drunkard's death. He made his haunts mostly around the great East St. Louis railroad yards, and in his way besought beer of the railroad men, and saloon keepers thereabouts and he was not averse to a dram of whiskey now and then when he "felt so dispoged," *à la Sairy Gamp*. He refused water quietly but firmly, and so he lived a drunkard's life till a few days ago, when, being drunker than usual, he toddled athwart the course of a switch engine and was cut in two. His sudden cutting off in the prime of his pleasure should be a warning to all dogs of bibulous habits.

Sir Everett Millais, Bart., died Sept. 9, at Littleton House, Shepperton, England. Death was caused by inflammation of the lungs. He was well known as a writer on kennel subjects. "Rational Breeding" and "Two Problems of Reproduction," are his best known works. At one time he was a member of the Kennel Club.

Volume XVI. of the Greyhound Stud Book, published by Horace Cox, "Field" office, London, contains the addresses of coursing secretaries, judges, slippers, etc., coursing fixtures, of '97 and '98, pedigrees of winning greyhounds, review of the coursing season, registrations, winners of the Waterloo cup, purse and plate, portraits of celebrated coursers, and a vast amount of other information pertaining to coursers and coursing. It is invaluable to all who desire to be up to date in coursing matters.

In our advertising columns the Eastern Field Trials Club calls attention to its All-Age and Subscription Stakes for setters and pointers. Entries positively close on Oct. 1. The judges are Messrs. Arthur Merriman and S. C. Bradley.

Those who contemplate showing their dogs at the bench show of the Danbury Agricultural Society should bear in mind that the entries close on Sept. 27. G M. Rundle, Sec'y, Danbury, Conn.

The Huber Buffalo Herd.

DURAND, Wis., Sept. 12.—Albert and Charles Huber, living a few miles south of this city, have a herd of about twenty-five full-blooded bison and some eighteen crossed bulls and heifers. About six years ago they were hunting in the western part of North Dakota, and captured alive three young bison, a bull and two cows, and these they brought to their farm here. The animals grew and thrived amazingly, and are pastured in an inclosure of about 400 acres running down to the valley of Rose Creek, where they have ample room and shelter.

Experiments were made early with crossed breeds, and it has now been found that the cross is very successful, the half breeds combining the docility of the domestic animals with the endurance and large size of the bison. They are also very fine fur producers, and grow to maturity in less time than domestic cattle. The flesh of crossed animals is very palatable, and the fur has all the qualities of that of the bison, and is softer and more silky. The crossed bloods can stand far more exposure in winter than can the native cow. The Hubers believe they have a fortune in their herd if they can continue its increase a few years longer.—*New York Sun.*

The Ways of Snakes.

A FEW weeks ago I went into a woods with my rifle to look for a squirrel, and the first thing that attracted my attention was a blacksnake, about 15ft. high on an oak tree. The tree trunk was nearly 18in. in diameter and free of limbs and knots for something like 50ft. The top, however, was broken out, leaving a small stub of dead wood among the green limbs. The snake had evidently been up there after something to eat in the shape of young squirrels, mice or birds. Whether he found anything or not, he was now coming down very leisurely, and seemingly with as much ease and safety as he would crawl on the ground. I noticed that his body lapped back and forth across the tree trunk a distance of probably 12in., and evidently that was the secret of his being able to hold on. G. W. CUNNINGHAM.

Good Words About Some Good Things.

Since Nov. 20, 1896, I have been living in a board cabin in the mountains of Polk county, Ark., engaged with three partners in trying to develop some rose quartz (supposed to be) gold mining claims, which will be my excuse for my long silence, but my family in Topeka forwarded the FOREST AND STREAM to my nearest post office, fourteen miles away, and you cannot imagine what a welcome visitor it was, and as a roll of four at a time was usually sent me by my family, it furnished us each one, and there was no other business before us on Sundays but to read the FOREST AND STREAM and to discuss the merits of its most excellent pages. W. F. R.

I HAVE been up the country fishing, about 1,500 miles, in Wisconsin during the summer, and bought single copies. I did not read a paper of any kind for three weeks (was between heaven and earth, you see), and then ransacked the news stands at Baraboo, Wis.; the Union Depot, Chicago; Union Depot, Kansas City, and all over Dallas, Tex., for back numbers of FOREST AND STREAM, I finally found them at a place in Dallas, and bought all they had. E. R. EMERY.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirabl

A PERILOUS RIDE.

An Allegheny Mountain Camp-fire Story.

ONE day last October, in the course of a wheeling tour amid the Alleghenies, I found myself in the Chipmunk Field, one of those new districts in the oil country, which, despite all efforts to prevent overproduction, are continually being discovered and developed. The Chipmunk is a small creek flowing down a rapidly descending valley to the Allegheny River, at its head, not over eight miles from Bradford, the metropolis of the oil regions, yet up to last year wholly undeveloped. Oil was struck there twenty years ago, rich, too, but the well was bought up by shrewd operators, and reported a "dry hole, which prevented development until last year, when a "gusher" was struck, and before the operators in Bradford "got on to it" sufficiently to buy and plug it, the news leaked out, and there was a perfect stampede to the new field.

When I was there the boom was new. Looking up the valley, you saw little but great black derricks above the little village of board shanties that had sprung up in a day.

Engaging lodging for the night at McCaffrey's, the only plastered house in the place, and stabling my wheel under an apple tree in the front yard, I went for a stroll up the valley. Passing the Chipmunk Emporium, the Gasser Saloon and Bijou Café (the latter closed and bearing on its door the striking legend: "Dry Hole; ask the Sheriff"), I came to a shanty that bore this sign in letters so large as to cover the entire front.

GUSHER CIGAR FACTORY.
Manufacturers of
THE CHIPMUNK GUSHER CIGAR.
Wholesale and Retail.

I asked the proprietor if I might take a snap shot of it. "Cert," said he.

Just as I pressed the button a thick voice cried from the Gusher Saloon, diagonally across the way: "Hi, Bill, here's a wheelin' dude takin' picters. Come an' hev your'n took."

"Mine too," chorused several more. "And the dawgs," piped another voice; and so it happened that very soon four representative citizens of Chipmunk, with three dogs—a bull, a mastiff and a cross between the two—were looking into the muzzle of my camera.

Wandering on, with eyes and ears open, I came soon to a section where many wells were in operation. It seemed a sort of portico of Hades; Dante's approach to the inferno might have been copied from it. A vile odor of gas filled the air. Crude oil, green colored, ill-smelling, floated on the roadside pools and glided serpent-like over the bosom of a little brook trickling down to join the Chipmunk. In many cases the grass and weeds for rods around the well had been killed by an overflow of the vile stuff. In places stand pipes, fed by gas from the wells, emitted a roaring flame, while the creaking and groaning of the pumping machinery sounded like the wailing of lost souls.

The pumps are quite primitive, being composed in most cases of a huge wooden beam working on a pivot fixed in an upright, one end of the beam being attached to the pump piston in the well, the other moved by a small steam engine. Sometimes this engine is placed in a central house and works several pumps by means of rods extending across wide fields, like an octopus's arms.

Having walked, I suppose, two miles up the valley, I grew fatigued, and threw myself under a spreading oak to rest. I had nearly fallen asleep when there arose down the valley such a rattling and thumping that I was wide awake in an instant, feeling sure that something out of the ordinary was coming, and soon I espied a very peculiar vehicle of funereal aspect approaching—a heavy wagon with covered box painted black, and drawn by two ancient, lop-eared horses. A little, weazened old man with a quizzical expression on his hatchet-shaped face, filled the driver's seat.

"Good day," said I.

"G'd day," said he, pulling up.

"How far to Colegrove?" I queried.

"About a mile," says he; "I'm a-goin' there; jump in."

An odd smile stole over his face as he spoke, but disregarding it, I 'jumped in" with alacrity.

"I never saw a well shot," I remarked, by way of opening conversation.

"I hev," he replied, with decision.

"It must be an exciting and dangerous business," I continued.

"Wal, now, it is, and then agen, it ain't I hev known torpedo shooters die with their boots on, but a right smart chance of 'em dies in their beds like or'nary folks. There was Bill Wirt Sykes, now, shot more wells than any man in the oil country; but he got picked up at last, Bill did—an' they couldn't find pieces enough to hold a funeral over."

"How was it?" I asked.

"Well, you see, Bill was engaged to shoot No. 6, over in Wildcat Run. No. 6 was a gasser, an' when Bill let the fust ca'tridge down she only sunk about 500ft. an' then begun to rise. You see, the gas had got a 150lb. pressure under her, an' was a-hoistin' her, anchor an' all.

"'My God, boys, scatter,' ses Bill, 'she's comin' up.' Everybody got but Bill, he stood by to catch her as she came up, because if she shot up out of that hole and fell back she was bound to explode an' wreck everything. Well, Bill caught her all right, an' went to set her down on the pile; but somehow he fouled the anchor, or set her down too hard, or the anchor slid off and hit another ca'tridge—nobody knows exactly how it was—all we knew was, there was a slap in our faces, an' nothin' but a hole in the ground where, a minute before, had stood a 90ft. derrick, an engine house, two horses an' wagon, 150 quarts o' nitro glycerine, an' Bill Wirt Sykes. As I was sayin', we couldn't find pieces enough of Bill to hold a funeral."

"How very exciting," said I.

"Agin take me—I've shot a thousan' wells an' never an' accident. Fact, or it is Bill's time had come, an' when a man's time's called he's a goin', no matter whether he's drivin' a glycerine cart or playin' the dude roun' wimmin in a tennis court."

"Of course," said I. "Who is greater than his fate. But what is a glycerine cart?"

"Why, don't you know?" he replied. "Wal, I'll tell you. It takes from 100 to 150 quarts o' glycerine to shoot a well, an' if it's within two days' drive of the works, the stuff's always taken there in a covered wagon with a team. Pretty risky business? Well, a little. Still there was Abe Glacken followed it twenty years without an accident; then he had a pretty bad one."

"What was it?" I asked, as my companion paused.

"Wal, Abe had two horses that he allers drove to his cart—Pete an' Satan, a white an' a black. Some folks say a white horse fer luck an' some say a black. Reasons Abe, 'I'll hev both, an' sure to hit it.' Wal, for twenty years Pete an' Satan plodded over the mountain steddy an' reliable as the sun an' moon. But one onlucky day in the Devil's Elbow on Shirley Mountain, Driftwood Creek roarin' 400ft. below, a swarm o' bees follerin' their queen lighted on Pete's neck, an' what with his plungin' and snortin' soon began to sting both horses pretty bad. You couldn't expect flesh an' blood to stan' that, and for the first time Pete an' Satan bolted. As luck would have it, old Doc Killam from town, with his nigger driver and span, was in the crook of the Elbow. For nigh twenty years Doc had kept the undertakers busy, an' now his time was come. The boy heard the racket above, an' reined his outfit jist as near the edge of the precipice as he dared. Abe saw the trick, an' drew in to the mountain wall close as he dared, hopin' to pass; but 'twant to be—his off fore-wheel hit a protrudin' rock jist as he got abreast of the Doc: there was a crash, and a second one enough sight bigger, an' then all there was left was about five square rods of broken rock piled in the road an' rushin' down into Driftwood. No, sir. They didn't git a shred of anybody—Doc, the nigger, Abe, four horses—jist went into thin air."

The road grew rougher and rougher as we advanced. Hollows, mud puddles, ruts, stumps, and protruding roots obstructed it. In places attempts had been made to repair it by dumping stone in the hollows, but without much success. Over these the wagon rattled and bumped, my companion meantime whistling a merry tune.

"Someone said a well was to be shot up the valley this afternoon," I remarked after a time.

"Yes," said he, "I'm on my way there with the stuff now."

Well, my heart nearly stopped beating.

"Heavens, man! You don't mean to say you've got 150 quarts of nitro-glycerine in this box, do you?" I cried as soon as I could speak.

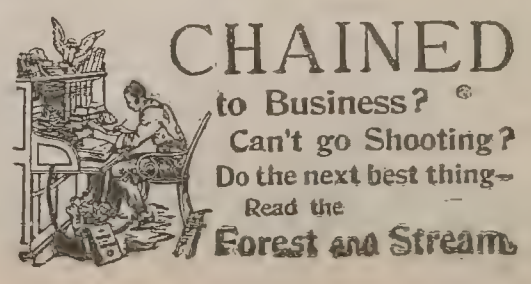
"That's the cold fact, squire," said he, nonchalantly.

I gave one leap from that box, and I didn't stop running till I was safe beside my wheel under the apple tree in McCaffrey's front yard. CHARLES BURR TODD.

THE annual report of the Long Island R R. Co. notes that the influence of the bicycle in building up suburban resorts and encouraging the building of good roads has been very marked during the past year. Many towns are building macadam roads, and in the near future Long Island will have a perfect system of highways. The results are seen in the great popularity of Long Island for bicycle tours and in the large numbers of wheels handled on the trains. During this season more than 100,000 wheels will have been carried as baggage. The railroad invites this business, and has organized a special department to supervise generally the needs of cyclists and to aid and encourage the building of good roads and cycle paths.

An Administration of Herb Tea.

THE Prince of a small German State, reports a German paper, whose ambition it was to do the grand, if only on a small scale, had invited a number of gentlemen to go on a deer-stalking expedition. Everything promised well. The weather was superb, and the company was in the best of spirits, when the head forester approached the petty monarch, and, lifting his green cap, said in faltering tones: "Your Highness, there can be no hunting to-day." "Why not?" was the stern rejoinder. "Alas! your Highness, one of the stags took a fright at the sight of so many people and has escaped into the adjoining territory, and the other stag has been ill since yesterday. But your Highness must not be angry—it is most likely nothing worse than a bad cold. We have given it some herb tea and hope to get it on its legs again in a few day."



Rifle and Man.

A WRITER in No. 10 of the present volume of this paper takes me to task for saying "A man should hit a running deer within a circle whose diameter is the width of the deer's body, and at any distance his gun will shoot accurately." He did not quote all I said on that point. Furthermore, he must know there are exceptions to all rules. Not long ago I said "two men might meet in the woods and exchange guns to their mutual advantage." Now, after I add the opinion that a medium-sized man can hit a running deer in the forest twice with a .38-40-24in. barreled Winchester, to once with a .50-95-26in. barreled Winchester. I will give my case to the jury. G. W. CONNINGHAM.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM's service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

THE story may be old, but it is worth repeating. It concerns the native Florida hog, known as the razorback. A resident was taking a visiting friend out driving one day and showing him the sights, when they came across a hog rubbing himself up against a telegraph pole.

"What do you call that animal?" inquired the friend, never having seen one of the like before.

"Why, that is a 'razorback'—a Florida hog," was the reply.

"Yes, but what is he doing rubbing against the pole?" was asked.

"Oh, he's merely stropping himself," replied the Floridian. —*Florida Citizen.*

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

Copies of the FOREST AND STREAM *race report blanks, for recording and reporting races, will be sent to all clubs requesting them.*

YACHT RACING FIXTURES 1897.

THE following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.

Races of the Sound Y. R. U. are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

SEPTEMBER.

25-26. Cor. San Francisco, cruise, Dillon's Point, San Francisco.
25. Buffalo, closing cruise, Lake Erie.
25. American, closing race, Newburyport.

OCTOBER.

9. Miramichi, Gould cup, Chatham, N. B.
9-10. Cor. San Francisco, cruise, Corinthian Cove, San Francisco.
16. Cor. San Francisco, closing day, San Francisco.
17. Cor. San Francisco squadron, cruise, San Franc'sco.

THE period for the acceptance of challenges without preference to priority for the Seawanhaka International Cup closed on Saturday last. A challenge has been received from the Seawanhaka Corinthian Y. C., and it is reported that one has also been received from an English yacht club in behalf of Mr. J. Arthur Brand.

THERE is a promise of good sport next season in the news that the new class of restricted 51-footers is really true, and that a number of these yachts will be built and raced, just as the 30-footers have been for two years. The new yachts will be within the regular limits of the 51ft. class, but special restrictions will be imposed with a view of producing something better than the extreme racing machine. In model, they will show a positive S-section, like Colonia, Vigilant and Gloriana, in place of the fin; and there will be 6ft. of headroom under the carlins of a flush deck. The sail plans will be moderate, and there will be limitations compelling each yacht to carry a *bona fide* cruising outfit in the races, with skylights and hatches in place. The rules will be such as to produce a yacht on board of which the owner can live while racing, to prevent outbuilding in a single season, and to make it possible to race without the often useless labor of stripping.

The Herreshoff Mfg. Co. will probably build seven—all of one design—like the 30-footers, but the class will be open to other designs. It is probable that seven to ten yachts will be built for 1898.

The class will sail all the spring races about New York, then go to Newport for continued racing through the season, and will take part in the New York Y. C. cruise.

The present yachts of the 51ft. class—Syce, Kestrel and Vencedor—will, of course, meet the new boats in some races.

DURING the summer the special committee on organization appointed at the conference of yachtsmen last May has been steadily at work, and the result of its labors is now ready for sending out to the different clubs for approval or suggestion. The committee has drawn up articles of association for the proposed body, and also racing rules, with the exception of a measurement and classification rule, toward which, as decided at the meeting, nothing definite has yet been done. The papers will be sent out and a meeting will be called some time next month, at which it is hoped that a permanent plan of organization will be adopted and officers elected.

IN going out of its special field to discuss yachting matters, the *Amateur Athlete* gets very much over its head, as follows:

The ingenuousness of the average Canadian is something wonderful to behold. He has a manner of reasoning that would puzzle a Schopenhauer to divine. Now that Our Lady of the Snows, or poetic words to that effect, has succeeded in retaining her grip on the Seawanhaka cup, she calmly announces that precedence in challenging next year will be given to anyone and everyone but United States yachtsmen, and all because we failed to win back our trophy last month! Why not try this argument in connection with challenges leveled against us for possession of the America's Cup? Would it not be all right to tell Lord Dunraven and the rest of his clan that the Ahkoond of Swat would have first call on the Cup, and after that the Fiji Islands' claim would be considered? We have tried but once to get back the Seawanhaka cup, and yet we are now classed away down the line by the august Canucks. England, on the other hand—or other side, rather—has been trying from time immemorial to get back her coveted mug, and yet we do not turn aside in disdain; in fact, we are just looking for that sort of trouble all the time. There is but one inference to be drawn from Canada's action regarding the Seawanhaka cup. She's afraid.

This is not only utter trash, but it is untrue in every particular; the new stipulation concerning the reception of challenges originated, if we remember, with the Seawanhaka C. Y. C.; at any rate, the two clubs were in perfect agreement as to the necessity for a change. No preference is given to any nation or club, the arrangement is simply that the holder of the cup may select at will from all challenges received within the first thirty days after the final race, thus putting clubs at a distance on the same footing as those near at hand. The Seawanhaka C. Y. C. has already put in its challenge within the thirty days, and is anxious to try again for the cup, but many of the members are quite willing to see the preference given to a trans-Atlantic challenger, believing that it will increase the interest in the contests for the cup and make it more thoroughly international.

The New Measurement Formula.

Editor Forest and Stream:

In regard to the new measurement formula proposed in FOREST AND STREAM of July 31, I agree to first, second and third of the preliminary as stated, and as qualified in the issue of Sept. 11. Concerning the consideration of the measurement rule:

First—A measurement rule is intended to encourage the development of a safe, roomy, speedy, easily handled boat, and I agree that this is desirable theoretically, but believe it to have been proven impracticable by experience heretofore obtained, and suggest instead that the honest and manly way for yacht owners and yacht designers to do is to acknowledge that racing boats are built only for racing, which is really what is done, and would therefore modify "a" so as read:

(a) To determine whether or not a yacht belongs in a certain racing class.
(b) Admitted.
(c) Admitted.
(d) Admitted.

Second—"What elements of the yacht should be considered if the suggestion of 'a' is taken into consideration?" The only element that should be considered, in my opinion, is that of sail area.

All measurement rules are used to determine a factor of relative size from which the allowance of time from the larger to the smaller yacht is calculated; the only rational element in such a measurement then, is sail area, because sails propel the yacht through the action of the wind, and all other elements retard its motion, and in their sum form the resistance. This subject is treated by Sextant in the issue of Aug. 21 in part and illustrates one of the principal fallacies when he says: "In the speed that comes from length, sail area is an important and inseparable factor." If any speed comes in such a way it would be possible by obtaining sufficient length to obtain unlimited speed, for if any speed at all comes from length there should be no limit to that speed if the length is unlimited. Speed is the result of the action of the wind on the sails overcoming the resistance of the hull to motion through or over the water, and the fact in regard to resistance is that length is only a minor consideration. The facts, as deduced by thousands of tank experiments, are that the resistance offered to the passage of the yacht through the water are:

(1) The frictional resistance of the immersed surface (skin friction).

(2) The resistance of the particles of water to displacement as evidenced (a) by the formation and maintenance of waves, (b) by the tendency to produce a partial vacuum wherever angles exist, except at the entrance.

The skin friction of a clean-painted surface at a speed of 10 knots for a length of 12ft. is 0.75lbs. per square foot, and for a length of from 300 to 600ft. and at the same speed, is 0.60lbs. per square foot; therefore, this resistance is practically independent of length. The wave-making resistance cannot be expressed by any formula for dissimilar types, but for similar types we know that at speeds of yacht and model related to one another as the square root of the length the wave-making resistance varies as the displacement, and in this the element of length only comes in to determine relative speed, but the principal factor is displacement. It may be said that the hull resists the tendency to motion produced by the sails, with a resistance to motion astern, to motion forward, and to motion sideways; the resistance to motion in either a forward or a backward direction is about the same. The resistance to lateral motion is vastly greater than either of them, and is determined by the character of the lateral plane.

In a familiar way, we know that the old style of shallow sloop that creates a great deal of disturbance in traveling through the water, makes a great deal of leeway; that the coasting vessels with a large lateral plane, but with rounded ends, also makes much leeway; and that the fin-keel with a sufficient lateral plane, or the centerboard yacht with a very large centerboard, make but little leeway, and in the matter of leeway length has absolutely no function to perform. The tank experiments show that in a given hull the increases in wave resistance with increases of speed are not uniform, but advance in a series of jumps. In all of these experiments the actual waterline length between extreme points of the waterline is measured, but in all of the measurement rules a waterline length is measured, which is not the actual length of the yacht, which bears a different proportion to the actual length of the yacht for every different angle of heel, which proportion is different in every yacht, for the same angle of heel, except where they are all made from the same model, and as a consequence, if the comparison were made by lengths, it must fail absolutely because of the fact that the lengths are not the same, but are constantly varying. That there is a discoverable relation between length, sail area and speed is further disproved by the actual performance of certain yachts.

Glencairn and Momo using	33ft. w.l...	500sq. ft.	...11 knots.
Thirty-footers using	.....42ft. w.l...	1,000sq. ft.	...13 knots.
Dorothy using	.....31ft. w.l...	975sq. ft.	...13 knots.
Defender using	.....95ft. w.l...	10,000sq. ft.	...16 knots.

There is, however, something of a relation between sail area and speed of yachts of a similar type. I should say that if sail area is the only element producing speed, it should rationally be the only element considered in measuring speed.

Third—"The element should be derived from the designers of the yacht, certified to by the designer and builder, and filed with the measurer of the club as club property." Admitted.

As a corollary to the suggestion of using sail area, I would add that in my opinion all time allowance should be abolished. (1) Because experiment has proved that with wind as a motive power, the strength of the wind and wave resistance varies so within small areas as to make any theorizing impracticable.

(2) Because our present time allowance tables are based on assumptions, which I have proven absolutely false.

If we established classes of 225, 500, 750, 1,000, 1,500, 2,500, 3,500, 5,000 and 10,000sq ft. of sail area, and permit only races between yachts of the same cl ss, we would have soon a mass of data as to efficiency of sail form and hull that would be positive so far as anything can be in which the personal equation of the helmsman is so great.

We, of course, know that some so-called designers will go to extremes, but the experiments thus made will teach a useful lesson, and at the end of a season's racing the intelligent designers will have a mass of data from which positive lessons of great value can be drawn. C.

Ogden Goelet.

THE steam yacht Mayflower arrived at Newport on Sept. 15 after a voyage of eleven days from Cowes, bearing the body of her late owner, Ogden Goelet. The funeral services were held on the following afternoon on board the yacht in Newport Harbor. The next day the yacht crossed the bay to Wickford, where the body was carried ashore in the launch and transferred to a special train. With the family were Capt. Jones, of the yacht, and some of the crew. The body was taken to Woodlawn Cemetery, near New York, being carried from the train to the receiving vault by ten men from the yacht's crew. By special orders the burgees of the New York and Seawanhaka Corinthian yacht clubs were half-masted on all club houses and yachts on the day of the funeral.

American Y. C., Open Regatta.

MILTON POINT—LONG ISLAND SOUND.

Saturday, Sept. 18.

SOUND Y. R. U. RULES.

THE last race of the Sound Y. R. U. for 1897 was that of the American Y. C. on Sept. 18, sailed off the club station, Milton Point, in a light southerly breeze and clear weather. The times were:

	Length.	Elapsed.	Corrected.
CUTTERS—43FT. CLASS.

Mistral wins the Steffens cup, held by Toxteth; either yacht winning it again will hold it. She also wins the new cup offered by Messrs Lawrence and Kimbark, to be won three times in succession, or four in all. Siren wins the Hennig cup, and Blade the Berg shield.

The judges were: Com F. W. Morgan, Com. Geo. Warrington and John McConnell. Joseph Ruff, timekeeper; George W. Rogers, assistant.

The Thirty-Footers at Newport.

THE race of Sept. 14 was marked by a collision between Wa Wa and Veda, in which the latter lost her mast. There was a fresh N.W. wind, and the Hope Island course was sailed, the times being:

	Finish.	Elapsed.
Esperanza, A. S. Van Winkle	5 39 50	2 30 50
Vaquero III, H B Duryea	5 39 51	2 30 51
Dorothy II., H P. Whitney	5 40 02	2 31 02
Wa Wa, J A. Stillman	Did not finish.	
Veda, C. Vanderbilt, Jr	Disabled.	

On Sept. 15 the Dyers Island course was sailed in a S.W. wind, the times being:

	Finish.	Elapsed.
Wa Wa, J. A. Stillman	5 46 41	2 30 41
Esperanza, A. S. Van Winkle	5 48 12	2 32 12
Vaquero III., H. B. Duryea	5 49 11	2 33 11

On Sept. 18 the course was out to Brenton's Reef Lightship and return, in a fresh S.E. wind, the times being:

	Finish.	Elapsed.
Dorothy II., H. P. Whitney	4 30 59	1 09 59
Vaquero III, H. B Duryea	4 31 45	1 10 45
Wa Wa, J. A. Stillman	4 32 51	1 11 51
Esperanza, A. S. Van Winkle	4 33 04	1 12 04

Knickerbocker Y. C. Ladies' Day.

COLLEGE POINT—LONG ISLAND SOUND.

Saturday, Sept. 11.

SOUND Y. R. U. RULES.

THE Knickerbocker Y. C. sailed a ladies' race on Sept. 11, in a very light S.E. wind, followed by a squall, the times being:

	Elapsed.	Corrected.
51FT. CLASS.		
Moccasin, S. H. Mason, Jr	2 50 50	2 59 50
SPECIAL MIXED CLASS.		
Nautilus, J. McCue	2 33 10	2 33 10
Whim, J. G. Honey	2 37 10	2 38 05
25FT. OPEN CATS.		
Melita, O H. Shellboy	2 41 12	2 41 07
Kite, R. & M. Goddard	2 43 09	2 42 12
20FT CATS		
Violet, A. S. Wiemers	2 51 16	2 51 16

THE racing season at Larchmont will end with the three races on Sept. 22, 25 and 29 for the 51ft. and 36ft. classes. In the former Syce will be matched against Vencedor, and in the latter Acushla will meet Anoatok. The races promise to be very interesting.

Seawanhaka Corinthian Y. C.

THE annual mess dinner of the Seawanhaka Corinthian Y. C. was held on Sept. 18 at the Oyster Bay club house, about fifty members and guests being present. The principal guest was Mr. W. B Stearns, of Marblehead, who has been in New York for some days in connection with the new one-design class. Com. Rouse was absent in the West, and Signal Officer W. G. Ulsoeffer occupied the head of the table. During the evening the new class was discussed and the plans and model examined. Mr. Dresser announced that already twenty members had enrolled their names in the class, and that no more would be admitted after Oct. 1. Mr. Stearns made some remarks on the subject of the new class and similar existing classes. Mr. Wetmore announced that a challenge had been sent to the Royal St. Lawrence Y. C. for the Seawanhaka cup, naming the 25ft. class. He also announced that in the event of the challenge being accepted a syndicate was ready to build two boats, and that Mr. C. H. Crane would design a boat and return to New York in April to prepare and race her. Mr. Crane's plans were made last winter to go abroad this fall in order to continue the study of naval architecture at Glasgow, and during the summer he had fully decided not to continue in the racing for the cup in 1898, whether successful or otherwise this year. His experience in designing and racing for two seasons in the 15ft. and 20ft. classes is too valuable to be dispensed with, and he has promised to take an active part again next year. Measurer Hyslop offered a motion, which was unanimously carried, thanking Mr. Crane for his work in attempting to recapture the cup this year.

The new class has awakened the interest of yachtsmen within and without the club, and promises to give good sport, not for next season alone, but for several years, as the conditions prohibit any immediate outbuilding. The exact details have not been fully arranged with Mr. Stearns, but the boats will be substantially as already described. The specifications call for a good quality of work throughout, making a fast, serviceable and durable yacht. While elaborate finish and specially costly details have been avoided in order to keep the cost as low as possible, nothing has been sacrificed in the way of essentials. All the boats will be built from the same moulds and as nearly alike as possible in every detail, and the ownership will be decided by lot.

With the present week the Oyster Bay club house closes, after a very successful season, the town house, at 19 East Twenty-second street, will be opened about the first of next month.

Beverly Y. C.—257th, 258th, 259th Regattas.

257TH RACE—4TH OPEN SWEEPS—CLUB HOUSE.

Sept. 4.

COURSES: 11¼ miles for second cruiser classes; 8½ miles for third and fourth classes; 5½ miles for fifth class. Wind: N.E.; light; calm at times. Judge: W. Lloyd Jeffries.

The day opened so calm that boats from Falmouth, etc., had to be towed up by steam yachts and launches, or they would not have got there in time. There was the usual crowd of members and ladies and children of their families at the club house to see the race.

For the first time, out of a very large number of races in the bay, one class—the second cats—failed to make a race in the time limit, and it was postponed to Sept. 10. Thordis crossed the line 2m. and 41s. too late.

Capelin started finely, as usual, outpointing and outreaching whole class; she, however, parted her peak halyards and lost six minutes in repairing them, and then found herself lost in a calm spot, while Opossum had a good breeze.

Thordis was protested by Kalama for a foul when the latter had right of way.

The cruising class has been a great success; these two races of Sept. 4 and 6 are the first where the whole eight were able to start.

It is said that the Seawanhaka Corinthian, Hull and Eastern clubs are already getting to build large classes of this type for 1898.

CRUISING CLASS.

Winners of Prizes: Cruiser class, Royal Blue first, Eina second. Edith third; class two, *Thordis first, May King second; class three, cats, Melro first; class three, sloops, Alma first; class four, cats, Elsa first, Daisy second, Howard third; class five, cats, Lara first, Vif second, Imp third; class six, Opossum first, Heiress second, Capelin third.

* Subject to protest.

259TH REGATTA—FIFTH CORINTHIAN.

The 259th regatta, fifth Corinthian, was sailed Sept. 11 in a N.E. breeze. It was a moderate breeze at the start, but increased greatly in force and blew hard soon after.

Boats carried whole sail during the race, but reefed before sailing home. May King, while near the home line and a little ahead of Thordis, parted her peak halyards. Howard broke her gaff and withdrew.

Cruisers and second class cats, 8 miles; third and fourth classes, 8½ miles; fifth class, 5½ miles. Wind: Strong N.E. Judges: G. P. Gardner, F. E. Cabot, W. Lloyd Jeffries.

Prize winners: Cruiser class, Edith first, Robin Hood second; second class, cats, Thordis first, Kalama second; fourth class, sloops, Capelin first; fourth class, cats, Elsa first; fifth class, cats, Lara first.

Edith, Thordis, Capelin, Elsa and Lara count 1 for pennant.

Robin Hood and Kalama count ½.

Pewaukee Y. C.

PEWAUKEE LAKE.

Saturday, Sept. 11.

THE last regatta of the Pewaukee Y. C.'s 1897 season was sailed on Sept. 11 over the regular 4-mile triangular course. There were but four yachts out, but as they are the swiftest of the club's fleet, the affair was doubly interesting for that reason. The wind was of a light and puffy variety, from the northeast. The preparatory gun was fired at 2:30, and the starting signal five minutes later. The start was very pretty, and all of the boats got across the line within fifteen seconds after the last gun was fired.

Lorraine led, and Idle Hour, Sirrocco and Christine followed, almost lapping each other. The start was to the west and in the run before the wind to the first buoy Idle Hour had the best of it, and was the first to get away on the second leg of the course. Lorraine, however, soon overhauled her on the beat to windward in making for the buoy opposite the Waukesha Beach, and rounded it fully a half-minute ahead of Idle Hour. The times were:

CLASS A.

	Finish.	Elapsed.
Lorraine, Schiller & Bauch	3 32 25	0 57 25
Idle Hour, R. E. Giljohan	3 33 23	0 58 23
Sirrocco, Wallber Bros	3 35 29	1 00 29
Christine, Gen. Louis Aner	3 36 21	1 03 21

Time of start, 2:35 P. M. Winners: Lorraine, Class A.

Judges—Andrew Nelson, C. E. Wintermute. Timekeeper, A. G. Miller, Jr.

Lorraine, having won the greatest number of the Class A events, was awarded the Pewaukee Y. C. 1897 Class A pennant.

Aida, winner of the club's '96 pennant, was awarded the Class B '97 pennant, as she won out in the greatest number of Class B regattas this season. ERNEST E. WHITE.

Cohasset Y. C. Special Race.

COHASSET, MASS.

Saturday, Sept. 18

THE Cohasset 15 footers sailed a special race on Sept. 18 for a $50 cup presented by Ralph Williams, owner of Delta. The race, sailed in a good S.E. breeze, was quite exciting, the times being:

	Elapsed.
Swallow, John Richardson	1 51 32
Blink, F. H. Pratt	1 51 40
Bee, A. Bigelow, Jr	1 52 30
Hoodoo, Gammons & Wheelwright	1 57 04
Mermaid, W. R. Sears	1 57 12
Jap, Bouve & Pegram	1 58 07
Mungo, L. D. Willcutt	1 59 10

East Gloucester Y. C.

GLOUCESTER, MASS.

Saturday, Sept. 18.

THE third pennant race of the East Gloucester Y. C. was sailed on Sept. 18 in a light S.W. breeze, the times being:

	Corrected.
Luna, S. E. Davis	1 08 48
Torment, Pomroy Bros	1 09 13
Tempest, Mr. Pinkham	1 15 07
Witch, I. H. Higgins	1 15 30
Hoodoo, Mr. Wheeler	1 16 20
Skeedaddle, Mr. Merchant	1 18 14

Luna, Brownie and Skeedaddle each hold a leg and will sail off for the pennant.

Knockabout Association Sweepstakes.

MARBLEHEAD—MASSACHUSETTS BAY.

Thursday, Sept. 16.

MASSACHUSETTS Y. R. A. RULES.

THE Knockabout Association, of Massachusetts Bay, held a series of three sweepstake races last week for the knockabouts, sailing in two classes, without allowance and handicap.

The latter class included the cruising boats. On the first day, Sept. 16, the wind was light S.E. at the start, but freshened considerably and raised some sea. The course was from Buoy 1 off Marblehead Neck to an outer mark 2½ miles S.E., thence to Pig Rocks Bell Buoy, and return over the same course; a beat to the outer mark, a reach to the Pigs and back, and a run home.

The times were:

	Elapsed.	Corrected.
Mongoose, A. D. Erving, Jr.	4 32 45	. .. ..
Fly, W. O. Gay	4 34 04	. .. ..
Gosling, North & Clark	4 35 40	. .. ..
Cock Robin, C. S. Eaton	4 35 43	. .. ..
Cockatoo, C. H. W. Foster	4 36 19	. .. ..
Sally III., L. S. Percival	4 43 56	. .. ..
Hazard, H. M. Sears	4 43 56	. .. ..
HANDICAP CLASS.		
Comet, J. S. Lawrence	4 56 30	4 53 30
Dorothy, F. Brewster	4 56 05	4 54 05
Mayona, C. O. Stearns	4 55 23	4 54 23
Tautog, J. F. Moors	4 55 30	4 55 30

Judge, H. H. Buck, Eastern Y. C.

Friday, Sept. 17.

The course was changed by the substitution of Half Way Rock for the Pigs. There was a light north wind and an old sea, making uneven conditions. The times were:

	Elapsed.	Corrected.
Cock Robin, C. S. Eaton	2 14 50	. .. ..
Cockatoo, C. H. W. Foster	2 15 55	. .. ..
Mongoose, A. D. Erving, Jr.	2 17 31	. .. ..
Fly, W. O. Gay	2 18 01	. .. ..
Gosling, North & Clark	2 18 41	. .. ..
Sally III., L. S. Percival	2 21 42	. .. ..
Hazard, H. M. Sears	2 23 43	. .. ..
HANDICAP CLASS.		
Mayona, C. O. Stearns	2 29 05	2 28 05
Tautog, F. J. Moors	2 34 05	2 34 05
Comet, J. S. Lawrence	2 40 00	2 37 00
Dorothy, Frank Brewster	2 39 05	2 37 05
Carl, Dr. J. Payson Tucker	2 44 27	2 41 57

Judge, Herman Parker, Eastern Y. C.

Saturday, Sept. 18.

The same course as on Thursday was sailed, the wind being light S.E. but freshening; however, it was very variable and resulted in various flukes. The times were:

	Elapsed.	Corrected.
Mongoose, A. D. Erving, Jr.	1 51 57	. .. ..
Fly, W. O. Gay	1 53 58	. .. ..
Hazard, H. M. Sears	2 02 27	. .. ..
Gosling, North & Clark	2 08 31	. .. ..
Cock Robin, C. S. Eaton	2 09 19	. .. ..
Sally III., L. S. Percival	Withdrew.	
HANDICAP CLASS.		
Tautog, F. J. Moors	2 00 24	2 00 24
Comet, J. S. Lawrence	2 04 52	2 01 52
Mayona, C. S. Stearns	2 13 44	2 12 44
Dorothy, Frank Brewster	2 16 29	2 14 29
Carina, J. Payson Tucker	2 19 25	2 17 25
Carl, Dr. Clark	Withdrew.	

Judge, Henry Taggard, Knockabout Association.

Mongoose was designed by B. B. Crowninshield, of Boston.

Dorchester Y. C. Ladies' Day.

DORCHESTER—BOSTON HARBOR.

Saturday, Sept. 18.

A PART of the programme of the Dorchester Y. C. for its Ladies' Day, Sept. 18, was a handicap race, sailed in a very light breeze, and resulting as follows:

	Elapsed.	Corrected.
Muriel, H. N. Nute	1 55 46	1 52 46
Wrinkle, S. N. Small	1 59 46	1 54 46

Eastern Y. C. Handicap Race.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, Sept. 18.

THE Eastern Y. C. sailed a handicap race on Sept. 18 with fifteen yachts starting. The wind was light S.E., but shifted at the last of the first leg to S.W., favoring some of the boats at the expense of others. The times were:

SECOND CLASS—SCHOONERS.

	Elapsed.	Corrected.
Hope Leslie, Lawrence Minot	5 50 05	5 45 05
Rusalka, J. A. Stetson	6 01 14	5 47 14
Adrienne, H. P. Smith	6 33 53	6 38 53
Virgilda, Sumner Myrick	Withdrew.	
Frolic, H. H. White	Withdrew.	
SECOND CLASS—CUTTERS.

Tom Boy, W. S. H. Lothrop	4 58 08	4 43 08
Asahi, E. V. R. Thayer	Withdrew.	

YACHTING NEWS NOTES.

A series of two out of three matches was recently sailed at Gloucester by the 15-footer Spruce IIII., now owned by Paul Butler, and the dory Tabasco, owned by Harry Wiggin. Spruce IIII. won the first two races.

Mr. Thos. McKean, of Philadelphia, has ordered of Cramp & Sons, a steam yacht 213ft. over all, 178ft. 8in. l.w.l., and 23ft. 3in. beam. She is to be completed by next April.

The Atlantic Y. C. is going ahead rapidly with the work of locating itself anew at Sea Gate, the new villa colony on Norton's Point. The financial plans have been perfected, and the plans for a new and much larger house are now under consideration. By the opening of the next season, the club will be fully installed in one of the finest club stations on the coast.

In our different descriptions of the Montreal 20-footers, we omitted to mention that they were rigged with a fine Manilla cordage, specially made for them by the Consumer's Cordage Co., of Montreal. The company, on the demand being made, interested itself in the matter, and produced a grade of 3-strand manilla in the small sizes that proved very satisfactory.

The yougsters of Lake St Louis, whose older brothers have raced this year and last in the 20ft. and 15ft. classes, are preparing to take their turn in due time at international racing. The following is from the Montreal *Gazette:*

On Saturday, Sept. 4, races took place between the above two clubs for a silver challenge cup won last year by Lachine. The race started from opposite the Royal St. Lawrence Y. C., Dorval, and was a beat to windward, the best two out of three to be the winner. Valeria, owned by George H. H. Eadie, was an easy winner. Defender, owned by Harry Davison, Lachine, was very fast, but Valeria walked by her. Six boats started, but only three finished. The thanks of both clubs are due to Mr. W. A. C. Hamilton, of the Royal St. Lawrence Y. C., who acted as judge. The times were as follows: First race started at 3:27—Jubilee, G. Eadie, sailed by Lawrence Norris; Defender, H. Davison, finish 3:39:45; Queen, G. Eadie, did not finish; Valeria, G. Eadie, finish 3:37:20; Vaseline, Harry Norris, disabled; Goldbug, Hamilton Gordon, disabled; Valeria won by 2m. 25s. Second race started at 3:51:30—Defender did not finish; Valeria touched Defender, 4:02:31. Third race—Defender won; Valeria did not finish. Fourth race—Valeria won; Defender disabled. Valeria, Dorval, wins cup.

No yacht was better known in her day about the Sound than the old Arrow, "Kirby's Arrow," the sloop. For some years past little has been seen of her. Lately she has been laid up Bay Ridge, but after being sold at auction she has started life anew on the Delaware, as told by the Philadelphi *Ledger:* "The Abe Townsend Y. C. started on its annual cruise early this morning in the sloop yacht Arrow, a recent purchase of the organization. The craft was laden with provisions, and the casual observer was impressed with the fact that the commissary department had not been neglected. The Arrow is a trim looking sloop, 65ft. over all, with 21ft. beam and 6ft. draft. The club purchased her at an assignee's sale in New York recently, and by their enterprise added another craft with a history to the local fleet. The sloop has been a Cape May cup winner, and while being used for cruising purposes in Eastern waters during the past ten years many a skipper has been obliged to read her name on the stern, for she has speed as well as providing comfort. For a sloop of her size she carries a very large spread of sail, her spinaker boom being 55ft. in length, while her balloon jib would be considered large for a craft of greater dimensions. Her underdeck plan, perhaps, furnishes more room than any sloop of her size in this vicinity. Her previous owner had so planned the allowed space that over a score of persons can be comfortably accommodated. The staterooms are so arranged on either side of the yacht that they can be closed, and only accessible from the main cabin. She is finished in mahogany, this valuable wood being liberally used in the companionway. The culinary department of the Arrow has been deftly arranged and fitted with all the modern appliances. Refrigerators are on either side of the sloop, with capacity for a ton of ice. Oil and junk lockers have their place abaft of the forecastle, and in fact every niche under deck is utilized in a manner reflecting great forethought on the mind of the designer. The yacht is fitted with a binnacle on deck and one suspended in the cabin, in order that the owner may lie in his berth and still be able to ascertain at a glance the course being sailed. The lines of the Arrow are strikingly beautiful, and with her large sail area she will likely give some of the prominent racing craft in this locality an occasional brush."

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.
Sec'y-Treas., John R. Blake. Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

BARELY a month ago canoeists were deeply exercised over different questions connected with racing; but now that the time has come for action there seems to be a total lack of interest in the very important matter of the amendment of the rules. Thus far no comments have reached us on the proposals published last week. But a short time is left before the annual meeting, and if anything is to be accomplished then, canoeists must bestir themselves.

Ianthe C. C. Regatta.

THE annual regatta of the Ianthe C. C. will be held at Newark on Saturday, Sept. 25, and all canoeists are invited to attend. Trains leave Chambers street for Woodside at 1:50, 3:15, 4:22, 5:00, 5:22, 5:52, 6:22, 7:30, and return at frequent intervals.

The regatta committee have arranged the following programme of events:

1. Sailing, handicap.
2. Paddling, any canoe.
3. Paddling, open canoes, single blades.
4. Paddling, tandem, open canoes, single blades.
5. Paddling, tail-end, open canoes, single blades.
6. Paddling, decked sailing canoes.
7. Paddling, Club fours.

The usual supper will be served the visiting canoeists, and a smoker will be held in the evening.

Rushton's Canoes.

Editor Forest and Stream:

In your report of the A. C. A. meet, in the issue of Aug. 28, in speaking of the new sailing canoes, you say "A third, designed and built by J. H. Rushton, was owned by C. W. Lansing." I did not have that honor. I neither designed nor built her and do not even know who did. Shortly before the meet Mr. Lansing shipped this canoe to me to be varnished and fitted out. It was found necessary to replank her, all but the sheer strake, and this I did. The centerboard and rudder were furnished by Mr. Butler, the rigs by Hemmenway, some other fittings were furnished by me—taken from my regular stock goods. Will you not kindly make this correction? J. H. RUSHTON.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

Zettler Rifle Club.

TWENTY-THIRD ANNUAL TOURNAMENT.

ON Sunday and Monday next, Sept. 26-27, the Zettler Rifle Club, of New York city, will hold its twenty-third annual tournament. The big event will take place in Henry J. Bookman's Cypress Hill Park, Brooklyn. The programme announces that "All riflemen and lovers of this sport are cordially invited to participate."

To get to the park there are alternative routes: Take Union Elevated direct from Brooklyn Bridge, or Fulton, Grand or Twenty third street ferries to Ridgewood; thence by Cypress Hill trolley to the park. Shooting commences at 9 A. M. on Sept. 26, and opens on Sept. 27 also at 9 A. M., closing at 6 P. M.

The shooting committee is composed as follows: H. D. Muller, chairman; G. Zimmerman, Ignatz Martin, Dr C. Grosch, C G Zettler, J. Begrow. B Zettler is shooting master, and G. Schurman, secretary. The ladies' committee is made up as follows: C. J. Watson, chairman; J. Guenther and W. Soll.

The three main contests will be on the ring target, the bulls-eye target and the target of honor. In these competitions, over $500 in cash will be distributed as prizes. There will also be special contests as follows: On the special 25-ring target, 3 shots free, only one ticket allowed; prize, a fine trophy presented by Zettler Bros. On the judges' target, open to judges only; prizes, two fine gold lockets presented by the club. On the ladies' target of honor, open only to the ladies of the club members; prizes presented by the club.

Calumet Heights Rifle Scores.

CHICAGO, Ill., Sept. 12.—The following scores were made to-day on the range of the Calumet Heights Gun Club. Metcalfe won the medal in Class A, and Booth the medal in Class B, in the men's contest. Mrs. Schmidt had no competitor in the contest for the ladies' medal, but won with the good total of 42 points.

Medal shoot, 200yds.:

Metcalfe	8221106955—30	Norcom	1335253342—31
Schmidt	2521133141—23	Chamberlain	0711080413—25
Whitman	0031000020— 6	Booth	2822334533—35
Harlan	0431258335—35		

Ladies' shoot, 100yds.:

Mrs Schmidt.....4443366048—42

PATTI.

A Rhode Island Shot.

MAJOR RANSOM, of the Warren Artillery, in competition for the veteran's badge, made a clean score of 25 at the 200yds. range a few days ago. He previously made a score of 24, making a total of 49. This is the first score of 49 at 200yds. to go on record in the State. The total of 20 shots fired at the same time was as follows: 25, 22, 22, 23; total 92 Lieut Sparks, of the Warren Artillery, last November exceeded this score by 1 point, his score being 21, 25, 23, 24; total 93, but unfortunately being shot out of season, no record could be made of it. Major Ransom's score is the largest official score ever made in the State at 200yds.—*Providence Journal.*

A Creditable Record.

ON Saturday, Sept. 11, Mr. Robert Hoffman, of Pittsburg, improved his former score of 114 at 200yds. muzzle rest, by 1 point. Mr. Hoffman used a .32-40 Ballard, and U. M C. shells loaded with Du Pont powder and his own moulded bullet He made the following score with 10 successive shots: 11 12 12 12 11 12 12 12 10 11—115.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Professionals and paid shooters barred. Royal Robinson, Sec'y.

Sept. 28-Oct. 1.—PASSAIC, N. J.—Annual tournament of the New Jersey State Sportsmen's Association at Clifton racetrack. First two days, targets; last two days, live birds. Main event on last day is at 25 live birds, $25 birds extra, handicap; $500 guaranteed to three high guns. W. H. Huck, Sec'y, Rutherford, N. J.

Sept. 30-Oct. 1.—ALTON, Ill.—Tournament of the Piasa Gun Club at Douglas Park. Targets. Under the management of Jack Park.

Oct. 4-5.—WARWICK, N. Y.—First annual tournament of the Warwick Gun Club. Open to all. Targets. $50 average money to four high guns in all programme events John M Servin, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13.—HACKENSACK, N. J.—Sixth contest for the *Recreation* cup. E. A. Jackson, Sec'y.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club Web. Woodfill, Sec'y.

Oct. 19-21.—DAYTON, Ia.—Second annual tournament of the Dayton Gun Club. First two days, targets; last day, live birds. "Cannot divide with professionals or manufacturers' agents"

Oct. 19-22.—BALTIMORE, Md.—Four days' tournament of the Baltimore Shooting Association. First two days, targets; last two days, live birds. $500 added money. Geo. L. Harrison, Sec'y.

Oct. 22-23.—HUNTINGTON, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Erie Gun Club.

Oct. 26-28.—COUNCIL BLUFFS, Ia.—Tournament under the auspices of W. D. Hardin, F. S. Crabill and C. B. Randlett, $300 added. Programmes later.

Oct. 29-30.—GRAND RAPIDS, Minn.—Tournament of the Itasca Gun Club. Dr. W. P. Brown, Sec'y.

1898.

March 22-24.—ELKWOOD PARK, Long Branch, N. J.—Sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

At Rutherford, N. J., on Wednesday of last week, Sept. 15, Captain Money said to us: "Why don't you say something nowadays about 'dropping for place'?" Our answer did not take much thought: "The fact is, Captain Money, we've not taken part in or attended any tournament this season where the old system has been in use, except at Auburn, N. Y., where it was used on the two sets of traps set apart for the 'Wolves' and the 'Lambs.' Personally we saw no dropping for place' at that shoot; and no one has said anything to us about the subject for several months." "Well," said Captain Money, "I'll tell you of an instance that occurred quite recently at a shoot which I attended. I won't mention any names, but the parties interested will know that I speak facts. I was standing near the scorer, and heard him tell a man who was standing by: 'Go and tell —— to drop a bird; tell him that I said so' There was a balk just then; a target had been broken by the trap, or a trap had gone wrong, so the messenger went up to the party designated by the scorer and gave him the message. The party spoken to looked around to catch the scorer's eye, but he caught mine instead. I put up my hand and said: 'Don't you do it: we know the message that has been sent to you, and who sent it; but don't you dare to drop this target.' The target was not dropped. Of course, I don't know whether he would have 'dropped for place' or not; but there were two people present who evidently thought he would have done so, viz: the scorer and his messenger. The matter caused quite a little talk, and 'dropping for place' came in for a whole lot of approbrious epithets" We have to thank Capt. Money for giving us this strong argument in favor of the Rose system, where the more targets you lose, the less money you receive. As we have repeatedly pointed out, the only case—so far as we can find out—in which combinations, pooling and dropping for place can pay under the Rose system, is where something like the following occurs: 15 targets, $1 50 entrance. Several men have shot, but 13 is high; the last squad has to shoot Two men are straight up to the last round; one agrees to drop a target and pool issues; he drops into the 14 hole, and cuts out a lot of (say) 11s, making each point more valuable. Anyone with any practical knowledge of tournament shooting will agree with us that this instance, or similar ones, will occur so seldom, that it is scarcely worth anyone's while to watch for such a chance. We shall be glad if someone—we don't care who—will give us instances where crookedness pays under the Rose system, quoting examples that differ from the above.

The Limited Gun Club, of Indianapolis, Ind., announces its "third annual interstate tournament," Sept. 28-29. The programme for the first day consists of four 20-target events, $3 50 entrance, and a 100-target race for the Grand Hotel cup, emblematic of the amateur championship of Indiana, Kentucky, Ohio, Michigan and Illinois. Entrance $2, with an optional sweep of $2.50 on each 25 targets. This cup is to be held subject to the following conditions: 100 targets, unknown angles. Each party to deposit $10 with the secretary at time of challenge and acceptance, and $10 more on or before date of match. Challenged party must accept within ten days and name time and place, which must be within thirty days of date of acceptance. On the second day there will be four 20 target events, $2.50 entrance, a different style of shooting being used in each event, viz: No. 1, known angles; No 2, unknown angles; No. 3, reversed order; No 4, expert rules. Event No. 5 will be at 3 pairs, known angles. No. 6 will be a two men team race, 50 targets per man, $6 per team. The shooter who makes the best average in the first five events will have his net entrance money for those events refunded to him. Targets will be charged for at the rate of 2 cents each. 10-gauges, black powder, professionals and paid shooters barred. On the first day all purses will be divided under the Rose system, with ratio points of 5, 4, 3 and 2 to 1. On the second day all purses will be divided under the old system, four moneys, 40, 30, 20 and 10 per cent. The following note closes the programme: "Shooters who are barred from the sweeps, and those who do not feel strong enough for the competition, may shoot and pay for targets only. They will be just as welcome and receive the same attention as those who put up their money."

From an item in a New York daily of Monday, Sept. 20, we learn that a serious, if not fatal, accident occurred on Saturday afternoon last, at Garnerville, N. Y., while the local gun club's members were holding a live-bird shoot. Below we give the story as it appeared; anyone who is acquainted with live-bird shooting will see that it is rather involved. There is one thing clear, however, and that is, that at least two of the shooters present were violating one of the most important rules in trap-shooting, viz., The shooter shall not load his gun until he is at the score. The item runs thus: "John Allison, superintendent of stables, live stock, etc., of the Rockland Print Works in Garnerville, with several other members of the club, was standing outside the range, between the platform and the traps, watching Mr Samuel Winterson shoot. Mr. Winterson with his last shot, wounded his bird and started walking toward the traps to get it, removing the old shells from his gun and replacing them with new ones as he walked along. When the lock sprung, closing the gun, one of the barrels exploded, the full contents of the shell striking Mr Allison, who stood within a few feet of it, in the hip, making a very dangerous if not mortal wound. Mr. Allison at the time had his gun in hand awaiting his turn at the traps, and when he was wounded dropped it as he fell beside Mr. Fred Taylor, who is assistant manager of the works. Allison's gun struck the ground on the tops of the barrels, both barrels exploding, the contents all passing within 3in. of Mr. Taylor's head Drs. Laird and Hasbrouck were summoned to attend Allison, and they say that his life may possibly be saved, but he may be obliged to lose the leg."

In another portion of the trap columns of this issue will be found a note of great interest to the vast majority of the trap-shooting readers of FOREST AND STREAM. We refer to the communication from Elmer E. Shaner, manager of the Interstate Association, informing us that the Grand American Handicap tournament will be held March 22-24, 1898, at Elkwood Park, Long Branch, N. J. All doubt, therefore, as to where this, the greatest live-bird event of 1898, is to be held, is thus set at rest. The facilities for handling a big crowd at Elkwood are so far beyond those of any other place that we are satisfied the Interstate Association has made no mistake. Those who took part in the event of 1897 will be the best advertising medium for next year's event; those who were there know just what there is at Elkwood, and the Grand American Handicap of 1898 will show the effects of this knowledge by an increased number of entries There were 146 entries this year, with 135 starters; what number of entries will there be in 1898?

A. W. du Bray and S. A. Tucker were in the city recently. We saw Du Bray, but we did not see Tucker, so can't say anything about the latter, except from hearsay, and we regret to learn through that channel that the "new corduroy shooting coat" is not wearing so well as the old one did. About Du Bray we cannot say anything very pleasant; he had an appointment with us which he didn't keep. Still he has apologized, and in the following terms, his letter being dated from Hotel Rennert, Baltimore, Sept. 16: "You will pardon my having skipped out so unceremoniously, and what is worse, my not having notified you of it sooner. But really our engagement for the time escaped me, until it was too late to make amends. However, there will be another day I trust, and then I will give myself the pleasure of looking you up and squaring myself with the formidable etc."

The New Jersey State Sportsmen's Association now has a membership of seventeen clubs in good standing, in addition to several individual memberships. This is a good showing for an association that has had such a hard road to travel while making its way back from oblivion into the world. The programmes for the Association's tournament at Clifton race track, Passaic, N J., are now spread pretty widely broadcast through this section of the country, and those who have received them, or who have read our synopsis of the same in last week's issue, can readily see that the Association is most thoroughly alive in every respect. There has been very little time to prepare for this tournament, but the management of the Association has done wonders. Its efforts are bound to be crowned with success. The traps will be ready for practice work by noon on Monday, Sept. 27.

We have been told that some people object to the charge of 3 cents for targets in all events scheduled for the New Jersey State shoot at Clifton race track, Sept. 28 Oct. 1. Why there should be any objection, we cannot say. The Association adds $100 a day in cash, and also announces a merchandise event each day. It must be remembered, too, that all the proceeds of this tournament will go into the (at present) almost empty treasury of the Association; and will be applied next year in endeavoring to secure better game legislation for the State, something of which it is sadly in need. Sentiment may go a long way in this matter, but money goes a great deal further. It is a sure thing that if the State Association does not move in this matter of better game legislation, no one else will; and it is another sure thing that the Association cannot make a move unless it possesses the sinews of war, popularly known as the wherewithal.

Bravo, Tucson! John J. Hallowell, late of Tucson, Ariz., but now of Bethayres, Pa., we salute and congratulate you on your magnificent run of 154 straight, made with Hazard's Blue Ribbon, on the second day of the Portsmouth, N. H., Interstate shoot, Sept. 16. Only the other day we made a note of Charlie Young's score of 151 straight, made July 30, on the grounds of the Springfield, O., Gun Club, and referred at the same time to Capt. Bartlett's run of 151 straight made at Rochester, N. Y., Sept. 26, 1895. Since Hallowell's arrival in the East he has been doing a lot of shooting, and the practice he has had has brought him rapidly to the front. His friends in Tucson will rejoice at his success.

Next week will find us busy at Clifton race track, Passaic, N. J., where the trap-shooters of New Jersey will meet their friends from neighboring States. The week following Warwick, N. Y., and Newburgh, N. Y., twenty-eight miles apart, will be the center of attraction of target and live-bird shooters around here.

The New Utrecht Gun Club will open its live-bird season for 1897-98 on Saturday next, Sept. 25 These semi-monthly gatherings will be held at Woodlawn, L. I., as usual.

The Florists' Gun Club, of Philadelphia, Pa., announces a target shoot on its grounds at Wissinoming, Pa., Saturday next, Sept. 25. The programme is an interesting one, including sweeps and a team race open to all. Both the Rose and the old system will be used in the division of purses, while in some events two 10-target events, entrance $1 those breaking 10 will receive $2 each; the 9s, 8s and 7s will also receive respectively $1.50, $1 and 50 cents each. The team race will be started about 2 o'clock. The conditions: five men from any organized gun club to compose a team. 25 targets thrown from a magautrap per man, no handicap. Entrance free. If six to nine entries $5 to first team, $3 to second and $2 to third. If more than nine entries, $5, $4, $3 and $2 to the four highest teams. An optional sweep of 50 cents will be shot on the 25 targets. The following is pleasant reading: "Please notice that this tournament will be given by the Florists' Gun Club for pleasure and not for profit. We give away three purses and guarantee two others. We throw targets free in the team match which is the same as added money. We have the prettiest shooting grounds in the State. Will you come?" A. B. Cartledge, 1514 Chestnut street, Philadelphia, is the secretary of the club. Shooting will commence on the arrival of the 9:52 A. M. train from the Pennsylvania (Broad street) Station.

From Ravenna, O., comes the following item, which shows that Mingo, otherwise John A. Flick, still retains his skill in breaking targets: "The last shoot for the Portage county championship cup donated by the E. C. Powder Company, and the handicap gold badge, was held on the grounds of the Ravenna Gun Club Tuesday last, Sept. 14. The cup was won for the sixth time by John A. Flick, of Ravenna, and the badge by Frank Spiers, of Atwater. Flick's score of 46 is considered good, as these shoots have always been held at difficult angles and flights, Sergeant system. These prizes are now the individual property of the winners. After the regular events some doubles were shot, Flick breaking 20 straight. These shoots have been the best ever held in Portage county, and the E C people have the satisfaction of knowing that their powder won the cup donated so generously by them, although under the rules any make of powder was allowed."

W S Brown, 520-522 Wood street, Pittsburg, Pa., the proprietor of the gun store where Old Hoss holds out in the Smoky City, has issued a pamphlet containing the latest revision of the A S A trap-shooting rules, a synopsis of the game laws of the States of Pennsylvania, Ohio and West Virginia, and hints on how to form a gun club, a blank constitution and by-laws etc. The booklet is a good form of advertising, and the information contained in it will be found of interest to many shooters. We cannot say, without referring to *Game Laws in Brief*, the standard authority on such questions, whether the game seasons, open and close, are correctly given or not, but we suppose that Old Hoss, who undoubtedly has had a finger in this pie, has tried to be as accurate as he usually is in other matters. His nickname of "Old Statistics" has been thoroughly well earned.

Here's a good story on Charlie Floyd, one of the most popular shooters around New York, but one whose time for shooting is sadly curtailed by his duty to his employers: A couple of winters or so ago Charlie was hunting ducks way down on the Delaware Bay. Geese were such rare visitors to the blinds, that when Charlie knocked one down he thought of nothing else but securing that goose. It fell in shallow water, but being only winged made rapid progress for the other side of the open water. Not having a dog, Charlie went in after it, gun in hand. After a short time the gun seemed in the way, so Charlie *laid it down*. Then the water began to get deeper, and, ice-cold as it was, he started to swim after that goose. To make the story short and to get to the point: The goose got away, and an expensive Greener is still at the bottom of Delaware Bay.

From Sherwood, Md., comes the following: "The Sherwood Gun Club is the title of a new trap-shooting organization which has been formed at Sherwood, on the Northern Central Ry. The club will shoot only at clay pigeons, and its traps will shortly be set in a large field which has been secured for the purpose. The organization, which starts out with about twenty-five members, is governed by an executive board consisting of the regular officers and one member at large. This board is made up as follows: Pres., C. S. Abell; Vice-Pres., F Smith; Sec'y, B C Howard; Treas., A C. Nelson; Member Executive Board, O F. Lackey. Shooting will begin in about a week, and the board will shortly designate the regular shooting days."

On Saturday afternoon last, Sept. 18, 1897, Jack Winston shot a couple of 100-target races, expert rules, with a certain party, and lost both matches. The scores were low, because Jack wanted to throw the targets as far and as low as the A. S. A. rules would permit. The shoot, also, took place on the Endeavor Gun Club's grounds, at Marion, N. J., and that signifies something when it comes to comparing scores. What we want to get at is the following: After the races had been concluded, an inspection of the scores showed the following: First race—76 to 72, defeated by 4 targets. Second race—80 to 73, defeated by 7 targets; 4 and 7 are 11. Who will say now that 147 is not a fitting title for John L. W.?

We regret to have to announce the extremely sudden death of Mrs. Paul North of Cleveland, O. Her death, which took place on Thursday afternoon, Sept. 16, was caused by heart failure, from which Mrs. North has long been a sufferer. On the day above mentioned Mrs. North retired to her room about 3 P. M., with the intention of taking a nap, leaving instructions with the servant to call her at 5:30. Her death was not discovered until the return of her husband, Paul North, from the office of the Cleveland Target Company, although efforts had been made by her young son to awaken her at the hour set, 5:30 P. M. Mrs North had only just returned to Cleveland from a two months' vacation with her family in Marquette, Mich.

The King's Smokeless Gun Club, of East St Louis, Ill., advertises its "first annual Interstate amateur shoot, and fourth annual fall tournament," Oct. 7-8, under the joint management of Jack Parker, of Detroit, Mich., and Jack Trendley, of East St. Louis. In addition to a long list of merchandise prizes for both days' programme, the club adds money in several events. In connection with the programme, J. M. Trendley writes us: "Please note that the twenty-two railroads entering East St. Louis will make reduced rates, owing to the fall festivities and the St Louis fair, which takes place the week of the shoot; and also on account of the parade of the Veiled Prophets, which will take place Tuesday, Oct. 5."

On Thursday of this week, Sept 23, at 2 P M, there will be a couple of individual matches at Marion, N. J. One will be a return match between W L. Gardiner, of Norwalk, O., and Carl von Lengerke, 50 targets per man, unknown angles. The other match will be between John 147 L. Winston, and a nominee of Uncle Al Heritage's. The conditions of this match, which is set for 2 o'clock sharp, are 100 targets, expert rules; and 100 targets, unknown angles, total score to count. The stakes may be termed "plunder," viz.: a dinner for ten at Taylor's Hotel, Jersey City; a Dunlap hat and a pair of shoes!

Mr. E. C. Eaton, treasurer of the Montreal Gun Club, made a new record in the regular monthly shoot of his club on Saturday, Sept. 11. The club shoot is at 10 known angles and 10 unknown angles, and Messrs. Eaton and Aubin tied for the Class A badge with 20 straight: on the shoot off at 5 targets, Mr. Eaton broke his 5, but Mr Aubin lost his 2d and 4th. Mr. Eaton's 25 straight is likely to be a "bogey score" for some weeks to come. Mr. D. J. Kearney won in Class A with 16 breaks, none of his classmates being anywhere near him.

The Riverton, N. J., Gun Club will hold a strictly invitation live-bird shoot Oct 15-16. On Oct. 15 the main event will be the second "Ralli shoot," limited to twenty entries, 20 birds per man, $20 entrance. This event will be shot in two squads. On Saturday, Oct. 16, the main event will be a 60 bird handicap, $50. Entries close Oct. 6, and must be accompanied by $10 forfeit. This match will be started, unless otherwise announced, on the arrival of the 10:30 A. M. train from Philadelphia.

In our last issue, under the head of "In New Jersey," we credited Noel Money with winning a heat for the Boiling Springs Gun Club's silver service at the semi-monthly shoot, held Sept. 1. As Captain Money was the winner, Noel Money not taking part in the shoot, the Captain now wants to know whether the mistake was the result of an accident, or of collusion between Noel Money and the trap editor.

There can be no two opinions as to the action of the Interstate Association in making arrangements for holding its Grand American Handicap at Elkwood Park next March Chicago could undoubtedly take care of the shoot and the participants very satisfactorily, but there is only one spot on this side of the Alleghenies that is suitable for such a shoot, and that is Elkwood Park.

Tom Keller put in a day or two in this city last week, but jumped out again to make a short trip in the interests of his firms, the King Powder Company and the Peters Cartridge Company We did not see Tom while he was here, but we learn from a reliable source that he has not fallen away at all, in spite of the hot weather and the hard licks he has been putting in while on his last trip.

The Riverside Gun Club, of Redbank, N. J., will pay a visit, with a 10-men team, to the Bergen County Gun Club, at Hackensack, N J., on Friday of this week, Sept. 24. The Riversides are able to get together a strong team, but the Bergen County Gun Club can generally reckon on the support of its members, and should be able to give the visitors a tough argument.

Manager Shaner, of the Interstate Association, tells us that: "After I've managed the New Jersey State shoot at Clifton race track, Passaic, Sept. 28-Oct. 1, I'm going to take a rest. I've arranged for a hunting trip, and self and 'Our Jim Denny's' dog Rupert, the dog he gave me at Oil City, will make it interesting for ruffed grouse and quail on that trip."

The men from Bellefontaine, O., won pretty nearly everything in sight at the big shoot and picnic at Brush Lake, Sept. 8. According to a local exchange, the team race was close and exciting. Bellefontaine and Columbus tied with 107 breaks each, Urbana's team being third with 100. Plain City, Mechanicsburg and Springfield also entered teams. Owing to the lateness of the hour when the team race was concluded, the shooting off of the tie was postponed until the annual picnic and shoot that will be held as usual in 1898. The Bellefontaine team was composed as follows: George Leidigh, A. Dushane, Gil Courter, C Bime', H Lee and Bob Bailey.

Dr. Hudson, of this city, a member of both the Emerald Gun Club and the New York German Gun Club is shooting exceedingly well for a man who has as little practice on live birds as the worthy doctor avails himself of. At the regular monthly shoot of the New York German Gun Club on Wednesday last, Sept. 15, the doctor scored every bird he shot at save one.

Wednesday, Oct. 13, is the date set by the Bergen County Gun Club for the sixth (and last but one) shoot for the Recreation cup. The shoot will be held, of course, on the club's grounds, Hackensack, N. J. The conditions are 50 known and 50 unknown angles.

The Piasa Gun Club, of Alton, Ill., will hold a target tournament Sept. 30-Oct. 1, at Douglas Park. The shoot will be managed by Jack Parker, the popular representative of the King Powder Company and the Peters Cartridge Company.

The regular monthly handicap shoot for the E. C. cup will take place at Hackensack, N J., Saturday next, Sept. 25, on the grounds of the Bergen County Gun Club.

SEPT. 21. EDWARD BANKS.

IN NEW JERSEY.

BOILING SPRINGS GUN CLUB.

Sept. 15.—The regular semi monthly shoot for the silver tea service donated by the Boiling Springs Gun Club, took place this afternoon on the club's grounds, Rutherford, N. J. There were eleven competitors in the main event. Banks winning a heat for the service, after a tie with Chris Wright. The latter shooter, although he has only one win for the service, has been very much in evidence in all the contests to date, having been in about every tie that has occurred. In the last shoot he tied with Capt. Money, but was shot out after a good struggle Ed. Taylor shot a good race, scoring 45 out of his 50; he was unfortunate enough to lose his first allowance target, when he needed all 5 to make a highest possible. Winston shot strongly, scoring 23 out of each 25; his total of 46 out of 50 was not enough, however, as his allowance of 2 extras would not permit of his making a highest possible. He did not, therefore, shoot out his allowance. In fact Wright, Taylor and Banks were the only ones who shot out their allowances, none of the others having a chance for highest possible. The handicaps were from 2 (scratch) to 10. This trophy has now been shot for six times. Van Dyke has two wins; Capt. Money, Chris Wright, Frank Hall and Banks have one win each. Scores in this event were as below:

C Wright (6)	1111111101111111101111111111111111101111111111101101	
	111101	—45—50
E Banks (2)	1111111111111111111111111111101111111101111111111111	—48
	11	—2—50
E Taylor (5)	1111111101111111111011111111011111111111101111101111	—45
	01111	—4—49
147 (2)	1111110111111111111101111010111111111111111111111111	—46
Beveridge (6)	1111111011111101011110101111011101110111111101111110	—40
Capt Money (4)	1011110111011101110101011101100111111111111111111111	—40
B James (10)	1011011011111111111011110111010111111010101111110110	—38
Hexamer (10)	0110111101111111001110110100011111010111101111101	—36
T Thomas (4)	0111001101111101000101011110011001111101111111110	—34
Matzen (10)	1011101100111111111011101110001110010110010111111	—34
J Hildreth (10)	0011010000110100011110110011111111111011101101111 01	—32

Shoot-off, 25 targets, proportionate allowances:

Banks (1)	1011111111111111111101101111—23
Wright (3)	1111010111111101101111010w

Several other events were shot off, three of them being at unknown angles:

No. 1, 15 targets: Taylor, 15; Wright, Money and Banks, 14; 147, 10; Hildreth, 9.

No. 2, same; Wright and Winston, 15; Money, 14; Beveridge, 13; Banks, 11; Taylor, 10.

No. 3; 25 targets: 147, 23; Banks, 22; Wright and Thomas, 21; Money and Beveridge, 20

Two other events, one at expert rules and the other at 10 pairs, were shot with the results given in detail below:

Twenty-five targets, expert rules:

147	11111 10111 11111 11111 01111—23
Taylor	01101 10111 11111 11111 11111—22
Banks	11111 11001 11111 11111 11101—22
Beveridge	01111 01111 11110 11111 11101—21
Money	11011 01011 11011 10111 10111—19
Wright	00100 11111 10101 11111 11111—19
Palmer	11111 11001 11100 11000 01000—14
Matzen	01100 00101 00101 01111 10110—13
Hexamer	11111 10000 01011 01110 01000—13
Hildreth	10011 00010 01010 10101 11000—11
Thomas	01100 01100 11110 11010 w —

Ten pairs:

Banks	11 11 11 01 11 10 11 11 10 01—16
147	10 11 10 11 10 11 11 10 11 10—15
Money	10 11 01 00 11 10 11 11 11 10—14
Beveridge	00 11 11 10 11 01 11 11 10 10—14
Wright	10 11 10 10 01 10 00 10 11 01—11
Palmer	00 10 11 10 11 01 10 10 10 00—10
Matzen	00 00 11 10 11 10 10 10 10 00— 9
Thomas	11 10 00 10 01 10 00 11 00 00— 8
Hildreth	10 00 00 00 11 10 00 10 10 01— 7

Several miss-and-outs were also shot to close the afternoon. In these events for the first target all stood at No. 5 and shot at No 1; the next target was shot at from No. 1 score, the target being thrown from No. 5 trap, and so on. Both barrels were allowed. Chris Wright covered himself with glory in these events.

EDWARD BANKS.

PIGEON SHOOTING AT PLAINFIELD.

Sept. 16.—A group of Plainfield business men and others who are fond of a day's outing at the traps had a little shoot in the country near that New Jersey city to-day. The pigeons were a lot of fast and strong country birds, and proved altogether too good for the majority of the shooters. The prizes were two live geese. The last thing seen of Dutchy was a rear view, as he disappeared in the direction of Plainfield with the largest goose under his arm. The scores in the 7-bird event for the geese were:

Dutchy Smith (28)	1111121—7	Sunderman (28)	2002120—4
C Lister (26)	2111120—6	Adelman (26)	1111000—4
Tom Keller (28)	1201102—5	McCullough (26)	0102201—4
Scott Terry (28)	1102202—5	Pearson (26)	0002011—3
Reed (26)	1021012—5	Worth (26)	0020200—2
Codington (23)	0121022—5	Hourand (26)	0100000—1
W Terry (28)	1101002—4	Blatz (26)	00w

BREAKING TARGETS AT MARION.

Sept. 18.—A series of matches, with sweepstakes attached, attracted a moderate crowd of shooters and spectators to the grounds of the Endeavor Gun Club at Marion this afternoon. The matches were two in number: One between Carl von Lengerke and W. L Gardiner, the latter of Norwalk, O.; and one between J. (147) L. Winston and E. Banks. Both were at 100 targets per man, but that between Von Lengerke and Gardiner was at unknown angles, while the match between 147 and Banks was at expert rules, one man up. In match No. 1 Gardiner was to have allowed his opponent 8 extra targets to shoot at in addition to the 100, but Carl did not need his allowance. The pair were tied at the end of the first 25 with 20 each. The second 25 saw Gardiner 1 in the lead; the third 25 resulted in a gain of 1 for Von Lengerke, the two being thus once more a tie, with only 25 more to shoot at. In the last 25 Carl broke 23 while Gardiner fell away badly in his shooting, losing the match by a substantial majority.

The above match was supposed to have been started at 1:30 P M., but business kept both the contestants away until quite an hour later The result was that Winston and Banks, who started in at 1 P. M. to shoot 100 targets, expert rules, for a Dunlap hat and the targets, were able to make a double header, and shoot two matches in place of one. Prior to starting the match, both agreed to have the bluerock traps throw the bluerock targets as far and as low as the A. S. A. would permit. This made the shooting very hard, the Endeavor Gun Club's grounds being notorious around here for hard shooting under any conditions No. 5 was an especially low and hard target, and 147 found it a perfect hoodoo; he only broke it twice out of the first twenty times he shot at it. Winston was not shooting up to his form; as he put it, he felt too good to do good shooting. Anyway, he was very slow and dusted lots of targets. The results of the two matches were wins for Banks, who thus holds a cinch on two Dunlap hats, fall styles Under the original conditions Winston was to have allowed Banks 5 extra targets to shoot at, or 105 in all to his 100; the allowance, however, was not needed in either match. The match was refereed by A. R. Strader, secretary of the Endeavor Gun Club; the same gentleman acting as master of the indicator. Jim Hildreth, of the Winchester Repeating Arms Company, who was suffering from a maimed foot, owing to his having stubbed his toe the night previous in a Turkish bath, acted as score-keeper. Scores in these two matches were as below:

First match:		
Banks	01111 11111 01011 11111 11111—22	
	10011 10111 10101 11111 01110—18	
	11101 10011 10111 11111 11111—21	
	11011 01001 10101 11101 11000—15—76	
147	10111 01111 11011 11110 10111—20	
	00011 01111 01101 11110 01110—16	
	11001 11110 11101 11101 10110—18	
	01011 10011 00111 11011 11111—18—72	
Second match:		
Banks	10111 01001 01111 11111 11111—20	
	11100 11111 10111 11111 11011—21	
	11111 01011 11111 01001 11011—19	
	10111 10111 11101 10111 11101—20—80	
147	11000 11110 11011 00111 10101—16	
	01011 11011 10011 10111 10011—18	
	11011 11011 11110 11101 11011—20	
	11001 10111 11111 10010 11111—19—73	

The scores in the 100-target race between Carl von Lengerke and W. L. Gardiner were as below:

	1st 25.	2d 25.	3d 25.	4th 25.	Total.
Carl von Lengerke	20	20	20	23	83
W L Gardiner	20	21	19	17	77

A team race, three men to a team, 25 targets per man, unknown angles, was another feature of the afternoon. This affair resulted in a tie on 66 each. Scores:

Banks's Team.		Gardiner's Team.	
F Sinnock	23	Gardiner	25
Capt Money	22	147	24
E Banks	21—66	C von Lengerke	17—66

The tie was shot, Gardiner's team going to pieces in the failing light and having, therefore, to settle for 300 targets. Scores in the second race were:

Banks's Team.		Gardiner's Team.	
Banks	24	147	23
Sinnock	22	Gardiner	10
Money	18—64	C von Lengerke	10—53

Sweepstake scores were as below, all events being at unknown angles:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	15	15	20	25	25	25	Targets:	15	15	20	25	25	25

Western Traps.

GARFIELD GUN CLUB

Sept. 18.—The Garfield Gun Club held its regular weekly shoot on its grounds this afternoon. There was a fairly good attendance, considering the fact that the 15th comes in this week, and that this is the time most of our Illinois shooters are away chicken shooting.

This month winds up the regular shoots for the season of 1897, and some good scores are being made and hard work done by some few who rival each other for the yearly medal. In some instances there is but 1 or 2 birds difference on the ten best scores of the season, and there is no certainty who the winners are as yet. Following are the scores of this week's shoot:

Medal shoot, 25 targets, unknown angles:

Stickle	0111111111110111110111101—21
Richards	1110101101111101111010111—19
Shaw	1111111111111111111101111—24
De Maus	1111000110110110100001101—14
Hicks	1111111101110111101100111—20
Russell	1001111010111111111110001—17
Slocum	0011100000000000100000100— 5
Workman	1101101110011010000110110—14
Wiley	0011010001010011111100111—14
Fish	1110101111011111111110110—20
E S Graham	1111110111010111111011111—21
Thatcher	0011001010010110011100010—11
Neal	100w
Patterson	1111011100111011001100111—17

Sweeps were shot as below: Nos. 1, 2 and 3, unknown angles; No. 4, snipe shooting; No. 5, reversed order; No. 6, 10 singles and 5 pairs. Scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	15	10	15	10	10	20	Targets:	15	10	15	10	10	20

Neal	12	9	15	9	6	12	Patterson	..	..	11	..	..	..

CICERO GUN CLUB.

Sept 18.—The following are scores of members of Cicero Gun Club, of Oak Park, Ill., who attended the grounds to-day. The attendance was light and the poor scores of the participants were largely due to the strong wind from the left quarter across the traps, making the flight of the targets very erratic.

Twenty-five targets, known traps, unknown angles.

Trophy Contest.

Banks	1101011011000101010111101—15
Knott	1001011100001100000110010—10
Barnard	0100011001000010110000000— 7
Dr Matthews	0011111011111101100111100—17
Lowry	0110110110111111100010101—16

AT WATSON'S PARK.

Sept. 15.—Below are the scores made at the Audubon Gun Club's weekly shoot, held to-day at Watson's Park:

Foss	2110211201211111—13+2—15
Rice	0222020200102200— 7+3—10
C E Felton	1200021100
Hollester	0011102110211 12—11+2—13
J Amberg	1022121 0113220—12+2—14
H H Frothingham	1100220202222212—11+0—11

The following scores were made in practice:

The following scores were also made: Adams shot at 100, broke 78; Vetter shot at 50, broke 37; Moran shot at 50, broke 21; W. S annard shot at 25, broke 21; F. P. Stannard shot at 25, broke 21; Goodrich shot at 25, broke 17.

COOK COUNTY TRAP-SHOOTERS' LEAGUE.

The Cook County Trap-Shooters' League will hold its seventh contest on the grounds of the Eureka Gun Club, corner Seventy-ninth street and Vincennes avenue, Saturday, Sept. 25th, 1897, at 1 P. M. The grounds will be open for all those wishing to attend at 10 o'clock A. M., and the regular programme of sweeps will be indulged in.

The Grand American Handicap of 1898.

PITTSBURG, Pa., Sept. 18.—*Editor Forest and Stream:* Contracts have been signed between the Interstate Association and Messrs. Daly & Chanfrau for the holding of the Grand American Handicap tournament of 1898 at Elkwood Park, March 22, 23 and 24. The requirements of the Grand American Handicap are such as to demand the securing of the best shooting grounds obtainable for the holding of the event. The Elkwood Park grounds have been so fully described in the columns of FOREST AND STREAM, that it is hardly necessary to state they are unequaled in this or any other country.

ELMER E. SHANER, Manager.

West Lebanon Gun Club.

WEST LEBANON, N. H., Sept. 14.—The West Lebanon Gun Club held its third annual shoot to-day The attendance was small, owing to many of its members being unable to leave their business to attend the shoot, consequently the events were cut short. Following are the scores, all events being at known traps and angles:

Events:	1	2	3	4	5		Events:	1	2	3	4	5	
Targets:	10	10	10	10	10	Broke.	Targets:	10	10	10	10	10	Broke.

NAP. BRIERE, Sec'y.

The Schmelzer Tournament.

KANSAS CITY, Sept. 17.—The fourth annual tournament of the Schmelzer Arms Co. succeeded in accomplishing the object of its promoter: that of bringing together a lot of amateurs, as well as inducing that class of shooters to attend which one never meets at the open-to-all shoots. There were plenty of this class present, and among them were a number who had never attended a tournament before, and others who had been shooting at the trap less than a year. Bringing out this class must stamp the tournament a success. It is safe to assert that some of the shooters who get their first experience at this tournament will be seen at other shoots next season, while the successful ones will return home with renewed enthusiasm. Their success, too, will be the cause of interesting others in the sport in their particular locality. This was the object of holding this tournament.

CONDITIONS AND HANDICAP.

One of the conditions in the programme specified that no shooter could win more than one first prize on any one day. On the face of it this rule appears straight, as it prevents the more skillful from winning all the principal prizes, and naturally protects the weaker shooters. Theoretically, it looks very good; but practically, it was a failure. Not that it failed to protect the weaker shots, but that it induced, or rather compelled shooters to drop for place—something which the programme emphatically stated would not be tolerated. This time, however, it was either 'drop" or remain out of the shoot for the balance of the day. Time and again the last target was dropped, as to tie for first after you had already won one would shut the shooter out. The system was wrong this time. For this reason no averages have been computed, as they would signify nothing under these conditions.

The shooters were divided up into three classes, A, B and C class. The A class shooters were required to shoot from three unknown traps, unknown angles, 18yds. rise. This was changed after the second day to known traps, unknown angles, at 18yds. B class shot known traps, unknown angles, 16yds.; while C class shot from known traps, known angles, 14yds. rise. If a shooter was found too fast for the class he was in he was advanced. Some few were advanced from C to B, but only one (Reust) to A.

The tournament was held at Fairmount Park, where all previous ones were held. Three sets of traps were run, one of these was arranged on the Sergeant system, and the other two after the old style of five. Perfection targets were used.

PRINCIPALS AND PARTICIPANTS.

The following is a list of the visiting shooters: F. M. Frick, C. V. Renick and N. C. Ewing, Oke Grove, Mo: H. Klio, Williamstown, Kan.; Dr. J B Hungate, Weeping Water, Neb.; E. A. Burton and J. A. Shaw, Murray, Neb.; C. L Funk, Pueblo, Col.; F. N. Cockrill, Platt City, Mo.; Dr. S Redman, W. S. Robinson, D. Davis and A. J. Williams, Cockrell, Mo.; C. E. McGee, F. W. Tryman and W. D. Moulder, Easton, Kan.; E. E. Hargrove, Sutton, Neb.; Dr. J. M. Hamme, Cottonwood Falls, Kan.; Tom Blackwell, Dr. E. A Lee, Ed. L. White and J. E. White, Odessa, Mo; J. N. Akard and Young, Fairplay, Mo.; A. L Bennett and wife, Emporia, Kan.; W. S Allen, Raymore, Mo.; Jas. Thomas, W H. Allen and Huck, Pleasant Hill, Mo.; L. Pruitt and L. H Bruner, Homewood, Kan.; Sumner Hale, Purden, Mo: B Johnson, Leloup, Kan.; S. W. Tatum, St. Joe, Mo.; F. P Hollenback, Zarah, Kan; F. C. Reust, Frankfort, Kan; E. A. Farris, Hall Summit, Kan.; J. C. Farris, Randolph, Mo.; B. O Running, Airy Lou Hardt and Hyde, Atchison, Kan.; J. W Sexton, Leavenworth, Kan.; Frank Hodges, Will Lemon, J. C. Carpenter, W. R Walker, Lou Thiele and R. E. Walker, Olathe Kan.; Dr. C. B. Clapp and L. L. Wayland (Woodson), Moberly, Mo.

First Day, Sept. 14.

While I have put all the events scheduled for this day in the table, this is not really the way they were shot, as only three events were finished on this day and two others begun. Much valuable time was lost in making a start and more in classifying the shooters, and then it is a much more difficult matter to keep new shooters in their proper place, and there were a lot of this class present.

The first event was a 10 target race, no entrance fee Dave Elliott won the kodak, which was first prize; Burton second, Ewing third, Davis fourth and Funk fifth. In the second event Hale won first, a Colt rifle; Funk second, Akard third, Burton fourth and Bennett fifth. No. 3: Blackwell first, a Syracuse hammerless gun; Redman second, Reust third, Gregory fourth and Funk fifth. No. 4: Gottlieb first, an Ideal loading machine; Bullock second, Wright third, Croweater fourth and Lee fifth. No. 5, Gottlieb first, 500 Peters shells, loaded with King's Smokeless; W. S. Allen second, McNu third, Hamme fourth, and Herman fifth. No 6 was a miss-and-out; Herman broke 27 straight and took first, a Spencer repeater; Bullock second, Sweet third, Hickman fourth, and Simms fifth. No 7 was also a miss-and-out; Palmer won the wading pants on 21 straight. W. S. Allen second, Bennett third, Sexton fourth, Cornett fifth. A Baxter camping outfit was first prize in No. 8. This went to Shaw; D. Elliott second, Reust third, Burton fourth, and Cornett fifth. A tent was first prize in No. 9. W. S. Allen got this, McNee second, Cornet third, Funk fourth, and Shaw fifth. Nos. 6 and 7 being miss-and outs, are not shown in the table below, though we have numbered them in this order. Bruce, Harrison, Herron, Arnds, Branhall, Richards, Hintche, Moore and Bottem shot only in one event.

Second Day, Sept. 15.

Things moved along much smoother to day, and a good number of events were shot off; no less than twelve events being disposed of, though the tie in many remained undecided.

The first event was a free for all, no entrance fee, Reust won first, a fine cigar case; Hodges second, Woodson third, Thomas fourth and N. Jarrett fifth. Hickman won the corduroy hunting suit, first prize in No. 2; Running second, R. Jarrett third, Rickmers fourth and Woodson fifth. Half a keg of Hazard Blue Ribbon is what Hodges got for first in No. 3; Gottlieb second, Swope third, Young fourth and McNee fifth.

Blackwell won a clock, first prize in No. 4; Hickman second, Thomas third, N. Jarrett fourth and Wright fifth. Shaw won the Winchester trap gun in No. 5; W. S. Allen second, Reust third, Swope fourth and N. Jarrett fifth. A clock is what Reust got for first in event No. 6; Young second, Rickmers third, Scott fourth and Hodges fifth. Sexton was on top in event No 7, and got the Smith hammerless gun; Cornett second, Thomas third, N. Jarrett fourth and Burton fifth. Young got the silverware in the eighth; Funk second, Hodges third, Hill fourth, Gregory fifth. Lee landed the Lefever gun that he was anxious to secure, the first prize in No. 9; Hungate second, Erhardt third, Shaw fourth.

Part of these events were shot on Wednesday and part on Thursday. The weather was sultry and threatening. The attendance was good and everything ran smoothly. There were a number of shooters who participated in but one event, among them the following: Yowell, Linn, Houck, Marston, Hollenback, Snell, Tatum, D Elliott, Brucker, Bills, Dickinson, Bruns, Sr., Bottem, Beohr and Mrs. Bennett.

Third Day, Sept. 16.

The morning of the third day of the shoot opened up very gloomily. There was a nasty rain falling, and a drop in the temperature of about 30°. Those who had been complaining of the heat were now shivering with cold, and later on when the sun came out were eager to reap the benefit of its rays. There was a big day's programme to be disposed of, and with the gloomy prospects in the morning, it looked very much as though it would be impossible to finish it. The disagreeable weather, however, had cut down the attendance considerably. Those who were present had come to shoot, and paid no attention to the driving rain nor the disagreeable conditions under foot. The events were run off with great rapidity, and as it cleared up after dinner, it was possible to finish all the events, as well as decide all ties.

First prize in No. 1, a lawn swing, was won by Funk; Palmer second, Bruns, Jr., third, Hodges fourth and Burton fifth. Hungate won the hunting suit, first prize in No. 2; Sexton second, Funk third, Lee fourth and Reust fifth. Hamme got a Marlin rifle as first prize in No 3; Palmer second, Hill third, Wright fourth, Lee fifth. Rickmers won a Kosmic rod, the chief prize in No. 4; Funk second, Erhardt third, Gregory fourth, Bryant fifth. In No. 5, the Smith & Wesson revolver were to Hickman, Hungate got second, Palmer third, Erhardt fourth and Hodges fifth. An Ithaca hammerless was won by N. Jarrett in No. 6, Hill second, Cockrell third, Woodson fourth and Herman fifth. First prize, an antique oak cigar box, in the 7th event went to Cornett, Cockrell second, Lee third, Bennett fourth and Gregory fifth. The prizes in No. 8 consisted of five lamps. The finest went to Wright, Bryant second, Gottlieb third, N. Jarrett fourth and Cornett fifth. In the final event Burton won first, a Remington ejector gun; Young second, Woodson third, Palmer fourth and N. Jarrett fifth.

These shot in only one event: Villians, Bruns, Sr., Norton, Scott, Blackwell, Dennis.

NOTES

J. S. Fanning, the Gold Dust powder representative, was the only trade representative present. Sharkey shot right along, but for birds only, though just as hard as if there was a good round sum at stake, Jack did lots of good missionary work.

Ed Hickman started in Class C, but after one day he was advanced to B, and here he shot equally as well If the shoot had lasted a day longer Ed would have gone into A. Ed is a first-class live-bird shot, but makes no pretensions on targets; yet there is no reason why he should not do equally as well with the saucers. Ed's name appears quite frequently among the winners.

C. L. Funk shot a very steady gait throughout, and was also fortunate in the few sweeps that were shot. He landed a 13 and a 15 alone. He has made wonderful strides since I first met him at the midwinter last January.

Gottlieb made one run of 43 straight, while the handicap of three unknown traps, unknown angles, 18yds. rise, was imposed on the A class men.

Airy Lou Hardt, as usual, was the life of the shoot. Lou never cares about his scores, but is out for a good time, and endeavors to make it enjoyable for all. Such people always add much to the pleasure of a shoot.

Funk is authority for the statement that there will be $2,500 added money shoot at Cripple Creek, Col., in October, under the auspices of the Intermountain Association. It has not been definitely settled yet whether it will be an open shoot or confined to members of the Association only.

PAUL R. LITZKE.

Trap Around Buffalo.

AUDUBON GUN CLUB.

BUFFALO, N. Y., Sept. 11.—The regular weekly shoot of the Audubon Gun Club was well attended. Event No. 3 in the table given below was the badge shoot. In Class A, C. S. Burkhardt and L. W. Bennett were tied for the badge; on the shoot-off, Burkhardt won. R. H Hebbard won in Class B, and Dr. Sauer in Class C. Nos. 6 and 8 were at 5 pairs. The team shoot, for the club championship of the city, was won by the Audubons with 108 out of 125 shot at. Cazenova Gun Club defeated the Bisons for second place by 95 to 91. Scores in to day's shoot were as below:

Mack	5	9	18	4	6	11	Wheeler	..	..	18	..	..	..

Zoeller and Bauman tied for A badge; Hager won Class B badge, and Beebe won Class C badge.

The next team shoot for the championship of Buffalo will be held on the Bison's grounds Sept. 23.

Trap in Rhode Island.

PROVIDENCE, R I., Sept. 15 —The Rhode Island Trap-Shooting Association's team was victorious to day on the club's grounds in a three cornered contest with the Pawtuxet and Centerdale gun clubs. This was a State club shoot, open to all, for a bluerock expert trap, donated by the Cleveland Target Company The shooting throughout was poor but close, as the Rhode Island team finished only six points ahead in a score of 250 targets shot at by each team. Messrs. Corey and Sheldon headed the shooting for the Pawtuxets; Remington and McCormack for the Centerdales, and Root and Greener for the Rhode Islands.

A special 100 bird race was also shot, and was won by R. C. Root, with a score of 87, F. L Corey 83, W. H. Smith 81, and F. I. Greener 78. This was a sort of a feeler for the contest which is to take place next Thursday for championship title and a silver cup offered by the Rhode Island Trap-Shooting Association, open to all residents of the State. This cup is not subject to challenge, but becomes the property of the winner, who holds the title for the year 1897. There will be other prizes offered beside the cup. A large attendance is expected and the best shooting of the season anticipated.

Summary of the team shoot:

R. I. Association Team		Pawtuxet Gun Club.		Centerdale Gun Club.	
R C Root	41	W H Smith	33	J Collins	5
E C Whitaker	28	F Arnold	31	W F Reiner	24
F I Greener	41	H W Bain	26	G T Naylor	27
P H Veteran	32	A Hawkins	29	J McMormack	28
Amos Arnold	31—173	F L Corey	43—167	H Remington	34—138

Conditions: Five-man team, 50 birds to a man; 25 known and 25 unknown angles.

J. F. RUSSELL, Sec'y.

Haverhill Gun Club.

Ab

Indiana Trap-Shooters' League.

THE TERRE HAUTE TOURNAMENT.

TERRE HAUTE, Ind., Sept. 11.—The two days' tournament of the Indiana Trap Shooters' League, under the auspices of the Terre Haute Gun Club, was a successful one in every way. Everything went like clockwork. The boys who had the hard and thankless jobs of scorer, referee, puller, cashier, etc., knew their business and attended to it. A magautrap was used for throwing targets, and a goodly number of targets were thrown. Some of them seemed too hard for Paul North but still he seemed to like it.

The visiting shooters were: Tripp, Tack, Partington, Beck, Parry and Lawrence, Indianapolis; Voris and Stilwell, Crawfordsville; Smith, Postner and Davis, Paris, Ill.; Joab and Murphy, Brazil; Morgan, Chicago, a member of the Eureka Gun Club; Deitrick, Waveland; Carter and Wm. and Joe Buffo, Clinton; Green, Marshall, Ill.; Paul North, of the Cleveland Target Co.; Ralph Trimble and R. S. Waddell, of the Du Pont Powder Co.; and Mackie, of the King Powder Co.

When the president called a recess for lunch on the second day, Mackie and Trimble misunderstood him and thought there would be no more shooting, and as they both had a great deal of business to attend to, they took advantage of the afternoon and so missed a great deal of the fun, much to the regret of all concerned. As will be seen in the scores below, the five high guns on the first day were Trimble, Partington, Stone, Tack and Tripp.

One of the features of the second day was the shooting of Sheriff Seeburger. It was his second appearance before the traps. He missed his first bird and then broke 19 straight. He purchased his shells from Tetzel, and as Tetzel is inclined to be careless, the boys all think there was no shot in the first shell!

First Day, Sept. 8.

Mackie	13		
Trimble	14—27		

Team race, 25 birds:

Stone	25	Mackie	23
Buffo	18—43	Trimble	25—48
Nuekom	22	Tetzel	22
Deitrick	23—45	Mitchell	18—40

Match, 25 birds: Mitchell 24, Stone 18.
Match, 15 birds: Pierson 9, Cooper 14.
Match, 25 birds: Nuekom 21, Mitchell 19.

BRUCE COOPER, Sec'y.

Calumet Heights Gun Club.

CHICAGO, Ill., Sept. 12.—Following are scores of regular weekly contest held to-day by the Calumet Heights club. The day was very warm and with scarcely any breeze, which accounts for the fair shooting shown by the scores. The early morning found most of the shooters on their way to the river, where the ducks were flying, small bags were made by all. The total killed by noon was thirty-two, most of which were blue-wing teal, with some few wood ducks. It is expected that good shooting will be had by the club members early this fall, as the marsh and water are in excellent condition.

Class A.

Lamphere	1111111111011101111111111—23
Young	1010111111101111101111101111—21

PATTI

Iroquois Rifle Club, of Pittsburg.

PITTSBURG, Pa., Sept. 10.—The 100-target handicap race shot to-day on the grounds of the Iroquois Rifle Club had seven entries. This contest was the last but one of the series, so extra interest attached to the results. Russell, with 20 extra targets, and Bennett, who was allowed 25 extras, tied with 90 each, Born, a scratch man, was next with 84, Hofmeister (2 allowance) came forth with 83. Motz was not in his usual form, and could do no better than score 80 out of his 100. Below are the scores in detail:

Russell (20)	1110111111111111111111011010110111101101111101001—40

Cook County Trap-Shooters' League.

CHICAGO, Ill., Sept. 13.—The sixth contest of the Cook County Trap-Shooters' League was held Saturday, Sept. 11, on the grounds of the Garfield Gun Club. While the attendance was good, the shoot was not as well patronized as was the last contest. This was probably due to the fact that many members are away chicken shooting. The interest was most intense, and considerable guessing was indulged in by the participants on the final results of the season's shooting, which will end within a month.

The sky was overcast the greater part of the day, and a strong wind blew across the traps from the left quarter. The flight of targets was somewhat erratic, and the shooting of some of the participants as well; though, considering these disadvantages to large scores, the results show up in a very favorable manner. The best scores of the day were by Kuss and Old Hoss Stannard, each going out with only one miss, both breaking their targets clear and good. These scores were followed by quite a number of 22 out of 25, and it is strange to say, out of the many scores shot, that not one made a 23.

The next and last team shoot of the league will be held on the grounds of the Eureka Gun Club, corner Vincennes and Seventy-ninth street, Chicago, on Sept. 25.

This will end the league's shooting for the year, except the handicap shoot, which will come off shortly thereafter. Those eligible to contest in this event are the five making the highest scores in each class of each club during the season.

Following are the scores of the team race:

Class A—Garfield Gun Club.

R Kuss	1110111111111111111111111—24
E Neal	1111101111111111111101101—22

A. C. PATTERSON

Bedford Rod and Gun Club.

BEDFORD, Ind., Sept. 13.—On Sept. 13 a team race between Stipp and Thompson on one side, and Hatfield Sears and Richard on the other, was decided on the grounds of the Bedford Rod and Gun Club. Conditions: 100 targets per man, 5 traps, unknown angles, for $15 a side and was won by the raw recruits, who "did themselves proud" on this occasion, while Thompson was in poor form. Scores appended. This race grew out of a challenge by Stipp and Thompson to any two men in Lawrence county to shoot them such a match. Braxton and Sherwood will try to entertain them about Sept. 21, same stakes and conditions:

Hatfield	1011111100011111111111111—21
Stipp	1111011111111111111111111—24
Sears	1110111110011111010111000 - 16
Richard	000.00110.1101011111111101—16
Thompson	0111101111101011101100110—17
Hatfield	1111101101100011000111101—16

Sears	16	20	18	18	72
Richard	16	16	17	18	67—211

SHERWOOD, Sec'y.

Pawtuxet Gun Club.

PAWTUXET, R. I., Sept. 13.—Below are the scores made in the two last shoots of the Hunters' Handicap series. Next Saturday Sept. 18, will see the finish of this series. The finish will be interesting, as the two leaders in Class A, Root and Sheldon, are tied with 87 breaks out of 100 targets shot at. Each has a chance to improve upon a score of 20, the best four scores out of eight shoots to count for prizes. In Class B, Armstrong cannot lose the first prize, but second and third prizes in each class are still in doubt, four or five men being pretty well bunched for these honors.

Sept 4.—Hunters' Handicap

Class A, 25 targets, unknown angles:

S D Greene, Jr (0)	1101010011111111111111101 —20
F Corey (0)	1111111011111001110100110 —18
F Arnold (2)	0011101110001111101.11011011—18
F Geaves (2)	1100001010100011100111101 —11

Class B, 25 targets, known angles:

Armstrong (0)	1111100110111111111111101 —21
Thoene (0)	1103011000111101111000110 —14
Buxton (2)	0100C01001110.0010111010111—14
Repeater (0)	1111011100010010100100101 - 13

Sept 11.—Hunters' handicap.

Class A, 25 targets, unknown angles:

R C Root (2)	1111101100.0111111111011111—22
W H Sheldon (0)	0111110101101010111111111 —20
F Arnold (2)	1101110011011011111011111—20
W Mooney (2)	1001111110100111111 0.11101 -19
H W Bain (2)	1011011101111110 010101111—19
S D Green, Jr. (0)	1010110100011111011111110 —18
F Corey (0)	0011000111.0010110011111 —15

Class B, 25 targets, known angles:

Buxton (2)	1110011011100010101101000—15
J Armstrong (0)	0011110100001010010110011 —12
Repeater (0)	0111010110000111011000010 —12
Peck	1000001000100101101000110 — 9

Thoene also shot and broke 8.

PAWTUXET.

ON LONG ISLAND.

NEW UTRECHT GUN CLUB.

Sept 18.—Below are the scores made to-day by members of the New Utrecht Gun Club on the Dyker Meadow grounds.

Club shoot, 25 targets, unknown angles:

D Deacon (A)	01111	11111	01001	01111	11111		- 20
P Adams (A)	10011	11100	11110	11111	11101		—19
P E George (A)	01110	10011	00001	11110	11110	11	—17
C C Fleet (B)	00010	00001	10111	11100	00100		—10
Dr O'Brien (B)	00010	01000	01000	10110	01011		— 9

Prize gun shoot, 25 targets, handicap allowances:

P Adams (3)	11100	01011	01111	11111	11100	101	—20
P E George (5)	01110	10011	00001	11110	11110	11111	—20
D Deacon (2)	00110	10100	10111	11011	01011		—15
C C Fleet (7)	11100	11011	10101	10010	11000	100	—15
Dr O'Brien (6)	11000	10111	10111	10001	00111		—13

Fleet, O'Brien and Deacon having no chance to win did not shoot up allowance. No classes in this shoot, each man having his allowance according to work done during 1897.

Tie for gun:

P Adams (3)	01101	11110	11101	11010	01011	011	—19
P E George (5)	11001	10111	11010	01000	01010	11101	—17

This Winchester repeater (shotgun) was presented by one of our members for competition, and will become the property of the one having the first three wins. Live bird season will open at Woodlawn Saturday next, Sept. 25.

G. E. POOL, Sec'y.

NEW YORK GERMAN GUN CLUB.

Sept 15.—Dr. Hudson won the badge to-day in the regular monthly shoot of the New York German Gun Club. Below are the scores:

Club badge shoot, 10 live birds, 28yds. rise:

Seven Points—Handicap.

Dr Hudson ..... •211112121—9 Eugene Doeinck ..... •0111•2112—7

Six and One-Half Points.

John Schlicht ..... 2011111120—8 Peter Garms, Jr. ..... 1220•01000—4

Six Points.

Henry Thornford ..... 0220202211—7 J P Dannefelser ..... 0112•11020—6
Aug Schmitt ..... 1011023002—6 Fred Sauter ..... 0200021•20—4

Five and One-Half Points.

Fred Kronsberg ..... 2201021020—6 Aug Lucas ..... 111•020•01—5

Five Points.

Ph Moersch ..... 0210222112—8 Henry Meisenholder ..... 2010120100—5
Michael Bondon ..... •010012122—6

Four and One-Half Points.

Charles Horney ..... 1021001110—6 John Boesenecker ..... 001002101•—4
Charles Voehringer ..... 00011110•1—5 Jacob Bissinger ..... 0002001000—2

Glenwood Gun Club, of Newburgh, N. Y.

NEWBURGH, N. Y., Sept. 16.—The "melon feast" of the Glenwood Gun Club, held to-day, was well attended. Some 200 persons visited the club's grounds and partook of the watermelons, muskmelons, steamed clams, etc., that were only waiting to be attacked. About 2,000 targets were thrown during the day, the main event being a 25-target handicap for three woodcock, donated by John Brewster, of Coldenham, N. Y. As will be seen by the following score, C. Hoppenstadt won the woodcock:

C Hoppenstadt (3)	1011001111111111111011111111 —24
H Wyatt (3)	1101110111111111111101110111 —24
L Henderson (3)	1111111110111011001111111111 —24
W M Stanbrough (0)	1110111111111111111111110 —23
C Bingham ( )	1110111111101101111110111011 —23
A Dickson (2)	1111110111101111010111111011 —23
Neaf Apgar (0)	0110110111111111111111111 —22
T Rhodes (3)	1111111010111011111011111000 —21
G D Carr (7)	1111101110011001001101110110001 —20
J J E Harrison (10)	0011110001010010111110111010010011—20
S Lewis (5)	1100101011101110101110001111 —19
R Hobbs (7)	0100101111100010010010100011101 —16
W May (7)	0000000111100001010100011010 1100 —12

In the first shoot-off of the ties on 24, at 10 birds, Hoppenstadt and Wyatt broke 9 to Henderson's 8. In the second shoot-off, Hoppenstadt won by 7 to 6.

Answers to Correspondents.

No notice taken of anonymous communications

F. M., Sault Ste. Marie, Mich.—There is no game law in Alaska.

C. B. M., Hubbard, Tex.—Please tell me what is the matter with my dog and what to do for him. He has a cough, and tries to vomit; does not seem to want anything to eat, just lies around. Ans. Apply tincture of iodine to outside of throat. Give a sixth of a grain of sulphate of morphine three times a day.

WANTER-KNOW, Philadelphia.—Please tell me if Grimm has replied to Elliott's challenge for the cast iron medal. Ans. So far as we are aware of Grimm has taken no notice of Elliott's challenge, although Elliott deposited $50 in the hands of FOREST AND STREAM to make the match. In our issue of Sept 18, page 240, under the head of "Western Trap," you will find the conditions governing the cast-iron medal, and other matter from the pen of our Chicago correspondent, Mr. Hough, touching upon this question.

INQUIRER.—Will you kindly answer in your next number as to when hammerless guns were first put on the market? Ans. We cannot give the exact date, because we don't believe that anybody knows. Greener, in his book, "The Gun and its Development," mentions Daw's 'central fire hammerless gun," and says that it is supposed to have been introduced by Mr. Daw about 1862. Green's hammerless gun, patented 1866, is said by Mr. Greener in the same work, to have been "one of the first English central fire hammerless guns."

A. F. B., Pittsburg, Pa.—Can you give me the scores made by Gilbert in the first contest for the E. C. championship cup? The shoot took place at Guttenburg, N. J., I believe. Also the scores made by Gilbert and Heikes in the two matches they have shot for this trophy since Gilbert first won it? Ans. In our issue of Aug. 21 of this year, page 159, you will find the full scores made in the first championship contest at Guttenburg, N. J. On Aug. 20, 1898, at John Watson's grounds, Heikes won by 138 to 130, as follows: Unknown angles, 48 to 47; expert rules, 45 to 44; pairs, 40 to 39. On July 31 of this year, at Dayton, O., Gilbert beat Heikes by 142 to 136, as follows: Unknown angles, 48 to 47; expert rules, 48 to 44; pairs, 46 to 45.

PUBLISHERS' DEPARTMENT.

Interstate Fair at Trenton, Sept. 27, 28, 29 30, and Oct. 1.

THE great Interstate Fair at Trenton grows more extensive and important each recurring year, and the exhibition to be held on Sept. 27, 28, 29, 30, and Oct 1 promises to be unusually comprehensive and attractive. Every department will be replete with interesting and instructive displays. The blooded stock exhibit will be particularly fine, and the daily programme of races contains the speediest classes obtainable. Circus acts of rare merit and daring, and vaudeville entertainments of all kinds will be presented.

The large purses offered in the manifold exhibits and contests insure unusual efforts in the endeavor to prove superiority in the various departments.

The Pennsylvania Railroad Company, as is its yearly custom, will sell excursion tickets on this occasion at greatly reduced rates from stations within a wide radius, and special trains over the New York, Belvidere and Amboy divisions will be run through to the grounds. The tracks of this company run direct to the Fair grounds, thus avoiding street-car transfer, and are the only ones within three miles. The management of the Fair has put forth extraordinary efforts to make this year's exhibition the greatest ever given.—*Adv.*

A New Through Passenger Route for Colorado Utah and California.

THE Chicago *Times-Herald* of Aug. 27 says that on Sept. 12 the new traffic alliance between the Chicago, Milwaukee & St. Paul Railway and the Chicago, Rock Island & Pacific Railway goes into effect, and on that date the former will send its first Denver sleeper out of Chicago. This will be attached to its regular night train for Omaha, and will be delivered there to the Rock Island. On Oct. 2 the tourist car route over these two lines, the Colorado Midland and Southern Pacific, will be inaugurated. Tourist cars will be run once a week between Chicago and San Francisco. For further details regarding this new route call on or address Geo. H. Heafford, General Passenger and Ticket Agent, C., M. & St. P. Ry., 410 Old Colony Building, Chicago, Ill.—*Adv.*

FOREST AND STREAM.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Sir Walter Scott is most interesting in his character of a sportsman. He looked on field sports with the eye of a poet, ever on the watch for picturesque effects. The blackcock springing from the thicket, the salmon leaping from the pool, the glossy-necked mallard rising from the reedy moss, all lent additional touches of color to the scene before him and filled his mind with images which enriched both his poetry and his prose. It is to be observed that in none of his novels does he ever give a description of any field sport, pure and simple, and wholly for its own sake. It is always coupled with a picture, sometimes highly finished, sometimes a mere sketch, consisting only of a few strokes, but in each case serving to remind us that our sportsman is an artist, and that he neither shoots nor angles merely for the sake of killing so many birds or landing so many fish, but for the sake also of all the surroundings of the sport.

Spectator.

AUDUBON BIRD PLATES.

IN our next issue will be given the seventh of the series of half-tone reproductions of Audubon's famous bird portraits, from the rare first edition. It will be of the Shoveller Duck. The list of plates already printed and to come includes:

THE BLACK DUCK, Sept. 26, 1896.
THE PRAIRIE CHICKEN, Oct. 24.
THE CANVASBACK DUCK, Nov. 21.
THE WILLOW PTARMIGAN, Dec. 19.
THE AMERICAN GOLDEN PLOVER, Feb. 27, 1897.
THE REDHEAD DUCK, July 10.
THE SHOVELLER DUCK, Oct. 9.
THE PURPLE SANDPIPER.

THE WEST WIND'S JOURNEY.

IT has traveled a long way—the west wind—and has seen many lands and many peoples. When it first reached our shores, the timbered mountains of Washington or British Columbia, it carried a heavy load, tons upon tons of water, which it had gathered while it crossed that wide expanse of ocean misnamed Pacific. And yet, notwithstanding the weight of its burden, it flew along merrily, now high, now low, sometimes dragging with it huge masses of heaped-up, snowy cloudbank, or again whistling through the rigging of some majestic ship, raising a turmoil on the ocean's surface, scattering the spray from the wave crests far ahead of the hurrying billows, and bearing the helpless sea gulls, fulmars and petrels away to leeward. But after it had traversed some thousands of miles of sea, it tired of this sport, and looked forward to more varied scenes.

When the land was reached and it struck the mountains of the coast, it dropped at once a part of the load it had been carrying and the lower lands were drenched with rain, while the peaks of the mountains became white with snow, which grew thinner and thinner down the mountain side, until at last it was hidden in the timber. The wind whistled through the valleys and among the great trees, and twisted off the tops of some of the tallest, and overthrew others, some of them long since dead, and whose hold upon the rocky soil had been weakened by years of decay. It tossed the branches of all, and rocked the nests on which the mother bird sat to keep her precious eggs from being thrown out, yet with all its force it could not penetrate deep into the heart of the forest, and here there were little lakes and sheltered pools, whose surface it could not roughen and whose dwellers it could not disturb.

Over these mountains of the coast the wind hurried without stopping. Often before it had tried its strength on their forests, and it knew well that it had no power to level them to the ground. It could break a few branches, ruffle the coats of bear and wolf, and perhaps snatch a few locks from the shaggy fleece of the white goat, but the giant forests of the coasts could defy it.

At a gentler pace it slipped down the eastern slope of the ranges and out over the heated plain, gray with sage, the home of the long-tailed grouse and gray, long-eared hares, big and little, of coyote, and here and there of deer; trodden, too, by range cattle and horses as wild as the creatures native to the soil. Here, too, there are farms now and then, deep hidden in the great cracks in the dry soil through which flow mighty rivers, always bearing their burden toward the sea. The wind mounted higher over these plains, and traveled more slowly, yet it blew briskly, stirring the stems of the short bunch grass with a quivering motion, bowing the tasseled blossoms on the sage-brush and greasewood, and sometimes taking up little clouds of dust, which it twisted into little funnel-shaped whirlwinds which walked quickly over the plains. When it came to a little pine-clad butte it sighed softly among the branches of the trees and tossed the twigs swinging the Clark's crows and the woodpeckers up and down so that they have to hold on tight.

And now it comes to another mountain range, up the western slope of which it moves with an ever increasing speed, and when it reaches the top it is blowing a gale. Here it meets cold gray rocks, and wide barren plateaus where no grass grows, and great fields of snow and ice, and when it reaches these it is chilled and forms somber gray clouds, and again lets fall a part of the moisture which it carries, whitening anew the rocks and the dust-laden snow-banks, adding to the thickness of the glaciers, and filling bank full the streams which flow down the slopes toward the Atlantic. Whirling down through the small timber of the mountain slopes it hurries on over the bare plain across the ranges where once the buffalo blackened the prairie and now the cattle feed, pushing fiercely against the lodge where the Indian camps by the stream, boring the fields of the white man's grain, scattering the hay in his fields, and humming a monotonous air on his telegraph wires.

And now it has reached the land of houses and farms of thick settlements, and all know the pranks that the west wind plays there.

THE NATIONAL YACHTING UNION.

THROUGHOUT the past summer the special committee of yachtsmen appointed at the May conference in New York has been steadily at work, and the result of its labors is seen in the proposed articles of association and sailing rules made public this week. As now arranged, these articles and rules will be in the hands of the clubs and boat associations for over a month, at the end of which period a general meeting of delegates will be held in New York for the purpose of formally organizing a national association for the promotion of yachting and yacht racing.

The necessity for such an organization has existed for many years; the FOREST AND STREAM has long recognized it, and has labored for its establishment; the scheme has found earnest advocates among individual yachtsmen, but the prevailing lack of harmony and clashing of petty interests among the clubs locally and the different yachting centers have proved insurmountable barriers.

Within the last three or four years a material change has taken place. The clubs in each of several localities have fallen into the way of working harmoniously together, and finally have united in the establishment of local associations whose rules are generally recognized. A further step has more recently been taken in the establishment of intimate relations between these different associations; and so far has this gone that the final step—the formation of a national union—seems now easily possible.

It is not to be denied that there are difficulties—and serious ones, too—that must be dealt with before the union can become a permanent success. It is no easy matter to deal with the necessary parties to such a scheme—the local associations, the clubs, large and small, and detached or affiliated with the associations, and the individual yachtsmen. The first steps must be few and simple, and largely experimental, leaving it to the future to develop and perfect the entire plan.

The work thus far has been carried on in accordance with this idea; it is not proposed to start with a complete and extensive scheme of organization, government and rules, but to form an organization which will enlist the interests and sympathies of clubs and individuals, leading them to work together harmoniously at the serious task of improving the general conditions of yachting. The experience gained in the local work of the different associations promises similarly good results in the more ambitious experiment, the work being largely in the hands of those who have been most prominent in the formation and management of the local associations.

SNAP SHOTS.

Anent the Jackson's Hole elk case, Secretary E. K. Whitehead of the Colorado Humane Society has written a letter expressing his opinion that the Wyoming statute which forbids the taking of live elk should not be held to apply here, nor in other cases when the game is "prevented from starvation." His notion is that laws are not intended to be applied impartially as they stand, but that their application is to be in each individual case as it comes up purely a matter of discretion. It is not made clear who is to exercise this discretion, but the implication is that, as in the Adams elk case, the man who breaks the law is to be his own legal adviser, judge and jury. Under the present constitution of the social organization, sheriffs, game wardens, prosecuting attorneys and courts are accorded no such discretion; their oaths of office require them to enforce the laws without discrimination against all violators. Mr. Whitehead's plan carried to its logical development would supersede the existing system of the executive machinery of the law and disorganize society. The letter of the Denver Humane Society officer is, as the game warden murder-advocating editorial of the Providence *Telegram*, quoted last week, chiefly significant as an indication of the growing disregard for law. When those who affect to be leaders and teachers preach defiance of the statutes, what can be expected of the classes who are accustomed to follow their guidance?

The law which Mr. Whitehead quotes respecting abandoned animals is not pertinent; there is a well-recognized distinction between wild and domestic animals as to their legal standing; this particular statute was never intended to apply and does not apply to wild game. There is, on the contrary, in Wyoming a specific law forbidding the capture of elk alive; that law, under pretext of pity for the game, Mr. Adams violated by the capture of a band of elk; and has continued to violate by holding the game in possesssion after its release has been demanded by the game warden. If by reason of the complacent acquiescence of the authorities he is permitted to retain the game, there is no good reason why every other ranchman who has a pull and a corral should not follow suit. With the snowfall in Wyoming next winter, we may look for an emotional surge of pity which shall land a thousand rescued elk behind corral bars, and Eastern agents may be trusted to find game preserve markets for them.

The most important enterprise open to the New York Association for the Protection of Fish and Game is to secure the repeal of Section 249 of the game law, which keeps open the game market throughout the year; and this subject is one which well may have attention at the executive committee meeting of the Association in Syracuse this month. It is a significant circumstance that since the enactment of that section such an official as a State game protector has been unknown in New York city. Under existing conditions the best intentioned protector could accomplish nothing. The law is an effectual shield for illicit game dealing. So long as Section 249 shall remain in force the shipment of snared birds and of birds killed out of season will give business to the express lines from country to city.

In our Chicago and the West correspondence this week comes the gratifying news that by official intervention of the authorities at Washington, the market hunting so long carried on in Minnesota under shield of assumed Indians' rights, will be stopped. This settles another one of the many perplexing problems encountered by protectors of game protection in their dealings with the Indians and the hunting privileges claimed by the Indians under their treaties. We congratulate Agent Fullerton upon the successful issue of his recourse to Washington.

The Sportsman Tourist.

ALASKA AND THE YUKON.

A Trip Through the Interior.

ANACONDA, Colo.—At the age of fifteen I commenced hunting, trapping and prospecting in Western Colorado. In those days bear, lion, and other fur-bearing animals were plentiful, and deer and elk could be found in bands of thousands. During the last two or three years the fur-bearing animals have been nearly all trapped, and other game has become correspondingly scarce. Having heard of the abundance of all kinds of large game in Alaska, an irresistible desire seized me to try my luck there, and accordingly I commenced looking about for a congenial companion.

Silos Meadows is a young man about 26 years of age; has had considerable experience in hunting, trapping, prospecting, etc., and as I had been acquainted with him for about nine years, and knew him to have plenty of grit and determination, I felt certain that he would not be one to turn back when difficulties were encountered.

I had decided to start from New Castle, Colo., May 1, and about three days before the appointed time I approached "Scy" on the subject. After considering the matter for a couple of days he fell in with the idea, and on the third day everything was in readiness.

We left New Castle on the night of May 1, and reached Seattle on the 4th. Here we took the steamer Alki, which left Seattle May 7, and touched at Tacoma, Port Townsend, and Victoria, B.C., for cargo and passengers. We left Victoria on the 8th, and coasted through numerous straits and channels, past fifty snow-clad peaks, rocky cliffs and heavily-timbered shores. On the night of the 10th we reached Mary's Island off the southeast coast of Alaska, just over the Canadian boundary. Here the U. S. customs inspectors came aboard and accompanied us to Juneau. On the 11th we touched at Fort Wrangel, a government post inhabited principally by Indians. Leaving Fort Wrangel, we sailed through Dry Strait into Prince Frederick Sound. Here we passed many large glaciers and icebergs, and saw numbers of whales and hair seals. We passed through Stephen's Passage at night and landed at Juneau May 12.

Juneau is the largest town in Alaska, and contains about 2,500 inhabitants, including natives. It is situated in a basin surrounded on the north and east sides by high mountains, and on the southwest by salt water. Here we outfitted for the trip through the interior, our supplies consisting of 1,500lbs. of grub and about 500lbs. of bedding, clothing, ammunition, etc., making a total of 2,000lbs.

On the night of the 13th we went aboard a small steamer called the Chehalis, en route to Dyea, 100 miles from Juneau by water. On the way we encountered heavy winds and rough seas, and on the morning of the 14th we ran into the harbor at Chilcat, where we cast anchor and laid over about fifteen hours. At 4 A.M. on the 15th we weighed anchor and resumed our course to Dyea, which we reached at 7 30 A.M.

There are but few docks in Alaska, and freight and passengers are usually landed by Indians, in canoes hewed out of large cedar logs, some of which are capable of carrying 10 tons.

We cast anchor three miles from shore, the whistle was blown as a signal, and immediately the Indians came out in their canoes and landed ourselves and outfit without mishap.

After cooking breakfast we secured our Indian packers, who loaded our goods into a canoe and towed it up the Dyea River to the head of canoe navigation—a distance of six miles. We camped here for the night between two large glaciers, one on each side of the river. On the 16th the Indians commenced packing our outfit up to Sheep Camp, so called on account of the numbers of mountain sheep killed in the vicinity. This camp is at timber line and seven miles above our previous stopping place. Here it is necessary to remain until everything is packed to the summit of Chilcoot Pass, a distance of four miles, and piled there in readiness for the trip down to Lake Linderman.

We worked between the hours of 1 A.M. and 8 A.M., while the snow was crusted. At this time of the year the sun shines for about eighteen hours a day and the nights are not dark.

While at Sheep Camp I killed my first Alaskan bear. Three of them came up the creek at different times, and as they had to pass between the camp and the glaciers, which were about 200 yards away, they were certain to afford a shot. I killed two of them, and thus secured our first supply of fresh meat—a very acceptable change from "sow bosom." My rifle was a .45-70 Winchester, with Lyman rear and ivory bead front sight, and proved to be a match for anything that we encountered.

Here all of the Indians black their faces, paint red around their eyes, and rub a coat of grease over all, in order to prevent sunburn and snow blindness, so we did the same.

The Chilcat Indians are probably the finest packers in the world. They have never had horses like the Indians of this country, and from childhood up they are trained to paddle canoes and pack heavy loads on their backs. The different tribes here are known as the Chilcats, Kliukets and Sticks. A strong Indian is known as a "skookum Injun," and will pack 200lbs. from Dyea to Lake Linderman, a distance of twenty-six miles, and make the trip in three days. The heaviest load ever packed over the trail by one man was 250lbs., and the immense strength and endurance required for such a feat may be realized, when it is stated that a "skookum" white man will only pack 50 or 75lbs. over Chilcoot Pass. I carried a sled and a whip saw, weighing together about 50lbs., to the summit, and it was quite enough. The last mile is so steep, that it is easier to carry a 40lb. sled than to pull it.

On May 21 we had nearly all of our outfit piled upon the summit, and on the 22d we broke camp and carried up the remainder. Here we paid the Indians for their services, at the rate of $10 per 100lbs. They charge $4 per 100lbs. for packing from here to Lake Linderman, the headwaters of the Lewis River, a distance of nine miles, but we decided to do that ourselves.

We loaded our sled with 800lbs. and started down to the lake, and had made about a mile when the snow became so soft that it was impossible to proceed further until next morning. There was no bare ground in sight, and no wood within five miles one way and seven the other, so we selected a large lava rock from which the snow had blown off as our resting place, unloaded, and made our bed on top. Now this rock was never intended by nature as a resting-place for humans. It was honeycombed and covered with little projections like inverted icicles, and as Meadows is rather bony, and has protuberances on his anatomy somewhat similar to the rock, he failed to realize that sweet slumber which we both deserved. I was not much fleshier than Meadows; but was so tired that I could have slept on almost anything.

We estimated the snow on these mountains to be from 20 to 250ft. deep—to say nothing of the glaciers, which are hundreds of feet thick. We got started at 4 A.M. on the 23d, and the snow being well crusted, we traveled to within a mile of Lake Linderman. Here the sleighing played out, and we made our camp at timber line on the northern side of the pass. At 9 P.M. we started back to the summit for another load, arriving at 1 A.M. on the 24th. We loaded up and got back to camp at 7 A.M., and after breakfast I picked up my Stevens .25 cal. pocket rifle and went up a bare hillside where I had seen some ptarmigan flying about. I soon knocked over enough to make a good pot pie, and putting them in a camp kettle filled it with water and hung it over a good fire, after which we went to bed. At 6 P.M. we got up, and found the birds well done. I then seasoned them with dried onions and dried potatoes that we had brought along for the purpose, and allowed them to boil thirty minutes longer, when we buckled in, and as the work had developed gorgeous appetites we soon disposed of the entire kettleful.

At 10 P.M on the 24th we started back to the summit for the remainder of our outfit, and reached camp with it at 5 A.M. on the 25th. On the 26th we commenced packing from camp to Lake Linderman, and on the 29th had our outfit piled and our tent pitched on the shores of the lake.

The ice commenced to break on May 28, and by June 3 the lake was open. We cut logs for our boat June 1, and on the 2d we built a sawpit and commenced to whip saw lumber. In two days and a-half we cut 200ft., then packed it down to camp and planed it. We commenced to build the boat on the 7th, making it 21ft. in length, 4ft. beam, and 24in. in depth; large enough for two to use in pretty rough water. We finished on the 10th, and next day rigged up a jib sail, launched our craft, and steered for the foot of Lake Linderman. The wind was blowing a gale and the lake was very rough. We camped for the night at the outlet, and next day we portaged our goods three quarters of a mile to Lake Bennett. We then let our boat down the river with a rope to the head of the rapids, where we hauled it out, skidded it about 200 yards, put it back into the river, and ran down to Lake Bennett. Here we loaded up and set sail to cross the lake. The wind was blowing hard and the lake was very rough, but we made about fifteen miles and camped for the night. On the 13th we again set sail, and headed for the foot of the lake; the wind being in our favor we reached our destination about noon and landed.

The connecting waters between Lake Bennett and Tagish Lake are about three miles long and quite shallow. They are known as Caribou Crossing, owing to the quantities of these animals which cross here in the spring and fall. We put in the remainder of the day hunting, and although we saw numbers of caribou, moose and bear tracks, we did not kill anything. Here is the commencement of the big game country, and next morning before starting we heard the wolves howling everywhere.

On the 14th we loaded up and went down the river to Tagish Lake, which was dead calm, something very unusual. We had to cross what is known as Windy Arm, about twenty miles wide, and of course were obliged to resort to the oars. This body of water is the most dangerous of all the lakes, and prospectors going down frequently have to lay over here for several days. The wind is always a side one, and as the boats are not usually provided with keels or centerboards there is great danger of drifting ashore. Tagish Lake is a curious one, and in shape is like the letter U with a range of high mountains in the middle. No white men know the length of this lake. The Indians claim that it is a four days' journey with a canoe up Takou arm and a two days' one up the other arm. As they travel from forty to seventy-miles a day this would make the arms 160 to 300 and 80 to 150 miles long, respectively.

We camped at the Tagish House, a village of Stick Indians, situated on the connecting waters between Tagish Lake and Lake Marsh, 180 miles from Juneau. It is a rendezvous for all the Indians in the vicinity, who gather here in the summer, hold councils of war and have ghost dances, and feasts, and cremate the bodies of the dead chiefs, who are thereby sent to the happy hunting grounds.

Here the country opens out into a wide valley bordered by hills covered with bunch grass, and is a great place for game and fish.

The principal varieties of large game are moose, caribou, mountain sheep, goats, many species of bear, wolves and wolverines, but none of our well known deer or elk. Water fowl are plentiful, and the beauty of it is a person can go nearly anywhere in a boat.

The principal varieties of fish are salmon-trout, grayling or Arctic trout and pike. The Indians catch large quantities in traps made of willows.

On June 15 we crossed Lake Marsh—twenty miles—and camped for the night on the Lewis River. On the 16th we descended the Lewis to Grand Cañon, and after investigating ran through it. The river above is from 300 to 400ft. wide, but through the cañon for a distance of a mile it narrows to 90ft. This was the swiftest piece of water that we tackled, and most people haul their boats over the top by means of a windlass which is left there. At the foot of the river the White Horse rapids commence. They are three miles long and we ran all but 200yds, which is almost impassable. Strangers going into this country sometimes do not know where the bad places are until it is too late. Few people ever get through these rapids alive if they attempt to run them; no less than thirteen were drowned here last summer.

This is as far as the salmon ever get, 2,335 miles above the mouth of the Yukon. We laid over here a couple of days and went hunting, getting a moose and two bears. This would have been sufficient to last us all summer if we could keep it, but the weather being warm we gave the greater portion to the Indians. Between here and Forty Mile it would be no trouble to kill a moose or bear at any time.

On the 19th we went on down to Lake Lebarge, twenty-eight miles. On the morning of the 20th we rose early, expecting to make a good run, but as there was no wind we had to buckle down to the oars. Occasionally a breeze would come up and we would hoist the sail, thereby getting a few minutes' rest. After twelve hours of this work we crossed the lake, thirty-three miles, and on the 21st continued on down to the mouth of the Hootalinqua River. This river is very large and enters from the east. About 200 miles up it is Lake Teslin, 126 miles in length.

On the 22d we went on down to the mouth of the Big Salmon River, where there is a tribe of natives known as the Salmon River Indians. They were the most savage ones we had seen so far, and despite the fact that they could not speak a word of English, I managed to do some trading with them by means of signs. They had some old muzzleloading rifles and also used bows and arrows.

About forty miles below here the Little Salmon River enters from the east. This is the country for bear. If some of the Eastern sports who are anxious to run up against a big bruin would take a trip to the Salmon Rivers they would not fail to be accommodated. These rivers are great streams for salmon, and the bears travel many miles to fatten on them In a day's journey up or down either of these streams one can see from ten to twenty. They are of many species, the most ferocious being the Mount St. Elias grizzly. He is exceptionally bold and will give nothing the road. The Indians will not fish nor hunt up some of the streams in salmon season, and when I asked them the reason, they replied that "Sometimes Injun kill big bear; plenty times big bear kill Injun." They kill a great many black and brown bears, but I have never known an Indian in the interior to have a Mount St Elias grizzly's hide.

Between the Little Salmon River and Five Finger Rapids the country again opens out into a wide valley, and the river is very crooked.

The Rapids are 451 miles from Juneau, and derive their name from five columns of rock which stand in a row across the river. This is a nasty piece of water and most travelers portage around, but we ran it. Five miles below are the Rink Rapids, but they are not so dangerous, and are nearly always run with a boat. Beyond these there are no rapids worth mentioning; all is plain sailing to the mouth of the Yukon, and large river steamers could run the entire distance of 2,100 miles. Above this point the current is about seven miles an hour, and below it six as far as Circle City. To the junction of the Lewis and Pella the river is very wide and contains many islands—the breeding place of thousands of geese and ducks.

From the Hootalinqua River to the Pella there is a volcanic ash deposit from 1 to 2ft. thick, which underlies the top soil about 1ft. and is deposited like snow. The Indians tell of many volcanoes in this district from three to five days' journey back from the river. The junction of the Lewis and Pella rivers forms the Yukon, which is 2,050 miles in length.

There are two trading posts here, and the two steamers which navigate the river to this point each make one trip a year. One hundred and ten miles below the White River enters from the west. This stream derives its name from the milky color of the water, which carries quantities of white volcanic ash in suspension. The Indians give many interesting accounts of a high mountain at the head of this river, and also of a large lake The mountain is said to throw up fire and smoke, and is doubtless the cause of the volcanic ash.

Eleven miles farther down the Stuart River enters, also from the east. The country up this river is celebrated for its moose, which are believed to be the largest in the world—the bulls frequently weighing from 1,500 to 1,600lbs. On this stretch of the river we made a run of 200 miles in thirty hours, only going ashore to cook our meals.

Thirty miles below Stuart River we passed Sixty-Mile Post, and forty miles below this the Claundyke River enters from the east. Unlike the White River, its waters are clear and shallow, and are a favorite resort for salmon.

We landed at Forty Mile Post on June 28, having traveled 750 miles since leaving Juneau. Here we left our large boat and procured a smaller one: 21ft. long and 28in. beam, made especially for poling up streams. On July 1 we started up Forty Mile River, towing and poling our boat. On the 4th, as we were towing our boat, I happened to glance up the hillside across the river, and there was a big bald faced grizzly looking down at us, so I started after him, having previously arranged a code of signals, which Meadows was to give with his hat in case the bear started to travel. A motion to the right or left meant that the bear was moving in the direction indicated; up or down signified up hill or down hill; holding the hat still, in same place yet; waving the hat, within gunshot. When I crossed the river and commenced the ascent of the mountain, I lost sight of bruin, but from Meadows's signals I knew he was traveling to the right, and followed accordingly. Finally a wave of the hat indicated that I was within gunshot, so I kept a sharp lookout. Soon I sighted him walking over a ridge about 200yds. away and looking back, from which I inferred that he had seen me first. I let him go over the ridge, then made a careful sneak to the top, and saw him cross a little ravine about 100yds. away. I let drive as he was walking from me quartering and hit him in the flank. This started him running from me toward a narrow strip of spruce timber, but before he reached it I fired three or four times more, then sat down and waited until he emerged from the other side, when I sent in another one. At this he turned around and started right back, so I awaited his return. He soon passed through the timber and headed right for me, so I commenced to shoot, but still he came on until within 50ft., when he turned sideways, and at that instant a shot broke his neck, and he rolled over. He was as close as I cared to have him come, and I was greatly relieved when he tumbled. Upon examination I found six bullet holes in his body, but only one had gone through—the one in the neck, I think that when he turned he had had enough of it and intended to retreat. I skinned him and packed the hide down to the boat, then went back and brought down a load of meat to last ourselves and dogs until we could kill a moose or an arctic reindeer. This was our Fourth of July celebration in Alaska.

The bear here do not come out of their holes until May, and the fur is prime until July. In the fall it is of little or no value on account of shedding so late in the season. One hundred and fifty miles up Forty Mile is a great game country. Here the Indians are known as the Ketchum-Stocks and Tanannas. Arctic reindeer can sometimes be seen in bands of thousands. They do not scatter like the deer and elk of Colorado, and if they are found at all, they are in great herds. Although not more than half the size of the woodland caribou of the Lewis River and British Columbia, they have enormous feet, and both the males and females have very large antlers, sometimes with as many as fifty points. They are found on the bald hills, above timber, which here consists principally of spruce, Norway pine, birch and willows. These only grow along the streams at an altitude of 2,000ft., or less, until the Arctic Circle is reached, north of which there is none. During our trip we kept a record of the thermometer readings, and the warmest was 80° above. The summer weather here is probably the finest in the world—neither too hot nor too cold—the temperature ranging between 50° and 80°. The sun is only down from two to four hours of the day, from the middle of May to the

middle of July. In the winter, the darkness is greatly modified by the Northern lights, which are nearly always visible. The cold during these months is intense, the thermometer frequently falling to 75° below zero.

We hunted, prospected and explored up the Forty Mile River from July 1 until Aug. 17, when we returned to Forty Mile Post, which is situated on a point of land between the river of that name, and the Yukon. The town contains about 175 log cabins, which are chinked with moss, and are practically airtight. In the top is a ventilator, by means of which the temperature can be regulated. The logs are hewed on top and bottom, and a thick layer of long, fine moss is placed over each course of logs, forming a bed for the succeeding course. A heavy layer is piled upon the roof, and then covered with dirt. Inside the cabin, a small rock furnace is frequently built, with a piece of sheet iron over the top. Upon this the cooking is done, and just before retiring a good fire is started, heating the rocks of the furnace, which retain their warmth all night.

There are hundreds of half-starved dogs here so closely resembling the wolf that it is often difficult to detect the difference. If a door is left open for an instant they will rush inside and steal the first portable article they can lay hold of, whether it be a can of corned beef or a bag of nails. When they get it outside they will investigate it and if not edible it is abandoned. The howling of wolves is nothing to the dismal sounds they emit, and a stranger at first is unable to obtain much sleep. These dogs are used for freighting in winter and packing in summer. From eight to ten dogs are fastened to two Yukon sleds weighing from 30 to 50lbs. each, and together capable of carrying a load of 2,000lbs. When a steep hill is encountered one sled is hauled up at a time. A large dog will carry 50lbs. on his back. We left the small boat at Forty Mile and taking the big one again continued on down the Yukon to Circle City, a distance of 250 miles. Here we ended a cruise of 1,250 miles in a rowboat.

Circle City is situated on the west bank of the river within the Yukon Flats. It contains about 150 log cabins, two stores, several saloons, two restaurants, a bakery, tin shop, etc. It derives its name from being close to the Arctic Circle. At this place the river is seven miles in width and contains many islands. Here on Sept. 7 we went aboard the steamer bound for the mouth of the river. Eighty miles below we passed Fort Yukon, an old trading post situated at the junction of the Yukon and Porcupine rivers, and within the Arctic Circle. We were now passing through the Yukon Flats, 400 miles in length and 200 in width. The river is from twelve to fifteen miles wide and studded with islands. Here is the breeding place of countless numbers of geese and ducks, and if a mess of young geese is wanted, all that is necessary is to take a club, go over to one of the islands and kill as many as are required.

In the spring, when the ice is breaking up, great jams occur and the river overflows the flats for miles.

The steamers which navigate the Yukon are always piloted by Indians, as they are more familiar with the channels than the whites.

About 450 miles below Fort Yukon the Tananna River enters from the west. It is a large stream, four miles wide at its mouth, and, like many others, its source is unknown.

A man by the name of Battles has a trading post here and a small steamer, with which he navigates the river for 400 or 500 miles and trades with the Indians, who are known as the Tanannas. About 200 miles below Cockran has a trading post, and just below this the Koiukuk River enters from the north. Here is an Indian village called Niulatta.

The next large river is the Anvick, which comes in from the north, and here we saw the first Esquimaux—the most degraded class of people on the face of the earth. They are filthy and lazy beyond description. Their principal food is fish, for there is no game here in summer—the Arctic reindeer being always back from the river.

Just above here is a Catholic mission, where there are from sixty to seventy young Indians attending school, most of whom can read, write and sing. This mission has done a great deal of good for the natives.

Just below, on the Esquimaux side, is a Russian mission, established forty-three years ago, and which does not appear to have accomplished much; for it was here that we saw the lowest and filthiest Indians in all our travels. When they bury their dead they hew some slabs and make a box about 3ft. long, 1ft. deep and 18in. wide, double up the bodies, cram them into the box, tie a slab of wood over the top with grass, and set the box up on four stakes about 2ft. above the ground. These graveyards are right among the villages, and as the custom is nearly universal among the Esquimaux, the smell in summer time can be better imagined than described.

The Chilcats, Sticks, Yukons, Tanannas and other tribes burn the bodies of their dead and all that belonged to them, then gather up the bones, gun barrel, spoon, knife and whatever is left, make a pile of them, cut a little bundle of wood, place a pair of blankets alongside and cover the whole with a piece of canvas or a moose skin, tent fashion, when the deceased is supposed to be properly equipped for the happy hunting grounds. Many of these graveyards can be seen on the little hills along the Yukon River.

At the Russian mission we saw an old-fashioned 3in. smooth-bore cannon about 2½ft. long, dated 1744. It was fastened into a log, and I suppose was used to bluff the Indians with forty-three years ago.

From here to the mouth of the river, northerly to Point Barrow and southeasterly to Cook's Inlet, there is no timber nor brush of any kind; nothing but grass and moss. The only fuel is the driftwood which comes down the Yukon and lodges on the shore.

Just below here is the Indian village of Annaruska, where the Alaska Commercial Company winter their boats, the steamers Arctic and Yukon. They run them up a slough about three miles from the river in order to avoid the ice which comes down in the spring.

At Annaruska the river begins to widen out again, and at its mouth, 200 miles below, it is from 80 to 100 miles wide. Here we saw swan, geese, brant, duck and other water fowl by the millions.

On Sept. 15 we landed at St. Michael's Island in the Bering Sea, eighty miles north of the mouth of the Yukon River. The river boats have to run this eighty miles of open sea, as the water is too shallow to admit of the navigation of ocean steamers.

The Alaska Commercial Co. and the Northern Trading Co. have their warehouses here, and the ocean steamers leave their supplies to be taken up the Yukon the following season in the river boats.

On the island are many lakes and sloughs, and good sport can be had with rod and gun.

The trip of 1,500 miles from Circle City to St. Michael's Island can now be made in a rowboat in from twenty to twenty-five days. On Oct. 3 we went aboard the Alaska Commercial Co.'s steamer Bertha, the last one to leave for San Francisco. Nearly all boats that do not intend to winter in this country leave the Bering Sea before Oct. 1. On the 8th we touched at Ounalaska Island, a beautiful little place, with a magnificent harbor. Unfortunately there is no timber. All of the hills near the coast are covered with grass, and at an altitude exceeding 400 or 500ft. above sea level are capped with perpetual snow. There are numerous lakes abounding in beautiful trout, and on the coast is good cod-fishing. The United States Government has stocked the island with reindeer, which have become very tame. One of the principal features of the island is a large, active volcano, and just across Olga Pass is Ackatan, with smoke issuing from his crater and his base covered with a large glacier.

Ounalaska is one of the Aleutian group of islands, and the natives are known as the Alleute Indians. Their principal occupation is fishing and hunting sea otter.

Both the Alaska Commercial Co. and the North American Commercial Co. have warehouses here. The Government has a coaling station and maintains a gunboat or two. After leaving the island we steamed through Olga Pass and entered the Pacific Ocean, bound for San Francisco. We made the entire distance without sighting land and reached our destination on Oct. 22, after a voyage of eighteen days on the Bertha.

JOHN BARRETT.

COLORADO, 1896.

SHEEP AND SNOWSHOES.—XII.

A Winter Hunt at the Summit of the Rockies.

Luck and Faith.

BEHOLD the virtue of Boak's doctrine of faith! Or shall we rather say, behold yet another instance of the FOREST AND STREAM luck? The very first morning after our companions had left us the malignant storms all broke away, and the face of the sky shone forth, new washed and innocent as that of a babe, too young and sweet for guile. The sun shone with untroubled beam upon the dazzling mountain tops, and all the world was fair. At last we had a hunting day, one of the few with which we were blessed during the trip. We turned out of our brush shanty and made a speedy breakfast of flour, water and tea, and though the fare was rude, we all felt a certain lightness of heart at the change in the weather. The pain in my face, however, continued so bad that I had not much heart for a hunt; so I told Kearney to take my rifle and go up on the mountain above us to prospect a little for game. He was to shoot a goat if he got the chance, but in any case to come back to camp by noon and report what he found by way of sign, so that if I was then able to go out we could both go directly to the place where he thought we could start the game. Ordinarily this would be rather a poor arrangement, because it necessitated a double climb for Kearney and broke his day's hunt in the middle; but this was the best we could do, and at any rate all is well that ends well.

After Kearney left for the climb to the upper regions, Boak and I made ourselves as comfortable as we could in camp. Boak kept me entertained with chapters out of his own long life in the wilder West. Boak's father, Theodore Boak, was a Forty-niner, and in 1850 discovered the famous Yankee tunnel, out of which free gold fairly by the bucketful was taken, the owner becoming wealthy in a short time. Theodore Boak eventually sold out and came back East to live, and his family now live at Adel, Ia.; the town, by the way, which was originally the home of Judge S. H. Greene, now of Portland, Ore., and a valued contributor to FOREST AND STREAM. Crosby Boak, my whilom companion, had too much of the Western fever in his blood to remain in so quiet a country as that of Iowa, and the great strikes of the Alder Gulch diggings of Montana found him on hand. At that time he was assaulted and injured by a drunken desperado, and in return for a certain punishment which he took into his own hands to inflict upon the assailant, he was on the point of being lynched by a few enthusiastic disciples of law and order. The leader of this lynching bee was a man named Curly, and in proof of the fact that even the great West is a very small country, I may state that a few years ago this same man Curly, now posing as sheriff of a certain town in lower Montana, came up into the Blackfoot country at the head of a posse in search of a party of train robbers (in whose arrest, further by the way, Billy Jackson figured prominently). During this little pursuit, Curly called at the cabin of Boak and made inquiry about the refugees, and so for the first time in many years these two men met again. Meantime times and customs had changed, but it is not of record that Boak was very hospitable or courteous to the man who once tried to hang him without process of law—and who came mighty near doing it.

During our little visit together in camp, Boak further continued my education in the diamond hitch and in the science of packing as it was once practiced by the old *cargadores* of California in the big pack trains of the old days. There are few more finished artists with the rope than he, and I consider that I have had a good tutor. We made little bundles of rags and manufactured a miniature saddle with cinch and lash, in default of the real thing and of a horse of proper size. Boak told me that I would get out of practice unless I kept it up, and that I ought to practice on a real horse; so after I got back home I got me a real horse—a woolly one, about 1ft. long—and now from time to time I pack him with bags of smoking tobacco, just to keep my hand in in case I ever have to tackle the White Pass of the Klondike trail. This horse is always hitched at the top of my desk and is always ready to start.

The Game is Located.

But meantime we were wondering what luck Kearney was having up on the mountain, from which came no sound of rifle shot. The morning wore away, and at last, just about noon, we saw Kearney come slipping down the trail he had made going up. With a non-committal look on his face he came into camp, set down his rifle and kicked off his shoes, presently saying:

"Goats up there, all right. Half a dozen of them."

We asked him if he had shot, and he said that he had, and had fired twice at a goat he had seen low down in the timber, wounding it very badly, so that he thought it could not go far. He had only followed this trail a short distance, seeing that the crippled goat was bleeding very heavily, but had come on down to tell me about the state of things. He said that he had found the trail of two big goats going straight up the peak above the timber where he had hunted, and knew that they were standing around up there not far from where he was, and that they would not go far away, because he had not gone up on their trail to frighten them. He thought I could get a shot without a great deal of trouble, if I was feeling able to make the climb.

At hearing this welcome news my malady seemed to lighten all at once and I no longer felt either pain or fatigue. Go? Of course I could go, and I told Kearney that had I but one leg, and that a wooden one, I should certainly get up the mountain some way.

We gulped down a few cups of hot tea, and made a hurried lunch of the staff of life without anything else, Kearney not stopping in camp over half an hour, though he must have been tired after a climb so hard as that he had just made. We did our best going up the mountain, scrambling and wallowing where we could not walk, but hurrying on up breathlessly, lest we should lose what we thought to be an excellent opportunity. In a little over an hour and a half we got to where Kearney had shot his goat. He said he had fired at it as it faced him, about 125yds. away, and hit it somewhere through the chest, though not full enough to stop it. It had gone off through the trees, and he did not get to see it again. This was the first time the little rifle had failed to stop within a short distance any animal hit by it, but Kearney told me a goat was a very hard animal to stop. He said that it was their invariable practice to go out to the steepest rocks when once wounded, and there to lie down when they could go no further, sometimes plunging off over the rocks in their death struggle, apparently moved by the impulse to get as far away as possible from the pursuer. Precisely this course seemed to have been adopted by Kearney's goat. We followed the trail, red with regular spurts of blood, for over a quarter of a mile in all, finding spots where the animal had struggled to get up over snowbanks, and where it had stopped to rest; yet though it seemed that it must have dropped at any moment, we could see its trail winding on below and beyond down to the ragged black rocks, but nowhere could we see the shaggy heap of white which should have marked the trail's ending.

I concluded that we should find this goat later just as well, and that it would be best to go on up at once after the others, whose trail, plain and deep as though dug out by a team of horses, lay before us, heading straight up to the most inaccessible part of the peak that lay still above us. This peak was, in its features, much like those on which our earlier hunting had been done. The timber grew densely about the base and sides, and the top rose up bare and rocky, swept by the full force of the winds and offering a front part of icy snow, part of actual ice and part of naked and uninviting rocks. Kearney said that the goats would go on up to these rocks and there lie down in the sun to rest. He said that we must get above them, and showed me that he thought it was possible to do this by keeping well off to the right and coming up over the top of the peak above and back of them. He thought that if we got to the top we should be within sight of the game, for it was very likely that these white climbers would not stop till they got pretty well to the top, where the rocks were nearly bare and where the sun shone full. Thus we quickly determined upon our campaign.

The Climbing of the Peak.

Before us, after we had gone to the limit of our ability on the shoes, lay a long, sloping ridge of white and hard-packed snow, dazzlingly bright and almost as hard as ice. We toiled on up this long reach of smooth footing for several hundred yards, keeping in view the trail of the goats somewhat to our left as we went up. At length the trail turned sharply off to the left and disappeared around the mountain in the direction of some jagged heaps of rocks which jutted out of the mountain side well up toward the summit. Here we could not follow without the certainty of alarming the game, so we kept on our course, now very cautiously and in silence so far as possible. We were now high up in the air above our camp and many hundred feet above the timber, only a few scattered cedars sticking out of the snow among the rocks. The face of the ascent became too icy to hold our feet, so we now began the slow and ticklish work of cutting footholds into the face of the ice-bed as we went up. It was so steep now that as we worked at the bank we were not standing up at all, but leaning against the face of the bank, hanging on with feet and hands and body the best we could, and progressing very slowly, a single upward step at the time, as we were able to secure the foothold.

Kearney was on ahead, or rather above me, a few feet and was carrying my rifle, the only one in camp, after the usual fashion, slung over his shoulder with a thong, the gun being of course in its case so that it would not be rendered useless by the snow. I gave Kearney the gun to carry for the first and only time, as he was so much better than I was in this mountain work, and I was feeling rather badly that day. We did not yet think we were close enough to the game to require me to take the gun. I was worming my way on up carefully below Kearney, not looking up very much at the moment, but taking heed about my footing, when all at once I ran into view of Kearney's legs, which were stationary above me on the ice bank! Just at this instant, and without my ever lifting my eyes up to see what was the matter with his legs, I again cast my eyes off to the left, in the direction where we thought we should eventually see our game. Then I saw a very strange, curious sort of thing, such as never in my life had I seen before.

The Finding of the Goat.

Just in sight, and in full relief against the white carpet of icy snow which covered a rough projection of rock jutting out from the mountain side a few yards above us and about 60 or 75yds. to our left, there lay two odd-looking black sticks, curving back, and spreading apart but a little at the ends. Such sharp and shiny sticks I had never seen before, and knew that none such belonged up there upon the high mountain side. I have a notion that something was about to flash across my mind, but didn't have time, for now a still more curious thing happened. The sticks moved! They disappeared. Then, just the instant afterward, there came into view the same sticks, attached to a big white shaggy head, which dragged a long beard across the snow as it turned sidewise and lazily looked down the mountain.

At once I saw that the goat had not sighted us, and that it was lying upon its side, or at least, the side of its neck, with the back turned toward us, was flat upon the top of the rock, where presumably the goat was lying basking in the sun. How on earth it could help seeing us or hearing us or smelling us seemed too hard to answer, for as we leaned there against the bank it seemed we could have reached out a hand and touched it, it looked so large and plain. The wind was not quite right for the goat to scent us, and as we were white with the snow in which we had been rolling for hours, we perhaps made but a dim blot at best upon the face of the slope as we laid there motionless.

I reached up my hand to Kearney, and saw the rifle begin slowly to slip off his shoulder and come down to me. Then, just as I touched the stock, the horns and the head again disappeared!

We waited for a moment, I meantime rapidly getting off the cover of the rifle, but the head did not show again for the moment. It was no use grieving or getting rattled, so we both kept quiet. "Is he gone?" I whispered to Kearney, and he said, "Yes, on around the edge of the peak. Come on up, and maybe we'll see him before he gets off the top."

We did not yet start on up. I balanced the rifle and tried the sights, seeing that the front sight still had on its coating of black from the smoking I had given it. The glare of the sun was frightful at this point, and I wanted to be sure of the sight before I tried a shot. "Gracious, but this light is bad!" I whispered to Kearney. "Just try it." I passed the rifle up to him, and he looked through the sights. "Pretty bright," he murmured. "Wonder if I can see the sights through the smoked glasses?" I thought, and I tried a look through them, but found the rifle barrel a blank, the front sight having vanished.

And then, as we lay thus against the slope of snow, I with my feet in the last hole below me, and my knee and elbow braced against the bank, there ensued still another strange and wonderful thing. Out on the jutting point of rock where the black sticks had been, there uprose slowly, deliberately, a great white, shaggy, ghostly, fierce-looking thing, with long beard now fully in sight and hanging down. The goat was not gone! He was right there before us, looking, like the born idiot that he was, not at us, but straight down the mountain on his own trail, where he seemed to think he would see something of interest after a while.

This was the first goat I had ever seen close up, and I am willing to say it was an odd-looking apparition. Everything was so silent that it seemed something like my dream when I killed my first ram. The whole scene was one of icy calm in all its surroundings, with no rustle of bough or twitter of bird or flutter of leaf. The goat, after rising into his squatting, dog-like attitude, did not move, but stared on steadily down as though he were an image carven from the ice and snow, of which he was fit citizen. All the machinery of the world seemed on the instant to go slow. My heart beat slow, in time to the sluggish movement of the creature out there on the rock. I saw that the shot could not be made with the smoked glasses on, so I pushed the bow of the spectacles down on my nose. Somehow the glare did not now trouble so much. The shot was an easy one, full at the shoulder and not over 75yds., and I cut loose as soon as the dark bead lost itself midway in the fluff of white. The wicked ring of the nitro load cracked out, and, as though struck down by a mighty hammer, the vast white body fell flat on its rocky perch. The little rifle had again been true.

Kearney and I had not time to exchange the hurried word of joy when there was a struggle a movement on the rock where the goat had sunk out of sight. It rose again, and in one grand leap went out and off and over and down, full out in the air! The body was half over in its first somersault at the moment when it disappeared from our view, shooting on down into the void below!

"Good God!" exclaimed Kearney, "his horns will be ruined! I wouldn't have had that happen for $100!"

It appeared we should be lucky if we ever got a hair of our goat, from the way things looked at last sight of it, but this was yet to be proved. We were now within 200ft. of the very tip-top of our peak, and on one side the descent was 1,000ft. straight down. If the goat struck that face of the mountain, it was useless to look for him at the top, though we might find his bones at the bottom if we were lucky and had time to go around for them at the foot. But in order to strike this face, it would be necessary for the body to fall first upon a rim of snowbank which lay above the sharp side of the cliff. If we saw no trace of the fall here, so Kearney explained to me as we began to carefully descend our icy house roof, we might know that the goat had not gone on down the mountain, but had lodged on some rock shelf above. Although it was only about 75yds. to where the goat was hit, we thought it would be impossible to get over to that ledge, as between us and that lay a series of sharp and jagged edges over which we could not crawl. Well indeed does the white ghost of the mountains choose his home!

The Mountains in Winter.

I shall make it short by saying that it took us an hour and a half to get to the body of our dead goat. Indeed, I never did get to it at all, for Kearney told me to stay behind when we came to the last few score yards of ascent over the ragged shelves or rocks somewhere upon which we knew the body was lying. I lay here upon the face of the slope, hanging on to a gnarled cedar, and looking out straight from the face of the mountain over a magnificent and stirring scene. Far below me in the lessening world, so far that the vast masses of matted snow looked like the snowballs of children, lay the débris of a great snow-slide which had started somewhere below us on the mountain side. On beyond, across the valley, the sides of the mountains were scarred and ribboned with slides. All over the strange world of this wild winter country there was absolute calm, absolute silence, and absolute light. The sky bore scarce a cloud. The flood of radiance was something unspeakable. Alone, and for the moment purposeless as I was while I waited, I felt to the full the grandeur of a situation such as I had never known before. And again I realized that the interpretation of the message of the mountains was one of repulse and not of invitation. The feeling was that man was not wanted there. It is not a comfortable hunt this for the white goat in winter. You intrude. There is no welcoming smile of nature. Indeed, neither is there a frown nor an open censure. But there is a superb and icy indifference to your presence which makes you feel that you, ignoble, have been found in the private *penetralia* of nobility, indeed, and that without the invitation of a look or sign.

After a time I heard the faint shouts of Kearney far above me, and soon he rolled down over the edge of the cliff the naked carcass of my goat. Then I wormed my way back again around the collar of snow above the bare face of the sheer cut slope and met Kearney, who came from above. He said he was glad I had not come up with him to the goat, for we could never have gotten back the way he went up. He had skinned the goat on a narrow little ledge where the body had lodged, and had then gone on, up and forward the best he could, coming out near to the place, after all, where we had killed the animal. As he called this down to me from his place above me on the mountain side, he gave a kick to the big white bundle he was carrying, and there came rolling down to my feet the hide, head and horns of my first mountain goat!

I took it up and shook out the hide at full length, matted full of snow as it was. It was beautifully white, pure white, not yellow or dirty, as these hides become after the snow has gone and the animals have to live upon rock and dirt and not pure and stainless snow. I stroked out the long beard and admired the sharp, curved black sticks, which I had first seen lying motionless on the rock shelf. Kearney now told me, when we had time to stop and talk things over, that he had seen the head of the goat as it lay there asleep in the sun before I noticed it, but that he dared not make any move or say anything lest it should alarm the animal. He renewed his expressions of disgust at the general fool character of the goat, which he said was the stupidest creature that runs the hills. But, stupid or no stupid, I felt extremely proud over this trophy when I found it well in hand. Indeed, I think I valued it more at the time than I did my bighorn.

As in the case of the first bighorn, the bullet struck in the shoulder, but from the position of the animal, ranged forward and up, passing out at the side of the neck after going through the shoulder. The shot was fatal, and the struggle of the goat as it went over the cliff was but a death effort. Both Kearney and I felt full confidence in the .30-30.

We started on down the mountain now, and as we slid down Kearney asked me, "How's your toothache?" Toothache? I had forgotten I had one. It is a fact, that from the time we started up on the hot trail after the goats the pain left me, nor did it return to any great extent during the remainder of the hunt.

The Relief Expedition Absent.

Boak, openly delirious with joy when he saw us coming in with the hide, pointed out all our happenings as proof of the excellence of his doctrine of faith. That night, a very happy trio in spite of our poor surroundings, we ate supper with content. We had tea, and we had flour and water. Digging around in the packs, we found a scrap or so of bacon, and a bit of beef trimmed off from the last steak we had cooked, in all perhaps as much meat as would fill a teacup a quarter full. It tasted very good indeed to us, and we put in a pleasant evening in camp, hoping that in the morning Appekunny (Schultz) would be in with the relief stores, though just how Appekunny was going to catch up with us on our long trail up into the mountains we did not stop to figure out. In this we were not as wise as Appekunny himself, for in point of fact he never came at all! Later on he told us that he had concluded he would stay at the reservation and get things ready for the council, he supposing that we would come on out of the mountains when we had nothing more to eat! He thought, in a rather optimistic way, that we might get a fool hen or something or other to eat. But it came about that we saw no grouse at all on this hunt, and nothing that would do for food. Goat was something which neither Boak nor Kearney would think of eating; though Boak told me, with a certain plaintiveness, that one time he had a partner who went to town and got drunk and spent all their earnings, so that he had to live six weeks on prairie dog. But, though he might eat prairie dog, he never would eat goat.

In the morning we were a little bit troubled by seeing the dog Shep, which had accompanied McChesney and Schultz out to the railroad, came into camp a little after breakfast time. We thought that of course Schultz would then soon be in camp, but though we waited for some time and went back a way down the trail, no sign of him appeared. Boak feared that something had happened to Schultz on the trail, else the dog would not have left him, but of this the dog could tell us nothing, and we did not guess then what was really the case, that Schultz had not stopped at the station, but had boarded the train with McChesney and gone on in home with him, leaving the dog to shift for himself, and leaving us without any supply train to support us in the rear. Had we known this, it would have saved us many a weary mile, for from where we now were it was much nearer to get to the railroad at Midvale than to retrace our long trail over the divide and down Ole Creek to Bear Creek station on the west slope of the mountains. But we feared that if we went out this way we might miss Schultz as he came in for us, or might perhaps be abandoning him helpless on the trail behind us, neither of which things would be right to do. So we determined to pull on back that day over the trail we had made company in; but we resolved first to take a run up the mountain to see if we could get Kearney's crippled goat, or get a sight of a certain big billy he had seen come down during our absence on the mountain, and stand for a long time on the rim of rock above the valley, in spite of all his efforts to scare it on up the mountain to where we were above it. He said this goat had stood and looked at him as though it had a big contempt for him, and didn't intend to move on till he got ready. Pondering again on the idiocy of this animal, we concluded that this goat would likely remain down low among the trees, feeding, and would perhaps not have gone up the mountain the next morning, in which case we might get a shot at it without climbing very high. We thought we would make this one little hunt more while we waited for Schultz, hoping that then we could make the short trip out to Midvale and not the long one back down the Ole Creek route.

The Luck Still Holds.

Making the story again brief as may be, Kearney and myself, after our miserable breakfast of dough and tea, went on up the mountain and caught up the trail of his crippled goat. Following this, we at last came upon fresh sign, and soon were trailing another goat, which we think was the one Boak saw the evening previous. This trail did not line out for the upper peaks, but wound around among the woods, the animal evidently pausing now and then, but not in the least alarmed. In less than an hour, though after rather desperate climbing over some bare rocks which overhung a sheer descent of some depth, we made out the line of the trail to be leading straight for a ridge of bare black rocks a few hundred yards ahead. As the sign was now very fresh, and as the sun was growing warm, we figured that the goat would hardly have passed this ridge of rocks, and might be lying out there sunning itself and engaged in the favorite goat occupation of looking down on the world. Kearney then told me to stop where I was, while he went around the head of the rock ridge and came down from above, we concluding that if the goat was started it could not then get above Kearney, but would come down the rocks and try to get around the mountain in the direction from which it had come. As it could not get down the face of the cliff above which we had just passed, it must come within range of me somewhere, as it tried to get away from Kearney. This plan I think would have worked perfectly had not the FOREST AND STREAM luck brought out a better one.

Kearney had not left me more than five minutes, and I had just got myself comfortably settled in a blind which I dug down into the snow, when I chanced to look up above, toward a little bunch of rocks which came into view under the lower boughs of the trees, when I sat down in the hole in the snow which I had kicked out with my feet. I had already gotten my rifle out of the case this time, and was ready for anything that might come past on either side, but I was not expecting what I really saw. There, framed in the black setting of a gap in the pine boughs, was the white head and front of a goat, staring straight down at me, not making a movement to get away, but apparently perfectly content to stop a while and see what I was doing! I am sure this goat must have seen me, for it was looking straight at me, and it was only about 140yds. away. It was lying with its front legs doubled under it, and with its head held stiffly out in front of it, as though it were lying there chewing the cud and not wanting to be bothered. A mountain sheep would have been out of that and over the hills by that time, but this mountain goat, bearded, shaggy and white as a ghost of the winter woods, sat there and calmly watched me to see what I was going to do about it.

What I did was to carefully pull the blackened front sight of the little rifle full in the middle of the shaggy chest of this fool animal. I was now beginning to have great confidence in this small-bore rifle, and I, of course, was sure I was going to kill this goat. The distance, I knew, need not matter, so I pestered not over the problem of altitude, but turned loose with the sights at 100yds. Held on the middle of an animal, this means you are good to hit with this gun anywhere from 50 up to 250yds., without any monkeying with the elevation. I knew the goat was mine the instant I touched the trigger, and at the sharp, shrieking, spiteful sound of the nitro load the goat, struck full in the chest, gave a big bound and went into the air, full upright on its hindlegs, exactly like a domestic billy about to charge! It was the most singular action I ever saw a wild game animal make, but with this eccentric creature all sorts of rules are off. To me it seems as though this goat sprang into that attitude as though to fight an adversary which it thought had assailed it.

For a moment the goat stood thus upright, and then I saw that it had half fallen, leaning against a little tree that was near it. Then it sank down out of sight at the foot of the tree, and an instant later slowly heaved itself into view again. Again I fired at it, this time hastily, and this time we think I shot low in the hurry of it. The goat, at least, now struggled out from under the tree and upon the face of the open slope which lay below it. It was trying to execute the last goat maneuver of jumping off some place out of reach. But it was too weak, and only succeeded in getting out from the trees and falling prone on the face of the slippery slope. Here again I fired at it, once, twice, rapidly, hitting it both times. At the last shot it relaxed all over and went sliding and bounding and rolling far down the face of the mountain, and dangerously near the edge of the cliff, over which had it plunged it must have been lost to us forever. Fortunately, it lodged against a tree trunk before it reached the edge, and here we at last got to it and skinned it. We found it another fine specimen, though the coat was not quite so silky white as that of the first one. Against the skin of the hindleg I cut out the flattened fragment of the bullet, which had passed lengthwise through the body from chest to thigh.

I now had all the goats I ever wanted, and I vowed to Kearney that I would never again shoot one of the fool things, no matter what might be the temptation, for that they did not have sense enough to make them a subject for sport. Kearney then told me that he had seen this goat lying there before I shot, and was trying to work his way back to me to show me the goat when he heard me shoot and saw the goat struck.

The Effects of Starvation.

From our position on this mountain now we could not get down without first getting up, and this meant a good stiff climb. Kearney was much slower than usual, and when we at last got up to where the going was easier, he sat down and admitted that he was about played out. He said that the food we had had, with no meat and nothing but dough, was not strong enough for him, since he was used to eating a great deal of meat during the winter. He admitted that he was pretty weak, and was glad we had now concluded our hunt. I asked him if he did not want to get the goat he had crippled the day before, and at last he said that he would make one more short try for it, giving me the rifle and the skin of the goat to take on down to camp. I therefore went on down and set Boak shouting again with joy, Kearney coming into camp pretty well used up about an hour later. He said he had trailed his cripple to a point above the cut face of the mountain, and had seen where it had lain down and bled, and apparently struggled over in a death effort. He could get no further down, nor was it possible to get up to it from below. Much as we all regretted it, we were therefore obliged to leave without getting this goat, which was undoubtedly killed.

The Homeward Trail.

It was high time we were leaving if we were to get out

at all. Schultz had not been heard from, and we were now almost at the end of even such supplies as we had. There was a craving for a solid meal of meat. The hard work of all this rough climbing was asking a great deal of us even had we been well fed. We were tired, grimy and hungry as we rounded up at the last meal of our last camp on the goat trail. Probably I will never go on the trail for goats again, and so I may look with equanimity on that which is past; but if I had to face a second trip as hungry as this one, I am not sure I would care for any goat.

Boak cleaned up the heads and hides all he could while Kearney and I rested at the fire for a while before making up the packs for the trail out to the railroad. It was after noon when we started. I shall not say much of our long and weary snowshoe trail that day and night, lest readers may think I exaggerate or wish to pose. It is enough to say that it was midnight when we got into the section house at Bear Creek. I do not know how far we had shoed, probably between twenty and thirty miles, on top of the hunt Kearney and I had made that morning. We were under good, stiff packs, and we were weak from hunger. Boak, who is not fit for this business at his time of life and in his physical condition, more than once slowed up and gave out during the weary night work in the half light of the moonless sky, which hardly penetrated into the thick woods through which we traveled. We offered to divide his pack, but he swore he would carry it in or stay behind on the trail.

We could hardly have been called in very fine condition when we got to the railroad and knocked loudly on the door of the little section house which nestled under the foot of the black-clad mountain in the heart of the range of the divide. Luckily we had here a woman quite different from the one at the Summit station. She woke up smiling and said she would cook us a meal. And so she did, the best and biggest meal three men ever did devour, I reckon. Then we were comforted. Schultz, it appeared, had gone off on the train and never come back, so we had had a dozen miles or so of walk that day for nothing. Not that we cared, since now we were fallen upon great store of beef, pork, beans, bread, coffee, and even—will it be believed? of fresh eggs! For that very day the section house keeper had gotten in a case of fresh ranch eggs from some town east of us. After our rude and scanty fare back in the mountains, this sort of living seemed to us almost too good to be true.

Around the Reservation.

And so we came out the next morning by rail, leaving Kearney at his home at the Summit. I said good-bye to him with regret, for he was as cheerful and sturdy a fellow as I ever met in camp and a good hunter enough for anybody. When I got to Blackfoot I was almost ashamed to admit that I had had such good luck, right on top of McChesney's last bad luck, killing two more head of game while he was forced to go home without a single trophy. Yet such was the fortune of this singular trip, in which the luck certainly came my way if ever such a thing did happen. I had in reality hunted less than five days in all on account of storms and other delays during the trip, yet I had killed five fine specimens of the rarest and choicest of the big game of the Rockies, and had had the additional good fortune not to miss an animal out of all I shot at. Naturally I felt that I had far outclassed myself, and done much better than I should expect to do again.

As to the game resources of that section, I have seen enough of it to know that it is the best big game country I have ever seen. For sheep and goats I presume it has no equal available to-day. Our game, I need not repeat, was all killed on the reservation of the Blackfeet, to which we had come by invitation; yet this same privilege is open to all who go out with members of the tribe or the resident guides, Schultz and Jackson.

After another visit with hospitable Joe Kipp on April 2, I went over to the agency with Schultz to make my call on Maj. Steell, the agent. We met here a number of the leading men of the tribe, among these Eagle Ribs, Little Dog, Bear Chief and others, and here we met Billy Jackson for the first time since we had parted on the Two Medicine. He said that his rheumatism had been giving him a great deal of trouble, and he looked none too well at the time. I spent a pleasant and interesting day at the agency, watching the people who came in, as it was issue day, and the little settlement was full of the unusual sights incident to such occasions in the Indian lands. On the following day I attended the council of the chiefs which had been called on the occasion of my visit, so that the people might send back by me certain messages to their friend in the East who has since that time been chosen by them as the Father of the Tribe—a compliment which I think has been earned by no other white man at the hands of any Indian tribe. The impressions of all this unique and striking life of a tribe of men turning from the ways of the chase to the ways of civilization are things hardly pertinent to this story. The story itself, wandering as it is, does not serve to convey the actual keenness of the pleasures offered by a sojourn in surroundings so unusual and so striking. My winter trip to the Blackfoot country I shall long treasure as one of the very best I ever made, as well as the luckiest. Almost the sole regret we felt was that McChesney, who worked harder than myself, did not share in any of the good luck. Yet I know we shall touch upon no sore spot in his nature if we repeat that one should never take an umbrella to the mountains on a hunt, under penalty of pursuit by Ai-so-pom-stan, Pah-kûk-kus, and all the other evil spirits of the mountains.

1206 BOYCE BUILDING, Chicago.

"Uncle Lisha's Outing,"

BY Rowland E. Robinson, is now ready in an attractively bound volume of 308 pages, the twenty four chapters recounting the homely adventures of those Danvis Folks with whom FOREST AND STREAM readers are so well acquainted. Sent postpaid on receipt of price, $1.25, by the Forest and Stream Pub. Co.

The Forest and Stream Publishing Co. are the largest publishers and importers in America of Books on Outdoor Sports. Their illustrated descriptive catalogue will be sent free on request.

Natural History.

HOW IDEAS ARE CONVEYED.

Editor Forest and Stream:

I have been deeply interested in the papers on the intercommunication of the lower animals. The writers agree that in some way animals do communicate ideas to each other. I expected this unanimity when the subject was first started. The writers to FOREST AND STREAM are observers in Nature's domain, and with such an experience no other conclusion could be entertained.

In order to intelligently consider this subject, would it not be well to look into the methods employed by the human family in intercommunication? Perhaps it will help solve the problem which relates to the lower animals.

First, let us place man where he belongs in the animal kingdom. He is simply the highest in a series of animals. Highest in both mind and matter. I claim intelligence for all animal life, but confined to degrees. Mind and matter rise together. Simple intelligence requires simple matter. Progressive intelligence requires progressive matter. It is nature's law that the progression of mind and matter shall reach its limit in the human family. The highest form of intelligence is the human mind which dominates the human brain, and the human brain is the highest form of matter known to science. Every faculty possessed by man is inherent in the lower animals, restricted by their needs and surroundings.

Man does not inherit speech. It is acquired after birth, usually by long-continued effort in childhood. Speech is a collection of audible words. Words are the signs or symbols through which we convey ideas by sound. Sound is expressed by a combination of muscular acts, and is controlled by the muscles of articulation, of the larynx and of the respiratory organs, in speech. The child possesses the necessary muscles and organs, but cannot utter a word without a teacher. Every word, and the idea which it conveys, must be drilled into the youthful mind before speech is mastered.

A word is simply a sign. A particular word is not the arbitrary expression of a particular idea. The same idea can be expressed by another word in the same language or in a different language. The Englishman has an English word, the Frenchman a French word, the Russian a Russian word, and the native of Australia a guttural word. The same idea may be expressed by a word in each language, but each word will have its own peculiar sound, controlled or created by independent muscular action, so it is evident that sound of almost any kind may convey an idea.

By what rule of logic can we determine that the sounds uttered by animals do not express ideas?

One reason often advanced is that the sounds are repeated, but that is just what we say of a foreign language. The speech of a Chinaman, to the most of us, seems to be nothing but a jargon of repeated sounds. Our dogs can convey to our minds more ideas than we can receive from an unknown language, human though it may be. We should be careful not to make a mistake when we listen to the sounds of animals. It is just possible that we might detect a slight change in the tone; and even if we could not, it is possible that an animal belonging to the same family could. Within the last half hour I have had proof that animals understand each other, when my hearing is in fault.

A chickadee drove another from a box of hemp seed, that is on the table where I am writing. The disappointed bird flew into the door-yard uttering a series of cackling notes. No notice was taken of this cry by the various species of birds in the yard. Soon after a chickadee discovered a sparrow hawk and, to my ears, uttered the same series of notes. Instantly every bird scurried to cover. Two chipmunks and a red squirrel took the hint, and a mole that was engaged in carrying away seeds remained concealed for a long time. Such incidents, or similar ones, have been of common occurrence during the last twelve years, and yet I fail to detect the difference in the cries.

The crows have a language that is patterned, in part, after Morse's alphabet. Besides, the voice is subject to a great variety of changes. I can understand many words of this crow language, or at least, I put ideas to the words.

A crow watches the tide on the clam flats. When the flats are bare he returns to the woods and circles above the pine grove where the flocks are holding forth. His message is a string of caws, which he utters until he has made the circuit, when he drops into a tree. I think the cries could be interpreted: "Come, come, come," or "Clams, clams, clams." Without doubt the idea of clams is understood, for sentinels post themselves without delay on the hills from the grove to the clam flats. The sentinel near the flats, in a measured tone, calls three times: "Caw, caw, caw." I have translated this call, "All is well." This cry of safety is passed along the line until it reaches the pines, when the crows begin their flight. If a sentinel sees a man with a gun, he cries out in rapid voice "Kerr, kerr, kerr," which means: "Look out there." The crows do look out and stop in their flight until the danger is past. I believe it is possible, by careful study and observation, for man to master the crow language. We need not go to the jungles of Africa to study the language of the lower animals. We might commence with the dog. We already know that the dog's voice is capable of great change. It can be modulated to express fear or confidence, love or hate, joy or sorrow; in fact, it can express all the feelings known to mankind. Hearing, we understand. Would it not be folly to claim that dogs themselves do not understand the ideas they so readily convey to us? There is positive proof that dogs understand much of the human language. Necessarily they must acquire the sound of a word, and the idea which it conveys, from their association with man. We know this is true when we consider that the Esquimaux's dog acquires ideas from his master's uncouth language.

Science cannot cite us to a reason why the dog could not acquire human speech if he possessed the proper vocal organs. On the other hand, man, though he possesses the necessary vocal organs, cannot acquire speech without a teacher. The deaf-mute cannot utter a word, because he cannot hear the human voice. If animals are born deaf, they utter strange sounds, which proves that animal language is a fact, and that it must be acquired, just as human language is, from a teacher.

A cat that was reared in a greenhouse in this city, did not mew when hungry like other cats, but instead, uttered a loud, harsh, discordant cry. The owner of the greenhouse thought that there must be something the matter with its throat. I suggested that, perhaps, the trouble was the want of a mother's voice when a kitten. The proprietor took the hint, and put another cat in the greenhouse. The experiment was a success; the discordant cry was soon dropped for the orthodox mew of the cat language.

HERMIT.

GLOUCESTER, April 12.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

A SOUTH FLORIDA DEER.

IN a late issue of FOREST AND STREAM I told how I encountered, down in South Florida, my first deer, and how I missed it, promising at the same time to furnish your readers with the sequel.

Meeting my friend D. a few days ago, I showed him the former article, which, he was good enough to say, was "true to the life, and strongly indorsed every word of."

With regard to the unlawful killing of game out of season, he said: "It's a scandalous shame that the pot-hunters of the State (they are not sportsmen) won't leave the game alone until the season opens. Pretty soon there will not be enough left for breeding, and then the idiots will say, 'Who'd have thought it possible?' Why, Squire, this section a few years ago, when I first come here in '83, was a sportsman's paradise compared to what it is to-day; you could kill more game in a day then than you can see now in a week."

And it's true. I know of an old man, old enough to know better, who claims that he cannot eat pork or bacon, and has to have venison for his regular diet, and his boys (one of whom is about ready for the asylum) are brought up with the same ideas, and the consequence is that they kill deer and turkeys all through the year. The trouble is that no one will take the initiative in reporting these lawbreakers when caught in *flagrante delictu*, and if they did, the probability is that no local jury would convict. Provision of game wardens to report and prosecute, and the State to rigidly uphold such, seems to be the only remedy. An example made of some of the worst offenders would go a long way toward stopping this contemptible practice of close season hunting and killing.

When D. lived out on his homestead, which was prettily situated on the east side of a small lake called Grasmere, I used often to visit him and stay a few days at a time. Going out from town one evening toting a load of provisions, for I never went empty-handed, the Grasmere ranch was found tenantless, but upon making a tour of inspection and visiting the safe hung on the north side of the house, a fine, fat young gobbler, just freshly cooked and hardly cold, was found. I was tired and hungry after my long walk, and roast turkey seemed to be just the thing. I knew D. had gone off to put some of the bronze beauties to roost, so I said to myself: "The old boy will want some tea when he comes in, so I'll boil the kettle and have it ready." Soon the kettle boiled, and tea was made and put to draw; then quick footsteps were heard, and a voice from across the fence challenged: "Who's on my plantation?" "Only your old partner," I said, "tea's ready, and I'm as hungry as a tramp for some of that turkey." Soon we were deep into it, and our appetites, for the time being, appeased. With pipe and cigar going, after supper, we discussed the hunting prospects. D. said: "Well, I couldn't find those birds this evening; they've moved further along the creek from where they were in the morning when I bagged that gobbler off the roost; but I've seen some right fresh deer sign along the bay head, and to-morrow we'll go, and possibly bring one in." This suited my book down to the ground.

Next morning at breakfast we decided to do some necessary work in the lemon grove, and to get an early start after dinner.

We started off, he carrying his double breech-loader while I had my own favorite .32, a gun I would not part with to-day for twice its value if another could not he had like it. The .45 and .50cal. express rifles may be all very well for moose or bear up in Maine, or the Northwest, but down here a .32 or .38 Winchester repeater will give better results for all-around shooting, with a shotgun for quail, etc. After going some distance we decided to separate and to meet again at a given point if nothing turned up. This oak and rosemary scrub was drawn blank, it was rather too early, so we took things easily, and wandered homeward along a long bay head with a stream of water running through, connecting two lakes named Grassy and Surveyos. We separated again, D. crossing a foot log to the other side while I remained on this. It was a good feeding ground for both bird and beast, and a favorable location was soon found. D. would always give me the choice spots, and had not neglected to on this occasion.

Along toward sundown, getting somewhat weary of waiting, I suddenly heard a noise of splashing along the bay head to my right, and carefully gazing in that direction, saw a sight to gladden the heart of any true hunter. Standing in the water, stamping his feet to shake off his winged tormentors, the deer fly, and calmly pulling down and eating the young bay shoots, was one of the grandest specimens of deer it has ever been my good fortune to look upon. Close by were two does in attendance upon their lord and master. The only chance to get a good shot was to get down and crawl; so, regardless of snakes or other varmints, down on all fours I went, the gun carefully carried so as not to plug the muzzle. In this fashion I proceeded for several yards, until one of the does spotted me and made a break for safety, and the other followed suit;

but the buck, tossing his antlers (he had a fine head), seemed to ask what was the matter, and appeared undecided whether to follow or not, the young leaves and stems of the trees were so tender and good. Hesitate, and you're lost, is an old saying, but true; he hesitated too long and lost, for carefully sighting, with the previous experience fresh in my mind not to attract his attention, the rifle cracked and the buck jumped and fled out toward dry land. As he went the gun spoke again, and the deer disappeared behind a big pine tree. Rapidly following, I found the noble brute stretched out behind the tree—dead. My friend D. soon joined me, having heard the shot, and showed me how to disembowel the deer. One ball had gone through the lower part of the heart and another through the lungs, and he had run nearly 200yds. after the first shot. The antlers had four points on each and measured 17in. from tip to tip between points.

After some hard work (to cut this long story short) we got the buck home between us slung on a sapling (my shoulders ached for a week after), and skinned and hung him up for the night, and when weighed the next day the two hindquarters tipped the beam at 24 and 25lbs., and the forequarters at 21lbs. each; and that was some of the best venison I ever ate—or ever expect to. SQUIRE.

GETTING A BIG BUCK.

It had been so long since I had killed a deer, that when Fred Jones and Will Miller, up at Northwood, N. Y., two as hearty good woodsmen, as ever looked through sights at a tossing white flag on a beech ridge, came to ask me if I didn't suppose there might be a deer up at Moose River which I might find and get a shot at, I hoped there might be, and so away we went. I ought not to have done it. There was a sizable sort of chain, which should have been strong enough to keep me from going into the woods, fastened to one of my legs. I had taken two weeks of a three-weeks' vacation by riding from Brooklyn to Westfield, N. Y., on my bicycle, passing along Greenwood Lake, N. J., to Port Jervis, to Lackawaxen, Pa., to Honesdale, Pa., to Mount Pleasant, N. Y., through Binghamton, Elmira, Dansville, Batavia and Buffalo, pedaling over 500 miles on all sorts of roads, and in many kinds of weather. That trip should have satisfied me. But a rabbit cocked up to look at me in New Jersey, and I scared enough partridges on the road to make me think of bigger game, and, to my mind, more worthy of a hunter's pursuit up in the Adirondacks; and, as I said, away I went on Tuesday, Sept. 7, with three comrades: Will and Fred, and my brother Elgie.

We left Northwood at 3 o'clock in the morning on a buckboard with three pack baskets on behind and Will Light's black team hitched on before, and Light was driving. Will Light will be remembered by Bisby Lake hunters. He was a boss guide over there for years, and now runs the Hiawatha House at Northwood.

It is eighteen miles or so from Northwood to North Lake, where the buckboard left us shivering in a rain which had come up, and it was dismal.

Miller hadn't intended to go clear to the river with us, only to the lake, where he intended to go to work on a State job there, and had not brought his gun with him. But we talked him into coming, and so he took a .22cal. Stevens target pistol I had along and said he'd go and shoot chipmunks. We got a boat after some trouble and rowed up the lake to the landing. At the Canachagala trail it was pretty easy for all but Fred, who is big, and seemed to enjoy rowing as much as anybody one ever saw.

It wasn't easy for four miles thereafter. Fred, Will and I had packs—Will taking Elgie's, Elgie being merely a "sawed off kitten," as Will put it. The packs weighed about 40lbs each, and my rifle, a .45-90-300 repeater, added several pounds more to my outfit. Fred had a .38-40 repeater, and my brother a Remington single-shot rifle. The Remington used to be a .32cal. rim-fire, and was the weapon with which I killed my first deer. It now takes a .38 40 shell and shoots to "eat raw meat," as Herb Conklin said when he tried to swap a watch and a deerhound pup for it last year.

Fred's gun has a history, and looks it. It shoots thirteen times, and Fred says it shoots a lead bar and throws a brass tube at the breech when there is meat in sight. It has killed as many deer as any gun in the country. The blue enamel is mostly worn off, and the enamel has been replaced with deer tallow, till it would serve as a candle if the barrel was a wick. The target pistol also has a history. My father got it when he went up through Central America on a mule. His belt wore one side shiny, and it has looked lopsided ever since; but partridges, rabbits, woodchucks, squirrels, etc, have been killed with it, not to mention a few cats that had gone wild when kittens and lived in the brush, feeding on birds.

The way to Moose River was long and muddy. The water sloshed in our shoes and dribbled down our backs. I wore a bicycle suit, including cap. The cap was all right when it came to still-hunting, but I'd have given our chance at a deer for a broad-brimmed hat that day. We rowed across Canachagala Lake, and walked to the river and along the south side, which is trailless to the head of Canachagala stillwater, not having been able to borrow boats because a sportsmen's club objects to its members loaning boats. No matter, we got to the trail spite of briars, logs, brush heaps, spruce slashings and fallen branches, and after two miles of that stuff the four miles to the natural dam at the Plains was comparatively comfortable.

We ate that night scandalously, and built a fire and warmed our dry clothes from the packs and lay down to rest and to sleep happy as any hunters ever were.

Next day we hunted. Fred and Elgie went up through "the island." The island is a long strip of hardwood left when the pines were burned off years ago. Will and I went up the old logging road just below the dam. Fred and Elgie scared two deer off the island without seeing them, and they came my way just as Will got back into the woods hunting a red squirrel with his pistol. My rifle "did some hollerin'" and Will took it away from me when he came back, saying I was an unfit person to carry a real gun. He went off over the ridge where the deer had gone, and in fifteen minutes began to shoot slowly. He came back after a while with a dry doe about the size of a small dog dragging by one ear.

"That," he said, "is the way to do it!" Then he said the gun made so much smoke that he couldn't see to shoot, or he'd have had his two deer at once.

I hadn't any excuses to offer for missing a nice buck, and the camp was too small for me till the others got to sleep that night.

Fred took Elgie over to Balsam Lake next day and staid all night, taking my rifle because it held up better on a long shot than his .38-40, and Will and I went out again. We got separated and all of a sudden I heard a yell and a whoop half a mile away, and directly Will came closer and closer, and pretty soon he came in sight bounding over logs with his hat in one hand and the pistol in the other.

"Where (puff) the (phew!) thought ye'd (woof) got lost. My-y-y!"

Then I knew that I was regarded as something of a sheep which was liable to go astray, and seventeen times a day I had to say that I had my compass and prove it, to one or other of the boys, also matches. We'd get thirty rods from the river and one would ask, "Now, which way do you suppose camp is?" and when we got a mile back they thought if I could tell which way the river lay it was sufficient.

One day the others went up to Kemble's to get some stuff to eat. I was left in camp with strict injunctions to carry my compass in sight and to blaze a trail from the river if I left it.

I took Elgie's Remington and went up the old road almost to where I had seen the two deer, then turned off to the left and followed the hardwood ridge there for about a mile.

I had been practicing walking quietly while I had been there and had read Van Dyke's "Still Hunter" through while in camp, which, with previous experience, had put me on my feet, so to say, and in about half an hour I saw something white flashing around about fifteen rods away. It was a deer's tail shooing flies, and the deer was walking rather fast. There was no time to lose. The deer paused behind a tree quartering from me. I forgot that the .38-40 wasn't a smasher like the big gun which breaks a deer down if held high up on the hip. It didn't matter, though. I got four shots at the hip, the deer not running till I knocked a birch curl off over its back. Then it went fast for a dozen rods and stopped. I followed, thinking the beast had gone a quarter of a mile, anyhow, and ran slap on to a yearling lying at the roots of a tree. The yearling ran when I got about 15ft. from it, leaping from its bed when I caught its eye. I missed it. I put in another shell and went smashing along angry with myself and things in particular. I broke a branch as big as my wrist, crashed through a briar patch by the edge of the swamp at the foot of the ridge, and there, six or eight rods off down a lane of tree trunks, was the first deer I had seen. I shot, and saw something the like of which I never heard tell of. The deer arched its back and made four leaps straight into the air and came down with its hoofs so close together that my feet covered all the marks of each jump. Then away it went, I followed it as far as I could, not quite half a mile, found neither blood nor hair, and gave it up. The deer was running yet, 16 to 20ft. to the jump, and clearing 3ft. high balsams when they were in the animal's line of flight.

I went back and looked into the swamp where the little deer had disappeared, and toward which I had seen a small buck's tracks leading. I had gone perhaps fifteen rods to the swamp when I came to a little opening, where swale grass grew and a few raspberry briars showed the nipping of a deer's teeth. While I was looking at the briars and some tracks I heard a twig crack, and on looking up I saw a deer broadside to me and wrinkling his nose curiously, as if I wasn't exactly his kind of a boquet. He was about four rods off. I aimed carefully at his shoulder and fired. He turned and trotted away with his head down like a whipped dog's. I found blood, but it wasn't encouraging, for I had evidently hit the animal too far back—in the paunch somewhere. I left him, and as it was near dark went to camp.

"Well," Fred said, "I s'pose you've seen a dozen?"

"And drawed quarts of blood," Will added.

"And haven't got hide nor hair to show for it," Elgie put in.

And I felt sick and mean, saying to the boys that I'd seen three and shot seven times, whereupon they said things, and as the meat of the doe was nearly gone guessed that I ought to let somebody who could shoot take the gun on the day following. The next morning, however, I found my buck, a three-pointer still in the velvet, and dragged him to the river, and whooped and danced a while by way of exercise and jubilation.

That afternoon a party from Beecher's Camp (put up by Col. Beecher, a son of Henry Ward Beecher) came down, having been invited to come down by Fred. It sprinkled in the morning and it was 11 o'clock before they came down, then only two of the three and one guide came. Fred had explained what he wanted to do and they thought Fred was sort of notional.

Fred and John Jones (of Raquette Lake county, who is no relative of Fred's) beat up the island while we watched up at the head. The deer were liable to run away from us we thought, but kept a tolerable sort of lookout. I was down by the old road; thirty rods away, by a big rock, was another man, and so we stretched along to head the deer off. I heard Fred and John barking like dogs, and all at once I saw something that made me shiver. There was a pair of horns bigger than I'd ever seen before, and a patch of white just below it with two staring eyes between. I fetched up my gun with a jerk and the deer dissolved into a sort of wabbly brush heap; but coming closer, ten rods away he stopped. I had followed him with my gun, and aiming approximately at his white throat—all I could see of him—I fired and broke his off hind leg.

That may seem like a foolish proceeding to some folks, hitting 2ft. under, but this is how it happened. I've got three sights on my rifle—a Lyman front sight, an ordinary sight on the barrel and behind the hammer is a Lyman rear sight. I put up the rear sight and use all three when deer hunting. I'm liable to see all the front sight and half the barrel if I don't. I aimed low at the deer and hit where I aimed.

It was as if a man had come up behind him and laid a raw-hide whip across his flanks then, for he leaped mightily toward me, and at his second jump I fired again, at his third and fourth jumps I fired too, and he went out of sight.

There was a crash over the knoll in a little swamp fifteen rods away, and a tearing along as if some one were dragging a hemlock stub through the woods there. The silence that followed was sickening. I ran over and there was blood, on the leaves of the briars, on a log the animal had jumped over, and on the ground where it was mossy. I followed it a way then went back where I heard Fred yell.

Fred had a spruce branch about 3ft. long with a nub at the end, and he waved it around his head.

"No man," he said to John, "can shoot so fast and see the sights."

"Where's that big buck—did you get him, er hit him, er anything?" he said to me when I came up.

I showed the boys the blood and Fred threw the club away.

"He's yours, sure," they said, and I felt better. We tracked him, and pretty soon we came to him. He lurched up on to his trembling legs and made a plunge. I started to shoot, but Fred grabbed my rifle, while Will grabbed the deer's horns, and such horns. Will sat down 10ft away. A knife was put to the animal's curl at the base of his neck, and in a few moments the largest deer I ever saw was dead at my feet, and the boys were all congratulating me. I felt as if it must be a dream. Some of them had seen larger deer, but none of them had ever seen a finer pair of antlers taken from an Adirondack deer. They were massive rather than long, and very regular. At Northwood the hunters told me the horns were the heaviest that have come out of the woods on a pack during the past fifteen years. I had hit him four out of four times.

The rest of the trip I passed in sitting on a stump before the camp, looking at the big head. No more deer were killed that trip, but we had all the meat we could carry out.

RAYMOND S. SPEARS.

NEW YORK.

NEW BRUNSWICK GUIDES AND GAME.

DURING the past six months I have received so many letters of inquiry on the above head that my ingenuity has been taxed to the breaking point to answer them. I have, however, done all I could to supply the information asked for. With the kindness of FOREST AND STREAM I would like to make a few remarks that would, perhaps, in large measure, meet the points raised by these correspondents.

First, as to the game supply. I am satisfied from my own observation and otherwise that moose and caribou are far more numerous in this Province than in Maine or Nova Scotia, while as yet our deer supply, though increasing yearly, is not nearly equal to that of Maine. The forest of New Brunswick is still to all intents and purposes a virgin wilderness. For the past quarter of a century the number of sportsmen who have availed themselves of the magnificent hunting afforded in the autumn months could almost, in any given year, have been counted on the fingers of one's two hands. They have produced practically no effect whatever on the supply of moose and caribou. What has decimated the moose in past years has been their ruthless slaughter by loggers, wandering hunters and Indians in the deep snows of winter. Of late, however, public sentiment has been educated up to a just conception of the value of the big game interests of the Province, and a sharper lookout is being kept for these gentry. If our Legislature could only be prevailed upon to expend a fraction of the large amount annually devoted by that of Maine for the preservation of game, the illegal destruction of these animals would be reduced to a very small item indeed.

Now, as to the exact location of the best game regions of New Brunswick opinions differ. I have only explored a very small part of the vast interior, and will only speak of what I personally know or have gathered from reliable sources. Perhaps as convenient a mode of classification as any would be to take up each district in its turn.

CANNAN RIVER.—This locality is perhaps the most noted moose region in the Province. It lies close to the settlements, has been much hunted, but is still well supplied with both moose and caribou. The best way for the American sportsman to reach it is to proceed to St. John and thence up the Intercolonial to Apohaqui or Sussex, or else by the Washademoak boat, which tri-weekly runs from St. John to Cole's Island. A good man to write to for guides is S. E. MacDonald, Cherry Vale, Brunswick, Queens county. Two excellent guides, whom I can personally recommend, are Richard Cole, of Sussex, and Cyrus Kierstead, Fork Stream, Canaan, Queens county.

CAINS RIVER.—A very large section of country is comprised in this geographical term. Moose, caribou and bear are all abundant. Sportsmen going to this locality should come to Fredericton, and here take the Canada Eastern Railway for Zionville or Doaktown. William Chestnut or John A. Edwards, of Fredericton, will supply accurate information as to guides. I believe that Chipman Bartlett and Frank Bartlett, Mersereau's P. O., Blissfield, Northumberland county; Charles Beek, William and Alex. Storey, Doaktown, and James Logan, of Marysville, are reliable guides.

SOU-WEST MIRAMICHI.—The sportsman who wishes to hunt on this river and its branches should come to Fredericton, thence proceeding to Boiestown and up the river, or else up the Gibson Branch of the Canada Pacific Railway to Bristol, and thence across country to the Forks. The North Branch is a good moose country, and there is more than an even chance for success at Miramichi Lake, McKeil Bogan and Otter Brook, which lie within a few miles of each other, about fifteen miles below the Forks. I am not acquainted with any guides residing at the head of the river whom I should care to recommend. At the Boiestown end letters addressed to Edward Norred or Alex. McKay (Boiestown) will be promptly attended to. The lakes at the head of Rocky Brook and the Sisters are within easy striking distance of Boiestown, and moose and caribou are plentiful. In November, as soon as a good, tracking snow has formed, the visiting sportsman may locate at Duffy's Hotel, right in Boiestown, and enjoy excellent caribou hunting on the plains not more than five miles away, returning to the hotel every evening. Mr. Charles Duffy, who runs the hotel, or is run thereby, will supply all needed information on this point. Perhaps in this connection I might refer to the Little Sou-west Lake country, which is reached by way of Boiestown, though properly it belongs to the Nor-west system. Here is where the celebrated guide Henry Braithwaite has control of one of the finest hunting regions in the Province. Henry has so many scores of applications more than he can attend to that he will hardly thank me for any further advertising. However, his address is Stanley, York county, and fortunate is the man who can secure his services.

NOR-WEST MIRAMICHI.—The proper point of departure for big game expeditions on this river is Newcastle, on the Intercolonial Railway. Robert Armstrong, of that place, is fully acquainted with all the essential ingredients. The upper portion of the Nor-West is perhaps the best country for caribou in the Province. It is here that another noted guide, Arthur Pringle (of Stanley, York county), has his camps. Arthur has few, if any, superiors anywhere as a guide. His brother, Tom Pringle (also of Stanley), has lately branched out for himself and is a thoroughly reliable guide.

NEPISIGUIT RIVER.—The beautiful town of Bathurst, on the historic shores of Bay Chaleur, is the jumping-off place for all hunting parties on the headwaters of the Nepisiguit. Henry Bishop, the local postmaster, is the best man I know of to consult about guides. William Grey, Jr., and William

Bateman are excellent hunters, and Mr. Bishop is acquainted with other good men whom he is in position to engage on short notice. I think I would about as soon take my chances on the upper Nepisiguit for numerous and various animals of the game persuasion as any place on earth. Moose and caribou are abundant, deer are fairly numerous, and bears roam over the blueberry hills in September and beg to be taken into camp. There is fine trout fishing to be had on almost any of the rivers and many of the lakes of New Brunswick, but none of them can beat the Nepisiguit.

RESTIGOUCHE RIVER.—I am densely ignorant of the game features of this river, except that many American sportsmen are heading that way this fall, and that moose are said to be very plentiful on the Kedgwick, one of its branches. I know nothing about the guides in the locality, but I should think Albert Mott, M. P. P., of Campbellton though a lawyer and a politician, would reply to all inquiries in a truthful manner.

TOBIQUE RIVER —The lakes at the head of this beautiful river are well supplied with game of every sort. It is in all respects an ideal hunting and camping region. Mr. T. F. Allen, of the Tobique Salmon Club, Andover, Victoria county, will supply all required information. Some of the Indian guides at the mouth of the Tobique are first-class men. If white men are preferred, I can certify to Asa and Robert Maston, of Sisson Ridge, Victoria county, as being hunters of skill and experience.

MADAWASKA RIVER AND SQUATOOK LAKES.—Though I have written one or two guide-books about this noted fishing and hunting region, I know, if anything, even less about it than the Restigouche. I can conscientiously recommend S. J. Raymond, or Milton Dayton, of Edmundston, as being the proprietors of mental refrigerators from which the frozen truth can always be supplied.

It has been stated by one of the Bangor papers that a license fee of $20 is exacted from all Maine guides who came to hunt in New Brunswick. This is not the case Canada has no alien labor laws of any description, and the American guide engaged in this Province has precisely the same privileges as the local men. He is not obliged to take out a license. Of course, if he shoots a moose or caribou he is liable to the same fine that would apply to any other unlicensed individual.

It has also been stated that American sportsmen hunting in New Brunswick would not be allowed to take the heads of any game they might kill out of the Province in the green state, but that they would have to be mounted here before they could be shipped. There is no law, Dominion or Provincial, containing any such provision. There is a law prohibiting the shipping of game, but this does not apply to heads or other trophies, and has never been construed to refer to the case of sportsmen taking out the meat of game they had killed.

FOREST AND STREAM is seldom wide of the mark, even in the line of prophecy, where so much allowance must be made for windage. When it predicted that, owing to the restrictive charactor of the New York and Maine game laws, there would be an exodus of American sportsmen to the Provinces this fall, it hit the target very close to the middle. Local sportsmen are divided in sentiment as to the advisability of encouraging this invasion of canvasback foreigners, and fear that the game will become extinct. I do not share in this view, for it is only the thoroughbred that will come to New Brunswick for the second trip. It is no place for the tenderfoot. There are no hotels nor steamers on the big lakes—only the loon and the lean-to. FRANK H. RISTEEN.

FREDERICTON, Sept. 11.

ZIGZAG EXPERIENCES.

II.—A Phantom Woodcock.

RISING high above its fellows, Mount Wachusett overlooks central and eastern Massachusetts, and nothing intervenes to break the vision to the Atlantic Ocean, which may be seen of a clear day more than fifty miles away.

Radiating from its sides like so many pulsating arteries instinct with life and running to all points of the compass, are several purling trout brooks, which reward the knowledge and skill of the angler with many a goodly creel of gamy trout.

Those flowing to the south and east, seeking light of the rising sun, join their forces and swell in volume, making the rivers known as the Quinapoxet and Stillriver, the confluence of which at Oakdale is the birthplace of the gentle Nashua. Along these brooks and adjacent hillsides are many excellent woodcock runs and coverts for ruffed grouse.

Mast grows in great abundance—blackberries, blueberries, grapes, chestnuts—and few sportsmen in the crisp days of autumn have better opportunities for enjoyment with gun and dog than those whose good fortune it is to know and pursue the wary game birds in these favorite haunts.

Boston is not a prohibition city, and yet singular as it may seem, she is seeking for more water. Already her scientific men and engineers are at work binding the waters of the Nashua near its source by a mighty dam, which is bound to take its place among the triumphs of engineering, and which is destined to be one of the wonders of the world.

Already our favorite woodcock ground at Sawyer's Mills is a thing of the past; but blotted out as it is, it will live long in memory as one of the best woodcock runs in which I ever fired a gun. Here the river recedes from a sloping hillside on the north and west and makes an intervale of some fifty or seventy-five acres in extent, which is overgrown with a dense growth of black alders.

The soil is that moist, black, light sandy marl that *Philohela minor* loves, and having natural protection from the vicissitudes of New England weather and the advantage of the sun's warmest rays in early spring, no better breeding grounds can be found.

Here it was in the callow days of youth that I shot and killed my first woodcock—the first bird that I ever fired a shot at on the wing. It was an unexpected, but most successful shot, and one that I will always remember with pleasure.

But that is another story.

It is of another occasion and another experience that I am to write. On this same ground, some years after, I had a very singular experience bordering on the marvelous.

In company with two friends we drove to a nearby farmhouse and put our team in the barn.

We were soon in our favorite haunt, which was now so dense in many places that to work it out thoroughly our progress was necessarily very slow. Many times the dogs could not be seen 20ft away, and often it was impossible to shoot when the bird was flushed.

We had made several snap shots, and were surprised, under such circumstances, to score some very creditable kills. My dog came to a stanch point but a few feet away, and, trying to get into a position where I could shoot with a fair prospect of success, the bird flushed, and without being able to get my gun to my shoulder I fired. Judge of my surprise to see feathers falling gently among the limbs, and working my way to the spot I found a wing as completely severed from the body as if done with a butcher's cleaver.

My dog trailed the bird a little distance and pointed where he secreted himself, under some dead brush and roots. Drawing him forth I found a wing gone, but not another shot had touched him.

My companions joining me soon after, we smoothed his plumage and admired his beauty. One of them suggested putting him out of misery at once in a humane manner, and taking from his pocket utility box a large, chisel-pointed sewing machine needle, he forced it into the base of the skull and then gave it a rotary motion. A few severe spasms, ending in gentle tremors, resulted, when he became limp in apparent death.

Depositing him in my game pocket, we separated and resumed the quest. Meeting again after the lapse of a couple of hours, we sat down for a little rest, when I felt a fluttering in my game pocket. Taking out one, two, three birds, stone dead, the fourth, my wingless bird, was as active as if the needle of my companion had never made an exploring expedition to the base of his brain. Companion No. 2 now had his innings.

"If you are going to kill a bird," said he, "there is but one sure way to do it, and that is this way," taking the bird and crushing its skull between his teeth. More spasms, tremors and twitchings resulted, and all again was quiet. Again we parted to meet again at the barn at 12 o'clock to eat our lunch and take a little midday rest.

I shot another brace, and arriving at the barn before my friends I noticed more evidence of life in my pocket, and thinking it must be one of the last lot of birds shot proceeded to investigate. Judge of my surprise when I found that it proceeded from my wingless friend. There, thought I, you may talk of the humane method and the sure method, I will kill the poor fellow as I have seen fanciers kill chickens, who make certain work of it by wringing their necks.

Grasping him firmly by his bill, I proceeded to wring him round and round until it seemed that there was not left an unbroken cervical vertebra in his neck and so I gave him another quietus. Returning all to pocket, I told my companions on arrival of my experience, whereat they marveled much, and said he must have borne a charmed life, and so he has since been known as the phantom woodcock.

We spent the afternoon in other covers, and added to our store; but more and more was I surprised on my return home to find evidence of life in that self-same bird, nor did it cease until his beauty for the table was destroyed by decapitation.

WORCESTER, Mass.

CHICAGO AND THE WEST.

Indian Market Hunters Stopped in Minnesota.

(Exclusive in FOREST AND STREAM.)

"ST. PAUL, Minn., Sept. 22.—*E. Hough:* Have just heard from our attorney, Byrnes. He has got the order signed in regard to the Indians. We think it is the best thing that ever happened for the game interests of Minnesota.

"SAM F. FULLERTON."

In the above brief telegram is embodied one of the most important bits of news that has ever occurred in the history of game protection. It means the culmination of careful plans which have been long meditated and quietly pursued by the hustling agent of the Minnesota Fish and Game Commission. This success was only possible after a visit to the President of the United States by the attorney of the Commission.

This is the first time the President has ever in the history of the United States interfered in a case of State game protection. Congratulations are due to Warden Fullerton, to the attorney, Mr. T. E. Byrnes, and to all concerned. It is not without a certain pride that FOREST AND STREAM may claim the honor of giving the first publication to this news.

I touched on this question last week in copy sent in from St. Paul under the head "An Important Case," taking up briefly the matter of game destruction by Indians who leave their reservation, kill game, bring it back to the reservation and sell it to the traders. It was then stated that the State Commission was about to take the ground that all game taken by Indians off their reservations would be followed and taken into control as part of the property of the State, as soon as was found again outside the reservation limits. It was then explained that so much game has been killed by all sorts of persons, and sold to the Indian traders for later shipment, that the entire law was in danger of practical nullification, the reservation being made a "fence" for enormous quantities of game, illegal and otherwise, all of which, under cover of this Indian exemption act, has been shipped fairly in train loads to the markets of the East.

Agent Fullerton has long been watching this drain upon the resources of the State, and has determined to stop it at any cost, seeing the inevitable result must otherwise soon be the extinction over large parts of the State of its most valuable game. As stated in last week's FOREST AND STREAM, he some time ago, through one of his deputies, seized a lot of this game (420 partridges, 630 prairie chickens) which had been shipped by Julia Selkirk, Indian trader at White Earth reservation. The latter sued for the recovery of this game, and so the whole question came into direct issue. As stated last week, Attorney Byrnes for the Commission, at once went into the archives and dug up the Indian treaty and looked into the precedents, and reported that he thought he could win the case. This, however, was not enough. The conditions remained the same. The markets were behind this illicit trade, and the law was sure to be broken again. It needed a decisive change in the conditions. The tap root of the evil needed to be cut off.

In his contest in this matter Agent Fullerton had a most valuable ally in the attorney who has so long been his competent and successful adviser. Mr. T. E. Byrnes, of St. Paul, "Tim" Byrnes as he is popularly called, is one of the powers in Minnesota politics, and though still a young man, one of such force that his name is likely to be heard of even more prominently in the future. It was determined to take advantage of Mr. Byrnes's acquaintance with authorities even higher than those of the State of Minnesota.

Last week I was in the office of Mr. Fullerton, in St. Paul, and there met again Mr. Byrnes. After a time Mr. Fullerton turned around to his desk and wrote a check and handed it to Mr. Byrnes, who folded it into some other papers, and after a while went out with us, carelessly slapping the folded papers on the rail of the stairway as we went down. In some way or other I felt that there was some news about that check, though of course it was not any business of mine to ask about it. Perhaps there is something in the stories of mental impressions. At any rate, pretty soon Mr. Fullerton came over and said to me in a low tone of voice:

"I have just given Byrnes a check to pay his expenses to Washington. He is going to see President McKinley, and try to get an order for the Indian Department to take action on this question of market shooting on and around the reservations of Minnesota. As it is, we have no game law if this thing can go on, of wagon-loads of game being taken in from all over the country, unloaded at the traders' stores, and then shipped out as special-privilege property. If we get this order signed, there will be an end to this Indian market shooting, and this hiding of game dealers and their men under the skirts of the Indian reservation. No Indian will be allowed thus, to bring game on the reservation. The business of market shooting at the reservations will be brought to a sudden close, and the Indian will be no better in the eye of the game laws than a white man, and a reservation no better than a white man's settlement. Reduced to that footing, we can handle this trade, and we can save tons of game each year."

When Mr. Fullerton told me this, of course I hoped that he and his attorney would meet success. Then I made him solemnly promise that no one should get on to this except FOREST AND STREAM, and that he would wire as soon as he learned of the result of Mr. Byrnes's trip to Washington.

This latter he has done, and so all sportsmen interested in the game resources of the grand State of Minnesota may now feel assured that they, and not the marketmen of Chicago and the Eastern cities, will have the benefit of many thousands of head of game each year which will no longer be stolen from the State. The figures of the destruction of grouse and chickens and ducks for the markets would be something appalling were they set out in black and white. Perhaps now the native game birds may slowly come back over large tracts from which they have recently practically disappeared, ground through the mills of one of the most insatiate agencies of the game trade now in existence in the West.

The benefit of this order from the President is something which may prove to be fairly incalculable. It solves one of the most serious questions of protection in Minnesota. It is a further proof, if such be needed, of the sagacity and energy of the agent of the commission of Minnesota, and it is a sure index of a still tighter drawing of the meshes of the law around those persons who have long fattened privately on public property.

We have long turned to Minnesota for examples of good work in protective matters, and we may now expect this State to become still more "airtight" in regard to the illegal handling of fish and game. The dealers are looking to Minnesota for much of their supplies, which they openly or covertly, brazenly or sneakingly, have so long been stealing from that State. Let them bestir themselves now, for much of their trade will meet immediate and extensive curtailment.

"Stop the sale of game," says FOREST AND STREAM.

"Stop the sale of game," says President McKinley.

It is stopping gradually all over the country.

Illinois Chicken Crop not Extra.

From all information obtainable, the chicken crop in Illinois is not extra, as indeed it could hardly be expected to be. The main wonder is that there should be any of these birds left in so old-settled a State. The best bag of which I personally have heard was that recorded last week of the Paterson party at Pontiac. No doubt many other bags were made at points lower down in the State, but while good shooting for a few days may have been had by a favored few in certain localities, one could hardly classify Illinois as a chicken State this year, or speak of good chicken shooting there with anything but surprise. At the famous old chicken grounds west of the city a hundred miles or so, there were a good many birds killed, and on the grounds of the Rising Sun farmers' league, there are no doubt very many birds left over for future breeding, but this is not country to which any hunter can be referred as open country. If he gets in by special virtue, it is good fortune. Lee county was once a great chicken region, and the birds hang on there yet astonishingly well. Without question, Illinois is one of the worst sooner States in the Union, especially in the lower part of the State, the theory of the residents being that the shooters of the big cities have not so much right to the birds as they themselves have. There is justification in this belief, perhaps, from their standpoint, though we of the cities don't see it just that way. While we have no great or regular shooting on chickens, it is only fair to say that the birds seem about as numerous this year as they were last. Really, we need a close season for a term of years again, to give the prairie chicken another chance to recover in numbers. Even yet we feel the beneficial effects of our last close term of three years, long ago as that was.

Wisconsin Chickens.

Wisconsin showed up unexpectedly well as a chicken country this season, and I presume more birds were killed there than in Illinois, though the latter has more country suitable as habitat for the bird. A little known feature about Wisconsin is that she has some rattling fine sharptail shooting, pretty well up in the State. I lived here in Chicago for five years before I ever heard of that. Try Hancock, on the Wisconsin Central. That was good this fall. What it may be next fall I should not like to guarantee, but it is worth remembering.

Long Trippers.

A great many men nowadays take long trips out into the remaining good shooting country, staying for a couple of weeks or more out in Minnesota, Dakota, etc. Thus, Mr. W. B. Mershon, of Saginaw, Mich., writes me that on Oct. 5 he will be in Chicago with his special crew, the Saginaw Crowd, en route for Dawson, N. D., for a good hunt. Of this party I heard when at Dawson last week, and was told there that they are first to stop for a duck shoot, then to go on out to the Missouri bottoms for a deer hunt, then to come back and meet the goose flight at

Dawson later on. At Dawson we saw a few flocks of geese and cranes during our hunting two days last week, and the men there think the geese will soon begin to come in. A few geese breed in that country, but most of them come in from above somewhere, as do the cranes.

At Dawson last week were Mr. W. H. Tyng, of Chicago, and Mr. J. R. Moore, of New York city, both there for trips of some length. They go out each day, but do not shoot very long or very hard. Soon other parties will be there for stops of a week or more each, among these Mr. L. S. Pettitt, of Milwaukee, Mr. Strobridge, of the big lithograph house at Cincinnati, and Mr. C. H. Wilson, of Troy, N. Y. There is hardly a city of the land but holds some shooter who has been to Dawson or wants to go. It is wonder that the place is not shot out, but the contrary is true, as we have seen, and it appears altogether likely that the non-resident license will save the game there, if not for many, at least for the few who can afford it.

Farmers' Leagues.

A curious feature of the times in shooting matters is the springing up in different parts of the country of leagues of farmers against the city shooters. There is reason for all this, of course, and of course there is legal ground for it if the farmers so choose, though probably the farmers are too apt to generalize in their estimates of sportsmen. The big cranberry marsh near Palmyra, Wis., was this fall taken into care by the farmers owning the land there, and I mentioned last week the acts of Judge Mallory and Peter Barth, of Milwaukee, who shot there in spite of the farmers and killed some birds. Up a little further in the State, at Baraboo, the same sort of sentiment obtains among certain farming communities, as witness the following extract from the local paper, the *News*:

NOTICE TO HUNTERS

Owing to the destruction of timber and property caused by forest fires, originated in most cases by hunters, and owing also to the wanton and wholesale slaughter of game, both in and out of the legal hunting season, we the undersigned freeholders, hereby forbid all persons from hunting upon any lands owned or controlled by us, and persons found so trespassing will be prosecuted to the extent of the law. But this prohibition shall not apply to the farmers whose names are hereto appended: Jacob Cline, John Luce, Amos Plummer, George W. Harrison, F. O. Newell, J. J. Bick, Mrs. H. W. Parshall, B F Thomas, B. Battles, W. T. Loomis, A. H. Norton, A. Rinney, C. Caflisch, E. C. Green, John Wrightmyre, Charley Beardsley, S. H. Webster, Seth Andrews, Grant Francisco, Miner Brown, Norris Wilcox, Steve Burton, O. A Getchell, Q A. Loveland.

In Michigan also the movement of the farmers has taken hold, and the *Star*, of Niles, Mich., this week contains the following notice:

NOTICE TO HUNTERS.

We, the undersigned land-owners in Milton, Howard, Bertrand and Niles townships, in Cass and Berrien counties, do hereby give notice that hunting and trespassing upon our premises is strictly forbidden, and any person found so hunting or trespassing will be prosecuted to the extent of the law. E. S. Stewart, C. E. Reum, Wm. C. Reum, W. M. Woodford, P. V. Brunner, Chas. Morehouse, Fred Fowler, L. Roebeck, J. A. Curt, Y. L. Reum, D. C. Updike, E. Blowhard and H. K. Fritts.

Probably the record State in the North for farmers' leagues of this sort is Ohio. I take from the Canton *Repository*, of Canton, O., this record of yet another Ohio movement against city shooters: "An organization has been effected by farmers of portions of Plain, Lake, Nimishillen and Marlboro townships for mutual protection in the matter of preserving game. The meeting of the farmers was held at Tyro Hall school-house. A vigorous discussion was indulged in, and it was promptly decided that farmers should organize for the purpose of protecting themselves. It was stated that game can not be killed by farmers when they have time to do so, and that often their stock and the persons of themselves and children are endangered by reckless hunters. It was agreed that the law in regard to trespassing be enforced."

The most famous farmers' preserve in Illinois is the Rising Sun Game Park preserve, referred to earlier in this column, and fully written up in FOREST AND STREAM some years ago. This preserve is the cherished work of Mr. Valentine Hicks, an enthusiast on the subject of protection. His efforts have really preserved the chickens on a big strip of country, and when one stops to reflect that otherwise they would all have been killed long ago, it is a pretty hard matter to feel any regret that the league of sturdy farmers have put up the bars against legions of shooters from Chicago and other cities. Say what you like against this spirit on the part of the farmers, each such league as that set on foot by Valentine Hicks is a protective body and runs a game preserve, and therefore is to be regarded with a feeling far different from resentment.

Violations.

At Waupaca, Wis., Sept. 15, Deputy Warden Stout served papers on the National Express Company for illegal handling of game and fish, the offense being located at Fremont.

At Tacoma, Wash., on Sept. 16, M. E. Weix was fined $10 for selling grouse out of season. Stop the sale of game, Mr. Weix, it will be weixer for you.

At Caldwell, O., Sept. 6, Austin Miller was fined $25 for killing two quail out of season, and was sent to jail for non-payment of the fine.

The Game Regions of the Northwest.

Sept. 24.—The sporting traffic which sets in early in the fall is something of a magnitude not generally understood by those who do not make it a study. The railroads appreciate it and do all they can to increase it. Nearly every road running out into game country makes a regular yearly campaign of education in this regard, and compiles what data it can in regard to the best game localities along its line. This is usually obtained from the local agents at its points, and often this information is very valuable to persons looking up a place for a trip. While at St. Paul I inquired of the Great Northern Railway for such information as they could give me of their best sporting country, and received the appended list of localities, made up especially from their latest correspondence, for the use of FOREST AND STREAM. Inquiring sportsmen will do very well to preserve the list for reference or further investigation. While I do not suppose all station agents are finished sportsmen, a good many of them know what they are talking about, and a tip thus obtained may be of use this fall or next year. No gazetteer of sporting country can be accurate long at a time, for what is good country one year is perhaps not good the next; but these lists, with those published in last week's FOREST AND STREAM, cover the best of the grouse and wildfowl country of the entire Northwest, and among them one may pick out his locality and look it up more at leisure. The tables are as follows:

MINNESOTA GAME RESORTS.

Northcote—Ducks, prairie chickens.
St. Vincent—Ducks, prairie chickens, grouse, geese.
Appleton—Ducks, prairie chickens, geese.
Richmond—Ducks, prairie chickens, geese.
Morris—Ducks, Geese.
Stephen—Prairie chickens, geese.
Ruthton—Ducks, prairie chickens, geese.
Donnelly—Ducks, prairie chickens.
Fosston—Ducks, prairie chickens, grouse.
Brandon—Ducks, geese.
Osakis—Ducks.
Anoka—Ducks, prairie chickens.
West Union—Ducks, prairie chickens, geese.
Ashley—Ducks.
New London—Ducks, geese.
Atwater—Ducks, prairie chickens, geese.
Milaca—Ducks.
Bellingham—Ducks, geese.
Willmar—Ducks, prairie chickens, geese.
Cold Springs—Ducks.
Elbow Lake—Ducks, geese.
McIntosh—Prairie chickens.
Darwin—Ducks.
Menahga—Ducks, prairie chickens.
Thief River Falls—Prairie chickens, grouse.
Spicer—Ducks.
Hinckley—Grouse.
Dassel—Ducks.
Alexandria—Ducks.
Big Lake—Ducks.
Sauk Centre—Prairie chickens.

NORTH DAKOTA GAME RESORTS.

Leeds—Ducks, geese.
White Earth—Ducks.
Lakota—Ducks, geese.
Rugby Junction—Ducks, prairie chickens.
Larimore—Ducks, prairie chickens.
Michigan City—Ducks, geese, prairie chickens.
Wahpeton—Prairie chickens.
Church's Ferry—Ducks, prairie chickens.
Park River—Prairie chickens.
Neche—Prairie chickens.
Devil's Lake—Ducks, geese, prairie chickens.
St. John—Ducks, prairie chickens.
Portland—Prairie chickens.

SOUTH DAKOTA GAME RESORTS.

Putney—Ducks.

MONTANA GAME RESORTS.

Great Falls—Grouse, prairie chickens.
Cascade—Grouse, ducks.
Wolf Creek—Grouse, prairie chickens.
Libby Creek—Grouse, partridges.
Jennings—Grouse, partridges.
Kalispell—Grouse, prairie chickens.
Big Sandy—Prairie chickens.
Columbia Falls—Grouse, prairie chickens, partridges.
Blackfoot—(From grizzly bear down).

IDAHO GAME RESORTS.

Bonner's Ferry—Grouse, ducks, geese.

WASHINGTON GAME RESORTS.

Chester—Chickens.
Leavenworth—Grouse.
Wenatchee—Chickens, grouse, ducks, geese.
Marysville—Ducks.
Blaine—Grouse.

Albino Otter.

A dispatch from San Francisco dated Sept. 17, states that the schooner Rattler is in from the northern seas with twenty-five sea otter skins, one of which is a pure white one, the first ever known upon the coast. It is thought to be worth about $1,000. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

IN THE SHASTAS.

SHASTA MOUNTAINS, Cal., Aug. 18.—*Editor Forest and Stream:* The other day Jim and I packed my speckled gray horse with camping things, and left my shack for the higher mountains. We intended to stay out for several days if necessary, and bring in a buck, a buck of some consequence in the world, with something on his ribs besides leather. We started about 6 o'clock in the morning of what proved one of our hottest July days. After climbing for two hours, we made camp on a small torrent, one mile and a half from our starting point.

Now it may seem foolish to rig up a pack horse to go a mile and a half from home and camp, but some folks know that a mile and a half up some mountains is not a thing to be sneezed at. We wanted to be on the ground selected during the best hours to hunt deer—at dusk and dawn. Having selected a spot for a camp, we unpacked the horse and turned him loose. I told Jim I would look around down the creek for sign and a way to hunt toward evening. Jim said he would go up creek a way. I crossed a gorge, and somehow, about 10 o'clock, I found myself on about the hottest and steepest ridge on the mountain side. I saw a mighty big deer, without horns, run over an opposite ridge, and I decided to go over and see whether it had any particular business there or not. It was a hard climb to get over to where the deer disappeared, and when I got there I was upon a narrow spur of granite, in the blazing sun—as barren a spot as ever was set up edgewise.

Two or three dwarf pines, some big, jagged ledges and a few clumps of scrub acorn bushes were down the steep mountain side to my left, 200yds. From behind one of the pines I could see that a deer's head protruded. I could not tell whether it was the head of a buck or a doe, but it seemed that of a small deer. There was no possible chance to get closer, as the deer was plainly watching me, and the hill was almost precipitous. A deer's head at 200yds. down hill is a small target for the best rifle shot and I fired at it, trusting to luck for a scratch, and I missed it. The head disappeared instantly and another appeared as a big fellow with horns jumped from one of the bushes. He was evidently confused at the report, and he hesitated just long enough for me to reload. As I raised the rifle he sprang forward, then turned to bound over a ledge of rock, and I took a snap-shot as he turned. He made his leap over the ledge, but the ball from my .38 took out a section of his vertebrae at the same instant, and he never jumped again. He went down the hill 100yds., but in a very undignified way indeed for an "antlered monarch of the waste" to go. He finally stopped in the gorge, and was gasping his last when I got there. There were five tines on each antler, yet in velvet, though the horns were hardened. He weighed about 150lbs. dressed, and there was an inch of tallow on his rump, and a liberal allowance upon his ribs and otherwheres. After dressing him, I took his head and horns and returned to "look for Jim." I found him in camp contemplating a smaller buck he had killed and hung in a tree. We had all the deer we wanted, but had to remain over night, as the speckled horse was a half mile below us, my deer was a mile above, and we were tired and hungry. We returned home next day with all the speckled horse wanted to tote. The camping part of our trip was a failure, but we were prepared to stay till we got a deer. RANSACKER.

THE JACKSON'S HOLE ELK.

From the Denver (Colo.) Republican, Sept. 18.

SECRETARY E. K. WHITEHEAD, of the Colorado Humane Society, has addressed a letter to Joshua A. Adams, of Jackson Hole, Wyo., stating the law relative to the crime of cruelty to animals and showing how it applies to wild animals as well.

Mr. Adams ran a herd of wild elk into a corral to feed them during the severe winter and he thus saved them from starvation. The FOREST AND STREAM, a sportsman's paper, attacked the Wyoming game warden severely for having neglected to require Mr. Adams to release the wild game unlawfully detained in a corral. The letter follows:

DENVER, Colo., Sept. 17.—*Mr. Joshua A. Adams, Jackson Hole, Wyo.:* Dear Sir—Some time ago the Massachusetts S. P. C. A., having its attention called to the elk question in which you are interested, and mistaking the location of the dispute, wrote to us in this State asking if some provision could not be made for feeding the elk since, as they supposed, they were on a State reservation.

This drew our attention to the controversy in FOREST AND STREAM in a way that would not otherwise have occurred. While FOREST AND STREAM is one of the best sportsman's papers, and while its editors seem to be actuated in most things by a much more kindly and humane spirit than many editors of kindred journals toward the creatures other than mankind, of which the world is full, in this case, assuming the facts to be as stated, they are certainly wrong.

It is true that game laws should be respected. It is true that no mere pretense of feeding starving wild animals should be permitted to serve as a pretext for their evasion. But, granting so much, when a man has actually prevented the starvation of wild animals, by providing them with food at his own expense, we are inclined to think that few humane and considerate people will question his right to control the animals his bounty has preserved from destruction. It is well enough to insist that officers of the law shall enforce the law as it stands. But human laws cannot be made to fit all cases, and when the literal and rigorous enforcement of any law in specific cases would be contrary to common sense and common humanity, courts ought to and do modify the application of the law. Moreover, officers are justified in refraining from pushing the enforcement of law when it is certain that, for the reason just given, the court itself would refuse to enforce it. Whatever may be said in criticism of this statement it is, nevertheless, true, and states a fact recognized and acted upon by all kinds of officers and courts in the administration of all the laws on the statute books.

The humane law of this State (that of Wyoming is identical, it being partly through the efforts of this society that it was passed) provides:

"Sec. 8. Any officer or agent of the Humane Society may lawfully take charge of any animal abandoned or neglected * * * may care and provide for such animal * * * and the expense of such care and provision shall be a charge against the owner of such animal * * *.

"Sec. 9. When said Humane Society shall provide neglected and abandoned animals with proper food, shelter and care, it may detain such animals until the expense of such food, shelter and care is paid, and shall have a lien upon such animals therefor."

Here is a recogniton, as least so far as private owners of animals are concerned, of the principle that he who supplies needy animals with food and drink for their own sakes, is entitled to be reimbursed, if need be, out of them. Why does not the same principle apply to starving wild animals whose owner is the State? Of course the provision that only representatives of the Humane Society shall have this authority, takes its exercise out of the hands of irresponsible or designing persons: and we are far from saying that every case which is claimed to be one of supplying food to starving wild animals should be considered, but that each case should be investigated and dealt with upon its merits.

Under the sweeping language of the statute I see no reason why you should not, by taking out a commission as an officer of the Humane Society, render such action, as is complained of in your case, entirely legal in the future. The statute says: "And animals neglected or abandoned * * *;" if wild elk are the property of the State, there is no reason why they should not be considered as "neglected and abandoned" when the State fails to provide food for them when starving, just as much as when the same thing happens to animals owned by individuals. Yours very truly,

E. K. WHITEHEAD, Sec'y.

Carrying Arms Through Yellowstone Park.

THERE seems to be a general misunderstanding on the part of the public regarding Col Young's recent order respecting the carrying of arms in Yellowstone Park by hunters who are going into the territory south of the Park for big game. The order simply provided that hunting parties going through the Park shall carry sealed arms and provide themselves with registered guides. Any guide of good reputation on registering at Fort Yellowstone, Mammoth Hot Springs, will be authorized to conduct hunting parties through the Park, where their objective point is the Teton country, Jackson Lake, or contiguous territory beyond the boundary of the Park. The order will, therefore, in no manner interfere with hunting parties who may desire to make this trip during the fall months. In fact, Col. Young, at Fort Yellowstone, states that he will even go further in case responsible parties who desire to go through the Park to meet their guides or pack trains, and will furnish a small escort thoroughly familiar with the roads and trails to accompany each party to the south, east or west boundary line according to their destination.

Golden Plover in Maryland.

ELLICOTT CITY, Md.—*Editor Forest and Stream:* While shooting beach birds at Ocean City, Md., last week (Sept. 16), I had the good fortune to bag a pair of golden plover. Are these not rare visitors to the surf bank? In an experience covering some twelve years beach-shooting, generally in the month of August, I have never seen such plover on the beach, and cannot, or rather did not, find a resident who positively asserted their presence at any time. So far as I know, the golden plover is not killed in this State even on the uplands, the "upland" plover (Bartram's sandpiper) being fairly plentiful. Both birds I killed were in full plumage and splendid condition. The one was killed from a buggy, the other stalked, though neither showed any symptoms of fear, and seemed to prefer running to flying. If any brother sportsman can give me information as to the rarity of this bird, either on the uplands or beaches of New Jersey or Maryland, it will be much appreciated. SAM'L J. FORT, M. D.

THE OPENING OF THE SEASON.

DUNBARTON, N. H., Sept. 22.—Never before in this section have the game laws of New Hampshire been so well enforced as during the past close season. Much credit is due the Hillsboro Game and Fish Protective Association. This Association not only preaches protection, but its members are active in practicing what they preach. Cloth posters of good size with the close time on different game, also offering a substantial reward for information of violation of the laws, are freely posted in conspicuous places, and certainly in this vicinity they are effective.

As usual our daily papers predicted a good supply of birds, and as usual such predictions remain to be verified. For my part I am sure the supply of birds about here is unusually small. I have hunted carefully over the best grounds I know and the result has been far from encouraging. I have killed a fair number, but they are very scarce and wild. I have found but one brood of six or seven. Nearly always it is a single old bird, occasionally two, and they get up a long distance ahead of both gun and dog, make very long flights and are very hard to find a second time. There is plenty of food with miles of good cover. Living as I am in the house where I was born close to fifty years ago, and hunting over the same grounds that I have for the past thirty years, I think I know something about the supply.

Twenty-five years ago a large majority, if not all, of our local hunters never so much as thought of shooting at a partridge on the wing, even when flushed within a few feet. Sitting shots on a tree or the ground were what was wanted, and then such shots were quite frequent. To-day, as Frank Forrester in his story of the "Warwick Woodlands," and speaking of things there after the death of his old friend Tom Draw, says, "Every man, boy and fool now owns a gun." In this section many of them are learning fast how to use it. One of my nearest neighbors, a young man, who previously to this season had killed but one grouse on the wing, now owns a cheap single-barrel breechloader, and the way in which he is knocking down some of our old and wary grouse, hunting without a dog, would take the conceit out of many a swell sportsman with his high-bred dog and elaborate outfit.

In a recent editorial of FOREST AND STREAM, rail shooting of to-day is compared with that of the past. So with our shooting here; what it has been it will never be again. Doubtless there will for years to come be some grouse in our covers; their wildness will be what will save them.

C. M. STARK.

P. S.—Since writing the above on the game supply I have heard from two of the best gunners who hunt about. One hunted all day without getting a bird, and the best score of the other was three birds. C. M. S.

THE SPORTSMEN'S EXPOSITIONS.

NEW YORK, Sept. 22.—*Editor Forest and Stream:* At a meeting of the Board of Directors, held at the offices of the Sportsmen's Association, 377-379 Broadway, the following resolution was offered and unanimously adopted:

"That the fourth annual Sportsmen's Exposition be held at the Madison Square Garden, New York city, from Jan. 13 to Jan. 22, 1898, both days inclusive, the Exposition to be known as the Sportsmen's Exposition and Bicycle Show, thereby making a special feature of bicycles, bicycle sundries, machinery, etc."

The National Board of Trade of Cycle Manufacturers have officially announced that they will not hold or sanction any show before June 1, 1898. We having received a number of applications from manufacturers of bicycles and bicycle sundries for space, which shows a desire on the part of the trade to exhibit in New York, our Board feels justified in adding bicycles and bicycle sundries to their fourth annual exhibition.

The great success that has attended the former Sportsmen's Expositions, with the additional attraction of a bicycle show, will undoubtedly make the 1898 Exposition the most attractive ever held in the Madison Square Garden.

Inclosed find application blank and floor plan. Spaces will be allotted as applications are received. We call particular attention to the fact that the Exposition will be open from Jan. 13 to 22, making nine exhibition days.

THE SPORTSMEN'S ASSOCIATION,
Chas. Tatham, Pres.

Antonio Apache, the young Chiracahua Indian who recently went to the Canadian and northern Maine game country in the interests of the New England Sportsmen's Exhibition to be held in Mechanics' Building in March next, has just returned to Boston. His journeyings covered a distance of nearly 2,000 miles, and many of the Indian camps and settlements of New Brunswick and Canada were visited. Contracts were entered into which secure the personal attendance and services at the Mechanics' Building, next spring, of a number of Indian hunters, trappers and guides, several of them to be accompanied by their families, all clothed in the primitive and picturesque habiliments of the aborigines, and engaged in canoe building, trap making, and in the fashioning of the rude weapons of warfare and woodcraft which have, since the introduction of the white man's methods, become almost entirely extinct. Among the interesting specimens brought to Boston by Antonio Apache is a model of a primitive Indian tent, composed of birch bark, inclosed in a framework of saplings, open at the apex for light and air, and with a deer hide hanging over the entrance and serving as a door. There are also birch bark canoes as fashioned 200 years ago, and a great variety of traps for the capture of bear, otter and other animals, and a number of devices for the taking of game birds, all composed of saplings and logs, and rudely, yet effectively, contrived.

North Carolina Bay Birds.

L. R. WHITE writes from Carolla, Currituck county, N. C., that yellowlegs, plover and other beach game is found there this season in great supply. Carolla is reached by way of Norfolk and Virginia Beach, thence a drive of twenty miles to Currituck Inlet. Or one may go by Bennet's line of steamboats from Norfolk to a point within four miles of White's. In either case one should telegraph in advance (Currituck Inlet office) for team or steamer.

North Carolina Outlook.

HERTFORD, N. C., Sept. 20.—Game prospects for this section very good. Deer, quail and squirrel seem plentiful.

A. F. R.

NORTHWESTERN GAME MATTERS.

Mushroom Heroes.

HEROES in general are independent of all the laws of perspective in that the nearer we approach them the smaller they appear. The romantic glamour of the distance fades into nothingness when close scrutiny of them is possible. And heroes and mighty men are made in various ways; some self-made, others made by the eagerness of writers to produce a story properly sensational, which will sell readily or bring notoriety, to which manner of hero making is supplemented an aid, the credulity of the public. At least, so are many mighty hunters evolved from obscurity to renown.

It is misfortune enough to learn that many of the idols of our school days had a liberal percentage of sawdust filling. With what feeling of just pride did we read in the "First Reader" that Gen. Israel Putnam dashed down a flight of steps to escape from the pursuing Britishers. Surely it was a brave act as boys see such things. But when it is considered that he was badly scared; that he rode down beside the steps instead of on them, and that the steps were not more than a makeshift article at best, the deed was commonplace. There is not much valor in running away, nor is such act much of heroism.

While in Manitoba I had the pleasure of listening to words of value from the lips of Mr. Thomas Johnson, in respect to the game resources of the Northwest. To us of the States, British America is a vast region, made up largely of winter and unexplored country; in reality, it is a vast area, larger than the United States. A large part of the southern area is fertile and well adapted to agriculture. The sharptail grouse is found from Manitoba west to the Rocky Mountains, and north irregularly to the Arctic Circle. The giant moose has its habitat in the southern part of Canada, and in the far north the musk-ox and caribou are found in great numbers. Bears are fairly numerous in the mountainous districts of the West, the big, dangerous fellows, terrific in appearance, so destructive in battle, and so active in promoting the sale of ink and pencils, the kind which live after being shot full of holes crosswise and lengthwise, or at least which live long enough afterward to kill the hunter with one stroke of a mighty paw.

Speaking of bears, and of these same bears which have a Canadian habitat, reminds me of what I heard of the bear hunt of the Jerome Marble party which toured through that country a few years ago. It has also to do with heroes. They went west on the Canadian Pacific, and as a variety to the abundance of other sport, they determined to kill some bears. In due time they were on a bear hunt in the bear country. They had a half-breed who guided them, and who explains how the bear hunt was conducted. He placed a single hunter at each of several promising stands, while he with his dogs went into the cover to drive the bear toward them. This he did as planned, but no shot was fired. When he emerged he found that the party had held a council and had determined that the bear would come out at one certain stand, and as there was no use in anyone being at any other stand than the one the bear would choose to run through, they all determined to stand together and have a joint glory in slaying him. The bear ran through elsewhere. The guide's advice availed naught. They were so sure of the stand each time, and were all so well agreed in banding together, so that they might share the honors equally, that they shot no bear. It was an unselfishness rarely manifested. And yet the half-breed hunter would go in after the bear with nothing but a knife, and he has fought bears with that weapon alone. He has a great contempt for bears, and therefore the killing of one does not make the bear-killer a hero.

While the killing of the bear is the masterpiece of the tenderfoot, it is a commonplace incident of the professional hunter. So go many bear heroes, if they have been mistaken in the true inwardness of bear slaughter.

The land of the musk ox is another land full of dangers and terrors—a land where the dark days are very long and cold and full of hardship; where civilization is unknown, and wherein for a tenderfoot man to venture bespoke for him a brave turn for desperate adventure. To succeed in the journey, it was necessary that the man be physically strong, vigorous, untiring. There were the deep snows and fierce cold of the long Arctic winter; the difficulty of securing food, and no companionship save that of the wild Indians. It was a land which made heroes.

There have, nevertheless, been different kinds of heroes who have penetrated the wilderness far toward the Arctic Circle, and of these, one was Warburton Pike, who, with incredible hardship and misfit supplies, went into the very home of the musk ox and killed some of them, and in proof of his indomitable perseverance under such hardships, he brought out a skin of the musk ox. His trip lasted several months, and he nearly lost his life. He wrote a book about it. There are few men who would care to be so great a hero for a musk-ox skin. Considering the months of travel, the horrible tortures from flies and mosquitoes, the suffering from cold, the journeys through snow and ice, the suffering caused from insufficient food, the discouragements caused by discontented Indian guides, and the many weeks consumed in the quest, few men would care to undergo such labor and suffering even for two musk-ox skins. Now, when I read Mr. Pike's book, I thought that he had about the only musk-ox skin extant, and that to secure one was much like an expedition after the golden fleece, but while in Manitoba I learned that musk-ox skins are a regular article of commerce, and that the Hudson Bay trappers go forth into the wilderness after musk-ox and other skins with as much *sang froid* as a farmer goes forth in the morning to plant corn. Mr. Pike's story was simply the story of the tenderfoot, who, in the blissful confidence which is peculiar to the novice, went forth poorly equipped, with insufficient knowledge of woodcraft, and conducted the matter with all the crudity and inefficiency which are so common to the efforts of novices. His book recounts the dangers and hardships he encountered in a land where men set forth without a thought of the dangers and hardships he met, and if they were asked to write a book on the same dangers and hardships, it is safe to say they would know of none to write of. It is a strange land to strangers, but well known to its dwellers.

The whole northern country is not an unknown land to the professional trappers and hunters. The Hudson Bay Co. has many posts and supply stations in different parts of the Northwest, and it employs thousands of men. The route through the Peace River Region is said to be an excellent one to the Yukon. There is a water route all the way. The trappers and hunters have worked in that vast region through many decades. Gold is found in most of the streams from the southern part of western British America up to the Yukon.

There is great difficulty in prospecting, owing to the heavy growth of moss, which is often several inches in depth, and which so completely covers the ground that it is concealed from view. The flies and mosquitoes in summer are described as inflicting torture beyond the powers of words to describe. They swarm in clouds even in the daytime and completely cover an exposed spot of man or beast. The flies are ever hungry and unsatisfied. The torture they inflict is maddening. Strange as it seems to people whose ideas of the North are associated with snow, ice and severe cold, the summers are very hot, the thermometer often ranging in the 90's. The summers are short, however, and in winter no prospecting can be done. Although the gold of the Northwest has been known to many Canadians for many years, not many of them wanted it badly enough to face the hardships and privations necessarily encountered in securing it. Even gold may cost too much. Still, the digging of gold in that country is not entirely ignored.

Mr. G. B. Borradaile, secretary of the Manitoba Field Trials Club, has been over a great deal of the Peace River and Makenzie River country; and along the banks of rivers where the different strata were exposed, gold signs were found frequently.

Trout for the Workmen.

The Canadian Pacific is building some new road in the western part of the Dominion, near the mountains, and so abundant are the trout in some of the mountain streams that but a few moments are required to catch enough for a meal. Mr. Thomas Johnson, who has traveled thousands of miles in that region in the past summer, told of an instance where at one camp a nearby stream contained trout in such abundance that enough for food purposes could be caught within 100 or 200yds. up or down stream near the camp. These nuggets of the fisherman are free to all comers, at present at least.

The Non-Resident License.

It has been held that a non-resident license law, in respect to the killing of game, had in it much that was selfish and little of the broad generosity which goes with sportsmanship. This would be true beyond question were each State well supplied with game, and therefore if each could reciprocally meet the obligations of sportsmanship as they pertain to the matter. But some States have been wasteful of the abundance of game within their borders, and stingy in measures of protection. Some of the people slaughtered to gratify a love for killing or for count, some slaughtered for market, some in moderation, but the sum total of unlicensed slaughter and neglected protection is the extermination or great decrease of game in certain sections. In discussing this phase of the subject with Mr. Bowers, Game Warden of North Dakota, he made the very good point that if it was selfish to adopt a non-resident game law, it was still more selfish on the part of sportsmen to leave their own State going to another State which had protected its game, and there kill to their satisfaction. In other words, the man who goes forth to kill game has his own selfish purpose in action, too. As a result of the North Dakota resident and non-resident license law, the ducks have bred and multiplied in North Dakota beyond anything known of a like kind within recent years. The license is a perfect bar to the swarms of non-resident shooters who invaded the State during the open season, though it admits such shooters as conform to the requirements of the license law. In this way the State is reimbursed in a measure for the expenses incurred in protecting the game, while permitting the non-resident to have the same shooting privileges as are conferred on residents by the laws of the State. The fact that the game has so wonderfully multiplied is a demonstration of the beneficence of the license required of residents and non-residents, and the fact that so many non-residents take out a license proves that they appreciate the privileges and gain thereby secured.

B. WATERS.

The Pennsylvania Game Seasons.

STEVENSVILLE, Pa., Sept. 20.—*Editor Forest and Stream:* I inclose clipping from a local paper, which please publish in FOREST AND STREAM for the edification of those who so strongly favored the present law. It is taken from the Tunkhannock *Republican:* "Under the new game law squirrels, pheasants and quail cannot be lawfully killed until Oct. 16, and from that time only until Dec. 15, inclusive. The change in the season for hunting squirrels is most obnoxious to sportsmen living in the rural districts, and is the united work of city game associations, who are making a vigorous effort to preserve game for their sport only. The only retaliation the farmer has in such case is to post notices which will keep that class of sportsmen off their premises when the season does open. When a game law of this kind is passed by the Legislature it simply becomes a matter of very little account among the country people, and therefore is violated in every direction, and who will prosecute? It is best to make game laws which best suit the sections in which the game lives, not to suit the cities in which the so-called sportsmen live. The greater trouble in this section has always been from sportsmen coming from the seat of those great game associations of great pretensions. We do not by any means recommend a violation of the game laws, but we do recommend that those who are responsible for the present laws be made to do their hunting among themselves, where the great and only benefit is to be derived from such laws."

Game, especially ruffed grouse, quail and woodcock, is reported plenty, but the law is a dead letter, and one-half the supply will be killed off by poachers before the season opens.

W. W. Mc.

New York State Association for the Protection of Fish and Game.

LYONS, N. Y., Sept. 8.—*To the Members of the Association:* Agreeably to Sec. 5, Article VII., of the constitution of this Association, there will be a meeting of the executive committee thereof, Thursday, Oct. 14, at 1 o'clock P. M., at the Yates Hotel, in the city of Syracuse. All clubs are requested to send a delegate to this meeting, as under the constitution the executive committee shall consist of such delegates.

The meeting is called for the purpose of deciding the advisability of making the call for the annual meeting of the Association earlier than January next; also for the transaction of such other business as may come before the committee. So many requests have been made in relation to a change in holding our annual meeting, that I feel it highly important that the matter have prompt consideration.

The committee on by-laws, and also the joint committee on reorganization of protection and trap-shooting branches, are requested to meet with us at that time. Respectfully,

ERNEST G. GOULD, Sec'y. W. S. GAVITT, Pres.

Iowa Prairie Chickens.

CHARLES CITY, Ia., Sept. 24.—Three hundred prairie chickens would be a fair count of these birds bagged by local gunners since Sept. 1, twenty-five, twenty six and seven being the best scores. Better results are always had here in October, when killing frosts expose their snug hiding places among the corn. VANE SIMMONDS.

BE READY.

How often has the game escaped because the hunter was not ready and failed to connect with his opportunity! He goes down to the spring for a pail of water, and leaves his rifle at the camp, when he hears a wheezy whistle, a crash in the underbrush, and a big black bear climbs up the bank and disappears unscathed. He is drifting down the stream in his birchen canoe, the gun is reposing in its case; the canoe sweeps silently around a bend, and the next moment the air is vocal with the frantic flight of ducks. He has just entered the forest, and is tramping along the trail ahead of the team, *en route* for the distant hunting ground; it is a task to carry the heavy rifle, and the weapon is lashed on top of the load; a big bull caribou appears in the path, makes a momentary pause, then breaks for cover and is lost forever.

Among my intimates I have sometimes been called O'd Gaspipe because when in the woods, either hunting or fishing, a loaded rifle was my inseparable companion. I have been carrying that rifle for fifteen years for the purpose, mainly, of getting one good, honest shot at a bear. The bear has never shown up yet, but some day he will show up, and when he does I shall be ready. But I will tell you of some of the opportunities that have not been lost simply because at any moment of day or night I could place my hand on the loaded rifle.

The cook and I were left in camp while the others were away calling moose. Now, I think the best thing for the human stomach on the earth is the cranberry, especially the low bush or bog cranberry. There was an island in the lake about a quarter of a mile from the camp where cranberries were abundant. I paddled over there in the dugout and soon picked half a pailful. As I shifted about from place to place I shifted the rifle too, so that it was always within my reach. Suddenly I heard a splash, looked up and saw a fine bull caribou swimming from an adjacent island toward the shore of the lake. Only his neck and head were above the water and he was swimming like a ghost, but he was not over 80yds. away. My second shot went through his neck, and I paddled out in the dugout and towed him ashore.

I was trout fishing with a friend in the month of September on one of the northern rivers of New Brunswick. That section of the country was too close to the settlements to give any promise of game; still, as the guides poled us up the stream one sunny afternoon toward a famous trout hole, I carried old Habeas Corpus across my knees and closely watched the changing vista of the shores. The Frenchman in the bow exclaimed: "Oh, luk at de d-e-e-r-e!" I stood up in the canoe and saw two big deer on the further side of a cove, about 300yds. away. The canoe was silently and swiftly poled ashore, and I crept behind a point of rocks that formed the outermost curve of the cove and brought me within a little over 200yds. of the game. I aimed at the biggest one, missed him, and the other deer leaped up the bank and disappeared. The second time I took the finest possible kind of a bead, and at the report of the rifle this deer also leaped up the bank and disappeared. There was something so abrupt and unceremonious about his departure that I was confident the bullet had found its mark. Yet we searched for him long and vainly, and then sadly resumed our journey up the stream. Two hours afterward, on returning to camp, we came down by another channel and found the deer lying in the water, as dead as a last year's almanac, about 150yds above the cove.

With a party of American friends I explored one autumn the upper waters of the Tobique. I was present in merely a sort of social and advisory way and confined myself to the camera while the visitors haunted the lakes and deadwaters in search of moose and caribou. I never meant to pull a trigger on the trip, still wherever the camera went there went Habeas Corpus also. One of the Indians and his little boy poled me up the "bogan" one morning to take a picture of a peculiar piece of stratified rock. We had reached a point about a mile from the camp when the boy in the bow stiffened in an attitude of cataleptic rigidity. I glanced to the right and there beheld, standing in the reeds and rushes, a young bull moose about 30ft. from the canoe. My first impulse was to take his picture, but I am not nearly so handy with the kodak as the rifle; I made a bungle of it, the moose turned like a flash, crashed through the alders, clambered up a rocky bluff and there he turned his head and looked us all over. I forgot all about the camera then and we gathered in the moose and towed him into camp. It was the only moose the party saw upon the entire trip.

I could enumerate various experiences to show the utility of taking along a load or two of buckshot when wing shooting in the brush, and show how the same is conducive to happiness and hash. But why multiply proofs of a self evident proposition. It is all summed up in an empty shell. Be ready!

FRANK H. RISTEEN.

FREDERICTON, N. B.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirabl

They May Know How to Ride, Though.

MONTREAL, Sept. 22.—*Editor Forest and Stream:* The inclosed are exact copies of letters received by a bicycle firm here (spelling, punctuation and all). FERD EVANSON.

Dear Sir—Will you please send me a oiler one of those little oil olders on the top of the pattles on the cilinder it go in like a screw and I would like to have some robbers for the pattles and two little rivets for the seat the nunter of my wheel is —— I have as the agent about these think and he never send them please sand them as soon as possible

And Oblige —— ——

Dear Sir—Me have received your Crank Right.

I am very glad of it that Crank do very well everythings I will have you send me it and I send you the money like I send you that money. Your truly —— ——

P. S. wend you received my letter send me a post card to tell me you received the money I send you and will you tell me if you have any bicycle to sell cheep let me know I think I will do some bargane from you. I send you in that letter $1.30

An Important Game Seizure.

CHICAGO, Ill., Sept. 28.—*Special to Forest and Stream:* Game Warden Loveday has seized 1,500 illegal ruffed grouse found in possession of the Monarch Cold Storage Co., of Chicago. E. HOUGH.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

ANGLING NOTES.

Landlocked Salmon in Lake George.

A FEW weeks ago I announced in FOREST AND STREAM that a landlocked salmon, the first, had been taken in Lake Champlain as the result of stocking the streams flowing into the lake on the west side with fingerling salmon. Lake George and Lake Champlain had each a carload of fingerlings planted about the same time, in October, 1894, and I ventured to prophesy that other fish of this species would be taken in one or both lakes before the season closed. In the latter part of last August a landlocked salmon of 6lbs. was caught by Col. Mann, of New York, while trolling in deep water for lake trout near Anthony's Nose in Lake George. This fish came from a lot of fry hatched three years ago last spring, and planted the following fall as fingerlings, so it was little more than three years and six months from the time it burst the egg until it was caught, weighing 6lbs. This shows remarkable growth and proves that Lake George has rich food for salmon. For several years I hesitated about recommending to the late U. S. Fish Commissioner McDonald that Lake George be planted with salmon, and there were two reasons for this—one that the streams entering the lake were not large enough for big salmon to run up at spawning time, the other that I was not sure that the food in Lake George would prove suitable for them. The lack of spawning streams for big fish was not an insurmountable obstacle, as artificial propagation would have to be resorted to in any event to keep up the stock, and the food question was the only one to be considered. Lake George abounds in whitefish of two species, the big lake whitefish introduced by the late Prof. Baird, and the round whitefish or Adirondack "frost fish," native to the lake. Believing that young whitefish would prove as acceptable food for the salmon as the smelt found in Lake Champlain, I finally made the recommendation that the lake be stocked, and the work was begun in 1894 by planting something over 10,000 fingerling fish. The next plant was made in October, 1895, when 5,000 fingerlings were planted. All plants were made in streams at the southern and middle portions of the lake, while this fish was caught at the northern end of the lake, seventeen miles away from the stream where the nearest plant was made. The salmon caught in Lake Champlain earlier in the season was caught off the mouth of a stream where the fingerlings were planted, and its weight, 3½lbs., showed more than satisfactory growth; but a growth of 6lbs. in the same length of time would indicate that the young whitefish are as good, if not better food than the smelt, provided the salmon get smelt at all seasons of the year in Lake Champlain. There can be no question about the identity of the Lake George fish. When first hooked, it made straight for the surface and jumped from the water; and thereafter, until it was gaffed and boated, it continued to jump. At the first jump, the boatman employed by Col. Mann pronounced the fish a big black bass, but its color soon disproved this; and when it was killed, it was recognized for what it was, a salmon. Mr. Albert Clifton afterward saw the fish, and confirmed what it had already been declared. While Col. Mann must be credited with taking the first salmon from Lake George, I am of the opinion that another salmon was taken earlier in the season; but as it was not identified beyond a peradventure, and as its captor did not recognize it except as a fish, "not a trout, but somewhat like one, and jumping like a black bass," he missed his opportunity of recording his name as the pioneer salmon killer in that lake.

Hooks.

It is not a difficult matter for me to recall that when I was a small boy I thought there was no hook for trout fishing like the Kinsey or Kinzey—low point and wide between the point and shank. If I were to go fishing to-day with worms in some mountain stream I believe I could catch more trout on a Kinsey hook than any other; but I have not seen one in years, nor used one for more years still. For lifting trout out of the water as soon as they got the bait there was no hook like them, for the low point was easily taken by the fish, and that wide sweep as the hook bent from shank to barb was a fine field on which to arrange a worm with lots of wriggle to it, and no danger of choking the hook with the bait. When it came to a different style of fishing from lifting trout out of the water as it flowed between and under the alders, a different hook was demanded, for the low point and long wide sweep was as much of an objection in playing a fish fair as it was desirable in the yanking process. I took a course with the old Limerick, branched out with the Carlisle, the Aberdeen (I never did like a blued hook, and that is the way I used to get these two with their fine wire), the Chestertown (for bullheads—and if one wishes a bullhead hook it is the hook of hooks, as it cannot easily be swallowed to the fish's tail), until I educated myself up to the Sproat; and still I was not satisfied, nor are the hooks named all I tried and used. Finally I was introduced to the Dublin Limerick or O'Shaughnessy, and there I stopped for years, feeling as Uncle Thad Norris expressed himself, "Hold him tight, O'Shaughnessy; you are the greatest hook ever invented." In fact, for all-around fishing, I feel so still. When Mr. Pennell devised the Pennell Sneck hook he sent me some of them with wire thicker than I have ever been able to obtain since. For fly-fishing alone that was a great hook, and I sometimes think in heavy wire it is the greatest fly-hook made. It is not a good bait hook, as the point inclines so toward the shank that it chokes when baited.

Mr. Pennell improved on the Pennell-Sneck and produced the Pennell-Limerick, with or without a "turn-down" eye, and, all things considered, this is perhaps the perfect hook for fly-fishing, although I would not recommend it to bait-fishers, as it will choke when baited with a minnow; at least that has been my experience. With no other hook that I have used in fly-fishing is there the feeling of certainty that the fish rising to it is well hooked when struck. It actually seems to me that I feel the hook go home in the mouth of a big fish. Any way, something is communicated up the leader and over the line to my hand that seems to tell me I can put on all the strain the tackle will bear, secure in the feeling that the hook will hold, whatever else may give way.

Fishing very recently for trout, I found that the trout in one part of the lake had a fondness, apparently, for the Montreal to the exclusion of everything else, and in another part of the same lake the Parmachene-Belle was the favorite to the exclusion of the Montreal. It so happened that I had but one Montreal of proper size, and that was tied on a Pennell Limerick turn-down eye. All my Parmachene-Belles were tied on O'Shaughnessy hooks. I hooked seven big trout on the Montreal, and in every instance I was sure of my fish from the moment I felt the steel go into them, and every one was so securely hooked that there was no chance of escape except by parting the tackle; for the hook was so firmly imbedded in the fish's mouth that in nearly every case it had to be cut out with a knife. I caught more than seven other big trout on other styles of hooks, and never was I sure that my fish were well hooked until they were in the net. I mean that the hook had a secure hold, and in the majority of cases the fish were very slightly hooked. One trout made a break in shallow water Intent upon the break, I hastened there with the canoe and soon hooked the fish. Not until then did I discover that the fish was in a sort of pocket, with weeds and lilypads on every side, and I knew I must kill him in the pocket if at all, and I put on all the strain I dared, remarking that it was a case for heroic treatment, although I did not know how the fish was hooked. When I got the trout to the top of the water my fly seemed to be about 1in. outside of the fish's mouth, held only by a slight ligament. Exclaiming it was "now or never," I told the guide to try and net the trout as I swung it gently toward his end of the canoe. The net was extended as far as the arm would reach and very, very gingerly I led the fish to it, knowing that one more struggle would free him. As the net touched him he struggled and the fly came back to me, but the meshes were wrapped around a 5¼lbs. trout as the net was quickly lifted. This was perhaps an exceptional case, but several times the fly was free at the moment the fish was netted, and I was more than ever impressed with the penetration of the Pennell form of hook. The sureness of the Pennell-Sneck and the Pennell-Limerick hooks are about the same, as the line of draft in each is intended to be identical, and it conforms more nearly to the direction of the force applied in striking than in any other hook made. The long, straight taper of the point insures greater penetration and the hook swims better. As a matter of fact, every one of the trout caught on the Pennell hook was hooked on the lower jaw, or tongue. The shape of the bend is such that once hooked, the fish has little chance to "wear loose" through play in the bend.

There is nothing new in what I have written—for a few years ago I wrote much in the same strain—but I have lately been so impressed with the sureness of these hooks for big fish in fly-fishing that I simply reiterate it for the benefit of fellow-anglers who may have any doubts about the advisability of employing what may be a new form of hook. In large hooks it is a saving to use those with the turn-down eye, for when the gut becomes worn it can be quickly snipped off and the hook attached again.

Customs Duties in Canada.

Early in the summer I made mention in this column of a new order of things relating to the collection of customs duties on angling and shooting gear of sportsmen visiting Canada. It was that 30 per cent. of the valuation of the guns and tackle taken to Canada should be collected upon entering the Dominion, and upon returning to the United States 90 per cent. of the duty would be returned to the sportsman when he removed the dutiable articles. This order from the Customs Department has, I find on a recent visit to Canada, been amended, and while the duty is collected as before, the entire amount is refunded to the departing sportsman who removes the articles entered within three months from the time he first crosses the border into Canada.

Guides and Fish.

A man visiting strange waters for the first time must know something of the habits of fish he seeks at the various seasons, or be dependent upon some one who does (this some one being a guide or a friend), or else he must trust to luck, and trusting to luck is not a certain way of succeeding in fishing. It was my intention at this juncture to moralize a little on this subject, but instead I will tell the story I have in mind, and it will illustrate what I mean, that there are guides and guides just as there are waters and waters. In August I had occasion to go into the Adirondacks, and had but a few days comparatively to cover a good deal of territory. I took a photographer with me for the purpose of getting some photographs to be reproduced in a State report. First I wished a number of views of overflowed lands caused by a State dam upon which a matter of damages rested, and then a lot of views of a series of lakes, timber, etc. At first we needed but two guides with two boats, but as we began on the chain of lakes I employed a third guide to carry a pack with provisions. We reached the camp of the third guide about an hour before dark, and while I was going over a map with him the photographer and his guide went out to get some trout for supper, as our provisions consisted of bacon, bread and tea. The two men came in with one little trout. A few days later we had completed the chain of lakes and returned to that same camp just before 5 o'clock in the afternoon. I had some writing to do, clothes to change, etc., intending then to go on several miles to another camp by water, where I would be near a railroad station so I could get a train at 4 o'clock the next morning. The two visiting guides (I say visiting guides to distinguish them from the guide who kept the camp, although they were guides for that very region and lived less than a dozen miles away) and the photographer went out fishing as soon as we arrived. After they had gone I asked the camp keeper if they would get any trout for supper. "Perhaps." "You have doubts about it?" "Yes." Can you get trout enough for supper, provided I will stay here instead of going on to my destination?" "How many do you want?" "Three of ½lb each will do for me." "How much time will you give me?" "How much do you want?" "An hour." "All right. I will call you when I have written out my memoranda and shaved; if you have the trout I will stay, if not I will go on, for having had nothing but bread and butter to-day, I feel like a square meal after making several miles over trails." In an hour and ten minutes I called the guide (he had been fishing within earshot all the time and nearly all the time in sigh

from the camp) and he came in with four trout. I weighed two: one weighed 1¾lbs. and the other 1lb.; two others being about ½lb. each. The other two boats had two small trout of perhaps ¼lb. each. We remained at that camp for supper.

Credit for Stocking the Hudson.

Some months ago Mr. Charles Hallock sent me a note with a newspaper clipping in regard to who was entitled to credit for the suggestion to stock the Hudson River with salmon, and he has just reminded me that I still have the clipping, and that I have not used it in my notes. It was and is my intention to use the clipping in a paper giving the history of the Hudson as a salmon stream if ever I get the time to write it. I have collected all the facts obtainable about the early history of the Hudson from old Dutch records and colonial papers, and there will be no difficulty in showing beyond a peradventure that the Hudson River never contained salmon until they were planted in the river artificially within twenty years or such a matter. It is true that John, Earl of Dunmore, signed an act in February, 1771, "to prevent the taking and destroying of salmon in Hudson's River," but the language of the act shows that there were no such fish in the river: "Whereas, it is thought that the fish called salmon, which are very plenty in some of the Rivers and Lakes in this and neighboring colonies, were brought into Hudson's River, they would by spawning there, soon become numerous, to the great Advantage of the Public." In the same year, April 2, the Common Council of Albany passed a resolution as follows: "Resolved, by the board, that a letter be sent to William Penturp for to come down and agree with the Corporation if he can undertake to bring live salmons into Hudson's River." Who William Penturp may have been or where he was to come down from, there is apparently no record, but I imagine he was to come down from Lake Ontario or the northern part of the State, where the rivers did contain salmon, as laws for their protection (and for fishing) will show. One of the early laws protects salmon in Big Salmon River, Grass River, Racket River, St. Regis River, Wood and Fish Creeks. However, I did not intend to go into ancient history at this time.

Now to the clipping I have mentioned. It is from the Brooklyn *Union*, no date, as follows:

"SALMON IN THE HUDSON.

"Through the efforts of Mr. Charles Hallock, the editor of FOREST AND STREAM, the Hudson is soon to be stocked with salmon. The series of articles published by Mr. Hallock having called the attention of the U. S. Fishery Commission to the subject, that gentleman has received the following letter, to the effect that his request will be attended to:

"U. S. COMMISSION FISH AND FISHERIES, Washington, Nov. 14, 1873.—*Charles Hallock Esq.*—Dear Sir: I am perfectly willing to place a good lot of Sacramento salmon in the Hudson River. Seth Green has 250,000, and I will request him to dispose of a portion for that purpose, subject to your direction. Very truly yours,

SPRUCE F. BAIRD, Commissioner.

"This will be gratifying news to our New York sportsmen of the angle, and they owe Mr. Hallock thanks for his efforts to restore the game fish to the waters of the Hudson, where they once abounded."

Certainly Mr. Hallock should have credit as one of the pioneers in the movement to make the Hudson a salmon stream. This may seem to interfere with Mr. Mather's claim that he was the first to make the suggestion to Prof. Baird, but I do not think it does. The effort to stock the Hudson with California salmon was a flat failure, for none of the fish came back from the sea, and that has been the history to date of all attempt to stock the Atlantic rivers with the Pacific salmon. My recollection is that Mr. Mather had no faith in the Pacific salmon experiment, and the fish that he suggested to Prof. Baird for the Hudson was the Atlantic salmon, anyway that is the fish he means when he says he made the suggestion to Prof. Baird and hatched the first eggs for this purpose. The Atlantic salmon came back on schedule time from the sea from the time the first plant was made in 1882, and have been coming back continuously as they have been planted each year in the headwater streams; but as the Hudson still lacks fishways in its upper parts the fish cannot return to proper spawning grounds near where they have been planted.

It will be seen that Mr. Hallock, when editor of FOREST AND STREAM, made the suggestion to Prof. Baird that the Hudson be stocked with California Salmon, which was done, and that later Mr. Mather suggested that the Hudson be stocked with the Atlantic fish, and that the first experiment was a failure and the last a success, should not in any way detract from the credit due Mr. Hallock or lessen the credit due to Mr. Mather, both being pioneers and striving to accomplish the same result.

Spawning Season of Trout.

Early in August a letter was sent to me from a fisherman just after he had been fishing for brook trout. He thought the present close season for brook trout, which begins Sept. 1 and extends to April 15 following, should be changed, and the fishing should close legally on Aug. 15. The reason he gave for this was that of the trout he caught a great many were filled with spawn. If this reasoning should hold the fishing season would close before it opened. Because trout contains spawn the first half of the month of August it does not follow that they will deposit this spawn during the last half of the same month if they are not killed in the meantime. My correspondent ceased to fish after he had caught about three score of trout, as he did not think it right to catch fish in such condition. Just why his conscience pricked him at that particular juncture he does not state, but he could have quieted the pricking conscience had he known that the trout would not have spawned in any event before the first or second week of October in the section where he was fishing. Trout carry undeveloped spawn all summer, but do not deposit it until some time after the season closes legally for fishing. A. N. CHENEY.

Great South Bay.

LAST Tuesday I went on a fishing trip to the Great South Bay, in the vicinity of Fire Island. I found bluefishing fairly good, but bottom fishing very poor. The boatmen in the neighborhood of Babylon informed me that the bay was full of pound-nets, which made it dangerous to sail their small craft and also ruined all fishing.

It is high time that the officials of the towns along the bay should show more activity in preventing this pound-fishing if they want fishermen to patronize their citizens in the future

Next Tuesday I will start for the woods of Maine on a deer and moose hunt, and will report my luck to FOREST AND STREAM on my return. M. Q. GOOD.

FISH PROTECTION AND FISH PRODUCTION.

A paper read by Seymour Bower before the American Fisheries Society.

WHILE we must in the future, as in the past, depend upon scientific research to indicate the best methods of propagating and cultivating water life, yet many of the complex and intricate problems that spring from a consideration of fishery economics are of minor importance when compared with the practical and less difficult questions that arise. These minor considerations differentiate in endless ramifications, affording a broad and interesting field for the scientist and investigator. Water life, from its lowest forms up, is a mysterious maze of combinations and possibilities, involved in which are many paths that will never be explored and many secrets that will never be disclosed.

But though many of these intricate problems shall never be solved and the door to a perfect knowledge of the interrelations of water life shall remain forever barred, yet we are no worse off than the ignorant but thrifty husbandman, who, with the simple knowledge of when and how to sow and when and how to reap, secures almost as large a crop as though he understood to a nicety the combination and relation of every element and process of development.

The term "fish protection" is a deceptive generality that may mean much or little, but which is quite apt to lead the unthinking into the error of supposing that in order to carry the annual production of mature fish to the highest point, the privilege of catching them must be surrounded at every turn with nearly prohibitive restrictions; whereas, protection, in its truest sense, and in its true relation to production, seeks to provide an increase, not decrease, in the annual harvest of adults. The real problem, therefore, is to determine what measures shall be adopted to enable us to remove the largest possible number of mature fish from the waters each year without depleting them.

Fish life is surrounded, perhaps to a greater extent than any other form of animal, with natural enemies and dangers that imperil existence at every stage and every turn. Nature, of course, has provided for each some means of defense or escape; but there is incessant warfare and destruction from the moment the ova are laid—indeed, with many species, by far the greater part of the destruction is wrought during the ovum stage.

Each species is an enemy of all others, ofttimes of its own. The spawning grounds of every kind of fish are likewise the feeding grounds of others, the spawn itself constituting the food; and every kind of the larger species is either a fish destroyer or spawn destroyer, or both, at some stage of life.

Of course, this preying of one form of animal life upon another begins much lower down the scale; in fact, the abundance or scarcity of the highest forms, or ultimate product, is determined by the volume of the lowest or fundamental forms. But the building up process finally results in populating the waters with a variety of animals suitable in size, form and texture as food for man. These animals embrace many species, some of which are prized far more highly than others, but all are alike without value to mankind until caught, and the importance of any water as a source of food supply depends, not on the number of animals inhabiting it, but on the annual output of adults of the more highly prized species.

Opinions will vary as to the number or proportion of adults that may safely be removed each year, but no one will deny the proposition that all of the adults of any species might be caught out each year as fast as they come to full maturity, provided that a sufficient number of young of the same species were reintroduced each year to make the loss good. Through the medium of artificial propagation, which protects the ova that nature leaves unprotected, this compensation of young is entirely feasible with the shad, the salmon, trout, whitefish, pike-perch and some other species, provided always that the catching and killing of the young and immature fish is absolutely prevented.

Where artificial propagation is thus able to supplant natural propagation, thereby eliminating the latter from consideration, it is much better to catch off the adults as fast as they mature, and thus make way for succeeding crops or generations. When fish have matured, it is time, so to speak, to realize on the investment. They should then be converted into food, either for some other fish or for man. If allowed to remain, they defeat the very object for which they were created, namely, to be caught and utilized. The food which they consume by remaining should all be converted into increment by going to the young and growing fish, instead of being wasted on the adults merely to prolong their lives. When a female fish has matured and yielded a crop of ova to the saving process of artificial propagation, she has accomplished more in the way of reproduction than she could in hundreds of seasons under natural environments, and can, therefore, well be spared.

It is evident that restrictive measures need not apply to the adult fish, provided a sufficient number are available for artificial propagation, but as affecting the young and immature fish such measures should be of the most stringent character. The killing of young fish of the more valuable species is little short of criminal, and should be penalized in every possible way.

A little reflection must convince any one that natural propagation is entirely inadequate to keep the waters stocked to their limit if considerable inroads are made in the parent stock at any season of the year, and it is a vain hope to expect nature to recover and hold lost ground by nature's methods alone, unless the waters are closed absolutely and permanently.

It is true that the catching off of one kind of fish sometimes results in increased production of others, and without the aid of artificial propagation, but such increase cannot be relied upon as being permanent, and depletion is sure to follow if fishing is continued and no restitution is made through the agency of artificial propagation.

The history of fishing waters is replete with illustrations and examples to prove the proposition that the natural hatching percentage of many species is too insignificant to offset any considerable drain on the parent stock. How often we hear the remark, "There used to be mighty good fishing over in Smith Creek, or Jones Lake, but they are pretty well fished out now." Even our best trout streams, after having been stocked to their limit, sooner or later become depleted unless kept up by occasional contributions from the hatcheries, and this, too, notwithstanding that the fishing is limited to hook and line and the season is closed two-thirds of each year. The reason for this is that it is impossible to recoup from the fish taken in the open season, and equally impossible to protect from natural enemies the ova deposited in the closed season. The unripe spawn in the adult fish caught in the open season is hopelessly and irretrievably lost, while the ripe spawn deposited in the closed season is very largely so.

Natural propagation will never force a water to its highest productive limit, unless fishing is absolutely prohibited for an indefinite period. Fortunately, this course is not necessary, for while we cannot prevent more or less destruction of one kind or size of fish by another after they leave our hatcheries, we can and do save the enormous waste that occurs under natural conditions during the ova stage, and thus bring into existence immensely increased numbers of young fish.

To appreciate fully the significance and importance of artificial propagation as a factor in fishery problems, we must ever keep in mind this wonderful margin of gain over natural propagation.

Fishculturists and all who have carefully investigated the subject are unanimously agreed that the treatment and protection we extend to the ova multiplies hatching results 500 to 1,000 times, and some place the ratio much higher. Nor is this enormous disparity to be wondered at when we inquire into the conditions, and understand the dangers and perils to which spawn as deposited in nature is constantly exposed.

But, taking the most conservative estimate, 500, as a basis, and it will be seen that we produce as many fish from one pair of adults as nature does from 500, or that 1,000,000 ova artificially treated is equal to 500,000,000 on natural spawning beds. Or, to put it another way, 500 pairs of breeders must be allowed to reach their spawning beds and spawn undisturbed to accomplish what we are able to, simply by lifting a single pair from the same beds and submitting the ripe ova to the treatment and protection called artificial. While the ova on spawning beds has its uses in the economy of the waters, serving, as it does, as a source of food for other fish, yet, so far as reproductive results are concerned, 499 out of every 500 pairs may as well never spawn at all, provided always that the solitary remaining pair falls into the hands of a hatchery expert at the proper time. It will readily be seen, therefore, that compensation for the removal of adults is possible only when they are taken from spawning grounds, and absolutely impossible only when taken elsewhere.

It should not be inferred that an indiscriminate throwing down of the barriers to the capture of adult fish is advocated. Many species of fish guard their spawning beds and protect their ova and young from the ravages of natural enemies, performing functions that correspond with the parental care and solicitude of land animals, thus producing a large natural increase. These should be surrounded with all manner of safeguards and afforded the most ample protection during their breeding season.

But there are many species of fish whose ova yields readily to the methods of artificial propagation, that desert their spawning grounds the moment the spawn is cast, leaving the defenseless germs wholly uprotected, to be mercilessly destroyed by a hungry horde of spawn-eaters. Now, when fish of this class assemble in sufficient numbers at the proper time to permit the collection of enough spawn to recompense the annual capture of adults, or, in short, whenever and wherever it is possible and practical to make complete restitution, it is obvious that no restrictions are needed. Desirable species that shirk parental duties after throwing their ova should not be allowed to throw it; they should be headed off and forced to "cough up" in time to give the germs the treatment and protection that they deserve, instead of being allowed to go very largely to waste.

If all the salmon and all the shad that ascend our great rivers from the sea were allowed to reach their spawning grounds before being caught, the immense numbers of young that, by the grace of artificial propagation, it would then be practical to return, would soon restore the depleted waters to their virgin fruitfulness. Fishing would be concentrated to fewer points, but the aggregate annual production might thus be greatly increased, and maintained indefinitely. If these propositions are not true, then artificial propagation is a snare and a delusion, and should be discontinued.

It must not be inferred that any relaxation of the protection now afforded our trout streams is to be thought of. Circumstances alter cases. We are obliged, in Michigan waters at least, to close the spawning season for brook trout and leave reproduction to nature's wasteful methods, simply because the parent fish are distributed throughout innumerable spring tributaries, making it impossible to collect the ova in paying numbers at any one point. It is a matter of the keenest regret, however, that all of the wild trout of spawning age in Michigan waters cannot be assembled each spawning season, and their ova submitted to the multiplying process of artificial propagation. There would be no unfilled applications, no unstocked streams, for the immense production of fry each season would keep every stream stocked to its limit for all time to come.

But this, of course, is impossible; so the only alternative is to confine a stock of parent fish in ponds, simulating natural surroundings by providing an inflow of spring water over a gravel-bottomed raceway into which the gravid fish are enticed. But we do not allow the fish to spawn naturally, knowing as we do by actual trial, how meager the results would be. Nor should any fish of this class be allowed to spawn naturally, whenever it is feasible to take advantage of the saving economy of artificial methods.

The most effective methods of fish protection, then, must include protection of the ova. Protect the spawn as well as the immature fish, and there will be an abundant harvest of adults; and the universal recognition and application of this principle will greatly enhance the value of some of our most important fisheries. Protecting the adults from the hand of man, instead of catching them and protecting their ova from the ravages of natural enemies, is a striking example of "saving at the spigot and wasting at the bung."

A Noble Rangeley Trout.

WE have been shown an outline drawing of a noble trout taken at the Upper Dam by Mr. Thomas Barbour, of Framingham, Mass. The fish was a genuine speckled trout, weighed 9lbs. 4oz., and was 28in. in length. It was taken Sept. 1 on a white tipped Montreal No. 2 fly, with a 4½oz. rod, and Mr. Barbour worked an hour and a half from strike to finish before he had the big fellow "reduced to possession."

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

CHICAGO AND THE WEST.

Chicago Fly-Casting Records.

CHICAGO, Ill., Sept. 24.—Following table shows the individual season records of competing members of the Chicago Fly-Casting Club:

	Total.	Long Distance Fly, Ft.	Distance and Acc'y, Per Cent.	Acc'y and Delicacy, Per Cent.	Bait Casting, Per Cent.
W. H. Babcock	.....	.....	.....	$89\frac{3}{10}$	.....
I. H. Bellows	$85\frac{127}{1920}$	87/8	$80\frac{1}{12}$	$86\frac{29}{32}$	$42\frac{2}{5}$
B. W. Goodsell	$88\frac{17}{240}$	$93\frac{1}{16}$	$88\frac{1}{2}$	$87\frac{173}{240}$	83
E. D. Letterman	.....	.....	.....	.....	$80\frac{33}{40}$
C. A. Lippincott	.....	.....	$87\frac{1}{24}$	$82\frac{11}{30}$	$87\frac{7}{40}$
C. G. Ludlow	$76\frac{1701}{1920}$	$74\frac{3}{4}$	$73\frac{3}{8}$	$80\frac{453}{480}$	$78\frac{19}{40}$
G. A. Murrell	$81\frac{123}{128}$	$78\frac{1}{2}$	75	$81\frac{31}{32}$	$92\frac{3}{8}$
H. A. Newkirk	.....	.....	$71\frac{11}{12}$	$77\frac{29}{96}$	$85\frac{37}{40}$
F. H. Peak	.....	.....	.....	.....	$95\frac{7}{10}$

H. G. Hascall	.....	.....	.....	.....	$84\frac{29}{40}$
M. D. Smith	.....	.....	.....	.....	$81\frac{1}{5}$
H. W. Perce	.....	.....	.....	.....	73 3/8

Holders of medals are: Long distance fly, F. N. Peet; distance and accuracy, B. W. Goodsell; accuracy and delicacy, W. H. Babcock; bait-casting; F. H. Peak.

Closing the Season.

On Sept. 11 the Chicago Fly-Casting Club held its last contest, a re-entry event, held to allow completion of season scores by members who had been absent at earlier contests. The day's records were as follows:

W. H. Babcock	....	....	$91\frac{1}{2}$ $93\frac{1}{2}$ $93\frac{1}{6}$	....	
I. H. Bellows	95 100	89 3/8 77 3/8	$85\frac{1}{3}$ $90\frac{2}{3}$	$95\frac{4}{5}$ $97\frac{2}{5}$	
C. A. Lippincott	83	85 3/8 90	$84\frac{5}{6}$ $78\frac{2}{3}$	$80\frac{4}{5}$ 97 $94\frac{4}{5}$	
G. A. Murrell	..	69 77	$88\frac{3}{4}$ $88\frac{1}{4}$	....	
H. A. Newkirk	..	$74\frac{2}{3}$ 71 $80\frac{2}{3}$ $79\frac{2}{3}$	$75\frac{5}{6}$ 81 $76\frac{1}{4}$ 78	90 $96\frac{3}{5}$ $81\frac{2}{5}$ $92\frac{4}{5}$	
F. H. Peak	..	....	....	$94\frac{4}{5}$ 96 $97\frac{1}{5}$ $93\frac{1}{5}$ 96 $97\frac{2}{5}$ $94\frac{3}{5}$ $96\frac{2}{5}$	
F. N. Peet	107	....	....	97	
J. E. Strong	85	....	....	....	
H. W. Perce	..	....	....	$74\frac{6}{5}$ $73\frac{4}{5}$	
M. D. Smith	..	....	....	$93\frac{1}{5}$	

The club weekly contests will be resumed May 15 next. Monthly club meets will be held during the winter season, the members meeting at little dinners as they did last year. At the first of these meetings, Oct. 15, the season prizes will be awarded as per above record. The record this year shows improvement over last year in casting. The club expects increase in membership before this time next year.

Minnesota Muscallunge.

Mr. R. B. Organ and wife are back from their visit to Minnesota, both looking well and happy. Mr. Organ, as I stated earlier, went up with Mr. M. Whitcomb, of Minneapolis to try the muscallunge fishing above Park Rapids. They were out about twenty miles from Park Rapids, on Man Trap Lake, in camp, and fished only three mornings and two evenings, yet they caught thirteen muscallunge of the prettiest sort Mr. Organ ever saw—the famous "gray-spotted" muscallonge peculiar to that region. The largest fish weighed 20lbs., two reaching that weight, and the smallest was 11lbs. The fish were beauties, and fighters from away back. Man Trap Lake has a little matter of 300 miles of shore line, and is the crookedest body of water on earth, so Mr. Organ thinks. It is in the heart of a great sporting country. Numbers of partridges were seen, but of course were not molested. More and more we hear of Minnesota as a sporting region. I have still more to say about it later in regard to moose.

Mr. Organ calls to my attention an article printed a while ago in FOREST AND STREAM complaining of the extortion in hotel charges and livery hire at Park Rapids. He says he cannot imagine how this idea got out. He found the Park Rapids hotel, the Great Northern, very comfortable and not extortionate at all. They paid 50 cents a day for boats, and $3 a day for a livery team with a driver. These rates are, if anything, below the usual pine woods schedule, especially the team hire. As to the hotel, it happened that while I was at St. Paul I met the owner of this hostlery, Mr. J. H. O'Neil, and was introduced to him by Warden Fullerton as being the right sort of people. I am sure he looked all right and acted all right, and didn't look in the least hungry himself. Neither Mr. Organ nor myself would hesitate about tackling Park Rapids the first minute we got a chance. I would rather live there than at my club, even though they may not have revolving round seats at Park Rapids.

Wonders of Wisconsin.

The wonders of Wisconsin as a fishing country are apparently inexhaustible, as I have occasion this week to remember through different reminders of the opening fishing season of the fall. My friend Mr. F. B. Huntington, traveling auditor of the Wisconsin Central R. R., has been out for a fishing trip at Pike, Turner and Round lakes, parts of the grand Fifield chain of waters, and he says the place is ideal, offering pike, 'lunge, ducks and partridge as one prefers. He took a 10lbs. 'lunge in less than ten minutes after he began to fish, and all had good luck. Of the party were Messrs. C. E. Wilson, W. S. Tarrant; W. O. Mumford, G. P. Joachim, S. G. Brown and Eddie Cooper.

From Eagle River, Wis., Mr. H. K. Frost writes me most enthusiastically about the sport at that point. He says that at his stopping place fourteen fish ('lunge) were taken in three weeks, the smallest weighing 19lbs., the largest 39lbs. (I give his weights). "The lucky anglers," says Mr. Frost, "were: F. B. Stone, Chicago, one; Joe Flanagan, Chicago, one; E. J. Wirtz, Chicago, four; Dr. and Mrs. J. H. Low, Chicago, one each; J. H. Thompson, Benton, Wis., one; H. Deardorff, Kansas City, Mo., one; Mrs. R. S. Johnson, Chicago, three; Mrs. S. M. Zimmerman, Muscatine, Ia., two.

"One bass weighing over 6lbs. was landed last week. Among the successful bass fishers are Messrs. Everett, Smith, Kennedy, of Chicago; Deardoff, of Kansas City; and Raum, of Peoria, Ill.

"The partridge season opened with a rush along the Eagle waters, D. F. Raum, of Peoria, Ill., being as yet the champion. Ducks are not very plentiful, the weather being too warm, but everyone tells me they are legion when the season grows colder."

Early in September General Passenger Agent James C. Pond, of the Wisconsin Central Lines, took up a party of friends to the Fifield lakes, and they had a great trip, all taking fish to the limit of desire. Among the party were Col. C. A. Ware, of St. Louis; Col. H. E. Thompson, of St. Louis, general passenger agent of the Missouri Pacific; B. Wilson, of Chicago; Frank Scott, ticket agent at the Auditorium, Chicago; Ban Johnson, president of the Western Baseball League; M. Lawrie, of Chicago, and G. K. Thompson, ticket agent of the Wisconsin Central, Chicago. The party had good luck with the rod and brought away plenty of fish.

Last week a big Milwaukee party returned after a week on Crab Lake and Manitowish chain, and report taking 250 bass, 150 pike and 33 muscallonge. The largest 'lunge weighed 18lbs. Among others were the following in this party: F. P. Eymen, commercial agent of the Chicago & Northwestern Railroad; W. D. Cantillon, assistant division superintendent of the same road; Charles Thompson, contracting freight agent; Conductor Michael White, J. L. Beals, Houston O'Neill, W. B. Simpson and W. H. Simpson, of the Northwestern Fuel Co.

Ex-Judge Lorin C. Collins, of Chicago, and M. H. Talbot, of Indianapolis, Ind., have just returned, after two weeks' fishing in the vicinity of Minocqua, Wis. They took twelve muscallunge, ranging from 18 to 30lbs.; the largest, 47in., while not weighed, was thought to have run over 30lbs.

Numerous catches of small-mouth black bass were made in Tomahawk Lake, and some large pike. In two days they caught thirty small-mouths, running from 1 to 3½lbs., four of the catch weighing 15lbs. In Storm Lake they made good takes of bass and pike, two of the pike weighing 8 and 10lbs. When the latter was hooked it was a question for several minutes whether or not it was a muscallonge.

The gamiest muski' caught by Judge Collins weighed 22lbs., and it took thirty-five minutes to land him. During the fight it snowed quite hard and the wind came in gusts, making the whole affair interesting from a meteorological, as well as from a piscatorial standpoint.

The Largest Muscallonge.

The largest muscallonge of which I have word this season is one of 36lbs., taken at Kabekona Camp, Minn., unless I credit the indefinite statement made above by Mr. Frost for Eagle Waters, in regard to which I should like further details.

The Largest Trout.

The largest trout of which word has been noted is the mountain trout recently taken by Mr. C. Brown in the Gunnison River of Colorado, 12lbs. even weight. This fish was taken on a No. 6 Coachman. The trout measured 28in. in length and 20in. in circumference.

The Largest Whitefish.

The whitefish is not a game fish, but a certain interest attaches to the capture of a whitefish so heavy as 13½lbs., the weight of one taken by James McCann in his lake nets near Charlevoix, Mich. Of late years the biggest whitefish have never been taken below Lake Superior or the less fished waters of some of the upper and less known lakes, such as the Rainy Lake or Lake of the Woods series.

Violators.

Ten nets, 1,000ft. in all, were destroyed by fish wardens Seaman and Jorgensen at the mouth of the Upper Fox River this month.

At Kalamazoo, Mich., Warden Watkins secured conviction against James Munson for gill netting in Paw Paw Lake. James Donovan and Geo. McGuire were fined for using set lines at an earlier date. Warrants are out for Sam Parrott, Will Lacoine and five others.

Indiana Law Constitutional.

The new fish and game law of Indiana has had a test case, and has been decided constitutional by the Supreme Court of the State. The case was that of David Lewis, of Lake county, who was fined $75 for having in possession a gill net. Possession is, under the new law, held to be *prima facie* evidence of intent to violate the law. He was convicted in the Circuit Court, and took the case up. On Sept. 23 the Supreme Court handed down a decision confirming the decision of the lower court, and setting at rest all question of the constitutionality of the law. It is hard not to be allowed to fish with a net in this land of the free, and of course it does seem unconstitutional when we can't all do what we want to; yet, from now on, it looks as though Mr. Lewis would have to do as the rest of us do, and come down to plain worms and a sinker.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Boston Fishermen.

BOSTON, Sept. 25.—In less than a week from this date the open season on Maine deer will be on—Oct. 1. Preparations and expectations were never so great—all looking in that direction. Hundreds of gunners from Boston alone will visit that State. Some are to go early and others will wait until the leaves are off the trees, and others till snow comes for tracking. Mr. N. C. Manson, with a party of three, is off for Camp Leatherstocking, Richardson Lake. He will doubtless get a deer the first day out. E. Frank Lewis, of Lawrence, with two shooting friends, will leave for the Maine woods early this week. He goes to a camp in Lee, or rather an abandoned farm there. He says that he would rather take the picture of a buck than to shoot it, though doubtless the party will take a deer or two for camp use. A novel idea is used by him on his trips for camp beds. A few wool sacks are taken along. These are filled with straw, boughs or dried leaves, whichever happens to be the best and most available. Hence a good bed for every owner of a sack.

Still the smelt fishers are getting good sport all along the coast, with plenty of smelt, for those who know the grounds and have boats and boatmen, Codfishing also gives a good deal of satisfactory sport and outing to many Boston merchants who have not the time for long fishing trips. Mr. W. Dodd is the champion cod fisherman among the Boston stock brokers, and has made a number of large catches this season. Mr. Mathew Luce is a lover of codfishing, and spends considerable time at the sport. He has an excellent boatman, and fishes off Cohasset. He says that the season will soon be at its best, and he expects to make a good record. He fishes only for sport and recreation, and yet he has taken in all many thousand pounds of codfish. All the fish he takes are saved, and what he does not want for his own use go to gladden the hearts of his many friends.

The salmon fishermen are all at home from their rivers. Mr. D. H. Blanchard and his fishing friend, Keeler, are to be seen in Boston again, after several weeks on the Northeast Branch of the St. Marguerite. Mr. Blanchard took the biggest salmon this summer he has ever taken—38lbs.—the largest by a ½lb. that he has ever killed. But after all the fishing was poor, neither Mr. Blanchard nor his friends getting more than half the salmon they have generally taken. Too many nets in the river below are believed to be the cause of the poor fishing. Mr. Blanchard's idea is that under the Liberals about everybody has been allowed to put in nets. He hopes for a change for the better.

The coming Food Fair, opening in the Mechanics' Building early in October, is to have a genuine log cabin from Maine, with real live guides. The hunting resources of that State are to be well illustrated, and a deer fresh from the woods is promised for about every day. Venison and other game is to be served.

SPECIAL.

EARLY GRAYLING DAYS.

MR. MATHER'S sketch of Len Jewell, as among the interesting "Men I Have Fished With," calls up some memories of the past.

I knew Len Jewell in the 80s, having lived in Bay City at that time. Jewell boarded for a while at the old Campbell House, in which hostelry I yelled: "Front!" as I came to know him—not well, but in a way. Plain, reticent, preoccupied, he seemed to live alone in a world of his own. No one appeared to be on familiar terms with him, but all spoke well of, and respected him. He was a man who minded his own business, and evidently expected others to do the same.

Mr. Mather's mention of grayling fishing on the Au Sable reminds me. Early in the 70s I was in the employ of a lumber company whose operations were on that stream. My duties as scaler kept me at the "banking ground," or "rollway," where the logs were rolled from the sleds into the river.

I knew nothing of the fish in the streams of that section, having lived before then in the southern part of the State; but my love of fishing and fish led me to investigate, and I discovered the waters to be teeming with what the lumbermen called "Sable River trout."

Although this was in midwinter and the mercury was well down to zero, owing to its swift current and tortuous course the river never froze over, unless it happened that the channel became clogged or jammed with logs, in which case the anchor ice would pack around it and freeze, and in time cover the stream.

When I discovered these fish the question was how to get them, for I argued to myself that a few of those "trout" taken from that ice water would afford a much needed and desirable change from pork and beans, which constituted the principal diet of the shanty boys.

My first attempt to secure them was quite successful. I found in the swamps a long, light cedar pole, just the right proportions for my purpose. I then fastened a good-sized pickerel hook to the large end of it, and thus equipped crept carefully down to the water's edge, crawled out a third of the way across the river on a "wing jam," shaded my eyes with my hat and found I was right among them.

When I slipped my pole in the water, the "trout" moved slowly more to the other side (there were thousands of them), but after a few moments would return to the channel.

Lying on my stomach, with rod jammed well on the bottom to keep it steady, I bided my time. Soon a good-sized fish hovered a moment over the hook, a quick upward jerk, and he was impaled and landed. I stopped to examine my prize, and while I did not know then his true name, his long dorsal, clean cut, stylish markings and racy proportions proclaimed him to be of royal blood. I added several more to the string, dressed them, and on my cabin stove fried them in pork fat to a turn, and then and there ate my first grayling; how delicious they were to an appetite sharpened by out-door work, youth and perfect health?

The snatch-hook was a success, but I longed to feel one of those fish on a rod; so rigging up a slender cedar pole with line and hook and heavy sinker, and putting in my pocket a piece of fat pork for bait, I took my stand on a a bridge which spanned the stream a short distance above my camp.

Through the clear water I could see several good-sized fish working slowly up stream near the bottom, and throwing in the line, I let the bait down carefully to their noses, and waited, hardly daring to hope it would be taken. However, it soon disappeared. I struck and hooked my fish. Against the swift current he threw his strength, and gave me all the sport possible with such crude tackle. I took three good ones, quite enough for my larder that day, and drew upon the same source of supply for several weeks with varying success.

At that time there were countless thousands of grayling in the Au Sable. A few years after that, and while I was living in Bay City, FOREST AND STREAM made mention of Seth Green and a party going to Germany to secure grayling for hatching purposes. Before the party left, however, some gentlemen from New York were up in the Au Sable River country and discovered that my "trout" were the true grayling. Immediately following that announcement there was a pilgrimage of fishermen to that stream from all parts of the county. Large camping parties from Elmira and Binghamton went there, with the result that in two years the stream was nearly depopulated of grayling. One party alone shipped out 1,500lbs. of the beautiful fish, so that for years thereafter where they once seemed inexhaustible, good strings could only be secured at the mouths of tributaries and other quiet spots known only to a few.

The State passed a protection law, but too late to stop the slaughter.

I do not know what the situation is now, having long ago left those parts, but from friends of mine who fish there annually I learn that the fishing is reasonably good.

B. W. SPERRY.

NORTH CAROLINA.

Delaware River Bass.

DINGMAN'S FERRY, Pike County, Pa., Sept. 22.—This morning Mr. J. D. Jais, a guest at the High Falls Hotel, caught a bass in the Delaware River weighing 6lbs. 12oz., measuring 26in. in length. A great many large bass have been taken this summer. This beats the record.

PHILIP F. FULMER.

AMID THE SCENES OF BOYHOOD DAYS.

"Ah! happy years! once more who would not be a boy?"

A FULL score years have passed since as a happy, barefoot boy I trudged the dusty streets of that quiet little village where once again I stand—a man, with a man's thoughts and a man's ambitions. And, as I seek to roll away the mists of years, there comes a picture of the boyhood days, and for a moment I see myself again the happy youngster, who roamed the woods and fields, knowing no cares and no burdens, light-hearted and gay. But the illusion slips away as quickly as it came, and with a sigh I turn to follow the narrow, grass-grown street to where it enters the picturesque old grove, at the foot of the hill; there used to be a well-worn path across the hill when I was a boy, but it is fenced in and boarded up now, and I go around by the road. Climbing the barred gate and entering the pasture, which is a sort of a prelude to the grove, I strike the old quarry road and am presently clambering down the precipitous walls of limestone which inclose the deep, dark pool where George and Les and Arth and Milt and the rest of us used to go in swimming in the old days. It looks just the same now as it always did—cool and inviting, and I am almost inclined to strip and take a plunge. But I resist the temptation, and making my exit from the quarry by an easier route, saunter on through the grove, listening to the chatter of the saucy squirrels, and watching the flitting of the robins, jays and "high-holers" from tree to tree. The birds and squirrels seem to recognize me; at least they are very friendly, although, to tell the truth, there was a time when the ancient army musket (my first gun) compelled them to keep a respectful distance.

A few minutes' walk and, leaving the more open grove, I enter thicker timber, where the young trees and underbrush have grown wild, almost obliterating the old wagon trail which, after interminable twistings and turnings, eventually comes out near the "swimmin'-hole" at the "big creek," where we boys used to go of Saturday afternoons and catch bullheads; there were occasions, too—events of our lives then—when one of us would catch a small grass pickerel. I well recollect the first one of these pickerel caught by myself; I promptly inserted two fingers in those vicious-looking jaws to remove the hook, and—well, the result was exceedingly painful.

A cottontail jumps up and bobs off down the path in front of me as I slowly pursue the old trail, and as I chuckle lightly at bunny's needless alarm he stops for a moment and whirls around to inspect me before proceeding, probably wondering in his own amazement, "What manner of thing is this?"

The sunlight shimmers through the arched and interlacing branches of the trees, which form a canopy overhead, and the air is pure and sweet—fragrant with a thousand perfumes of the woods and fields. Presently I arrive at the creek, and here, alas! as elsewhere, things have changed; the channel of the once familiar stream has been dredged out so that it is deeper and swifter, and its mossy banks are heaped with rock and dirt not yet disguised by the hand of nature. Withal there is little here to remind me of the haunts of my youth, and with a dull sense of disappointment I turn back.

Leaving the stream by another route, I emerge, after a few minutes' brisk walk, into the country road, and soon stand beside a little mound of earth in a lonely and deserted graveyard. There are not many new graves here, and this is not one of the newest; beneath the small expanse of sod there lies all that was mortal of a true friend of my youth. The flowers have grown wild, and the stone is broken and mossy with age, yet, like a sweet incense, there still lingers in my memory a recollection of kindly councils given by one of nature's noblemen. I doff my hat in reverence, and, leaving the mound again in the keeping of the flowers, the birds and the bees, am once more in the little village.

My next visit is to the little, time-scarred brick schoolhouse, where, under the guidance of good, old-fashioned, flogging "school masters," I had the mysteries of the "three Rs" duly instilled into me, and unlimited propensities for "devilment" partially (I speak advisedly) thrashed out of me. Here it was that I took my initiative steps in journalism by composing marvelous and hair-raising accounts of bear hunts and Indian massacres; my heroes were always dead shots and more than matches mentally, morally and physically for anything in animal or human shape which stalked the earth, while—needless to say—my heroines were invariably pinks of perfection in all respects.

There is the table at which sat in awful majesty several well-remembered pedagogues, and as I walk slowly down between the rows of battered old seats, I have no trouble in finding the ones occupied by myself at different periods of my youthful schoolroom career. There is one, and on its edge I can see some well-defined marks made while trying the cutting edge of a new jack-knife; and, unless my memory fails me, that identical performance wound up with a visit to the private audience chamber in company with the teacher and a tough twig.

But I leave the schoolroom and am out in the sunshine again in the big yard, where we boys used to play "one-old-cat," "goal" and "cross-tag." And, passing on out into the dusty street and through the little village, I wave a second sad good-bye to the scenes of boyhood. As I draw the curtain, the man is a man again and no more a child, but who would not live his youth once more, even if for but a few brief hours? CLARKE HELME LOOMIS.

"Men I Have Fished With."

IN a recent issue Mr. J. S. Van Cleef kindly suggested that I write up the men I haven't fished with. That would be a task, but if I undertook it I would probably begin with Judge Van Cleef himself, as one who has a great stock of angling lore as well as of law. But the Judge made another remark, and it was the latter which started me to write this. He said, speaking of me: "It seems to me he has fished with more men than any person I ever knew of."

Let us consider that remark. I have fished every year since 1840, with the exception of 1864. That gives fifty-six years of fishing of all kinds, and up to date I have written of exactly that number of men, an average of one to each year. That is not a great number, surely, and it is safe to say that Mr. Van Cleef has fished with ten times that number. This month I fished with two men, Mr. Jeremiah Sullivan, of Conroy's, and a regimental comrade, Mr. W. A. Clark, of Newark, N. J.; and during the summer I have fished with several more.

If Mr. Van Cleef will make a mathematical calculation of "Men I Have Fished With," he may readily believe that there are more than 1,000 of them, while I think that figure would not cover half of them. I hope these figures will not appal him, for in many cases there was no incident which is remembered or worth recording. Boyhood companions were very numerous, because we fished before school and after school and at other times, often in parties of half a dozen.

My work in fishculture brought me in contact with many noted anglers whom I never would have known but for that, and it was this work which gave me three opportunities for angling in Germany, and many in other places. If it had been my good fortune to have fished with Judge Van Cleef I would take pleasure in trying to sketch him, although such a man gives no quaint salient points to portray as others, like Port. Tyler, Billy Bishop, John Atwood, Antoine Gardapee, Alvah Dunning, Ned Buntline and others of that kind afford. My most difficult work has been on Francis Endicott, Col. Charles H. Raymond, Gen. Chester A. Arthur, Mr. E. R. Wilbur, and gentlemen of that kind. FRED MATHER.

Cayuga Lake Fishing.

ITHACA, N. Y.—Probably the finest catch of fish taken from Cayuga Lake in recent years was scored Sept. 22 by Charles E. Courtney, Cornell University's famous rowing coach, assisted by a few congenial friends from Ithaca and Union Springs. The magnificent score was made in the vicinity of Union Springs, and between 8 and 11 A. M. The catch consisted of muscallonge, pike and pickerel and weighed 81lbs. The three heaviest muscallonge weighed respectively: 16, 11 and 8lbs. Charley Carr, of Union Springs, took the 16lb. one, and Coach Courtney the 11lb. and 8lb. ones. The heaviest pike was listed at 5lbs.; the heaviest pickerel at 4lbs. And to make this little paragraph a complete history of one day's angling, it may be said—Mr. Courtney will vouch for the truth of the statement—that the largest fish seen on the trip was pulled to the surface, flirted his monstrous fins at the party, shook the steel from his mouth and was lost.

The fishing was done in that part of the lake given conspicuous mention by Mr. Mather in his charming chapters, "Men I Have Fished With." That particular part of Cayuga Lake has furnished, and is now furnishing, some notably fine muscallonge, pike, pickerel and bass fishing.

Union Springs, from whence this good angling may be quickly and conveniently reached, is on the Auburn division of the Lehigh Valley R. R. Bait, boat and all the other necessary furnishings which the sportsman angler may wish for are readily obtained. Everything considered, it holds out greater inducements to lovers of the gentle art than any other point along the lake, and in respect to muscallonge, pike and pickerel fishing it cannot be surpassed, if equaled, in central New York. At the Ithaca end of the lake some exceedingly fine creels of bass are being taken opposite the Esty Lookout. Good bass fishing may be counted upon for that locality until cold weather shakes the angler's hand. The high hook from that point is credited with twenty-two small-mouth bass as an afternoon's work. M. CHILL.

Iowa Bass Waters.

CHARLES CITY, Ia., Sept. 24.—The Shellrock and Cedar rivers in this county (Floyd), have produced more and larger specimens of black bass and wall-eyed pike this summer than in a great many years. One party of three brought in from the Shellrock 180lbs. of black bass, thirty-three of them averaging 3½lbs. a piece, the largest tipping the scales at 5¼lbs.

Sept. 20 a string of seven bass, weight 28lbs., taken from the Cedar near Floyd dam, was credited to H. W. McElroy and party. Four of these splendid bass averaged 5½lbs. a piece. Two thousand pounds would be a small estimate of the weights of black bass taken from a stretch of water no longer than two miles—along the Shellrock, since the middle of July.

Since July 22, a friend and I have caught fifty-two fish, weighing 181lbs. Forty-one of them were wall-eyed pike, weighing 159lbs., the seven largest, 50½lbs. The eleven pickerel ran much smaller, from 1½ to 3lbs. The score is the result of seventeen fishing excursions half-mile from town, two hours' trolling constituting one trip.

The Mill Company are repairing their dam here, and State Fish Warden Delevan has submitted plans to the company for a new fishway through this (at present) impassable barrier. No doubt the command will be complied with, as in years gone by; but to maintain a suitable runway is more than this or most corporations care to do, or will do.

VANE SIMMONDS

Long Island Salt-Water Fishing.

THE fishing in this vicinity has been exceptionally good all season. Last season was the poorest in the memory of the old fishermen hereabouts, and the fine sport which can now be had is fully appreciated by them and the salt-water fishermen generally.

Bluefish and weakfish have been so numerous that but little attention has been paid to the smaller fish: blackfish, fluke, porgies, etc. Striped bass, which have always been scarce here, are now caught daily in large numbers.

On last Friday, John O'Neil, of Sheepshead Bay, caught seventeen striped bass in a few hours' fishing. The largest of these tipped the scales at 7½lbs., and the balance weighed from 2 to 4lbs. each. On Saturday, W. J. Fox and T. F. Kane, of Brooklyn, captured a dozen in a short time. These few fish were all caught around the jetties off the Manhattan Hotel, on Manhattan Beach. They were caught by trolling with a spoon and blood-worm.

Boats and bait can be procured at Sheepshead Bay, from whence the fishing grounds are reached after a hard row of about an hour. It is not advisable to attempt this trip in rough weather, as it is an extremely dangerous place to fish.

On Sunday, W. J. Fox and one guest, aboard the sloop Sly Fox, caught sixty-two blackfish. Blackfish, fluke and porgies are caught in large numbers by those who do not care to make the long trip to the Manhattan, while that much-sought-for and game little fighter, the snapper, has done his share in providing sport for the fisherman.

SCHOOLING THE DOG.—XIII.

IF the dog be a successful finder of birds, it is necessary that he be able to locate their exact whereabout with reasonable quickness after he has caught the scent of them. The accomplishment of pointing stanchly is only useful accordingly as the dog is able to find the birds to point. It is clear that if he cannot find he cannot point usefully.

Generally speaking, setters and pointers follow the scent of birds in two ways, that is to say by the foot-scent and the body-scent, respectively. Colloquially speaking, the act of following the birds to find their exact whereabouts, is called "locating." It is clear that however stanch a dog may be on his point, he is very deficient if he is not skillful in the useful supplementary accomplishment of "locating."

In respect to proficiency in finding, dogs vary greatly. Some dogs trust to their speed and the consequent wide area of ground they can beat out to find birds, and pointing the birds fairly well when they come across them. They may have very inferior ability in following a scent, and yet when they find the birds under the right conditions for making a good point, they may do it well and make a good showing. Such dogs are generally overrated as performers, their wide range and high speed being accepted as indicative of high general ability. Such dogs are always poor finding dogs. Nor are they so few in numbers as one might think. The field trials in particular are a favorite haven for the wide and fast ranger whose heels are his greatest power.

But if a dog is a good ranger and is also skillful in picking up light scents and following them up till he locates the birds, he is the correct thing in the way of an assistant to the gun.

Locating by following the foot-scent is far inferior to locating by following the body-scent, and in respect to either method, there are good and poor performers. Superior intelligence and high functional powers of the organ of scent will enable a dog to make a good performance. On the other hand, if a dog be intelligent and his scenting powers imperfect or dull, or if his powers of scenting are very keen and his brain dull, he will be a poor performer.

Why two dogs, intelligent and possessing good noses, should vary so much in their methods of locating, the one by foot-scent, the other by body-scent, is not known. Men vary quite as much in their choice of methods when pursuing game, hence it may be that such method as was first employed, and being persisted in, became a habit. However, whether the dog followed his birds by body-scent or foot-scent, the trainer can do very little to improve on the dog's methods, although he can do much to mar them if he be injudiciously meddlesome or faulty in what he attempts to teach.

Dogs of high intelligence, but of ordinary powers of nose, sometimes perform skillfully, their excellent reasoning powers enabling them to circumvent the birds whose habits and devices in evading pursuit they have learned to a nicety.

Some dogs, of inferior range, distinguish themselves as successful finders from their ability to successfully locate birds whose trail they have come across, and which wider rangers might pass over unheeded. Also a narrow ranging dog—one skillful in locating—may use his nose constantly, thus recognizing every game scent within his compass. Many wide ranging dogs are running fast without using their noses or giving any heed to finding birds by any intelligent attention to the task of seeking. It is not at all easy for the novice to discriminate between the dog which is using his nose and one which is not, and indeed some sportsmen of wide experience seem to be without this faculty of discrimination. They observe the wide, dashing ranger and can only see in his efforts the purpose of finding birds. Some dogs will range wide and fast on bare ground, and on the same ground day after day, for the reason that they like to run for the sake of running. The dog which is really seeking birds will soon learn what ground contains birds and what does not, if he have the opportunity to beat out the ground a few times, and he will not waste any effort on ground which he knows contains no birds. The dog which beats out a large scope of ground, using his nose constantly, all else being equal, will find more birds than will the narrow ranger, but the reader will perceive that it is possible, and often it is really the case, that a narrow ranging dog may find more birds than his wider ranging companion.

The dog which follows by foot-scent locates much slower than does the one which locates by the body-scent. The former generally carries a low nose and trails along by the tracks. Some dogs follow along very accurately and with reasonable quickness, but most dogs which locate by foot-scent do so in a more or less uncertain and dilatory manner. They follow the trail of a single bird of a bevy, lose it, pick up another, and follow it, making a little gain each time, sometimes losing the trail entirely, sometimes following it so slowly that it becomes too cold for them to follow, and thus they lose the birds; and sometimes the dog which potters and picks out the trail track by track goes slower than the birds run, so that he is unable to catch up with them and press them so that they will run to cover. The dog which follows by foot-scent locates his birds with uncertainty of their whereabouts even when he is quite near them, and he consequently makes many flushes which the more skillful dog, he which locates by the body-scent, readily avoids.

The trainer should not tolerate any pottering on the foot-scent. Some dogs will potter around and around a tuft of grass or a growth of weeds where the scent is strong, and if they do road away they return repeatedly to where the scent is strongest. The dog should be encouraged to go on and follow the running birds. The habit of pottering on scent should not be tolerated. The dog should be prevented from pottering, if the trainer can possibly prevent it.

On the other hand, if the trainer is continually meddling with a dog which is roading well, striving to have the dog do the roading in the manner in which he thinks it should be done, he may succeed in marring or spoiling the dog's method, instead of improving it. When the dog is picking out the trail and is actually going ahead, it is best to leave the matter entirely to him. No theory of the trainer as to

where the birds have run should be set up against the efforts of the dog in roading. He must learn to locate by experience, and about all the trainer can do is to present the opportunity for the dog to exercise such powers as he has.

The dog which locates by body-scent carries a high nose, that is to say he is guided by the particles of scent floating in the air, though his nose may be only at such natural height as he commonly carries it. If the scent is faint, he casts quickly to and fro till the scent becomes strong enough to follow it, when he follows it with wonderful quickness and precision directly to the birds. When he becomes proficient from experience he makes but few flushes or errors of judgment.

The dog which roads by foot-scent, depending as he does on little matters of detail, is frequently at a loss to determine which is the back track and which is not; and it not infrequently happens that he follows the back track up wind. This error the more skillful seeker by body-scent rarely makes.

All dogs are not distinctly of one class or the other. Some govern their efforts by circumstances, and can road or draw skillfully, but in a general way the distinction will be found to hold good. The dog which draws and locates by the body-scent only needs experience to perfect him.

That the novice may the better understand the distinction between trailing the birds by foot-scent or body-scent, let it be assumed for the sake of illustration that a small flock of sheep is crossing a dry plain and that we desire to follow them. They have passed near us, but we do not know where they are. We find their tracks, but they being indistinct in places and lost in others, the trail is followed thus with difficulty. It is noted, however, that there is a perceptible line of dust along the trail, and by following this at high speed the flock may be quickly overtaken. The particles of dust in this case correspond to the particles of scent in the other, and the difficulty of following the tracks by sight would correspond to the like difficulty of following them by the sense of smell. There is sufficient analogy between the two to make the matter understood by the novice.

The puzzle peg and similar contrivances have been devised to make the dog carry a high nose and thus follow the birds by their body-scent, but all mechanical means are generally useless, and therefore it is better to permit the dog to seek after such manner as his nature prompts or permits.

THE A. K. C. MEETING.

THE regular quarterly meeting of the American Kennel Club was held at its office, 55 Liberty street, New York, Sept. 23.

There was an unusually good attendance, there being twenty-two delegates present.

Vice-President Edward Brooks presided.

There were present: Associate Members (A. C. Wilmerding, H. K. Bloodgood and G. W. H. Ritchie), American Fox Terrier Club (H. H. Hunnewell, Jr.), American Scottish Terrier Club (James L. Little), Boston Terrier Club (L. A. Burritt), Butterfly Bench Show Association (Dudley E. Waters), Collie Club of America (James Watson), Columbus Fanciers' Club (J. M. Taylor), Gordon Setter Club (James B. Blossom), Irish Setter Club (G. H. Thomson), Mascoutah Kennel Club (C. F. R. Drake), Metropolitan Kennel Club (G. M. Carnochan), National Beagle Club (H. F. Schellhass), New England Kennel Club (Edward Brooks), Pointer Club of America (George Jarvis), San Francisco Kennel Club (C. B. Knocker), Southern California Kennel (C. B. Bernheimer), American Dachshunde Club (Dr. C. Motschenbacher), Pacific Fox Terrier Club (B. Waters), M. A. A. C. Rod and Gun Club (W. F. Hobbie), American Spaniel Club (Marcel A. Viti).

The reading of the minutes of the last meeting was dispensed with. The secretary's quarterly report was accepted and placed on file. The treasurer's report was as follows: Balance on hand to Jan. 1, 1897, $3,256 97. Receipts from all sources to date: $7,030.61. Total: $10,287.58. Disbursements from Jan. 1, 1897: $6,557.83. Balance on hand: $3,729.75. The report of the executive board stands as published in the *Gazette*. The stud book committee decided that giving a kennel prefix to a dog already registered is an alteration of the dog's name, such as is prohibited by the rules, and the committee decided that it was not allowable. The club confirmed this ruling. The following clubs were admitted to membership: California Collie Club, Cocker Spaniel Club of California, Pointer Club, of California, Pacific Mastiff Club, Rhode Island Kennel Club and Bull Terrier Club of America.

Applications for kennel names were granted as follows: Highland View, to George N. Clemson; Providence, to Harry J. Bascom; Trenton, to H. T. Cousins; Banner, to H. E. Smyth.

The St. Bernard Club of America, having disbanded, was dropped from the roll.

Mr. G. M. Carnochan was elected chairman of the membership committee.

The matter of the six months notice given by the Canadian Kennel Club, in respect to the cancellation of the recent agreement, was taken up and the cancellation was accepted and the six months notice was waived. It was moved that the secretary be directed to write to the Canadian executive committee informing them that they will be held responsible for penalties incurred by the Toronto Kennel Club in their catalogue, if any exist.

A communication was read from the Spaniel Club notifying the A. K. C. of the suspension of Messrs. R. Toon and George Thomas for dishonorable practices in connection with bench shows.

It was voted that the deposits of $25 which had been forfeited by such clubs as had violated the rules, should be applied to the credit of said clubs as deposit for claims for dates for shows of 1898. In case a club did not hold a show, the $25 was forfeited finally.

The type-written proceedings of the Pacific Advisory Board, concerning the St. Bernard Club, of California, vs. Payne, and the report of the Pacific Advisory Board, were referred to the Executive Board.

It was voted that "it is the sense of this meeting that where a dog is disqualified for not complying with the conditions of the class in which he is shown, that does not disqualify him for competing for specials offered in its breed to which he may be eligible."

The vice-president issued notice of suspension against Messrs. Toon and Thomas, the same to remain in force until the charges preferred against them by the American Spaniel Club can be heard by the Executive Board.

The Victoria Kennel Club was elected to membership.

The matter of showing the dog Osceola Chimmie under the name of Chimmie was referred to the Executive Board, as was also the matter of the notice of John T. Cameron, of the failure of the Kentucky Kennel Club to pay him a prize won at the club's show.

The amended classification is as follows:

1. The puppy class shall be for all dogs over six months and under twelve months of age, and no entry can be made of one under six months, or whose date of birth is unknown.

2. The novice class shall be for all dogs never having won a first prize at any recognized show, wins in the puppy classes excepted.

3. The junior class shall be for all dogs never having won four first prizes at any recognized show, wins in the puppy and novice classes excepted.

4. The senior class shall be for all dogs having won four or more first prizes at any recognized show, wins in the puppy and novice classes excepted. In entering a dog in the senior class, it is necessary to specify on the entry blank a sufficient number of first prize winnings, giving name and year of show, to entitle it to compete in such class, until such time as it has won in a senior class, after which, one senior win shall be sufficient. These wins must be published in the catalogue.

5. The free-for-all class shall be for all dogs of any age over six months. No prize winner shall be debarred from competing.

6. All shows offering cash prizes for three of the above classes, from any one breed, one of which must be the free-for-all class, shall be empowered to provide for that breed a winners' class for the dogs which have won the first prizes in said classes, and the winner of three first prizes in such winners' classes will thereby become a champion of record, and be so registered by the American Kennel Club. No class winner can be withdrawn from competition in the winners' class. No entry fee shall be charged for exhibits in the winners' class.

"A dog that has already won one or more firsts in the challenge class shall retain these wins to his credit toward becoming champion of record, the remaining qualifying wins to be gained in the winners' class."

7. The miscellaneous class shall be open to all dogs of established breeds for which no regular class has been provided in the premium list. Entries in this class must specify the breed of the exhibit. Failure to comply with this condition shall disqualify the dog and cancel the award.

XIII. In estimating the number of prizes a dog has won, no award received by it, on or after the date of closing the entries shall be counted.

The following is the amended rule concerning the cancellation of wins:

XXII. The secretary of the American Kennel Club must cancel all wins, when he has satisfied himself that these rules have been violated by the exhibitor, in the following instances:

When an entry has been made after the advertised date of closing of entries.

When a dog has not been registered or listed.

When a dog has been entered in the name of an agent only.

When a dog has been pronounced deaf by competent authority.

When a puppy is entered, being under six months of age, or as date of birth unknown.

When a dog is entered in the novice class, having previously won a first prize.

When a dog is entered in the junior class, having previously won four or more first prizes.

When a dog is entered in the senior class, having won less than four first prizes.

When a dog is entered in the senior class, and the necessary first wins are not specified as to place and year of such wins.

When a dog is entered in the miscellaneous class and the breed is not specified or recognized.

When a dog, by authority of its owner, is led into the judging ring by, or is in charge of, a person not in good standing.

When a dog is entered by an owner or his agent, if either is not in good standing.

Alabama Field Trials Club.

THE Alabama Field Trials Club held a meeting on the evening of Sept. 1. There were eleven members present, and the following were elected to membership: L. Hardage, Madison; Harris Toney, Swancott; C. L. Smallwood, Tuskaloosa; William H. Hundley, Greenbrier, and Howard Smith and F. M. Stich, C. E. Meglemery, J. T. D. May and Charlie Bower, Birmingham. The date for the next trials is Feb. 8, and they will be run on the club's preserve at Madison, Ala. Entries to Derby and All-Age Stakes close on Jan. 8. Entrance $2.50, and $2.50 additional to start. A cup valued at $50 was donated by members of the club. This is a trophy for competition in the club's new stake, the Alabama Champion Stake. Dogs owned in Alabama are eligible, regardless of age or previous winnings. Entrance free. A silver cup, the gift of Mr. John Rosentihl, will be awarded to the best puppy born in 1897. The puppies must be handled by owners or other amateurs. The name of owner or winner will be engraved on the cup. Annual dues were reduced from $5 to $2.50, and the initiation fee was abolished. Madison is located on the Memphis & Charleston Railroad, midway between Decatur and Huntsville. Both trains from the south on Louisville & Nashville Railroad make close connection with the Memphis & Charleston going and coming from Madison. The grounds (over 10,000 acres) are well stocked with birds, very open, level and in every way unsurpassed for field trial purposes. Rates will be $1.50 per day, including noon lunch on the trial grounds. Saddle horses $1 per day; team and driver $2 per day. Any inquiry addressed to Mr. F. G. Hertzler, Madison, Ala., in regard to grounds, birds, accommodations, horses, teams, etc., will have prompt attention.

The following rules of the club are commended to the attention of those who contemplate entering dogs: Pointers and setters will run together. Dogs eligible must be the property of amateurs residing in Alabama. Dogs having won first place (in Derby or All-Age Stake) at any recognized field trials prior to the running of these trials, or whose owner may have handled for money in public field trials, are barred. All dogs to be handled by owner or other amateur, who must be a resident of Alabama.

Death of Thomas Stone.

CONCERNING the death of Thomas Stone, Mr. Thomas Johnson writes feelingly to us as follows:

"WINNIPEG, Sept. 20.—It is only a short time ago I had to write you of the death of the patron of the Northwestern Field Trials Club, Mr. A. P. Heywood-Lonsdale, and now I am pained to tell you that he who had been our president for the past five years passed away yesterday.

"To me this is a most affecting loss. Born within a few miles of each other, and near the same age, meeting again years after parting, thousands of miles from our native land, and both adopting the great Canadian Northwest as our future home, we had tastes in common, and more pronounced in everything appertaining to manly sports. Stone was a man in millions, fully 6ft. tall, weighing over 200lbs., a veritable gladiator and a perfect picture of physical manhood. He held 'championships' for all kinds of feats of strength and agility, and was a great lover of dogs, having bred and owned some of the most noted greyhounds England ever had, besides having at different times many notable pointers and setters.

"He was a genial, whole-souled, sympathetic fellow; brave to a fault, manly before all men, yet endowed with the fine sensibilities of a woman. We were friends in the truest sense the word implies; so you will conceive that the loss to our club is great, but to myself immeasurably greater."

POINTS AND FLUSHES.

In respect to the rabbit incident at Liverpool, which afforded grounds for the prosecution of Capt. Hargreaves and his kennel man Hudson by the R. S. P. C. A., Hudson was fined 10s. and costs, Capt. Hargeaves £3 fine and £5 4s. 6d. costs. The offense consisted in using a rabbit in the show ring to attract the attention of Capt. Hargreaves's St. Bernards. A string was tied to the rabbit's hindleg, by which it was pulled back after being thrown out into the ring. The magistrate ruled that to exhibit the rabbit in that manner was an act of cruelty, but the fine was imposed for the cruelty inflicted by tying a string to the rabbit and jerking it back.

We are informed by Mr. L. O. Seidel, secretary, that the Central Beagle Club's trials will be held at Rice's Landing, Pa.

Mr. G. V. Young, secretary-treasurer, writes us as follows: "The third annual meet of the Dixie Red Fox Club, to be held at Waverly, Miss., Nov. 1, is postponed until Nov. 29, owing to the uncertainty of frost and the quarantine regulations."

ANSWERS TO CORRESPONDENTS.

MASSACHUSETTS, Danvers, Mass.—My pointer bitch, six years old, was bred once, four years ago. About sixty days after she came in season. She is very restless, as if she was going to have puppies. Her teats are inflamed with more or less milk. She goes poking around trying to crawl under doorsteps, and is very uneasy. Can you recommend any relief? Ans. First give a purgative, then half a grain of the extract of belladona three times a day. Bathe the teats with hot water morning and evening, and if necessary milk them sufficiently to relieve the pressure.

Yachting.

YACHT RACING FIXTURES 1897.

THE following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.

Races of the Sound Y. R. U. are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

OCTOBER.

9. Miramichi, Gould cup, Chatham, N. B.
9-10. Cor. San Francisco, cruise, Corinthian Cove, San Francisco.
16. Cor. San Francisco, closing day, San Francisco.
17. Cor. San Francisco squadron, cruise, San Franc'sco.

"Yacht Architecture."

DIXON KEMP.

WITH the third edition of "Yacht Architecture," the series of standard works for which yachtsmen the world over are indebted to Mr. Dixon Kemp, may be said to have reached its majority; this book, just issued, marking the twenty-first year since the publication of the introductory volume. The first book, the large quarto, "Yacht Designing," came at an important time, when the professional yacht designer was just making a place for himself in England and assuming the work previously delegated to the yacht builder. Mr. Kemp's clear and thorough presentation of the principles of designing, illustrated by the designs, then a comparative rarity, of successful yachts, did much to interest and to instruct yachtsmen, and to foster the study of designing both by builders and amateurs.

Two years later, in 1878, he launched another book, "Yacht and Boat Sailing," an octavo volume of moderate thickness, but treating most comprehensively the subjects of practical seamanship and yacht racing, and describing in detail small craft of all kinds from the canoe to the 10-tonner. From that date onward the larger size was abandoned, the successive editions of "Yacht and Boat Sailing" down to the current one (eighth) have been of the same nominal size, though greatly increased in thickness.

When the time came for a new edition of "Yacht Designing" in 1885, the title was changed to the more comprehensive one of "Yacht Architecture," and the size was changed to that of the later work. The successive editions of these two works, 11×7in. in height and breadth, fill a length of 32in. on a book shelf, and "Yacht and Boat Sailing" in its eighth edition and "Yacht Architecture" in its third, each measures 4½in. in thickness. While there is much in each volume relating to the principles of both designing and handling that is practically unchanged from year to year, those parts relating to practice, the designs of yachts, are constantly changing, old designs being of necessity dropped from each successive edition to make room for new ones.

While there are occasional craft, such as the once-famous Kriemhilda and Vanessa and the more modern Minerva, which will always stand out as models of naval architecture, the rapid changes of rule and fashion that serve to make a new boat famous in her first year, now hurry her out of the way after a couple of seasons to make room for some greater novelty. In this manner both books are constantly changing, new designs taking the place of old.

The care and thoroughness which made the second edition of "Yacht Architecture" so valuable have left but little room for improvement in that part relating to the principles of designing. On this subject, Mr. Kemp says in his preface: "In publishing the first edition of 'Yacht Architecture,' in 1885, I was able to state that the knowledge of the scientific principles on which yacht designing is based had been considerably extended since the publication of my large work, 'Yacht Designing,' in 1876. This can also be said of the period between 1885 and 1897, and, no doubt, the present generation of yachtsmen and those interested in yachts have a much more exact knowledge of the science of naval architecture than their predecessors had, owing to their having studied the numerous works published on the subject. It cannot, however, be claimed that any great discovery has been made since 1887 which has thrown new light on the science; notwithstanding, yacht designing and constructing have undergone great development in all their branches."

As they now stand, the chapters on Displacement, Buoyancy, Stability, Lateral Resistance, Sail-carrying Power, Steering, Resistance, etc., present to the student of yacht designing the latest knowledge on these subjects, and combine in a compact and convenient form a mass of useful information that otherwise could only be had by reference to many authorities that are not readily accessible.

While the theoretical portion of the work has been improved and extended, the principal additions are in what may be called the practical portion, the designs. The already extensive collection in the former edition has been materially extended, among the additions being such well-known racers as Isolde, the Fife 64ft. l.r. cutter, Lord Dunraven's Audrey, Stephanie, Kismet, Edie, Tatters, Wenonah, Dusky Queen, Norman, Heartsease and Anetta. Most of these, of course, are of the fin-keel type, pure racing machines, with the most limited accommodation and headroom, though with rather less draft than similar American craft.

That portion of the work relating to power propulsion is now very complete, covering the latest developments in engines, boilers and propellers, as well as the hulls. Cruising craft of different sizes and rigs also occupy a prominent place. One of the most valuable, as well as the most interesting, features of the work is the large collection of plates and cuts descriptive of yacht construction and fittings. This includes some large colored plates, in which every detail is clearly shown. Wood, composite and steel construction are fully illustrated by sections of well-known yachts. A special

chapter on "Yacht Architecture in Germany" describes the great progress made in recent years; designs of some of the later German yachts are also given.

Whether dealing with the more abstruse theories of design or the every-day methods of the shipyard and boat shop, Mr. Kemp's treatment of the subject is always direct and practical, and the book is quite as well adapted to the amateur and the working builder as to those of greater experience and education.

Numbered Names.

As a matter of legal right a very wide latitude must certainly be allowed to the owner of a yacht in naming his craft; a name may be as trite, commonplace and meaningless as many really are, and yet, provided it is not already in use, it is in one sense no one's business but the owner's. At the same time it must be admitted that as a matter of general interest and the common good, a yachtsman is under some public obligations in naming his new yacht. Of course, the first questions are those of the moral right and of good taste, an owner who has selected for his new yacht a new name or one not in present use, has a moral right to its sole and undisputed use, and may justly resent the subsequent appropriation of the name by a fellow yachtsman, though such a practice is by no means unknown. Similarly, an owner who has made famous such a name as Puritan, Volunteer, Vigilant or Defender, may object to having it bestowed promiscuously on freaks, cruising tubs, hay barges, tugboats and similar craft. The first owner of a name has a moral right to its sole use, at least within the area of the vessel's service.

If the owner has certain rights he at the same time is under certain responsibilities in selecting a name. In the case of a racing yacht, at least, she does not belong to him alone, but to his clubs and to the racing system of which they are a part. The least he can do is to select a name which will fully and definitely identify the yacht in the minds of yachtsmen. The doubling up of names, with or without numerals, is a nuisance to all parties, especially to those concerned in the management of races. The *Field* comments as follows on the adontion of the custom in this country, something which as yet has not gone very far:

It will be noted that the British fashion of putting Roman numerals after a yacht's name, to denote the number an owner has built of the same name, has taken on over the other side of the water. We believe it was introduced in this country in connection with the series of Dragons built by Mr. F. C. Hill about ten years ago. The fashion has now been introduced into steam yachting, and although it may be only an innocent sort of whim in the case of small yachts, it is likely to cause confusion in delivering letters to the owners of cruising yachts. The name of the original yacht can be changed, of course, but there does not appear to be any reason left for adding II., III. or IV., as the case may be, to the yachts which follow. Years ago it was a common practice for an owner to build a succession of yachts of the same name, and among these many will remember Capt. Whitbread's Queens, Lord Alfred Paget's Violets, Mr. Kirby's Violets, etc. We think most of these retained their original names to the last. Indeed, the rage for changing the names of yachts is of quite recent origin, and, of course, the practice has grown because yachts now so frequently change hands. In the early days of yachting an owner generally stuck to a vessel he had built as long as he lived, but owners come and go now faster than the moon changes.

The Dragon series is a case in point; these three yachts cover a most interesting stage of development, the production of a new and admirable type on the first adoption of the old rating rule, and the changes which paved the way to the fin-keel. Each of the three was a very successful boat, almost as notable and interesting as their sister ships from Mr. Will Fife's board, Clara and Minerva; but while the history and identity of the latter is clear and distinct, the identities of Dragon I., Dragon II., Dragon III., are completely mixed, and further complication follows the subsequent changes of name to Molly and Idalia. The same is true of the three Valkyries and five Spruces; the histories and the identities of the various boats, interesting as they are, must always be in an inextricable tangle, except to their original owners.

There is a good deal to be thankful for, so far as American yachting history is concerned, that there is only one America, one Mischief, one Puritan, Mayflower, Volunteer, Vigilant and Defender.

The Larchmont Matches.

THE first two of the series of races for the 51ft. and 36ft. classes for special cups offered by Com. Postley, of the Larchmont Y. C. were sailed last week, Syce, in the 51ft. class, and Acushla, in the 36ft. class, winning both races, so that a third was not necessary. On Sept. 22 there was a fresh nor'easter blowing, with of course a lively sea on the Sound. The first leg of the course was the three miles to the Hempstead mark, then four miles to windward to the east mark in the Sound, and four miles to the line. The starters were: Syce, sailed by her owner, F. M. Hoyt; Vencedor, sailed by J. F. Lovejoy, and the 36-footers Acushla, Wilmer Hanan; Anoatok, Oswald Sanderson, and Vorant II. With Mr Sanderson were Com. Jarvis, of the Royal Canadian Y. C., and Mr. N. D. Lawton. Colonia was under way, as well as the steam yacht Sagamore. The 51-footers started at 12:05, and the 36-footers at 12:10. Vencedor was over within 15s., Syce being a little later, but to windward. She carried no topsail, but a baby jibtopsail. The 36-footers made a smart and even start, Acushla carrying whole sail and the others each having a single reef. Syce very soon led Vencedor in the reaching, and Anoatok passed Acushla to windward just after the two came on the wind at the Hempstead mark; but Acushla regained her lead. The mark was timed:

Syce	1 07 34	Acushla	1 24 23
Vencedor	1 16 45	Vorant II.	1 40 00
Anoatok	1 23 36		

With spinakers to starboard they ran to the line, and the first round was timed:

Syce	1 40 03	Anoatok	1 58 55
Vencedor	1 49 40	Acushla	1 59 05
Vorant	Withdrew.		

The reach across to Hempstead showed a hot fight between Acushla and Anoatok, but when on the wind again the former gained very rapidly. The times at the East mark were:

Syce	2 40 35	Acushla	3 45 50
Vencedor	3 02 03	Anoatok	3 18 29

Spinakers were set again and they ran to the finish, being timed:

Syce	3 11 03	Acushla	3 15 30
Vencedor	3 26 15	Anoatok	3 18 29

The final times were:

	Length.	Elapsed.	Corrected.
51FT. CLASS.			
Syce, F. M. Hoyt	50.86	3 06 06	3 06 06
Vencedor, H. M. Gillig	47.64	3 21 15	3 17 28
36FT. CLASS.			
Acushla, Hanan Brothers	34.04	3 40 28	3 40 23
Anoatok, O. Sanderson	33.97	3 45 24	. .. ..
Vorant II., G. G. Tyson	34.00	Did not finish.	

The preparatory signal for the second race was given at noon on Sept. 25 with a light S.S.W. wind and smooth water, the threatened cyclone—of which a taste was met with on Wednesday—having given place to fine warm weather. A good start was made by all the boats, the signals being at 12:05 and 12:10. Vencedor and Acushla, as on Wednesday, led their classes. The wind was so light that the 36ft. class sailed but one round, the 51-footers sailing two. The times of the rounds were:

	First Mark.	Second Mark.	Home Mark.	Finish.
Syce	12 44 09	2 34 46	2 59 46	5 38 00
Vencedor	12 46 16	3 14 27	3 41 49	Not timed.
Acushla	12 51 17	2 57 52	3 25 08	. .. ..
Anoatok	12 54 11	3 01 59	3 36 44	. .. ..
Vorant II	12 54 39	3 13 08	3 42 26	. .. ..

	Length.	Elapsed.
51FT CLASS.		
Syce, F. M. Hoyt	50.86	5 33 00
Vencedor, H. M. Gillig	47.67	Not timed.
36FT. CLASS.		
Acushla, W. Hanan	34.04	3 15 08
Anoatok, O. Sanderson	33.97	3 26 44
Vorant II., G. G. Tyson	34.00	3 32 26

Syce and Acushla win the cups.

Western Yachts.

FOX LAKE Y. C.

CHICAGO, Ill., Sept. 24.—The final race was sailed Sept. 19 between Mabelle, winning boat of the Fox Lake (Ill.) fleet, and El Capitan the season's winner in the regattas of the Delavan Lake Y. C., of Wisconsin, the event coming off on Delavan waters. Rough weather was met both days of the sailing, and the last contest was finished in a gale not much short of that which tore the deck off El Capitan the day previous. Mabelle was well sailed, and proved a puzzle for the Delavanites, who saw her make the best time ever sailed around the Delavan course. Mabelle had never previously equalled her record of Sept. 19, which broke the local record one minute flat. El Capitan was sailed by Capt. Philo King, Mabelle by Capt. Frank L. Grannis, whose crew was Messrs. R. Douglas, O. Ware, W. Bower, C. Murray and Dr. Flegler. Mabelle belongs to Bald Eagle Y. C., of Fox Lake. This probably will close the season of interlake racing. Time in the final race was: Mabelle, 1.04.00; El Capitan, 1.17 00.

COLUMBIA Y. C. WATER FETE.

The Columbia Y. C., of Chicago, held a carnival last week, all the fleet turning out decorated, the following boats being in the harbor about the club boat-house: Toxteth, Com. Baker; Siren, G. W. Pearce; Charlotte R., C. M. Smalley; Weasel, William Hennessy; Genevieve, Robert Haves; Wizard, J. Ingersoll; Atalanta, Robert Young; R., F. Porter; Skate, Wightman; Blade, Com. Ramsdell; Allie T., W. H. Thompson; Pathfinder, Com. F. W. Morgan, and Vixen, Com. Bowles.

The prizes for the open regatta were distributed to the winners. The schooner Mistral received the Steffens cup, and the Lawrence and Kimbark schooner cup. Siren got the Hennig cup, and Microbe the Farwell cup, both time prizes. The Hyman-Berg shield went to Peri, and other cups for the race went to Siren, Blade and Microbe.

On Sept. 23 Weasel and Microbe, of Columbia Y. C., indulged in a little private contest, sailing over the course from Van Buren street gap in the Government pier to the Chicago avenue Waterworks Crib and return. The boats got off to a good start, Weasel rounding the Crib first and running home winner by 10m.; time, 1:47:00. Weasel is owned by W. H. Hennessey, Microbe by Rosing & Thorn.

E. HOUGH.

The Proposed National Association.

THE following circular has been sent out this week, accompanied by the proposed articles of association and sailing rules. There is every prospect that the end of this month will witness the birth of a strong and permanent union of American yacht clubs:

To the Yacht Associations and Clubs of the United States and Canada:

Pursuant to a resolution adopted at a conference of the representatives of the yacht associations and clubs of the United States and Canada, held at the Fifth Avenue Hotel, in the city of New York, on Saturday, May 1, 1897, we, the undersigned, a committee appointed by the chairman of the said conference, hereby give you notice in accordance with said resolution, that we have prepared articles of association and sailing rules, omitting from the latter the measurement and classification rules, and other rules, dependent thereon, copies of which are hereto annexed and which we forward to you herewith for the purpose specified in said resolution of having same submitted to the different clubs represented at said meeting and such other clubs as it has been deemed advisable by this committee to furnish with copies of such articles of association and racing rules, in order and for the purpose of having the same reported back to this committee and having such associations and clubs appoint and instruct delegates as to the action or position they desire to take with respect to the same, at a meeting, which we hereby notify you, will be held at the Fifth Avenue Hotel, in the city of New York, on Saturday, Oct. 30, 1897, at 3 o'clock in the afternoon; which meeting we hereby call for the purpose specified in and as directed by said resolution.

NEWBURY D. LAWTON,
AEMELIUS JARVIS,
LOUIS M. CLARK,
ALANSON J. PRIME,
JAMES M. MACDONOUGH,
OSWALD SANDERSON,
FRANK BOWNE JONES,
} *Special Committee.*

Dated Sept. 25, 1897.

The Massachusetts Y. R. A. Meeting.

THE Massachusetts Y. R. A. has a very wise provision for a meeting in October for the consideration and adoption of amendments to the rules; in good season for the early placing of orders for new boats. Secretary Bliss has sent out the following notice to the delegates:

The October meeting of this Association will be called on Thursday, Oct. 21, 1897 (notice of which will be sent you later), at which meeting amendments to the by-laws and racing rules should be made; and as our rules require that "the notice of such meeting shall have contained the proposed amendments in full," it will be necessary for you to have such amendments in the hands of the secretary, to be inserted in notice, at least one week before the meeting.

The aim of this Association is to improve and perfect its rules, and each delegate should present this matter to his club at its next regular meeting, and also confer personally with racing men with regard to any changes which might be beneficial to yacht racing.

Prominent among ideas which have been advanced are the increasing of the class limits 1ft.; to establish 15ft. and 35ft. classes; to subdivide the third class into cabin and open boats, and as to postponing the abolishment of time allowance, etc., etc., all of which should be presented to your club, and you should come to the meeting prepared to vote as your club may have instructed you.

This is businesslike and very much to the point; if owners, delegates and clubs will do their part in suggesting and discussing proposals for the improvement of the rules, much may be accomplished; and that in time to be utilized next season.

Winning Flags.

ONE excellent feature of modern racing is the growing importance of continuous records as compared with individual prizes; the competition in many cases being out of all proportion to the intrinsic value of the prizes. This is particularly the case in the different racing associations, such as the Lake Y. R. A. and the Massachusetts Y. R. A.; the cash prizes are generally small, but every yacht in the fleet is racing for a place on the official record. The Lake Y. R. A. has for some years past awarded flags of different colors for first, second and third places in its races; the competition for these flags being far keener than it would be for such cash prizes as the association could afford. The Massachusetts Y. R. A. preserves an official record of every race and every yacht, from which is compiled the official average. At the end of the season a bronze medal and a pennant are given to the yacht having the highest percentage in each class, and a diploma is given to the yacht winning the highest percentage in all the classes. At the end of the season there is published in pamphlet form the official records of every race and of every class, showing the relative work of each yacht in the fleet. In most of the races the prizes are in cash, and small in amount, but there is a strong and healthy rivalry for a place on the record.

In other localities, where the matter has not yet been reduced to a system, the English custom of flying a winning flag, the owner's burgee, for each race, is becoming more popular every year.

It is unfortunately the case that very valuable prizes do not attract entries, as instanced this year in the case of the Goelet cups and the Larchmont schooner cup; and, on the other hand, where there is really a spirit of rivalry between owners, as in the 30ft. class and the Boston classes, there is good racing for comparatively small prizes in cash or cups. With this evidence before them, it is to the interest of the associations and clubs to encourage as far as possible the fashion of racing for records.

One essential of this system is the flying of winning flags as an evidence of victory; and this usage should be encouraged, but at the same time it must be regulated by laws, or it will soon fall a victim of abuse. *The Yachtsman*, in a late issue, discusses the English usage as follows:

From time to time the custom of flying winning flags for prizes other than firsts has engaged attention, but no definite rule or recommendation has been made by the Yacht Racing Association on the subject. This seems a pity, for winning flags are the only emblems whereby the general public can be made aware of the successes of a yacht, and it is certainly delusive to find one craft flying say twenty flags, of which perhaps only two or three represent firsts, while another in the same class may boast only fifteen, ten of which may be for firsts. It is now the custom, too, to fly flags for third prizes; and, no doubt, where a fourth prize is given, it would be held to carry a flag with it. A few years ago this custom did not exist, and we think that some steps should be taken to alter it, for it is calculated to rob a time-honored privilege of much of its value.

Suggestions have been made that flags denoting second and third prizes should be of different shapes from that of the firsts, or that the different values of the flags should be denoted by separating each lot by some fancy flag. This certainly would be better than the present indiscriminate habit of flying all together, and perhaps it would be well to allow no yacht to fly a flag for a second prize unless there were at least five starters in a race, nor a third prize flag unless there were seven. If the Y. R. A. intends to undertake the registration of racing flags, it might also at the same time consider this question.

There are in the above several suggestions which are worthy of the attention of American associations and clubs, as it is desirable that every encouragement be given to this inexpensive and valuable stimulus to yacht racing. Should the proposed national association become a reality this fall, as we earnestly hope it may, it cannot do better than to take up at once the entire flag question, assuming the task of formally registering racing flags; in fact, all private signals, even of cruising owners, and of establishing a definite system of recording prize positions in races and indicating them by means of winning flags. There has been for some time a demand on the part of yachtsmen for some official registration of private signals, but this is hardly a matter that the Government can be expected to burden itself with, and none of the existing associations or clubs possess the requisite jurisdiction. Such work, however, is well within the functions of a national association.

The same is true of records and winning flags, while some associations have attempted to deal with the matter, one uniform system, such as can best be established and maintained by a national union of all associations and clubs, will be in every way superior. It is hardly necessary now to discuss the details, but there should be some standard symbols for first, second and third place; and some limitations, such as suggested by *The Yachtsman*, of a minimum number of starters as requisite to the award of such places.

The Speed of Yachts.

THE present year has witnessed some exceptionally high speeds on the part of small yachts in this country, both on salt and fresh water. The following observations on the speed of large yachts are contributed to the *Field* by Mrs. Wynham Fitzherbert, of the Royal Dorset Y. C.:

I note that in referring to the fast sailed race between Aurora and Bona round the Shambles Lightship, at the Royal Dorset Y. C. regatta, on Aug. 21, mention is made of the memorable duel between Satanita and Britannia in 1894 over the same course. On comparing the speeds of the yachts on the two occasions they prove to be very similar. In 1894 Satanita covered the 31 miles in 2h. 32m. 35s., and Britannia in 2h. 37m. 8s., while at the late regatta Meteor took 2h. 35m. 45s.; Aurora 2h. 35m. 50s.; and Bona 2h. 44m. 35s. to complete the same course. Satanita's rate of sailing works out at 12.19 knots per hour; Meteor's at 11.94 knots, Aurora's at 11.93 knots, Britannia's at 11.82 knots, and Sona's at 11.30 knots. In 1894 the sea was worse, but the wind was not quite so heavy; Satanita and Britannia carrying jibheaders over reefed mainsails, whereas this year the yachts with housed topmasts had all they could stagger under.

In 1894, the wind being E. by N., the yachts could not fetch No. 1 markboat, one and a quarter miles from the committee boat, but had to make two tacks in the first round and one tack in the second round to weather it, so that more water was sailed through on the occasion of the 1894 race than in the last. Although a high rate of speed is attained by large yachts while racing in a strong wind, races in which this point of sailing alone is exemplified, are unsatisfactory as tests of all round capabilities, and it is unfortunate that the formation of Weymouth Bay is such as to preclude the outside markboats from remaining safely in position when a heavy blow occurs from any point between S.S.W. and E.N.E. Sailing committees of clubs situated on the landlocked waters of the Solent are luckily spared the markboat anxiety, for well-known buoys and lightships furnish them with all they require, whatever may be the state of the weather. Less fortunately situated committes are liable to be confronted at the last minute with the necessity of substituting an inferior course for that intended, owing to the sudden collapse of one of the necessary turning points.

Massachusetts Y. R. A., 1897.

THE Massachusetts Yacht Racing Association has just closed a remarkably successful season, especially considering the condition of business and that this is but the second year of the Association. The standing of the leading yachts has been very thoroughly summed up by the Boston *Globe*, as follows:

With a view to comparing the work of the boats in the several Y. R. A. classes to somewhat better advantage than can be done with the table of Association averages, the *Globe* presents a series of "cross" tables, showing how many times each boat has beaten or has been beaten by every other boat in its class.

Similar tables have been presented in the knockabout class for several years past, and also in the year in which the Alpha won the championship in the 21ft. class; but this is the first attempt to give them in all the Association classes. It is believed that they will be of as much interest as the tables previously published, and that, taken in connection with the tables of Association averages, they will show the relative standing as well as the records of the racing boats better than in any other way. The knockabout table will be published later. No table is given in the second open class for the reason that Hoodlum's win has been so pronounced as to make the table of much less interest than the others.

The tables are not strictly from official figures, since formal reports of some of the races have not yet reached Sec'y Bliss, but they are compiled from the best available sources, and are not likely to be materially changed by later reports or the settlement of a few protests still pending. Errors are likely to creep into even the most carefully prepared tables, but the writer craves the indulgence of the yachtsmen in that respect, and trusts that if errors are found his attention will be called to them, and that they will be considered as purely clerical and not from lack of good intention to do justice to every boat making a record for itself in the season's racing.

Only those boats which have secured a place in the Association average tables are given a place in the "cross" tables, except in the case of Beatrice in the first class, where several prizes were lost through failure to have an official measurement within the required time. The work of the boat has, however, been so interesting as compared with her old competitors that she is included in this table, though not officially appearing as a prize winner in the Association records.

In the third class Allison, Yahoo and Nancy Hanks are dropping from the "cross" table, because their racing has had little effect on the standing of the other boats. All these have, with one exception, been beaten by all the other boats in their respective series, and no change in the result would be made by including them, save in the case of Cleopatra, when the win of the series by Yahoo would put Cleopatra below Vamoose. This has been discounted in the table, however, and the tie broken which would otherwise exist.

In the "cross" tables a boat's wins over other boats are shown in the horizontal lines, and her losses to other boats in the vertical ones. Read across for wins and down for losses.

It is a notable fact in comparing the "cross" with the Association average tables, that in no case is the place of first boat in the Association table changed by the results in the other. Several changes are, however, found in the ranking of the other boats, and they are interesting ones, as showing that room for improvement exists in the Y. R. A. method of percentages. In the "cross" tables the boats are ranked on the number of series lost and won. In case of tie on numbers, the winning or losing of the series with each other is the basis of decision.

In the first class under this system Emma C. and Little Peter change places, the former having won five out of the seven series, while Little Peter has won but four. Harbinger also goes above Asahi and Elfreda, while Elfreda goes above Asahi. The table in the first class is as follows:

FIRST CLASS.

	Ida J.	Emma C.	Little Peter.	Addie.	Harbinger.	Elfreda.	Asahi.	Beatrice.
Ida J.	..	6	5	3	7	7	2	8
Emma C.	2	..	5	1	6	6	2	9
Little Peter.	3	3	..	6	3	9	6	10
Addie	1	3	1	..	3	2	1	7
Harbinger.	0	1	3	0	..	5	0	4
Elfreda	0	2	3	1	1	..	4	4
Asahi	0	0	1	1	1	2	..	1
Beatrice	2	2	2	0	3	3	1	..

The table in the second cabin class shows no change in the position of the four leading boats. Harolde, however, steps above Yankee, and Whisper above both of them. Muriel's win of every series is by such a good margin as to leave no doubt of her championship. The table is as follows:

SECOND CABIN CLASS.

	Muriel.	Privateer.	Rex.	Nettie.	Whisper.	Harolde.	Yankee.
Muriel	..	10	6	8	5	1	4
Privateer	6	..	6	10	6	5	6
Rex	4	5	..	5	5	1	4
Nettie	2	2	3	..	3	2	2
Whisper	1	1	2	1	..	1	3
Harolde	0	0	0	0	0	..	1
Yankee	2	1	3	2	1	0	..

In the third class, a very interesting comparison can be made. The order of the boats is materially changed, except in the case of Rooster, which wins six out of her series, and ties the one with Al Anka. What would otherwise be a tie between Vamoose and Cleopatra, their own series with each other being also a tie, is broken by Yahoo's win over Cleopatra previously mentioned. The table:

THIRD CLASS.

	Rooster.	Al Anka.	Arab III.	Wrinkle.	Vamoose.	Cleopatra.	Omeme.	Tacoma.
Rooster	..	1	10	13	2	11	5	6
Al Anka	1	..	3	4	2	2	3	1
Arab III	3	2	..	10	2	7	5	5
Wrinkle	2	0	7	..	3	9	7	5
Vamoose	1	2	6	4	..	3	3	1
Cleopatra	0	2	6	5	3	..	3	1
Omeme	1	3	7	5	4	5	..	1
Tacoma	1	0	4	3	2	2	6	..

In the fourth class there is no change in the positions of the leaders. Vitesse wins all of her series, and Fantasy all but one. Both have done excellent work, and are a credit to their owners, who in both cases are the designers and builders as well as owners. The table:

FOURTH CLASS.

	Vitesse.	Fantasy.	Alpine.	Circe.	Gnome	Glide.	Ripple
Vitesse	..	14	12	9	4	10	8
Fantasy	5	..	9	10	5	9	10
Alpine	4	8	..	6	5	7	8
Circe	2	4	5	..	3	4	3
Gnome	2	0	1	2	..	2	2
Glide	0	2	1	2	1	..	3
Ripple	1	1	1	1	2	1	..

The foregoing tables, taken in connection with the Y. R. A. tables given elsewhere, show that the championships have been fairly won in each class under any possible system of figuring. The Association is to be congratulated on the fact, as well as the owners of the boats themselves. Here's to the health of the winners, and a wish for better luck next season to the losers.

The following tables of the racing percentages and averages of the boats of the Y. R. A. fleet are from the official figures of Sec'y Bliss, and are subject to change only in the decisions on several protests now pending before the Association's executive committee.

FIRST CLASS.

	Tl. pct.	Start.	1st.	2d.	3d.	Ass'n av.
Ida J.	800	12	6	4	..	.662/3
Little Peter	1400	24	11	5	2	.581/3
Emma C.	600	13	3	4	4	.462/13
Addie	450	9	2	4	2	.45

Jacobin	50	13	..	1	..	.0311/13

Niagara II.

ON April 5 Howard Gould, owner of Niagara, signed the contract for the new steam yacht which had been talked of during the past winter, the builders being the Harlan & Hollingsworth Co., of Wilmington, Del. The new yacht, which will be named Niagara II., will be of steel, bark-rigged, with twin screws, and is to be delivered by April 15, 1898, the contract speed being 14 knots. The dimensions are: Length over all, 270ft; l.w.l., 245ft.; beam, 36ft.; depth of hold from spar deck, 28ft.; depth of hold from main deck, 20ft.; freeboard amidship, 13ft; at bow, 18ft.; tonnage, 1,900. The hull will have a double bottom and three decks, and the vessel will be built to the requirements of Lloyds and the American Association. The engines will be triple expansion, cylinders 18, 28 and 45×30in., with three Scotch boilers of 160lbs. pressure. Capt. W. G. Shackford, formerly of the Pacific Mail Steamship Co., who has been for some years in command of the steam yacht Atalanta, will have charge of the construction and will command the yacht. The arrangement of the deck and interior is described as follows: On the upper or spar deck, there will be a continuous house of steel 100ft. long by 16ft. wide. This will be covered with mahogany or teak.

In the forward part of this house will be the chart room, which will contain duplicate steam steering gear to be used in bad weather; and connecting with this room are the captain's quarters, which are spacious and very comfortable. The social hall, 32ft. by the full width of the house, follows aft, this to contain settees or seats, as may be determined upon; while adjoining will be the smoking room. 12×16ft; a passageway from it along the engine space on the port side, which is to be glass-inclosed, leads to Mr. Gould's room on this deck, of the same size as the smoking room. From the owner's quarters the observation room, which is in the extreme after-end of the deck house, is reached. This room is believed to be new in steam yachts, and it will be used by the Niagara's people particularly in rough weather. The sides are to be of glass, and the ends rounded, but will not meet, the after entrance being hung with heavy curtains, while the roof of the house will extend a short distance over it and be neatly finished. From the after end of the deck house to the taffrail there is a space of 45ft. The bridge, from which the yacht will be steered except in boisterous weather, will extend from the forward end of the chart room, aft to the smoke stack. The woods with which to finish the interior of the house and fittings, are matters for future consideration. None of the crew will ever be found on the upper deck, except when on duty. From both the forward and after ends of the social hall will be broad stairways, the former leading to the staterooms on the main deck—all accommodations being forward—and the latter to the library, which opens into the dining saloon.

The library is on the starboard side of the yacht, 22×12ft. The after end of this room is fitted as a large armory, and will be inclosed with glass. The dining room is 24ft. long by 36ft. wide, the full width of the vessel, and with the other handsome furniture will contain a piano, while a fireplace of exquisite and appropriate design will add much to the spacious and cosy apartment. Domes in the sides of the social hall, ingeniously concealed from view within, will give sufficient light and additional ventilation to the dining saloon, and at the same time will permit of very effective and artistically arranged electric lights. From a door on the starboard side of the dining saloon Mr. Gould's suite is entered, including a bedroom, 16×16ft.; a dressing room, 7×10ft., and a bath room 5×10ft. On the port side, directly opposite, is the largest guest's suite on the yacht, the three rooms being similar in size to those of the owner. The finish and fittings of these six rooms will be rich and handsome and determined upon later. There will be no thoroughfare in these suites. Four staterooms, each with a private bath, are forward, one a doctor's room, a photograph room and a brushing room, together with linen and other lockers. The occupants of these rooms will use the stairway leading from the social hall to the upper deck.

Going back to the library, there will be found opposite it on the port side a large butler's pantry; two kitchens, which are connecting, one for the owner and guests and the other for the officers and crew; a laundry, a "hospital room" and a room for a valet. The quarters for the officers and crew are aft on this deck, and particularly commodious. They will have a recreation space of 40ft. by 36ft., which will be lighted and ventilated from large, square port holes, hooked back from above, thus giving them really a shaded, open deck. There will be about fifty all told in the ship's company. The stairway from the social hall will continue to the lower deck, where there will be found three more guests' rooms, a hall for the servants to meet in, rooms for the maids, together with trunk and general storage rooms. All of these are large, and will be appropriately finished and fitted. The plumbing work is to be of the most modern description, and simple as is possible in its workings. Hot and cold fresh and salt water will be found in all bathrooms, as will be such other conveniences as are required. The yacht will be lighted throughout by electricity, two dynamos being supplied, together with a large storage battery, which will be found extremely useful and convenient. The Niagara will carry eight boats: one steam launch of 15ft., one naphtha launch of 24ft., two gigs, two dinghys and two lifeboats.—*American Shipbuilder.*

The Seawanhaka Cup.

AT last advices, the Royal St. Lawrence Y. C. was awaiting the confirmation by letter of a telegraphic challenge from J. Arthur Brand, presumably through the Minima Y. C., the club which Mr. Brand represented in 1895. Until this letter is received, no action will be taken.

Riverside Y. C.

STILL another one-design class is proposed for the Riverside Y. C. of sailing dories, 17ft. over all, 13ft. on keel and 4ft. beam, with leg-o'-mutton mainsail and a jib. It is expected that a fleet of these boats can be built at a cost not to exceed $50 each. They will be named after salt-water fish.

YACHTING NEWS NOTES.

The second supplement to Lloyd's Yacht Register has just been issued, containing the alterations and additions up to Aug. 31.

The Long Island Y. C. has elected the following officers: Com., Joseph A. Goldbacher; Vice-Com., John Essman; Rear-Com., Charles McManus; Rec. Sec'y, Charles Olmesdahl; Cor. Sec'y, Charles Williams; Fin. Sec'y, William L. Drummond; Treas., Frederick Schwanenflugel; Meas., Wm. B. Richards; Steward, Charles Weydig; Sergeant-at-arms, Frederick Berger; Board of Directors: Theodore Meyer, A. Schrader, C. Weydig and C. Olmesdahl; Regatta Committee: E. Euchart, J. Ameen and C. Williams; Finance Committee: C. Olmesdahl and J. Ameen.

The Gas Engine and Power Co. and C. L. Seabury & Co., consolidated, have enlarged their storage basins, at Morris Heights, by a basin 250ft. long, with 16ft. of water at low tide, and yachts are rapidly availing themselves of the facilities thus offered. Among those already laid up are the steam yachts Hiawatha II., Lorna, Tide II., Alga, Reva, Anita, Tillie, Nada, Margaret, Reposo, Linta and Alcina; and the cutters Enterprise and Sparetime. Margaret and Linta will have new Seabury boilers during the winter; Alga is being thoroughly overhauled, her deck house extended 10ft. aft, a large bridge added and the steering gear shifted to it, and she will also have a new Seabury boiler. Mr. Fleischman will fit out Hiawatha II. in February for to cruise to Bermuda and the West Indies, and Alga may also fit out for a cruise to the South.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1897-98.

The Regatta Committee Report.

TWO weeks from the date of this issue the annual meeting of the executive committee of the American Canoe Association will be held in New York. It is especially provided, both in the by-laws and the racing regulations, that all amendments to the latter shall be presented to the committee by the regatta committee, as part of "a full report" of the committee's work. This provision was adopted years ago for at least one good and sufficient reason—that most of the proposals for amendment are in a crude and incomplete form, making it necessary that they shall be properly worded and arranged previous to the meeting, where there is always much business to be transacted in a limited time. The reason for the provision of at least two weeks publication is, of course, obvious.

This year, in particular, a report from the regatta committee is specially desirable. Several important points in connection with the rules came up at the meet, all of them interesting to the members of the Association; and various proposals have been made for the amendment of the rules. The regatta committee alone is fully cognizant of these matters, and to it alone the members must look for information. Unfortunately no report has been received up to the time of going to press, and we understand that none has been prepared. Several amendments have been informally published in the FOREST AND STREAM, the Official Organ of the Association, and it will probably be ruled that such publication, even in the absence of the official report of the regatta committee, makes the proposals eligible for consideration by the executive committee, but it is to be regretted that the regular mode of procedure has not been followed.

A. C. A. Amendments.

Editor Forest and Stream:

Will you please publish the following proposals for the amendment of the A. C. A. Constitution and Racing Regulations:

Amend Art. VI., Sec. 4, to read as follows:

"Board of Governors.—Each Division in its proper turn at its annual meeting shall elect in the same manner as their regular officers, one member of that division to serve on the board of governors of the Association for a term of four years, or until his successor is elected. The commodore shall be a member *ex officio*."

Insert in Sec. 5 after the words "board of governors" "to have general control of the funds and finances of the Association."

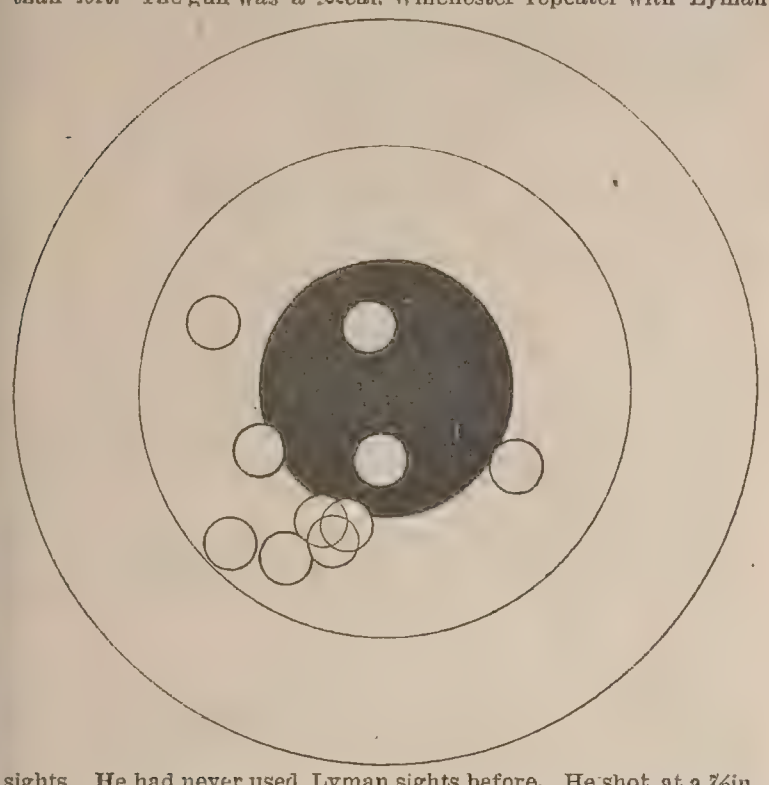
I would also offer the following suggestions for amending Rule L.: "That the minimum depth of open canoes be 11in., and in any race of open canoes where sails are used, the area of same shall be limited to 40sq.ft., no seat allowed to project beyond the gunwale, and no rudder to be used."

G. P. DOUGLASS.

A. C. A. Membership Competition.

THE Commodore and Secretary-Treasurer of the A. C. A. offer an open Canadian paddling canoe, with single blade paddles, as a first prize, also a pair of single blade or double blade paddles, at the option of the winner, as a second prize, to the members securing, before the opening of the 1898 meet, the largest and next largest number of new (active) members, respectively, to the American Canoe Association.

The presentation of prizes will take place at the meet. The re-election of ex-members will not count in this competition. By sending a postal card to the Purser of your division, application blanks will be mailed to you.



FRANK L. DUNNELL, Commodore.
C. V. SCHUYLER, Secretary-Treasurer.

Rifle Range and Gallery.

A Veteran's Score.

TRAVERSE CITY, Mich., May 30.—Here is what seems to me a phenomenal performance when the shooter's age is considered:

Living in an adjoining county is an old gentleman who has been a hunter, trapper and guide nearly all his life. The other day he came to town, strolled around awhile calling on his friends and finally visited Pilbeam's shooting gallery, and did the remarkable shooting about which I am going to tell you. The range is a few inches less than 40ft. The gun was a .22cal. Winchester repeater with Lyman

sights. He had never used Lyman sights before. He shot at a ⅞in. bullseye, off-hand, standing clear of everything, without glasses, and out of 10 consecutive shots made the remarkable score of 92 out of a possible 100. There were two clean bullseyes and eight in the first ring outside the bullseye counting 9 each. This would be creditable shooting for any of us young fellows, but the remarkable thing is Mr. Whipple, the shooter, was born in March, 1800, and is therefore nearly two months over ninety-seven years old. Mr. W. went to California in 1828 and has spent nearly the whole of his life in the West. He has in his possession now a hatchet which has accompanied him on four round trips over the Rocky Mountains. He has had some thrilling experiences.

I enclose a copy of the pattern of his shots as near as we could copy them. Perhaps this will draw out some other old shooters.

M. C.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 28-Oct. 1.—PASSAIC, N. J.—Annual tournament of the New Jersey State Sportsmen's Association at Clifton racetrack. First two days, targets; last two days, live birds. Main event on last day is at 25 live birds, $25 birds extra, handicap; $500 guaranteed to three high guns. W. H. Huck, Sec'y, Rutherford, N. J.

Sept. 30-Oct. 1.—ALTON, Ill.—Tournament of the Piasa Gun Club at Douglas Park. Targets. Under the management of Jack Park.

Oct. 4-5.—WARWICK, N. Y.—First annual tournament of the Warwick Gun Club. Open to all. Targets. $50 average money to four high guns in all programme events. John M Servin, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 12-14.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Company.

Oct. 13.—HACKENSACK, N. J.—Sixth contest for the Recreation cup. E. A. Jackson, Sec'y.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

Oct. 19-21.—DAYTON, Ia.—Second annual tournament of the Dayton Gun Club. First two days, targets; last day, live birds. "Cannot divide with professionals or manufacturers' agents."

Oct. 19-22.—BALTIMORE, Md.—Four days' tournament of the Baltimore Shooting Association. First two days, targets; last two days, live birds. $500 added money. Geo. L Harrison, Sec'y.

Oct. 22-23.—HUNTINGTON, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Erie Gun Club.

Oct. 26-28.—COUNCIL BLUFFS, Ia.—Tournament under the auspices of W. D. Hardin, F. S. Crabill and C. B. Randlett. $300 added. Programmes later.

Oct. 27-29.—DES MOINES, Ia.—Amateur tournament at the Des Moines Gun Club's park. $300 added. W. R Milner, Manager.

Oct. 29-30.—GRAND RAPIDS, Minn.—Tournament of the Itasca Gun Club. Dr. W. P. Brown, Sec'y.

1898.

March 22-24.—ELKWOOD PARK, Long Branch, N. J.—Sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added.

DRIVERS AND TWISTERS.

The *American Field* takes us gently to task for wondering why it was silent when it should have known, if anyone did, that Elliott had not complied with the conditions governing challenges for the cast-iron badge, when he deposited his forfeit in the hands of FOREST AND STREAM. This is what it says in its last issue: "Why does the gentleman connect the *American Field* with the matter? We did not issue the challenge; we are not Mr. Grimm's backer; we have no interest in the matter one way or the other, except to give the news to our patrons. Our business is not that of arranging shooting matches between individuals; we are publishing a paper for the sportsmen of the country, and we find it keeps us pretty busy to give all the news of the day, without bothering with matters that do not particularly concern us, or stopping to find fault with what some of our cotemporaries do or do not do. Our friend should not lose sight of the fact that Charlie Grimm—not the *American Field*—holds the medal emblematic of the champion live-bird shot of America, and that he is quite able to defend it without any assistance from us; and that in trying to blame us for the challenger's shortcomings he goes a long way out of his road." We still think that it would have been a good item of news for the shooting public, in fact, would have been an interesting part of "all the news of the day" to have informed the wondering public why Charlie Grimm was silent. We do not wonder at the disclaimer; that is only a natural consequence of the unpleasant atmosphere at present surrounding the cast-iron badge and the cast-iron championship.

The programme for the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., has come to hand. The tournament takes place next week, Oct. 6–8; the first two days are at targets; the last day at live birds. The programme calls for 185 targets each day at an average entrance fee of 10 cents per target; all events are at unknown angles. The division of moneys will be under the Rose system, three moneys, under twelve entries; four moneys, twelve entries or over. There are ten events each day, three 15 and seven 20-target events. For the live-bird day there are three events scheduled: No. 1, 5 birds, $5; No. 2, 7 birds, $7; No. 3, 10 birds, $10. All purses at live birds will be divided under the old system. For the target shooters the club will divide $50 into six moneys—$13, $11, $8, $7, $6 and $5, to go to the shooters making the highest averages on targets on both days. The programme says: "Ties divided unless otherwise agreed." We think this is a mistake. Average money should always go to the high guns, not class shooting; this does away with any chance of dropping for place. Two sets of traps under the control of Gil, the boss trapper, will be in readiness on the morning of Oct. 6. As Newburgh is so near Warwick, N.Y., where there is a two day's shoot on Oct. 4–5, the boys should find no difficulty in putting in a good week at the traps. It is just twenty-eight miles from Warwick to Newburgh over the Erie Railroad.

R. E. B., of Greenville, Pa., writes us, under date of Sept. 26, as follows: "The Greenville Gun Club, a member of the Pennsylvania and Ohio Border Gun Club League, has arranged an extensive programme for the especial purpose of entertaining the amateur shooters; and by so doing hopes to merit the approval of all lovers of the trap and gun. It has been claimed by many shooters in this section that an amateur shoot could not be successfully conducted, but from the many applications received for programmes and particulars of the tournament, the attendance promises to be the largest of any shoot held in this section. The programme contains ten events. Besides the regular division of money, the two high guns in each event will receive handsome merchandise prizes, donated by the citizens of this city. The last event will be a Winchester gun handicap. The gun is an 1897 model. All professionals and paid experts are barred from the sweepstakes, but may shoot for birds and display goods. Come to Greenville with your shooting clothes on Wednesday, Oct. 6."

The programme for the Warwick (N. Y.) tournament, Oct. 4–5, calls for 205 targets each day, with a total entrance fee of $15.50 for all day. Both known and unknown angles will be thrown in the ten events on each day's schedule. Following is a list of the events: Nos. 1, 4 and 10 are at 20 targets, unknown angles, $1.50 entrance; Nos. 2, 6 and 9, 15 targets, known angles, $1; Nos. 3, 5, 7 and 8, 25 targets, unknown angles, $2 entrance. Fifty dollars will be given, divided as follows: $15.50, $13.50, $11.50 and $9.50 to the shooters making the best averages on both days on targets. Ties divided unless otherwise agreed. Moneys will be divided as follows: Entries of twelve and under, 50, 30 and 20 per cent. Entries over twelve, 40, 30, 20 and 10 per cent. Targets 2 cents each. Warwick, N. Y., is a lovely place, and there are many good reasons why a shooter can spend Sunday there as pleasantly as any place around here. As the shoot commences at 9 o'clock sharp Monday morning, it will be almost necessary for those who want to try for the average money to be on the spot early.

Mr. D. Alfred De Pas, of New Orleans, is now up North and is stopping near this city. Mr. De Pas has not done much trap-shooting, but he went along with the boys to see the team race between the Bergen County Gun Club and the Riverside Gun Club, of Red Bank, N. J., at Hackensack, on Friday last, Sept. 24. He was an interested spectator, but the snipey look of the Hackensack meadows caught his eye more than the flying targets. He thought about the prairies down in Louisiana where the snipe are now getting fat and are wondering when "that man De Pas will come along with his gun" and hustle them around. Although there are plenty of quail in Louisiana, it is rather a strange fact to note that last season was about the first in which he did anything to Bob White. His hobby has been, and is, snipe and duck shooting.

Van Dyke has been doing some good shooting recently. At the Portsmouth, N. H. Interstate shoot, Sept. 15-16, he came pretty near to being high man. On the second day he started off with a 12 out of 15; then he ran three 15s and two 20s straight, making altogether a run of just 101 straight. At the shoot at Hackensack, N. J., on Friday afternoon, Sept. 24, when the Riverside Gun Club, of Red Bank, N. J., sent a team of ten men to face the Bergen County Gun Club's team, Van was again well to the front. In the team race he broke 22 out of his first 25; he then ran the next 25 straight, adding another 20 straight in a sweep immediately after the main event. His run was something like 60 straight, and on hard targets at that.

On Saturday morning last, Sept. 25, we had the pleasure of greeting Mr. H. Hawkins, of the E. C. & Schultze Powder Co., Limited, who had arrived that morning from England on the steamer Paris. Mr. Hawkins, who comes from Eyeworth, Hampshire, England, will locate in Oakland at the factory. He expects to enjoy American life, especially as he says his first experiences on American soil were quite pleasant. First impressions go a long way, so it is perhaps just as well that Mr. Hawkins did not land on Thursday afternoon last.

The Sportsmen's Association has changed the dates for its annual Exposition from March to Jan. 13-22. This brings it two months ahead of the Grand American Handicap, instead of one week, as in previous years. The Exposition this year will make a specialty of bicycles, in addition to the usual grand display of fine guns, sporting goods of all kinds, and trophies. This will add much to the popularity of a show that has already attracted more than a usual amount of popularity in a short time.

Mr. J. M. Browning, one of the Browning brothers, of Ogden, Utah the inventors of the Winchester repeating shotgun, is in the East on business. His last trip here was during the Sportsmen's Exposition, last March, and, if we remember aright, he took part in the Grand American Handicap. Mr. Browning was a member of the Utah team that rolled up such a large total in the team race at live birds between that State and Montana early in the spring. He expects to make quite a stay in this city and its vicinity before leaving for Utah again.

Tod Sloan, the well-known jockey, is a new member of the Emerald Gun Club, of New York, and from the way he handles his gun he bids fair to rival his heavier brother of the pigskin, Snapper Garrison, when it comes to shooting live birds. There was only one 10-straight in the club race, but Tod Sloan was one of the 9s. In a 5-bird sweep, shot after the club race, he scored his 5 birds in good style.

Elsewhere we give a reply to Mr. Grimm's letter, which appeared in the columns of our Western cotemporary of Sept. 25. A perusal of that reply will show that everything was just as we expected. It looks, however, as if Grimm had not done himself any good by going into type. So long as he kept silence, one could do nothing but guess. Now that he has spoken, there is no doubt as to his motive in keeping silence.

The return match between the Bergen County Gun Club and the Riverside Gun Club, of Red Bank, N. J., will take place on Friday week, Oct. 8, on the grounds at Red Bank. The Bergen County team will leave for Red Bank on the 10 o'clock train, Pennsylvania Railroad, reaching Red Bank at 11:20. The Riverside Gun Club intends to make this team race the occasion for an all-day shoot at targets.

We regret to learn that E. A. Jackson, secretary of the Bergen County Gun Club, Hackensack, N. J., met with a serious accident on Saturday afternoon last. A shell in his gun burst at the base, we are told, and the result was an explosion that may cause the loss of his right eye. We have received no official report of the case to date, and sincerely hope that Mr. Jackson's injuries may not prove anything like as serious as they are reported to be.

The New Haven, Conn., Gun Club has issued a neat little programme for Thursday, Oct. 7; $15 is added by the club, $9 in a 20-target event, and $6 in a 15-target event. Four moneys in all events, 40, 30, 20 and 10 per cent. Shooting commences at 9:30 A. M. The New Haven gatherings are always enjoyable, hence we regret that this fixture clashes with the date chosen for the Newburgh, N. Y., tournament.

On Thursday, Sept. 23, E. C. Burkhardt and F. G. Wheeler, both of Buffalo, N. Y., shot a 100-target race on the Bison Gun Club's grounds. Burkhardt won easily with the excellent total of 96 to 89; he ran 48 straight before losing a target. The targets were bluerocks and were thrown from the club's magautrap. Both contestants used 3⅛drs. Hazard's Blue Ribbon, with 1¼oz. No. 7½ shot in U. M. C. Nitro shells.

H. G. Wheeler, of Marlboro, Mass., was in this city on Tuesday last, Sept. 21, on his way East from Lakewood, N. Y. It will not be very long before he is making his way South again, to spend the winter in Florida, looking after the bicycle departments of the hotels on the great East Coast System. Gil may show up this week at Passaic, N. J.

In a race at 15 live birds in Allentown, Pa., the other day, F. C. won first money alone on 15 straight. James Timmons, of Morristown, N. J., Gosner and Hohn tied for second money on 14 each. J. D. Arthur and John Rehrig tied for third money with 13 each. Frank Class could do no better than score 11 out of his 15. There were eleven competitors.

The W. J. Healey Hardware Co. writes us from Mitchell, S. D., under date Sept 15, as follows: "Owing to a misunderstanding as to the dates of the Sioux Falls tournament and the South Dakota State Fair, we are obliged again to postpone our shooting tournament until Oct. 12-14. This date is final, and our programmes will be out in a few days, when we will be pleased to forward copy."

Fred Gilbert has been bicycling lately and met with an accident which put him on his back. Fred's challenge for the *Star* trophy had already been made and the date fixed by Elliott; but at Gilbert's request, Elliott postponed the shoot until Oct. 8, when the pair will meet at Kansas City, Mo., at 2 P. M.

What a relief it is to see two such truly great shots as Elliott and Gilbert make a match in about ten lines of type! If anybody really wants to shoot, it doesn't take long for him to make a match; provided, of course, that he doesn't mind traveling 200 or 300 miles to shoot it.

The Des Moines, Ia., Gun Club's park will be the scene of an amateur shooting tournament, Oct. 27-29; $300 will be added to the purses, and the tournament will be managed by Mr. W. R. Milner, who will gladly answer all questions regarding the tournament.

The scores of the Interstate Association did not reach us until too late for last week's issue. We mention this fact as some sort of an excuse to our Eastern friends for apparent neglect.

Western Traps.

JOHN WATSON'S TOURNAMENT.

CHICAGO, Ill., Sept. 24.—John Watson's early fall tournament was planned by that veteran possibly with the intent of raising the public opinion regarding live birds as trapped usually at this season of the year. The shooters were not expected to attend in any great numbers at this particularly unfortunate date, when so many are growing tired of trap-shooting and turning to the fields for fun. None the less a very good turnout resulted, about a dozen and a half taking turns at the traps. About 700 or more birds were shot daily, and perhaps 1,500 targets on the best day. The birds came up to the expectation, as they generally do at the old park, and everything moved along nicely, as things have a way of doing there. Among the shooters were E. H. Tripp, of Indianapolis; Frank Parmelee, of Omaha; Dr. Morris, Mr. Troop and R. B. Page, of Dixon, Ill.; Chas. Grimm, of Clear Lake, Ia.; Geo. Klehm, of Arlington Heights, Ill.; Capt. Andy Meaders and Mr. Ellison, of Nashville, Tenn.; Aug. Kolanczicke, of Mendota, Ill.; Geo. Roll, of Blue Island; Geo. A. Mosher, of the Syracuse Arms Co., Syracuse, N. Y.; S. A. Tucker of the Parker gun; F. H Hollister, of Chicago; E. S. Rice, general agent for the Du Pont Powder, and many others from Chicago and vicinity. On the first day an effort was made to occupy the target traps, but it is always difficult to hold attention to this sort of shooting at this particular place, where the specialty is live birds. By noon of the second day practically all the shooters were about the live-bird score, watching or taking a hand in some stiff sweeps or interesting miss-and-outs. The live-bird rules were A. S. A. revised, with some modification, through use of parts of the Illinois State rules, more especially as to boundary, which was the Illinois horseshoe. Moneys went 50, 30 and 20 in three-moneys events, and on proportionate scale in larger entries, birds in, 25 cents a bird, except call birds and extras, which went at 20 cents. Straights were not the commonest things in the world, even in the short sweeps, and many hopes were dashed well on to close of events where the shooter felt sure of running out and getting rich. On the second day attention was divided between Amberg, Von Lengerke, Dr. Shaw, Klehm, Grimm and Parmelee, each of whom raised hopes and let them down with cheerful inconstancy. Good lunches were provided, as usual, at the club rooms on the grounds, and, all in all, the little tournament passed off very pleasantly, seeming more like a friendly club shoot than a gory battle for supremacy. Following are the scores:

SCORES OF SEPT. 22.

No. 1, 7 birds, $3.50, three moneys:

Three races were also shot to-day between Messrs. Goodrich and Smith; each race was for $5 a side, loser to pay for the birds; Goodrich shooting at 9 birds to Smith's 10. Scores:

	No. 1.	No. 2.	No. 3.
Goodrich	011011011 —6	221211222 —9	212212202 —8
Smith	000021100 —4	2111102012—8	1102201012—7

COOK COUNTY LEAGUE.

The last shoot of the season was held on Eureka Club grounds by the Cook County League to-day, Sept. 24, and it was a red-hot trap event, with a big turnout, some fifty shooters, made up of the flower of the army in Chicago, being on hand. Five clubs, Eureka, Garfield, Calumet Heights, Garden City and Cicero, had teams or parts of teams present. Eureka turned out 16 men, two teams and a part; Garfield 14 men, two teams and a part; Calumet Heights 13, two teams and one man; Cicero 7, one team and a man; Garden City had only two men on hand, but one of them, Ruble, tied with 25 on top score of the day. In this score he was tied by Kuss, of Garfield, the sturdy shooter who has been keeping up so strong a gait throughout the season. Much interest lay in the run between Ruble and Kuss, because they were only one bird apart on the totals in the "majority of contests," or best four scores out of seven, for which a special prize is given.

On the season totals the individual winner is J. A. Ruble, of Garden

City Club, with 168 out of 175 targets shot at in the various events of seven different meets throughout the summer. A very good showing, indeed, for regularity. R. Kuss, of Garfield, was close up to him with a total of 165

Last year the method pursued in the team contests was to designate the *personnel* of the teams before they entered the contests. This year a different course was pursued, the six highest scores in each class being selected after the close of each contest. This makes the matter of figuring out the different winning teams a matter too long and complicated for covering at the late hour of night at which the closing scores of to-day were at hand for arrangement. It is, however, practically certain that the Garfield A Class team has won high average. It will be a near thing between the B Class teams of Eureka and Calumet Heights clubs. The issue in C Class teams is still in doubt.

Following are the team scores of the interclub contest to-day, arranged to show the teams of each club represented.

Teams of six men, 25 targets per man, unknown angles:

Class A—Garfield.

Kuss	1111111111111111111111111—25
Hicks	1111111111111111011101111—23

Following are scores of sweeps shot by members of the Cook County League on the magautrap at the meet to-day, this shooting progressing at another part of the ample grounds of Eureka Gun Club, while the League was going on at the regular score of five traps:

No. 1. 10 targets: Dr. Shaw 10, Ruble 10, Kuss 9, F. E. Graham 9, H. B. Morgan 9, Goodrich 7

No. 2, same: Glover 10, Wright 7. Houston 7, Rehm 8, Goetter 6, Fehrman 6, Vetter 6, J. L. Jones 3, Richards 8. Schmidt 9.

No 3, 15 targets: Kuss 14, Shaw 8, H. B. Morgan 8, Boedker 1, T. Stannard 13, Wright 13, Vetter 8, Houston 11.

No. 4, 20 targets: Matthews 14, Lowrey 13, Barnard 12, Goetter 17, Lamphere 14, Rehm 18.

No. 5, 15 targets: Vetter 7, J. L. Jones 9, Russell 11, Ferguson 8, Fehrman 13, Fish 9, Wiley 13. Richards 13. Russell 8

No 6, 10 targets: Glover 8, Ferguson 4. Wright 7, Airey 7, Fehrman 9. O. von Lengerke 9, Matthews 6, Metcalfe 5, C. S. Smith 6, Rehm 7, Heilman 5, Wiley 7, Richards 4, Hicks 7, Morgan 7, Jones 7, Stannard 9, Shaw 5, Houston 7, Banks 2, C. Grimm 8.

No. 7, same: Walters 4, Harvey 1, Rehm 7, J A. Morgan 6, Prickett 6, Kuss 9, Glover 7, Ferguson 8, C. Grimm 10, Harlan 9, Fish 7, J. L. Jones 5, C. S. Smith 6, Vetter 8, Richards 7, H. B. Morgan 5.

CALUMET HEIGHTS CLUB.

Calumet Heights Club, of Chicago, held its usual weekly shoot on its grounds the 19th inst. The attendance, including members and their families, numbered thirty-eight persons. The early morning was spent on the river and marsh, which affords some little duck shooting at this time of the year. The latter part of the morning was employed in live-bird shooting by a few members. After dinner followed the target contests. Some 200 live birds were also shot at, and 645 targets thrown. There was a very strong wind from the lake in the face of the traps, which sent the asphalts high in the air; most of those missed the wind would carry back, even to a point behind the shooting score or stand. Notwithstanding these contrary elements, some fair scores were made, as follows: Houston winning in Class A. Norcom in Class B, and Schmidt in Class C after a shoot-off with Chamberlain.

Class A.

Houston	1110111111101111111101110—21
Metcalfe	1110011110111111111111010—20
Wescott	0100001000100001110011110—10

Class B.

Norcom	1111111111111111100011111—22

Class C.

Harlan	1111011101111100001110101—18
Schmidt	0011111011011001111111111—19
Chamberlain	1111011110010101011111111—19

Sweeps were also shot as below:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	15	15	10	10	25	30	Targets:	15	15	10	10	25	30
Houston	11	13	7	5	22	19	Schmidt	..	11	..	..	..	..
Norcom	13	7	4	8	21	..	Chamberlain	..	11	9	4	..	..
Metcalfe	12	13	5	6	19	19	Hunt	..	4	2	..	..	..
Harlan	9	11	7	6	..	..							

Nos. 1, 2 and 3 were at unknown traps and angles; No. 4 at 5 pairs, unknown traps and angles; No. 5, unknown angles; No. 6, at 15 pairs, unknown traps and angles.

Live-bird scores were:

PATERSON.

AT KANSAS CITY.

At the last regular medal meet of the Metropolitan Gun Club, of Kansas City, Mo., Sept. 19, Dave Elliott won the A Class medal with 24 out of 25 targets, N. Jarrett taking the B Class medal with 23. Harvey McMurchy was in town at the time, and he got tangled up with the strong boy, Chris Gottlieb, of Western fame as a shooter, the two shooting a friendly race at 25 live birds. Gottlieb won with a score of 25 straight, McMurchy scoring 22. This reminds one of the time Bennett, of Kansas City, came up to Chicago and beat one of our shooters here the way Gottlieb beat Mac. The injured party in that case remarked, with some justice: "Beat him! How could I beat him, when he killed 'em all?" Following were the scores in the medal target event:

Dave Elliott	1111111111111101111111111—24
R L Baker	0000110001011101110110111—14
J P Vaughn	0101101111011010001101111—16
L Scott	1110111111011111111111011—22
H H Gregory	0101111111011111111101111101—20
J W McCurdy	1101111100111111011101101—19
N Jarrett	1110111111111111111111101—23
C J Mustion	0110011110011001101101110—15
Chris Gottlieb	1111111101111011111111011—22
H McMurchy	1111111111111111111010110—22

MARINETTE SHOOT.

The following scores of the Marinette Rod and Gun Club, of Marinette, Wis., live-bird shoot of Sept. 6 were promptly forwarded, but personally addressed, and so did not reach attention as business mail until some days after they reached FOREST AND STREAM's office at Chicago. Mr. John E. Dafter was very kind to score the flights in FOREST AND STREAM's trap type, and he adds the following notes in regard to the pleasant little event:

"The weather was perfect, just cool enough to make the birds fly, and the birds—a fine lot—only three of them failing to get off at the pull of the trap. A good breeze was blowing from the east, making most of the shots left-quartering. Three traps were used, plans of same being kindly furnished us by C. M. Grimm, of Clear Lake, Ia. Too much praise cannot be said in behalf of these traps. They are simply perfect. The shooting was done in blocks of five, one man up, unknown traps. The score shows considerable difference in the number of birds shot at, but as it was purely a club shoot, the members merely shot at as many as they wished to. The score doesn't figure up very high, but most of those shooting have never been in anything of the kind before and it was a new thing to them. Our club is young, but growing, and in time we trust we will be able to furnish better scores. We propose having another live-bird shoot Thanksgiving Day. Ducks are flying now, and until late in the fall more attention is paid them than anything else. Next year we trust we will be in condition to have a State tournament here."

OUT IN THE COW COUNTRY.

The Douglas *Budget*, of Douglas, Wyoming, pays some attention to the tournament which will be given by the Douglas Gun Club Oct. 12, making the following comment, which shows that trap-shooting is not unknown even in the far lands of the cattle range:

"It is expected that the shotgun artists of Casper will come down in force and attempt to recover the trophy won by our boys recently, in that city, although no definite notification has been received from them as yet. A live bird shoot for $15 or $20 entrance money each—three prizes, to be divided among high guns—is being arranged, which ought to bring some of the crack shots of Chadron and Cheyenne. A match shoot has also been arranged between four of the best shots of the local club, which will prove a drawing card. Messrs. Jesurun and Rice shoot Messrs. Morton and Rimington, for $50 a side, 20 birds to the man. This will be a close race. Bluerock events will be made up during the day, to suit all comers."

ELLIOTT-GILBERT.

Some interest is evinced over the coming race between Jim Elliott and Fred Gilbert at Kansas City, Oct 8. Much sympathy is expressed to-day in Chicago with Mr. Gilbert, whose father died yesterday at his home at Spirit Lake, Ia., after a short illness. The news came very suddenly to Fred, and was a shock to him. I have often heard him speak very highly of his father, who appears to have been taken into his confidence in many ways of intimacy. The elder Gilbert was one of the pioneers of Iowa, and was engaged in trading with the Indians and trappers in the early days of that State.

GOODRICH SMITH.

F. M. Smith and L. M. Goodrich, both of Chicago, on the termination of tournament at Watson's Park, Sept. 24, shot a race for $10 and the price of the birds. Smith shooting at 30 birds and Goodrich at 27. The latter killed 24 out of his 27 and won by one bird.

PISTAKEE SHOOT.

There will be a two days' target shoot Oct. 2-3, given by the Pistakee Gun Club, at Ben Billings's place, Pistakee Bay, Fox Lake, Ill. Open to all.

TRAP NOTE.

From the nature of a loud wail emanating from the vicinity of the Masonic Temple, Chicago, last week, methinks that about six or eight toes of somebody's No. 10 or 12 foot have been rudely stepped on by a few facts printed in last week's FOREST AND STREAM about the Grimm-Elliott fiasco. The owner of the toes will please accept polite apologies to those, them, him or it; though, really, it would seem that they, those, he or it, ought not to leave so many toes exposed in the public highway.

E HOUGH.

1206 BOYCE BUILDING, Chicago.

Rhode Island Trap-Shooting Association.

PROVIDENCE, R. I., Sept. 23.—The individual championship contest for a silver cup and the title of '97, took place to-day under the auspices of the R. I. Trap-Shooting Association on its grounds in Johnston, and resulted in bringing out all of the crack shots in the State. The wind and weather were anything but pleasant. Showers and a strong wind blew direct against the shooters, making the targets quite erratic in their flight, and poor scores were the result.

This ends one of the most prosperous seasons of trap-shooting by this club, and next year will be looked forward to for even better prospects.

The conditions for the contest to enter were: Each man to shoot at 50 known targets and 50 unknown targets, entrance free, winner of the event entitled to championship honors and a silver cup suitably engraved, for the year 1897. Below is a summary of the event:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	25	Targets:	25	25	25	25
R C Root	22	20	22	18—82	H Remington	18	20	18	15—71
F I Greener	16	19	16	17—68	P H Randell	12	9	16	15—52
C M Melvin	21	15	12	15—63	F Arnold	16	21	13	18—68

H M Hetlin	16	19	18	18—71	J F Rossie	9	12	w	
F S Corey	18	19	15	17—69	J A Hopkins	12	8	w	
S F Wilson	19	19	16	18—72	W Richards	11	18	w	
A Aronald	15	15	15	11—56	A Babingtoff	17	w		

Events 1 and 2 were at known angles. Events 3 and 4 were at unknown angles.

J. F. RUSSELL, Sec'y.

Norwich Defeats Oxford.

SHERBURNE, N. Y., Sept. 22.—Below is a report of the team race between the Norwich and Oxford Gun clubs, which took place yesterday. This race was the shoot-off of the tie which occurred at Oxford when the same teams met two weeks ago. The scores yesterday show a win for Norwich by five breaks. Scores:

Norwich: Frank Conley 19, Postmaster Jones 17, Sim Sheff 15, Frank Coy 14, N. B. Bonney 14, Wm. Slater 14, John Hynes 13, M. Harvey 12, B. L. Crandall 10, W. M. White 9—138.

Oxford: L. Coville 14, Geo. Stratton 13, Wm. Gilman 13, Chas Dodge 15, A. L. Brewster 15, Ed. Stafford 16, Wm. Dedrick 13, F. H. Fitz 10, Martin Ryan 12, Gilbert Sanford 12—133.

These clubs will meet again in the very near future. In the above match each man shot at 20 targets.

D. G.

Haverhill Gun Club.

HAVERHILL, Mass., Sept. 25.—Only four members put in an appearance this afternoon at the regular weekly practice shoot of the Haverhill Gun Club. Below you will find scores made:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	20	10	10	10	10	10
Webster	9	8	6	15	8	7	4	3	5
Stevens	8	9	7	17	7	8	..	..	..
Tuck	2	3	3	6	4	2	6	4	3
Fernald	..	..	4	7	5	..	3	1	5

Event No. 1 was at known traps and angles; Events Nos. 2, 3, 4 and 5 at known traps, unknown angles; Event No. 6 known angles, reverse pull; Events Nos. 7 and 8 at 5 pairs, and No. 9 a "snipe" shoot.

GEO. F. STEVENS, See'y-Treas.

When this issue of FOREST AND STREAM goes to press, the tournament of the New Jersey State Sportsmen's Association at Passaic, N. J, will be well under way. This tournament is an important one to Jerseymen. It is the first State tournament held since 1884. From that year the old Association went to sleep, waking up for a moment or two at intervals, until it finally closed its eyes in 1890 or thereabouts. Early in the spring of this year a movement was set on foot by FOREST AND STREAM to wake it up or to form a new Association. That movement was successful, although the efforts to amalgamate the old Association and the new, a scheme that never was favored by FOREST AND STREAM, brought about complications and muddles that took much time and thought to circumvent. When it went to sleep in 1884 there were about thirteen clubs members of the old Association, the New Jersey State Association for the Protection of Fish and Game The new Association, the New Jersey State Sportsmen's Association, has the names of eighteen clubs upon its roster, and has a constitution and by-laws that are up to date in every particular. It starts on its career in such shape that it ought to be at the top of the heap in a few years.

Authorized by Grimm.

HIS REASONS FOR SILENCE MADE PUBLIC.

For some weeks past we have requested Mr. Grimm to make public his reasons for ignoring Elliott's challenge for the cast iron badge. It took Mr. Grimm some time to make up his mind to accede to that request, and naturally—for not one of his reasons is worthy of a man who claims a championship. No wonder he was silent.

But now that he has, in a decidedly personal letter, made such defense of his conduct as was possible, it is due our readers that we should consider that defense.

After reading through the letter we find three reasons for silence and two reasons for not wanting to shoot Elliott. Two of his reasons for silence were that he had been bass fishing and corn husking; the other is treated of later. His reasons for not wanting to shoot Elliott were: (i.), "I will say right here that I have not been looking for any shooting matches lately;" and (ii.), "I do not think that midsummer, when the birds are nesting and in poor feather, is the best time to shoot live-bird matches in championship events."

TO RAISE THE STATUS OF THE CAST IRON BADGE.

In the second paragraph of his letter Mr. Grimm writes: "It is not so very long since Mr. Banks wanted to have t e cast-iron medal and the Kansas City *Star* cup welded together. But that cannot be done just at present, for I think it a proper idea to have one trophy without a string tied to it, and I believe the cast iron medal is the only medal of that kind, because the *American Field* wing-shot cup is now owned by an individual and not open for competition. It is very evident that Mr Banks does not know the circumstances in this case, or Mr. Elliott, as well as I do, or he would not wonder at my silence, or why Mr. Elliott and myself do not shoot."

It is quite true that we did suggest welding the two trophies together, and the suggestion was made with the idea of giving the cast-iron badge some intrinsic value as a championship emblem The history of the badge itself shows just how much value it has as such: In November, 1894, some four or five champions or would-be champions got together in Chicago, agreed to shoot for $50 a corner, one money, 100 birds per man, for a badge of no financial value whatever, and then drew into the net a few more shooters to make the shoot of some note in point of numbers at least. In less than seventy-two hours from the time of drawing up the articles of agreement in a private room in the American *Field* office, and with practically no publication of the conditions of the race, and with no due notice of such an event being given to any other shooters in the country, this great championship shoot—the contest for the cast-iron championship of the United States—was shot off, and George Kleinman declared the winner. The other competitors were: Brewer, Carver, Grimm, Elliott, Bingham, R. S. Mott (Robin) and C. W. Budd. If such conditions as the above are all that are necessary to constitute a championship, why shouldn't there be any quantity of champions supplied at three days' notice? It wouldn't cost much to turn out a dozen champions by a stated date. The stakes might be nominal; entries limited; $1 the maximum price of the championship emblem, and the cost of birds put down to bottom prices. No conditions apparently (if we follow the precedent established above) would have to be made public prior to the shooting of the event. Let us have a fluid-steel medal championship, a spittoon championship, and a host of similar titles to fight for.

The last part of the paragraph quoted above is rather superfluous. We no longer wonder at Mr. Grimm's silence, or "why Mr. Elliott and myself do not shoot," now that we are acquainted with Mr. Grimm's version of what he terms "the circumstances in this case."

NOT LOOKING FOR MATCHES.

"I will say right here that I have not been looking for any shooting matches lately, and when a man really wishes a shooting match nowadays he is liable to get one very quickly."

Here's the pith of the whole matter. In the above sentence, quoted from his letter, Mr Grimm leaves the public but one inference, viz: that he does not want to shoot, and is willing to take advantage of a very trivial error in the form of Elliott's challenge, in order that he may retain his championship honors without a contest.

"I do not think that the midsummer, when the birds are nesting and in poor feather is the best time to shoot live-bird matches in championship events."

Mr. Grimm has a perfect right to his opinion on that point, and, as a matter of fact, we agree with him to a certain extent. But neither Mr. Grimm nor ourselves can expect everybody to think as we do, and a challenged party has only a limited time in which to defend his trophy. With the cast iron badge the limit is sixty days. Elliott deposited his forfeit with FOREST AND STREAM on July 8. This gave Grimm until Sept. 5. Now, suppose Grimm had let the matter go by for thirty days, say until Aug. 7, but had then written Elliott of his error, or made his reasons for not accepting the challenge public. The match could then have taken place, after a new challenge, somewhere about the second week of October, taking into account delays in mailing, etc. The second week of October is not midsummer by any means; but then—"I have not been looking for any shooting matches lately."

When Mr. Grimm further on in his letter refers to a 25-bird race shot in Kansas City in April last, when four men out of twelve killed 25 straight, and everybody in the event got in for the money, he confirms us in our opinion of Kansas City shooters as a rule; there are lots of excellent shots there, and one of them is particularly skillful.

There is another point that Mr. Grimm seems to have overlooked in decrying championship contests on midsummer birds: It is the same for all. Another champion might say that he didn't like to shoot at midwinter birds, when the pigeons are heavily clad with feathers and hard to bring down. What the holder of a trophy thinks as regards weather and quality of birds is of little value when somebody else challenges him to shoot within a given time. It is then a case of shoot, forfeit or squizzle; sometimes it's a squizzle!

ELLIOTT MAKES NO CLAIM.

Passing on to another portion of Mr. Grimm's letter, we find the following paragraph: "Now, to return to the cast-iron medal. Mr. Elliott helped make the rules governing that emblem, and he alone cannot amend them, just at present. Also, if Mr. Elliott really thought he had any claim to the medal, he would make a loud noise about it; he knows how to halloo as well as Mr. Banks. I am truly sorry that Mr Banks should think that I would be silent if I had any reason for saying anything; also, I am sorry he should think that I would not give up like a gentleman if I had forfeited, for I will do so yet if I do forfeit."

If Mr. Grimm will read over once more the interview our Western correspondent had with Elliott on this point, he will see that Elliott makes no claim for the cast-iron badge, having become aware of his error in posting his forfeit with FOREST AND STREAM in preference to depositing it with our Western cotemporary. As to our opinion of Mr. Grimm and his silence under the circumstances, that has by now been well defined in these columns. We still think, and always shall think, that Mr. Grimm took refuge behind a remarkably small bush in order to protect his championship emblem and his title.

The latter part of the paragraph is best answered by quoting what we wrote on the point in our issue of Sept. 11: "Jim Elliott's victory over Charlie Budd gives him two championship emblems and titles: he has won the *Star* cup and the Du Pont trophy. The cast-iron badge alone remains, and it would seem that that, too, belongs to him by virtue of forfeiture, Charlie Grimm not having paid any attention to the challenge issued by Elliott at the same time, and in the same letter, that he challenged for the two trophies above mentioned. There may be something back of this silence on the part of Grimm, but what it is we cannot guess, and our correspondent who reported the Budd-Elliott match at Eau Claire, Wis., gives us no clew. Not having a copy of the conditions governing challenges for this trophy, we would hazard the statement that the non acceptance of a challenge for the cast-iron medal necessarily carries with it the forfeiture of all right to the medal, and to whatever title goes along with the emblem. If we are wrong on this point, will some one who is familiar with the conditions kindly correct us."

ONLY ONE MISTAKE.

Proceeding with Grimm's epistle: "Mr. Banks says, 'Mr. Grimm is too good a sportsman and too good a fellow to seek to hold a trophy like the cast-iron badge by virtue of such an insignificant breach in the conditions governing challenges for the same;' and he intimates that I should have notified Mr. Elliott of his mistake. Well, if I should undertake to notify Mr. Elliott of all his mistakes, I might be kept very busy, as much so, perhaps, as Mr. Banks is in notifying me from time to time of my mistakes. I am sorry to have made a bad impression among the shooters by keeping silent. But a great many of our shooters and champions are making a very bad impression by saying too much, even without the aid of other people."

We have never suggested that Mr. Grimm should do anything more than we imagine any sportsman would have done; that is, notify Elliott of his *one* blunder. We are sorry, too, that Mr. Grimm has made a bad impression by his silence; and we regret to inform him that he has undoubtedly made that bad impression worse by permitting the "signed"), to appear in print. It is nothing more than an open confession that he took advantage of an error in the terms of a challenge, in order that he might not have to defend his trophy and possibly lose his title.

MORE REASONS FOR SILENCE.

Mr. Grimm goes on to state that "there were several other reasons for my silence." So far as we can see, he gives three, two of which do not seem at all pertinent or endowed with any strength. (i.), "It is disgusting to hear people say too much, or to have others saying too much for them." (ii.), "Another good reason for my silence was that I was off bass fishing." Both the above reasons may be dismissed without further comment.

The third reason is, however, most decidedly *apropos*, and confirms what we have written above. This is the reason, also in Grimm's own words (if the letter is his own production): "I consider it a very good reason for keeping silent, when a man who helped to make the rules governing the championship of America, and who pledged himself to them and shot under them, will not comply with those rules in issuing a challenge; and that is why I have not taken any trouble to answer his challenge."

What is Mr. Grimm driving at? He knows that no championship could be claimed unless the conditions of challenge were observed. Does he mean us to infer that Elliott was afraid of him, and purposely made the error in posting his forfeit with FOREST AND STREAM? Does anybody think that Elliott is afraid to shoot a match with Grimm for the cast-iron badge? The reason given is absolutely no pertinent reason at all.

The remainder of Mr. Grimm's long letter is of no particular interest, as it wanders from the subject, being chiefly concerned with small personalities which are aimed at other individuals as well as ourselves, but which do not apply to the case under discussion.

The closing paragraph is, however, worth reproducing:

NOT A NEWSPAPER WRITER.

"In conclusion I will say, Mr. Banks seemed to think it necessary for me to say something, and I have done so, and have given him the facts. My business is farming and stock-raising, not newspaper writing; therefore I will quit that diversion right here. But I will pick up my gun from time to time, so as to be in good form should it become necessary. I hope this will quiet the newspaper talk and self-advertising business. I will now pick up my old corn-husker once more, and I hope this time in peace, unless some one comes along who means business."

For a man whose "business is farming and stock-raising, not newspaper writing," Mr. Grimm makes quite a fair attempt at the latter business in this letter signed "Charles M. Grimm."

IN NEW JERSEY.

MATCHES AT MARION.

Sept. 23.—A series of matches was brought off at the grounds of the Endeavor Gun Club, Marion, N. J., this afternoon. Ordinary human beings would have stayed indoors and kept dry, but it has to rain very hard before trap-shooters will quit; so, despite the raw northeast wind and constant rain, all the matches scheduled for decision were brought off. There were about a couple of dozen spectators, too; among them Captain A. W Money, Ferd Van Dyke, Dr. Hunt, Joe Kehoe, Seeley, etc. It seemed strange to see Captain Money and Ferd Van Dyke at a shoot without guns, but the weather was so bad that they very wisely left theirs behind.

The first match was the 200-target race between 147 and Al Heritage's nominee, 100 targets, expert rules, and 100 targets, unknown angles, total score to count. The stakes were a dinner for ten at Taylor's Hotel, Jersey City; a Dunlap hat and a pair of shoes; loser to pay for the targets. The targets were thrown about as far as the club's bluerock expert traps would throw them, and all were thrown low, with the exception of No. 5, which was quite high in comparison with the others. W. L. Gardiner, of Norwalk, O., was chosen referee, and to his credit be it said that he never flinched from his duty, sitting out in the rain without a murmur, or anything else to protect him save an umbrella; and that wasn't much protection from the rain that came right in his face, driven by the northeast wind that at times rose to the dignity of quite a strong breeze. Mr. Gardiner's refereeing was never once called in question, and that means a great deal, for the light was so bad that it was often extremely hard to see the targets. Carl von Lengerke worked the indicator, five gun wads, and dealt out the traps without fear or favor. Billy, the club's puller and major-domo, pulled the traps, while Ferd Van Dyke marked down the scores, and smiled when the 0s came thick and fast. Toward the close of the match, when the second 50 at unknown angles were being shot, the referee also grew quite hilarious over the numerous ciphers that rolled in. He did not laugh quite so loudly, nor so strongly, when his turn came. It is true that the scores, particularly in the unknown angles, do look ridiculous; they certainly should have been much higher. But the conditions were severe, the match being shot thus: First, the 100 targets, expert rules, were disposed of, each shooter having to walk from the club house to the score for every series of 5 targets; before this part of the match was half over, they were wet through and decidedly chilly; then came the unknown angles, the whole 100 targets being shot at without a break or a rest, 147 cooling off his gun with a bucket of water. When all these things are considered, added to the bad light, fast targets, hard angles, and a driving rain in the face of the shooters, it will be seen that there is some cause to plead extenuating circumstances. The result of the match was in favor of Heritage's nominee by a satisfactory margin, 147 inviting the party to partake of his hospitality at Taylor's Hotel the same evening.

Carl von Lengerke and W. L. Gardiner in their 50-target, unknown angles, double act, were next on the programme. Carl's run of 16 straight in the first 25, and Gardiner's repeated failures in the second half, were chiefly responsible for the result of 39 to 35 in favor of the Jerseyman Mr. Gardiner's friends out in Ohio will probably wonder what he was doing. If they had been present they would have, perhaps, wondered how he broke so many under the conditions.

The third match was between Heritage and 147, the stakes being cigars for the dinner party The Jersey southpaw lost the cigars; the bad light, fast targets and the heavy rain on his glasses were too big a handicap, even with his allowance of 5 extra targets to shoot at.

A fourth match was made and shot, the conditions being as follows: Gardiner and 147 vs. Carl von Lengerke and Banks, 100 targets per man, unknown angles. The Lengerke-Banks combination won easily, but the victory was entirely owing to the excellent shooting done by Von Lengerke, who shot a remarkable race under the circumstances. Ordinarily Carl shoots in slow time, but to-day he shot quickly and pulverized his targets before they got any start on him. His score is really very much better than it looks on paper, being actually little short of miraculous.

The detailed scores of the chief races were as below:

One hundred targets, expert rules.

Banks	01110	10011	00111	11111	11111	—19
	11111	11011	10111	10111	11011	—21
	11101	10011	11111	11111	11111	—22
	10101	11111	01111	10101	10110	—18 - 80
147	10111	00101	11110	01111	11001	—17

Gardiner	18	18	17	16	69—144

BERGEN COUNTY WINS FROM RIVERSIDE.

Sept. 24.—The Riverside Gun Club, of Red Bank, N. J., sent a 10-men team to visit the Bergen County Gun Club at Hackensack, N. J., this afternoon. The conditions of the race were 50 targets per man, unknown angles. After the heavy rain and persistent northeasterly wind of the previous day, the clear, bright sky and soft southwest wind of to-day were quite a treat. Everything looked favorable for high scores, but with a few exceptions on each side, the results were disappointing. The home team won by 18 breaks, not a large number when it is considered that 500 targets were shot by each team. Taking the teams man for man, it looks upon paper as if the Bergen County was much the stronger of the two. But the last five men on the team were clean off in their shooting, both Ed. Taylor and F. Sinnock being physically unfit for the work they had in hand

The race was shot in squads of six, three men from each team, 25 targets per man at a clip. The result of the first round was in favor of the Bergen County Club with 198 breaks against 191, a lead of 7. The second round resulted also in favor of the home team with 203 breaks against 192, an additional 11 to the good. The high score in the first round was 23; this was made by N. E. Money and W. Watts, both teams thus dividing this honor. The second round also saw honors divided in this line, Ferd Van Dyke and Oscar Hesse, the president of the Walsrode Powder Company in this company, both scoring 25 straight. Watts, of the Riversides, was again well to the fore with a 24, Fogarty and Banks scoring similar totals for their team. Noel Money and Capt. Money both shot good scores, materially helping with their totals of 44 and 43 respectively, to make the victory more binding. The detailed scores follow:

Bergen County Gun Club.

INDEPENDENT GUN CLUB, OF NORTH PLAINFIELD.

Sept. 24.—The members of the Independent Gun Club, of North Plainfield, had a most enjoyable shoot this afternoon. The regular club handicap shoot, 15 live birds per man, excited a great deal of interest. Keller, Reed, Darby and Coddington divided the chief honors, Keller scoring all of his birds.

Club handicap, 15 live birds per man:

Coddington (26)	222121112220120—13	H Hamand(26)	.1120•1002222221—11

ASHLEY.

The next shoot of the Philadelphia Trap-Shooters' League will be held Saturday, Oct. 2, on the Roxborough Gun Club's grounds, Shawmont avenue, Roxborough, Philadelphia, Pa. In connection with this tournament, the Roxborough Gun Club will hold an all day shoot, commencing at 10 A. M. The programme will consist of ten 10-target events, 50 cents entrance each; six 10-target events, 75 cents entrance in each, and four 15-target events, $1 entrance. The grounds are easy of access from Philadelphia, trains on the Pennsylvania, Schuylkill Valley branch, or on the Reading, running frequently close to the grounds.

The Portsmouth Interstate.

THE last target tournament on the Interstate Association's schedule for 1897 was brought to a close at Portsmouth, N. H., on Sept. 16. The weather had been very favorable for the tournament, and everything seemed to have passed off very pleasantly. As a matter of record making for the year, the last day of the shoot was a most thorough success. On that date Van Dyke started in and made a run of 101 straight, using his new model Winchester repeating shotgun, and Winchester Leader shells loaded with W-A powder. Then came Jno J. Hallowell's big run of 154 straight right on top of Van Dyke's; Hallowell shot Hazard's Blue Ribbon in U. M. C. Smokeless shells; we do not remember what gun Tucson shoots. On the first day Puck went off like a three year-old, breaking 71 straight before dropping 1. Puck shoots a Parker gun, E. C. powder and U. S. Rapid shells. We are told by Manager Shaner that the shooting was not easy; in fact, the background was not good in certain places.

Miss Maggie Kirkwood (Misskay), of the Boston Gun Club, was the heroine of the day. The fact that she landed in eighth place for the day's averages shows what she can do. This is what Mr. Shaner writes us about her shooting: "The shooting of Misskay was much admired. She is easy and graceful and shoots in admirable time. She can make a whole lot of the experts 'tired,' and if she ever shoots a race with any or all of the other lady shots, she will carry my money. I'd go broke on her beating them." Misskay's records on the home grounds, at Wellington, Mass., are enviable ones, and reflect great credit on her pluck and skill.

On the first day the attendance was very good, forty-five shooters being present. On the second day the attendance was not nearly so good, a parade of uniformed Order of Odd Fellows, and a free clam bake and band concert proved too strong an attraction for the home talent. One of the pleasant features of the tournament was a moonlight drive of fifteen miles around the ocean front, which was enjoyed by twenty members of the Portsmouth Gun Club on the evening of Sept. 15

The shoot ran smoothly from beginning to end, and over 9,000 targets were trapped altogether. The officials were: Casnier, Robert Dunk; referee, W J. Puilbrick; blackboard scorer, Ira D. Newick; manifold scorer, William Kehoe; puller, Master Ray Philbrick. The tournament was held in the Bicycle park, about six minutes' drive by stage from the hotels.

Among the neighboring clubs represented were the Haverhill, Mass., Gun Club, Boston Gun Club, Boston Shooting Association, Exeter Gun Club, Kittery and Cape Neddick clubs.

Those from a distance, many of whom may be classed as experts, were: Capt. J. A. H Dressel and U. M. C. Thomas, of the U. M. C. Company; Ferd Van Dyke, of the Winchester Repeating Arms Company; H. P. Du Pont Collins, from Baltimore, Md., representing the Du Pont Powder Company; B H. Norton, of New York, of the Hazard Powder Company; W. F. Parker, a member of the firm of Parker Bros., Meriden, Conn.; O. R. Dickey, E B. Wadsworth (Puck) and B. Leroy Woodward, of Boston, Dickey also representing Parker Bros.; John J. Hallowell, of Bethayres, Pa., etc.

GENERAL AVERAGES.

The unlucky number of thirteen men shot through the programme of twenty events, ten on each day. Hallowell, by reason of his big run on the second day, came within 3 points of tying Leroy for first place. Leroy's shooting, however, was steady on both days, and his position as first on the list was thoroughly well deserved. W. F. Parker shot a great gait, too, on both days of the tournament, landing in third place for general average with a percentage of 93. Van Dyke, like Hallowell, made solid gains on the second day, owing to a big run of 101. He finished 1 target ahead of Dickey, their respective percentages being 92.1 and 91.8.

In the table given below, showing how the thirteen men finished in order of merit, it is worth noting that the first five men on the list, Leroy, Hallowell, Parker, Van Dyke and Dickey, made the following excellent record: Shot at 1,650, broke 1,537; average 93.1.

	1st day.	2d day.	Shot at.	Broke.	Av.
Leroy	157	156	330	313	94.7
Hallowell	147	163	330	310	92.9
Parker	153	154	330	307	93
Van Dyke	148	156	330	304	92.1
Dickey	152	151	330	303	91.8
Puck	153	136	330	289	87.5
U M C	139	146	330	285	86.3
Darton	140	139	330	279	84.5
Noone	128	144	330	272	82.4
Frizzell	128	131	330	259	78.4
Collins	121	132	330	253	76 6
W Newick	120	125	330	245	74.2
Norton	95	99	330	195	59

The scores for each day follow, the tables showing the order of merit for such shooters as shot at the same number of targets:

Pawtuxet Gun Club.

PAWTUXET, R. I., Sept. 18.—To-day saw the finish of the Hunter's Handicap series of eight shoots for merchandise prizes. The close was not a very glorious one, as the two leaders in the race for the Class A prizes, who were tied for first place, failed to improve upon a 20 standing to their credit The conditions were the best four scores to count. This left Messrs. Root and Sheldon still tied. The tie was shot off at 15 targets per man. Mr. Root refusing to take any allowance; the result of the shoot off was a win fer Sheldon with 11 breaks against 9. Although the scores look low, they are really not so bad as they look, for the targets were thrown very far, several being picked up 75yds. from the traps. Below are the scores made in the shoot for the Hunter's Handicap held this afternoon:

Class A, 25 targets, unknown angles:

Greene (0)	1011001111111111111101101	—20
Sheldon (0)	1110111100100101111111111	—19
Root (2)	1011110111101111001101001	—19
Staniels (0)	1011101011111 10011100111	—17
Mooney (2)	1111101010011100101110101010	—17
Arnold (2)	1110000101111101101010010111	—16
Corey (0)	0010111011001111110100011	—15
Crandall (0)	1101101010001001101100110	—13
Hawkins (0)	0100111001110010000011100	—11
Bain (0)	0001101101010011 0010	

Class B, 25 targets, known angles:

Armstrong	0111111101111110101111100	—19
Thoene	1010001011111111110111010	—17
Peck	1000000001101011000001011	— 9

Messrs. Sheldon, Root and Corey also shot a race at 50 targets, unknown angles, the scores being as follows:

Sheldon	11111101111111111101111111110111001001010111111111—42
Root	01011111011111111101010111011111011101110111001110 10—37
Corey	0110 11111110111111011010001011101100111111010000111—33

Under the conditions of the Hunter's Handicap for the merchandise prizes the best four scores of the eight shoots decided the winner. There were four prizes in Class A and three prizes in Class B. The former class shot at unknown angles and the latter at known angles. This arrangement proved quite popular with the boys. The winners and their scores were as below:

Class A.

W H Sheldon	23	22	22	20—87	First prize.
R C Root	23	22	22	20—87	Second prize.
S D Greene, Jr	20	20	20	18—78	Third prize.
F L Corey	20	20	18	18—76	Fourth prize.

Class B.

J Armstrong, Jr	21	20	19	18—78	First prize.
W Thoene	20	17	15	14—66	Second prize.
G E Buxton	18	15	15	14—63	Third prize.

This practically closes the shooting of the club until next spring, with the exception of Thanksgiving and Christmas. PAWTUXET.

Washington Gun Club's Introductory.

WASHINGTON, Pa., Sept. 18.—The newly organized Washington Gun Club held its introductory tournament to-day on the Oak Grove grounds. Shooting commenced at 9 A. M., and was kept up until 5 P. M. The result of the shoot was a pleasant day's sport for all present. Targets were thrown from a magautrap. The programme for the day was as follows: No. 1, 10 targets, $1; Nos. 2, 3, 6, 7, 9, 11 and 12, 15 targets, $1.50; No 4, 10 singles and 5 pairs, $2; No 8, 5 pairs, $1.50; No. 10, 20 targets, $2. An extra event was shot as a starter to warm up with, the scores for the 10 targets being as below: W. S. King 10; A. H. King 8, McPherson, Duffy, and Kochendarfer, 7; Cundall 6, Bessemer 5; Alford 3; McCutcheon 1.

The results of the programme events are given below, all purses being divided under the old system, 40, 30, 20 and 10 per cent.

No. 4 was at 10 singles and 5 pairs. In the singles, A. H. King and Kokey broke 10 each; W. S. King, Alford and Bessemer broke 7; and J. B. Duffy broke 6. Below are the scores made on the 5 pairs, and also the scores in No. 8, which was at 5 pairs also:

	No. 4.	No. 8.
A H King	11 01 10 11 11— 8	11 00 11 11 10— 7
Kokey	11 10 11 11 10— 8	11 11 11 00 10— 7
Bessemer	11 01 11 11 10— 8	11 11 10 11 10— 8
W S King	11 11 10 11 00— 7	
Alford	01 10 10 00 11— 5	11 11 11 11 11—10
Duffy	01 11 10 10 01— 6	11 11 11 01 01— 8

Below are the records for the day:

	Shot at.	Broke.		Shot at.	Broke.
A H King	190	149	Kockey	260	208
Alford	260	147	Hosack	180	108
McPherson	160	140	McCutchen	120	43
Dr Cundel	215	154	Johnson	95	76
Bessemer	205	144	J Robb	65	46
W S King	205	148	Cartwright	20	9
J B Duffey	225	144			

Scores of all events shot at, with the exception of Nos. 4 and 8, were as below:

Events:	1	2	3	5	6	7	9	10	11	12	13	14	15	16

Alford	0101010111000110010111100—13

H. T. MACKEY.

Chatham F. and G. Protective Association.

CHATHAM, Mass., Sept. 18.—The members of the Chatham Fish and Game Protective Association who attended the bi-monthly shoot today spent one of the most enjoyable afternoons in the history of the club. There were ten entries for the club handicap, for which three handsome prizes had been provided. The first prize, a silver mounted flask, was captured by H. D. Ogden; second, 100 Smokeless shells, was won by W H. Larison, and third was tied for by E. L. Phillips and R. B. Budd. Mr. Budd winning in the shoot-off.

It is the intention of the club to hold an open merchandise shoot sometime during the fall. Keep your eyes open for this.

The scores for Saturday's shoot are as follows:

Handicap prize sweep, 25 targets, known traps, unknown angles:

Phillips (0)	0111111101111111111011111 —22
Dawson (13)	0100000011000001001110001011001011000—14
Ward (13)	1100011010000101000110011111111010000 0—18
Geoffrey (2)	1101111101111011110101101 —19
Larison (3)	1001111000100011001010000011111011 —19
Elder (9)	1101101011011101111111111 —22
Budd (2)	0101000011000001110011110000000100011 —14
Plum (13)	1010110111111011111110111001 —20
Page (2)	1111100010101101111111001101000111110 —24
Ogden (12)	

No. 1, 10 targets, known traps, unknown angles, 25 cents entrance, birds extra, three moneys: Phillips 10, Ward 8, Geoffrey 10, Larison 6, Elder 9, Budd 7, Page 6, Plum 10, Kirkpatrick 5, Green 4, Hopping 2

No. 2, same over again: Phillips 8, Ward 6, Geoffrey 8, Larison 8, Elder 8, Budd 9, Page 7, Plum 7, Kirkpatrick 5, Green 5.

No. 3, same conditions: Phillips 10, Dawson 7, Ward 3, Geoffrey 9, Larison 7, Elder 10, Budd 9, Page 7, Ogden 9. R. B. BUDD.

ON LONG ISLAND.

NEW UTRECHT GUN CLUB.

Sept. 25.—The New Utrecht Gun Club opened its live-bird season at the Woodlawn, L. I. Grounds this afternoon. In the club shoot Furgueson and Meyer tied in Class A, but did not shoot; Sykes won in Class B, and E. G. Frost in Class C. A 5-bird sweep was also shot. Scores in these events were as below:

	Club shoot.	Sweep.
C Furgueson, Jr (A)	2220222222— 9	22222—5
C M Meyer (A)	2212211012— 9	11212—5
Wm Rail (A)	2202200 — 4	0210

A A Hegeman (B)	0020220 — 3	0120
E G Frost (C)	1202122010— 7	0021
E Lohman (C)	0210022 — 4	....
D Lohman (C)	0100000 — 1	....

The Bristol Gun Club's Barbecue.

BRISTOL, Conn., Sept. 15.—The all-day shoot, with the barbecue dinner, given to-day by the Bristol Gun Club, proved a success, although there were not as many shooters present as we expected to have. For dinner we gave them roast lamb, fried sweetcorn, boiled sweet and Irish potatoes, bread, butter and coffee. It would have done you good to have seen those New Haven shooters keep sending up their plates for more, and we had a plenty. Below are the scores, all at known angles except No. 7, that being unknown traps and angles:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

H. J. MILLS.

Montreal Wins the League Shoot.

WE have received the following account of the league shoot held Saturday, Sept. 18, in which the Montreal Gun Club's team defeated the Sherbrooke team:

The Montreal team defeated the Sherbrookes on Saturday, Sept. 18, and retains the league championship trophy. The weather was not favorable for good scores, a high and fluky wind at times making the birds very difficult. Eight individual events in addition to the team match were shot.

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	10	10	10	10	10
Walton, Sherbrooke	8	4	5	6	..	4	3	..

LEAGUE CHAMPIONSHIP.

Sherbrooke vs. Montreal. Conditions: Five men per team, each man shooting at 20 birds thrown from five traps, American Association rules. Referee, Mr. A. W. Westover, of Sutton. Scorers, Messrs. R. B. Hutchison, Montreal, and C. H. Foss, Sherbrooke:

Montreal.		Sherbrooke.	
W Haigh	13	T M Craig	12
E C Eaton	14	N Bray	16
W F Robertson	13	J G Walton	7
C Auoin	17	W White	15
H H Wootton	15—72	Thompson	12—62

Trap Around Buffalo.

WITH THE BISON GUN CLUB.

BUFFALO, N. Y., Sept. 23.—The fourth of a series of shoots for the championship of Buffalo was held to-day on the Bison grounds, Walden avenue and City Line, and was participated in by teams from the Bison, Cazenovia and Audubon clubs. The Bisons won to-day by 6 birds. The Audubons have the first three contests to their credit. Each man shot at 25 birds, and scores were:

Bison Gun Club.		Cazenovia Gun Club.		Audubon Gun Club.	
Wheeler	22	Stevens	22	McArthur	19
Foxie	22	Beck	19	E C B	25
Mack	19	S Winter	20	S B Charles	20
Zoeller	23	McCarney	21	Norris	21
Estes	23—109	Alderman	21—103	Warren	18—103

A special match was shot between F. G. Wheeler and E. C. Burkhardt, 100 targets each. The score was: Wheeler 89, Burkhardt 96.

The following scores were made in the other events:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	15	10	25	15	Targets:	10	15	10	25	15

Sherwood	1111010111111101110110110	—19
	1001111111101111111110111	—21
	1111110011110111110111111	—21
	1110101111101111111001111	—20—81

RECAPITULATION.

Stipp	78	Braxtan	81
Thompson	85—163	Sherwood	81—162

The targets were thrown very low and swift and at extreme angles, so the scores are much more creditable than they appear on paper.

SHERWOOD, Sec'y.

Oxford vs. Norwich.

NORWICH, N. Y. Sept. 21.—Inclosed find score of team match between Norwich and Oxford clubs; 20 bluerocks at 16yds rise:

Norwich.		Oxford.	
Coy	1101110110100110111 1—14	Covill	1011011011111010110—14

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 9, 1897.

VOL. XLVIX.—No. 15. No. 346 BROADWAY, NEW YORK.

AUDUBON BIRD PLATES.

IN this issue is given the seventh of the series of half-tone reproductions of Audubon's famous bird portraits, from the rare first edition. It is of the Shoveller Duck; and is noteworthy as one of the most animated of the wildfowl pictures left us by the great artist. The plate illustrates one admirable characteristic of Audubon's work, its truthfulness to nature, living nature. His portraits are the delineation of birds as he saw them in the woods, on the marshes, in the air. In all the hundreds of plates never a one suggests the stuffed specimen; all are instinct with life, whether the study be of action or of repose. To his bird paintings Audubon communicated that absorbing love of the gladness and living joy of nature which controlled his life. Ornithology as represented in his great work is not the museum classification of the closet naturalist; it is the bird world of song and color and motion.

OCTOBER.

EVERY season has in it that which is beautiful and useful, though the mawkish mind may be always able to find something of a gruesome turn and not to its liking.

The springtime has come, the poet of prose or verse tunes his lay in glad strains, and all is high lights and glad imagery. Summer comes, and again joyous pæans arise in praise of nature, the bountiful, the beautiful, the eternal. The autumn comes, and the songs change. There are those who see the natural fruition in nature, a beneficent provision for her earthly children, and there are again those who see only the lugubrious signs of a year which is dying.

The sad October days, indeed! The days when the air is cool and bracing; when the golden, dreamy light of Indian summer, softened by its tinge of haze, illuminates an earth laden with fruits and foods, all in glorious coloring; when the north wind and the south wind alternate in the gentlest of comings, the one feebly struggling to get possession of the earth, the other reluctant to yield.

The sad October days, indeed, when the squirrels are merrily flitting from tree to tree, gathering in a winter stock, and whose speed and nimbleness and cunning tax to the utmost the skill of the hunter who pursues them fairly; when the ruffed grouse, proud in his full beauty of color and vigorous strength, plump of form and strong of wing, can take his shadowy flights through the densest thickets, wherein but few of the sons of men can cope with him in fair warfare; when the quail glean the fields and woods for the best foods, full of the courage which comes from the strength and self-confidence defying pursuit, whether it be from the setter or pointer whose beauty of color rivals that of his prey, or whether it be from the hunter in the full panoply of his craft; when the rabbit races with a dash born of contempt for the pursuers whose bugle notes make the woodlands full of a new melody, or, if it be on the plains where the long-legged jackrabbit makes his home, the scene is changed to one of silent flight and swift, fierce, silent pursuit.

And the cooler waters, with their silvery yet darker glintings, hold denizens which are stronger and more daring, ones fiercer in their pursuit of prey and more desperate in the warfare which they make either to gain possession or to avoid being possessed. Whether the sportsman take in hand either gun or rod, he will find the offering of the October days a matter for gratitude and not for reviling.

And if he, the sportsman or the man, or if she, the sportswoman or the woman, wish to forsake the places of bricks and mortar, of struggle never-ceasing and of turmoil of wheels and bells, what season is better than the October season for pitching one's tent in a setting of autumn tints, mellow light and pure air? In days when nature is preparing for a rest from her labors; when, at every hand, tree or field bears the bounteous product of her fruitful efforts; days which are cool and bracing, making the chest expand and the spirits rise; days when the nostrils are conscious of inhaling an exhilarating stimulus and the pulse are accelerated of their own volition; days when there is a spontaneous impulse to seek the woods or fields or waters in quest of fur, feather or fish, as did man's progenitors of the primordial days of life.

In the October days are the bountiful and the beautiful, all the promises of the springtime and the summer time fulfilled. There is store in plenty for the winter there, sport for him who loves the best that land and water can offer, and all in the richest coloring of the year, and all these the October days offer freely to man.

SNAP SHOTS.

Mr. Ernest Seton Thompson makes an ingenious and quite practicable suggestion that special strains of domestic fowl should be developed for plumage adapted to use on hats, to take the place of song bird decoration. The barnyard fowl now contributes largely as it always has to woman's headgear, but the notion of developing by selection a plumage particularly designed to catch woman's fancy is original and happy. Why not go a step further, and following the example set by ostrich farmers, domesticate and breed for its plumes the egret itself? The bird is readily tamed and takes to domesticity; we have published accounts of tame egrets in Honduras and Nicaragua; the commercial rewards certainly are sufficient to repay the enterprising Yankee who shall establish an egret farm.

An extraordinary game decision is reported from Virginia. Because of the destruction of quail in the severe winter of 1895–6, the Legislature in 1896 enacted a law forbidding entirely the killing of quail for two years, which included this present autumn. With a view, we are told, of testing the constitutionality of the law, a citizen recently went quail shooting, and when prosecuted made defense that the two-years close time was an unwarrantable restriction of his rights and privileges as a citizen and landowner. The court sustained him in the contention. Owing to the fact that the Commonwealth was a party to it, the case is not appealable to a higher court, and the decision will stand. This leaves Virginia without a quail law, although it may be assumed that the Legislature will enact a law when it shall assemble in December.

What particular advantage there may be in a Virginia game law, however, does not appear, if the principle established by this decision shall hold; for precisely the same authority, and no other, which empowers the provision of a two-years close time empowers an annual close season. If there is no warrant for the one, there can be none for the other; if a two-years close season invades private rights, so, too, does a close season of nine months in the year; if the one is overthrown by the courts on the ground of unconstitutionality, so also must the other be held repugnant to the Constitution. In short, if the ruling of this lower court shall hold good, Virginia may say good-bye to game protection; and if Virginia, other States, too.

The fact is that the decision is bad law. No principle of jurisprudence is more firmly established than the right of a State to legislate for the protection of game, and to exercise its jurisdiction even to the point of an absolute prohibition of the taking of game for any period it may be judicious to prescribe. Said Mr. Justice White, of the Supreme Court of the United States, in the case of Geer vs. the State of Connecticut, the italics ours:

> While the fundamental principles upon which the common property in game rests have undergone no change, the development of free institutions has led to the recognition of the fact that the power or control lodged in the State, resulting from this common ownership, is to be exercised like all other powers of government, as a trust for the benefit of the people, and not as a prerogative for the advantage of the Government as distinct from the people *or for the benefit of private individuals as distinguished from the public good.* Therefore, for the purpose of exercising this power the State, as held by this court in Martin v. Waddell (16 Pet., 410), represents its people, and the ownership is that of the people in their united sovereignty. The common ownership and the resulting responsibility in the State is thus stated in a well-considered opinion of the Supreme Court of California: "The wild game within a State belongs to the people in their collective capacity. It is not the subject of private ownership except in so far as the people may elect to make it so; *and they may, if they see fit, absolutely prohibit the taking of it,* or traffic and commerce in it, if it is deemed necessary for the protection or preservation of the public good."

The close term extending over a period of years is a common and familiar feature of game protection in the several States; there are now in force numerous laws of this tenor, by which in the West buffalo, elk, antelope, mountain sheep, female deer and other species of large game are given immunity, and in the East deer, quail, imported pheasants and other species have been protected and are now, for such periods as may be considered expedient to insure the recovery of a depleted indigenous supply or establishing of a new species. Whether or no every long term is conducive to the advantages sought may be questioned, but we are not aware that the point has ever before been raised of the authority of the State to enact and enforce such laws; nor do we doubt that if the Virginia case were one which could be reviewed by the higher courts the decision would be reversed.

There is a deal of wisdom in the contention made by Dr. James in his paper before the American Fishery Society, that neighboring States should have uniform laws for the protection of fish. Without concert of action on the part of New York, Pennsylvania, New Jersey and Delaware, the Delaware River cannot be made to yield its most fruitful supply of fishery resources; and so of numerous other waters subject to the control of several States. But however desirable national laws might be for such waters, it is outside the province of Congress to legislate respecting them, and the attainment of uniform laws must be sought in State legislatures.

This is the third paper we have published from the proceedings of the recent Detroit meeting of the American Fisheries Society. They have been taken from a copy of the report of the meeting furnished to us by a member, our application to the secretary for a copy having been met by the response that the society had voted to restrict the report exclusively to the members. This is decidedly an error on the part of the society. If its papers and discussions have any practical worth in fishculture and fish protection they should be given the widest possible publicity, and the society should welcome the offices of a journal like FOREST AND STREAM, in presenting these papers to thousands who would otherwise never hear of them. The American Fishery Society is and should be educational in its aims. It is made up of men who are in the public service. Publicity for its proceedings should be sought, and no light-hid-under-a-bushel policy resorted to.

Julius Delmotti, of Somerville, N. J., has been the unconscious recipient of much sympathy within the past few days because of his harsh fate as a victim of the stringent enforcement of the Jersey game law. Delmotti's case as reported in the newspapers is this: He is an honest hard working man, who has been care-taker of the place of William Van Buren, a New York business man, who lives in the summer at Mount Bethel, on the Watchung Mountain, in New Jersey. Moved by a love of pet birds, and all unknowing of any statute to the contrary, Delmotti caged five robins as pets. When advised that this was contrary to the law, he immediately set them free; but the relentless game protector haled him before a justice, and despite his protestations that he had erred unwittingly, and had set the birds free of his own volition immediately upon being apprised of the law, he was fined the full penalty of $20 each and costs, and in default of the payment of $107 was put into jail, there to remain one day for $1, until the crime should be expiated. He would be an unfeeling man indeed, who could read this recital without indignation, and it is certain that the enforcement of the letter of the New Jersey law in such a way would excite only repugnance to the statute. It was a case, one might say, where the justice should have exercised his discretion of imposing a fine for one bird only, or of suspending sentence; the law would have been vindicated and no injustice wrought.

The cold truth, however, is that any sympathy expended upon Delmotti has been misplaced and wasted, unless he may be pitied for having trusted to the bad advice and council with which Van Buren misled and victimized him. When Deputy Game Protector Ten Eyck found that the Italian, with the usual weakness of people of that race, had been trapping birds, and proposed to prosecute him, Van Buren announced that he would take care of him, and the two set in to defy the law. Both Van Buren and Delmotti were sued. They secured counsel and made their fight. Van Buren shook off his responsibility and was acquitted, and Delmotti was convicted and fined. The case was appealed and Delmotti gave bail for his appeal, but his bondsmen subsequently surrendered him, and he is now in jail. He is not there for a term of 107 days, since the game law provides that the imprisonment for violation of the fish and game acts shall not exceed ninety days, nor did his offense lie in keeping the robins as pets, since there is no prohibition of that in the New Jersey law. As has been said already, if it had not been for Van Buren's part, and for Delmotti's having injudiciously taken Van Buren's advice, the Italian would probably never have seen the inside of the county jail.

AUDUBON'S PORTRAIT OF THE SHOVELLER DUCK.

Natural History.

THE SHOVELLER DUCK.

(*Anas clypeata*, Linn.)

From "Audubon's Ornithological Biography."

The Creoles, of Louisiana, are well acquainted with this species, under the name of *Micoine*, the etymology of which I am unable to trace. In that country it arrives, both from the westward and from the eastern inland districts, along with the blue-winged teal, or at the commencement of autumn. It associates with that species, to which, as well as to the green-winged, the mallard, the dusky duck and the gadwall, I should consider it very nearly allied, notwithstanding the peculiar expansion of its bill. The shovellers remain in the lower parts of Louisiana during the whole of the winter, and depart, along with the blue-wings, between the end of April and the middle of May. There, in early spring, they resort chiefly to ponds, where they feed on grasses and their seeds, as well as at times a small kind of onion, the bulbs of which they pull up from the moist grounds on their margins. This may, perhaps, to some seem strange, but I have long since made up my mind to learn from nature, and believe what is, rather than what philosophers imagine ought to be. Having fed through the night, they collect toward dawn into large bands and betake themselves to the margins of sand bars on the Mississippi, where they spend the greater part of the day. At other times I have found them swimming or wading along the muddy margins of ponds and streams, immersing the head and part of the neck, while alternately moving the bill to either side, in the manner of the roseate spoonbill, sifting as it were the contents of the soft mud or water, and ejecting the substances unfit for food. Repeated inspection of the stomach has shown me that the shoveller is not more nice as to the quality of its food than the mallard or any other of the duck tribe, for I have found in it leeches, small fishes, large ground-worms and snails. They never, however, I believe, feed by semi-immersion, like the mallards and teals; nor do they dive unless hard pressed, or when in a sportive mood, when they will dash for a moment beneath the surface.

This species is generally considered scarce in the United States, and I believe it is so, for, although many pass northward and breed in the fur countries, a greater number spend the summer months in the Texas and the districts further westward. It is, however, abundant on the streams of the Rocky Mountains, as well as on the tributaries of the Columbia River, where it was frequently observed by Dr. Townsend during summer.

We have no ducks in the United States whose plumage is more changeable than that of the male of this beautiful species. While the female is sitting on her eggs, he undergoes a moult, after which he appears mottled, and seems as if inclined to assume the garb of his partner. From this period, the beginning of July, until late in November very few finely-colored males are to be seen, and only such as have not mated that season, in which case they do not moult until the beginning of winter, as if to be the sooner ready to associate with females on the approach of the next breeding season.

In the Carolinas, this species, though found during winter in the rice fields, is not abundant; more than three or four being seldom seen together. In our Central and Eastern districts they are rather rare, and a male in full dress is not to be obtained without difficulty, although I have seen some in the markets of New York and Philadelphia.

The shoveller walks prettily, and I have often admired its movements in the puddles formed by heavy dashes of rain in our Southern corn-fields, where I have found it in company with the wood duck, the mallard and the pin-tail. Its flight resembles that of the blue-winged teal; and in tenderness as well as in flavor, it rivals, as an article of food, that beautiful bird. No sportsman who is a judge, will ever pass a shoveller to shoot a canvasback. It is rarely, however, found on salt-water, and that only when compelled to resort thither.

In the beginning of May, when I was in Texas, I found shovellers breeding in considerable numbers. The males had already left the females, and were seen on the sand-bars of the Bay of Galveston up to the River San Jacinto, but none of my party discovered the nest. During the autumn, they are to be seen on the waters adjoining the Ohio, and generally in ponds in company with the bald pate or American widgeon, when they become very fat, and afford delicious eating. At this time I have been often much pleased, when on perceiving a flock of eight or nine of these ducks, probably members of a single family, and cautiously approaching them while they were busily engaged in searching for food, with their heads and necks immersed, I have obtained several of them at the first shot, and as the survivors flew off, have succeeded in procuring one or two more. On such occasions, they rise almost perpendicularly to the height of 15 or 20ft, and then fly off in a direct course in the manner of mallards.

DO SNAKES CARE FOR THEIR YOUNG?

Editor Forest and Stream:

Our non-venomous snakes are all oviparous, and I have never seen, read or heard of their evincing any care of either their young or their eggs. But our venomous snakes bring forth the young alive. The little ones are often found near their mothers, and stories have been told that, on the approach of danger, the mother will open her mouth and the young will run inside. Naturalists, however, entirely discredit the story, and in fact the general attitude of all our venomous snakes on the approach of danger, is that the danger is all to the other party. Their "Monroe Doctrine" seems to be neither to seek nor to avoid a fight. And, generally, they—like the Guard at Waterloo—even permit the other fellow to fire first. That is where they make a mistake.

But, among the "snakes I've met," I have found a single instance of a behavior so different that I can only account for it on the supposition that the snake was a female with young.

It was in September, 1858, on the emigrant trail along the south side of the Platte River, in Nebraska. I was returning from Utah with a company of engineer troops, and was shooting ducks along the river bank late in the afternoon, some distance behind the command. I had suddenly realized that I must hurry to be able to reach camp before dark, when my pony came upon a very large rattlesnake lying across our path in the high thick grass. When we were within some 12 or 15ft. the snake ran slowly off to the right, giving me a good view of it. It was about the largest I had ever seen, and I decided to kill it and get its rattles, so I watched closely to see where it stopped. The grass soon hid it, but the shaking of the high grasses showed it still going for such a distance—some 80 to 100ft.—that I feared I would not be able to find it, and I hesitated if I should lose the time necessary to hunt. But the desire to get the rattles prevailed, and I dismounted and picketed my pony, and began to prepare my gun to kill it. I had a muzzle-loader with the right barrel empty. I did not wish to waste shot, and I decided to blow its head off with a heavy paper wad, so I put a charge of powder in the right barrel, and, resting the butt on the ground, began to roll up carefully a heavy wad, using both hands. Suddenly I heard the snake begin to rattle, and I saw by the shaking grass that it was coming rapidly back to me. Before I could get the wad ready I saw that I did not have time to ram it down and cap before it would reach me. So I had to drop the wad, and picking up gun in my left hand I began to feel for a cap in my right vest pocket.

By the time I could get the cap the snake was so near that I began to motion at it with the gun in my left hand, as if to strike it, so as to make it stop long enough for me to get the cap on. This had the desired effect. The snake stopped within 6ft. of me It did not coil, but with body contracted and head and tail erect its rattle sang as I never heard one before or since. I quickly capped, and holding the gun as a pistol, by the small of the stock in my right hand. I slowly advanced the muzzle to about a foot from its head and fired the blank powder in its face. It did not tear the head, but it blinded, and the snake rolled over and writhed and twisted in all sorts of mixed contortions. I watched for a chance, and with butt of my gun came down on its back, breaking the spine. The rest was easy. I was disappointed and surprised to find only ten rattles and a button. I have seen as many on snakes less than two-thirds as large. This would indicate that the snake was a female, as females are usually larger than males of the same age.

It did not occur to me at the time to search in the grass for young ones, which I have ever since regretted. For I have always believed that it was the maternal instinct which, first, led this snake to go off slowly, to such a distance, to lead the intruder away from her young, as the female quail will do; and, second, to return to defend them, when she saw me stopping right where she had left them, and both the going off and the coming back are equally and utterly unlike a big rattlesnake's normal behavior. Jack Hildigo.

Graytown, Nicaraugua.

CHANTICLEER VS. EGRET.

Editor Forest and Stream:

A few years ago, through the medium of this far-reaching paper, it was my lot to call attention to the possibility of breeding fur animals for profit. I have heard of quite a number of fur farms that have sprung up since, and to some extent in consequence of my article.

I would now like to call attention to another chance for small capital and large enterprise. We are all in sympathy with the movement and endeavors of the Audubon Society. The thousands of good folk enrolled as members are doing good work, but so far they have not accomplished a certain object that is of great importance, and one which has received exceptional attention—viz., arresting the extermination of the plumed egrets.

The case is briefly this: Each egret bears a bunch of plumes worth more than its weight in gold; there is no danger in going after the birds; little capital is required for the expedition, and its character is such as to commend it to a certain class. The commercial demand for these plumes continues, and in my opinion there are but two things that can save the birds that bear them:

First—A complete cessation of the demand, which I see not the slightest reason for anticipating.

Second—The discovery of a cheaper substitute. It is well known that the discovery that silk would felt saved the beavers from extermination this century, and I venture to predict that whoever invents a substitute for heron plumes, will not only save the birds but will make a fortune.

There is good reason to believe that those skilled in the handling of celluloid have experimented much but fruitlessly in the attempt to produce a celluloid plume. I think there is a simp'er though a slower solution of the question. It is this: Develop a breed of barn fowls that shall grow plumes.

This suggestion may provoke a laugh from some, but not from those who know the boundless plasticity of our barn fowl in the hands of a skillful breeder. When we remember that breeding has produced a fowl with tail feathers 18ft. long—has produced one whose head and neck bear no feathers at all—has produced another whose head is smothered with long feathers—and has already produced one whose every feather is a silky plume, we find it not difficult to believe that a breed might be made with plumy tail, the more so since several varieties seem to stand ready for development in the desired direction.

Pure white Dorkings and the silky fowls offer a good groundwork for the breeder to start on. It is no uncommon thing to see a white Dorking whose hackle and tail coverts are so meager in the web and so open in texture as to be quite plumose. These peculiarities could be seized on and developed by judicious breeding with a rapidity that would surprise any one unacquainted with such matters, and the question solved.

Finally, it should not be forgotten that no great outlay is required. The fowls would continue equally good and profitable for table use, so that the increased value of the feathers would be an item of clear profit.

Buffalo in the Yellowstone Park.

Col. S. B. M. Young, acting superintendent of Yellowstone National Park, in his annual report estimates the number of buffalo in the park at twenty-four. He says he has consulted with the superintendent of the National Zoölogical Park, as to the advisability of corraling them in the park with a view of their preservation and increase, but that the idea has been abandoned, as adult animals die under even slight restraint. Colonel Young estimates $250,000 as necessary for next year's improvements in the park.

The Sportsman Tourist.

PACK-BASKET, RIFLE AND ROD.

Part I.

"The natural life in the woods, the strong day's work,
The blazing fire at night, the sweet taste of supper, the talk, and the
Bed of hemlock boughs." —*Whitman.*

It came at last, the long-anticipated day, when the fetters of business were snapped and commercial problems were left for other brains to solve. Farewell, for a blessed season, to the sounds of brawling traffic, to newspapers, politics and all the ignominious details of our watch-consulting and train-catching existence! Away to the land of the trout and deer, to the forest camp and the cedar boat!

The Adirondack air was like wine, as my friend L. and I stepped from the train at Spring Cove on that fair August morning on our way to Blue Mountain. The St. Regis River glimmered in the sun, the tamaracks were ablaze with jewels of dew, the tall spruces rose like spires against the sky, and the great hills towered in majesty above us, making a picture which I doubt not will be recalled with a mixture of pleasure and regret on winter nights in the future.

It was an encouraging thing to see deer tracks in the moist margin of the road as we drove to the hotel, and when after a four-mile drive through the woods we arrived at the quaint old log hostelry, it was a solid satisfaction to shake hands once more with the burly and jovial proprietor, Darwin Day, and to see the picturesque figure of our guide, Will Martin, standing, rifle in hand, framed, as it were, in the doorway. The day was given up to unpacking our duffle, laying plans for the morrow and targeting our rifles to see if they or ourselves had lost accuracy during a long period of enforced inactivity. Our objective point was Lake McCavanaugh, four miles distant, near the shore of which Camp Saint's Rest was awaiting our occupancy.

To provide for the comfort and internal wants of three hungry men who plan to make a protracted stay in the woods involves some physical exertion at the outset, and I wouldn't like to say just how much the pack-baskets weighed which we shouldered next day; but if the packs were heavy our hearts were light, and as "the labor we delight in physics pain," we waved a cheerful adieu to our friends and soon crossed the threshold of the forest.

I believe it is John Burroughs who speaks of "the ground-loving foot," and the phrase is a significant one. Certainly, to one who for months has walked on granite and bluestone, there are few things more grateful than to get his feet on the grand old earth. Moreover, a clean forest trail is the most delightful of all paths, and we would have been blind to the beautiful and picturesque if we had not enjoyed the tramp from Blue Mountain to Lake McCavanaugh. The brown streak winds around the precipitous sides of the mountain through a noble forest of maple, ash and yellow birch, avoiding huge, moss-covered boulders, crossing little fern-lined brooks of ice-cold water, and deer trails leading down from the hills above, threading its way through wild, selected spots where the spruces grow thick among the ledges, and the close-cropped "witch-hopple" bushes show that the deer have wintered here; leading us up onto the high ridge above the lake, glimpses of which we get through the balsams and hemlocks as it shimmers in the sunlight far below; and descending at last into the sunny valley where nestles the snug little log camp, just as we three left it almost a year since.

Standing in the door of this sylvan lodge, hearing the sound of the little brook as it sang among the ferns, smelling the fragrance of the balsams and feeling the freedom and the restfulness which are the gifts of the mighty forest, I could readily believe that in some such spot the king of poets must have stood when he said: "This shadowy desert, unfrequented woods, I better brook than flourishing, peopled towns."

It is astonishing what a hold a simple camp of logs and bark may get upon our affections, and how vastly superior to the most luxurious homes its rough exterior and homely appointments may sometimes seem. Why is it that a man is compelled to live in a house costing $5,000 or $10,000 when a $50 house suits him so much better? Whoever solves this problem and provides a remedy for this unfortunate state of affairs will become the patron saint of all hunters and fishermen.

We have a cast-iron rule that, barring salt pork, no meat shall be brought in from the hotel, and that the woods and waters must supply our needs in this direction. Therefore Martin and I took the rods and started for the lake to win our dinner. The deep gutturals of the frogs among the lilypads suggested that if the trout failed to rise we would still have our feast; and so it turned out. The trout disdained our flies, but the frogs seemed to regard an ibis or an oriole with favor, and fifteen big fellows were soon sprawling in the boat. And such frogs! None of your sputtering, scurrying sort, but huge, bellowing batrachians, half as big as a muskrat. I wonder if people really know how much fun there is in catching frogs with a fly. I have seen fishermen turn up their noses at the thought of descending to so low a level, but, later on I have seen these same fishermen so absorbed in the pursuit of this unique game that they forgot to come in to dinner. The "frog chorus," which at the time of our arrival at McCavanaugh would have made a Yale crowd turn green with envy, became gradually fainter during our stay, and finally ceased as entirely as I have known it to do on the Manhattan Field when Princeton kicked a winning goal. We dined royally that afternoon, and thenceforth there was never a day when we were not at least one meal ahead in our supply of fish, flesh or fowl.

Before dark a big balsam was felled, its bushy top was reduced to a great aromatic pile of fine browse, and the bunks were filled a foot deep with it, shingled on, ends up. The man who has never yet slept on a properly made bed of balsam tips has yet to experience the keenest luxury of repose.

We failed to get a shot on the lake at dusk, and jacking having become a lost art under the recent law, we decided to try a moonlight hunt, a species of "shining for deer" which Albany legislation will have difficulty in preventing. A mile below us, on Stony Brook, was a small clearing

where some old lumber camps had been burned. Several big deer trails led to it, and the ground was literally hashed up with tracks. It looked as if a herd of deer had been spending the summer there. Martin, L. and I reached this spot at dark, and seating ourselves on some charred logs awaited developments, of which there were several. First came the punkies, something less than a million of them; but a liberal application of tar-oil on our hands and faces stopped their fun. Then a pair of "saw-file" owls discovered us, and flitted about, squeaking their disapproval of our presence. A hedgehog wheezed and grunted in the raspberry bushes; then there came a sharp rustle in the thicket, and the child-like scream of a rabbit proclaimed a nocturnal tragedy, in which a fox was probably the heavy villain. Finally the moon, which had been struggling through the clouds on the horizon, shone out in sudden splendor, and the whole face of nature changed. The inky brook became a stream of silver, the charred logs and stumps of the old lumber camp assumed strange fantastic shapes, and the gloom of the forest gave place to a subdued glory, which softened the rugged outlines of the hills and bathed the hemlocks and spruces in its gentle flood. Surely it could not have been intended that men should sleep on such a night as that!

Our admiration of moonlight effects was interrupted by a cracking of twigs on the other side of the brook, a sound which every still-hunter knows, and which makes his blood leap. But just as we were expecting to see a deer come into the open, a succession of loud snorts informed us only too plainly that his antlered majesty had winded us and would never show himself. He made noise enough for a whole herd of deer, blowing holes in the atmosphere and smashing around in the brush until, as Martin said, it sounded as if there were "half a dozen Frenchmen in there clearing up land." Convinced that such a racket would drive all the deer in the vicinity to another county, we started up the trail for camp.

The natives in the Adirondacks have a way of utilizing old wood roads wherever they can, to save the trouble of cutting out trails; and as these roads are almost invariably on the lowest land, and only intended for use in the winter, when everything is frozen solid, they make the worst possible trails for the hunter, being boggy, overgrown with bushes, and full of low stumps and exposed roots. Bad at any time, their general cussedness is best realized at night. The Stony Brook trail is no exception to this rule, and when we got back to camp, after midnight, covered with numerous concentric layers of mud, and with a few square inches of skin missing from our legs, we decided that it was violating the spirit of the law to attempt to kill deer with the moon for a jack—especially on Stony Brook. Besides we didn't need a deer anyway. That night I dreamed of falling out of the top of a hemlock tree and being impaled on the sharp stubs of a dead spruce, which sank with me out of sight in the soft ooze of an Adirondack wood road.

Just before daylight I woke Martin, and we went down to the lake to see if anything was stirring. It was still too dark for me to see distinctly, and when Martin, pointing to the further shore, said, "There's a deer over in the cove," I could not at first make it out, although I had always prided myself on my eyesight. I presume, however, that as Martin is partly nocturnal in his habits, he can see all right in night. We got carefully into the boat and headed for a point toward which the deer was feeding. Every time its head was raised we were motionless, and when it was lowered again the boat seemed to make noiseless leaps toward the shore. It was as pretty a piece of paddling as I ever expect to see. As we neared the dusky figure of the deer I found myself getting

"Wild with all the fierce commotion
And the rapture of the hunting."

Suddenly the deer lifted its head, craned its neck toward us, and then looked toward the woods. A slight shake of the boat admonished me that there was no time to lose, and, holding just back of the shoulder, I "unhitched." With a mighty bound the deer cleared the bushes skirting the shore and disappeared before I could get in another shot. "That's our meat," said Martin, and when I expressed some doubts, "You'll see," was the laconic response. We landed, and entering the swamp found "our meat" within 30yds. of the water, stone dead. I was very sorry to find that it was a doe, but my disappointment was tempered by the fact that she was dry and had no fawns dependent upon her. It was also a satisfaction to find that the lead had been placed exactly where I had intended, and there was considerable comfort in having the meat supply assured so early in the game.

At 5:15 the deer was hanging in front of the camp, and while Martin was preparing to celebrate the occasion with a breakfast of liver and onions I put the seventh notch on the stock of the good old Marlin.

The camera was brought into play, and the first deer of the season was made a matter of record. The camera is indeed a most valuable adjunct to the camp outfit, enabling one to bring the woods and waters home with him, so to speak; giving to many a wild spot, where the foot of man has never trod, "a local habitation and a name"; furnishing endless themes for conversation and reminiscence, and incidentally revealing some of the facts and secrets of the wilderness to skeptical friends, whose experience of the woods consists of viewing it from the porches of the big hotels.

In another paper I shall attempt to give a further account of our adventures and successes, hoping it may give to others as much enjoyment as their articles in the columns of FOREST AND STREAM confer upon me.

ARTHUR F. RICE.

PASSAIC, N. J.

"Uncle Lisha's Outing,"

BY Rowland E. Robinson, is now ready in an attractively bound volume of 308 pages, the twenty four chapters recounting the homely adventures of those Danvis Folks with whom FOREST AND STREAM readers are so well acquainted. Sent postpaid on receipt of price, $1.25, by the Forest and Stream Pub. Co.

The Forest and Stream Publishing Co. are the largest publishers and importers in America of Books on Outdoor Sports. Their illustrated descriptive catalogue will be sent free on request.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

THE NATIVE AMERICAN HUNTER.

I.—Buffalo Killing by the Cheyennes.

As told by White Hawk.

IN presenting an account of the methods by which the Primitive American Hunter captured the animals on which he lived, and of the ceremonial which often accompanied this capture, some introduction is needed. At best it is difficult for the civilized person to comprehend how the savage exists, but when this savage is the man of the Stone Age, the task of putting one's self in his place becomes doubly hard.

The American of the Western plains was, as a rule, a meat-eater, and depended for subsistence on the flesh of the wild animals who shared with him the country which he inhabited. These animals furnished him food, clothing, shelter, and, in large measure, the implements which he used in the vocations of his daily life. Unless he captured them, and in sufficient numbers, death by starvation must be his lot. Something of the difficulties that the Primitive Indian had to face I have endeavored to show in my book, entitled "The Story of the Indian," from which a few paragraphs may be quoted:

"It is difficult for us who dwell among the civilized surroundings of this age, to realize how severe was the struggle for existence of primitive man in America; what the condition of the Indian was in the days before the white man had come, bringing with him firearms which kill at a distance, and horses which can overtake the buffalo. To comprehend this we must stop and think, trying to move ourselves some centuries back to the time of the stone age, when the people, wholly without knowledge of metal, slew with weapons made of flint the wild beasts on which they subsisted, and moved from place to place on foot, carrying their simple possessions on their backs or on the dog travois.

"In those days the securing of daily food must have been a difficult matter for many tribes, and the laying up of provisions for the future doubly hard. The great beasts, so easily slaughtered by the rifle or even by the iron-headed arrow, shot into them at close range by a mounted man, must have been well-nigh invulnerable to the stone-headed arrow. The tough, thick hide, covered with a close mat of fur, presents resistance to the keen edge of a modern knife, and could have been pierced only by the best arrows of that day shot at very short range; and if the careful hunter crept close enough to drive the blunt-headed shaft deep into the body, the great best, irritated by the prick of the puny dart, instead of running away, might turn to fight the one who had injured it. Often, no doubt, the man kept out of sight and shot arrow after arrow into it, for there was no sound to alarm it, and it could not tell whence the hurt came; but let the animal learn the cause of this pain and the man was in great danger, for a wounded buffalo was a terrible antagonist, swift of foot, resistless in power, only to be avoided by the exercise of that cunning which has ever given man the mastery over the brute. In that age of stone the contest between wild man and wild beast was not an unequal one. The beast was the stronger, the quicker, the better armed of the two. Man's advantage lay altogether in his intelligence.

"Long before the time of the bow and arrows, there must have been a day when for these men—the ancestors of the Indians whom we know—the capture of such a great animal as the buffalo was an impossibility, a thing altogether beyond their power to compass, and not to be contemplated; a time when the food of the people consisted of the fruits of the earth and the small animals, those which are so numerous, so timid, and so lacking in craft and wariness, that even feeble man, armed only with his club—the first weapon—could circumvent them. In some of the tribes there still persist traditions of those earliest times, when arms—the bow and arrow, the shield and lance—were unknown, and many of the practices of those ancient times have endured even to the present day.

"Since his armament was so inefficient as to make the capture of game at all times uncertain, and since the effort to secure it was often attended with danger, it must early have occurred to the Indians to devise, for capturing food in quantity, some method which should be more certain and more safe than the bow and arrow. The problem was long pondered over, and the first steps toward solving it, no doubt, took the direction of improving the traps and snares which they employed for the capture of the smaller animals; and the evolution of the pen with the extended wings, into which the buffalo or antelope were brought and captured whole herds at a time, was slow. On the other hand, in those early, as in more modern, days, the Indian's whole study was the animals among which he lived. Constantly engaged in watching them, and trying to learn how they would act under particular conditions, he knew their habits better than he knew anything else. Long before the traps, so successfully used, were devised, he must have known of the existence in buffalo and antelope of that curiosity which made the trap feasible, and which, to the animals, proved so self-destructive."

In different books that I have published on the Indian I have described some of the methods by which some tribes of Indians captured their game, but in these papers I shall refer only to some of the ways of the Cheyennes, a tribe whose migrations brought them less than 225 years ago to the plains of the West and the foothills of the Rocky Mountains. What their original starting point was is not well determined, though the investigations of Mooney and others show that they came from some point east of the Mississippi River.

This is the way in which the old men tell us that the buffalo were captured in ancient times, the narrator being White Hawk. It is to be remembered that the evolution of these different devices was no doubt slow, and that no memory of this process would remain among the Indians. Tradition would tell them that at different periods in the tribal history different methods of capture were employed. This being the extent of their knowledge, it is very natural that they should attribute the devising of improved methods to dreams—in other words, to supernatural assistance or advice. Like most primitive peoples the Indians are firm believers in dreams. Like the prophets of old, they often received in sleep suggestions from supernatural sources—were warned in a dream. Such visions—the Indian says—are sent us to tell us what is going to happen, and the advice which they convey must be obeyed.

GEORGE BIRD GRINNELL.

White Hawk's Relation.

In those days the arrow point was made of stone. There were birds, and so they got feathers for their arrows so that they would fly straight. Men were out from the camp all the time looking for food. When any of these men found a herd of buffalo, twenty or thirty or forty, they would come back to the camp and report to the chief. Then all who had bows and arrows would get ready, and go with these men to near where the buffalo were, and would form a big circle as far off as possible from the buffalo, but entirely surrounding them. The side of the circle to the leeward of the buffalo and the two other sides across the wind were formed first. The windward side was formed last. Then the people would begin to close in on the buffalo, until, as the circle grew smaller, the people would be closer together. When the buffaloes began to smell the people, they would run away; but those toward whom they ran would would yell and toss their robes, and the buffalo would turn, looking for another place, and from being always turned back they were soon running in a circle. When the people got pretty close, all those who had strong arms to pull the bow and who could shoot straightest and the most active young men would charge in among the buffalo and begin shooting their arrows at them, while the buffalo were running round in a circle, not trying to break through the line of the people. The old men say that sometimes they would kill a whole herd in this way, none of them breaking out. At times a few would break out and get away, but often they killed them all.

The people had dogs, and when buffalo were skinned and cut up they packed meat on their dogs, and then every man, woman and child able to walk would carry a pack to camp. They left nothing behind, but carried everything in. Even the bones were carried in, and the entrails, for buffalo were hard to get and were only had occasionally, so nothing was wasted or left.

Later, after they had learned to surround the buffalo in this way, some old man was told in a dream of another and better way. That he should take the wing of some large bird, perhaps an eagle and perhaps some other big bird, and that the people should take their lodges up on to the prairie and pitch them in a circle, leaving an opening at one side. When the buffalo were close, two old men, each carrying one of these large wings, should go out toward the buffalo and wave the wings in the air, beckoning to the animals, and that these would come toward them. They did this, and as the buffalo came toward them, the men moved away and the buffalo followed, and so the men led them right into the circle of the lodges, where the people killed them all. The buffalo seem to be gentle and would not run, but would stand about, waiting to be killed.

In later times, another man had a dream about this. His dream said to him: "You shall take your people and have them make a large pen out of wood and brush, with a gap in one side, and a chute with diverging wings running out half a mile into the prairie, a solid fence which shall hide the people from the buffalo. Then you shall take certain young men of the camp and go out with them on to the prairie and you can bring the buffalo into this pen."

The man had the people build the pen and the wings as he had been told, and took his young men and told them what to do and went out and led the buffalo into the pen without any trouble. After that they could always go out and bring them.

Before they set out to bring the buffalo, the old man told his young men to strip naked down to their moccasins, and to paint their faces, arms, legs and bodies red all over with red dirt. The medicine man and another old man, each carrying a wing, went before the painted men singing their mysterious songs. The painted young men were divided into two equal parties, and followed these two old men, behind them and outside of them, on either side. When the old men got near the buffalo, they beckoned to them with the wings, and soon the buffalo began to come toward them. When they began to come, the old men walked toward the chute in front of the buffalo, and on either side of them, but a long way off, walked the two parties of painted young men. The young men did not sing, but if at any time the buffalo tried to turn aside from following the old men, in either direction the young men held their hands up to heaven and waved them in a certain way, and the buffalo turned back. When the old men had led the buffalo in between the wings, the opening into the chute was filled by the medicine man's companion and by the two parties of painted men who stood on either side of him in the gap, and all sung. The young men who had been chosen to do the killing had been hidden behind the walls of the chute, and after the buffalo had passed them they climbed over this fence and followed them, hurrying them into the pen. While they did the killing, the painted men stood there at the gap of the chute, and kept on singing until all were killed.

When the buffalo that were following the two men who called them with the wings, got near the gap into the pen, the medicine man walked a little to one side of the entrance into the pen, still singing and waving his wing toward the entrance, and the buffalo walked right in. Then, while the young men walked up and formed a line in the entrance, the medicine man walked along the fence, and outside of it around the pen to the back opposite the entrance He stood at the back of the pen and sung his mysterious songs all the time while they were killing the buffalo, and when they were through killing he sat down on the ground and stayed there till they had finished the skinning and cutting up and had taken the meat all home to camp.

The best pieces of the meat were selected for the men who called the buffalo, and the painted men had the privilege of going into the pen and selecting for themselves the next best portions of the meat.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

A MOOSE HUNT IN THE SOU'WEST.

The starting place of nearly all fishing expeditions that have for their objective point the famous salmon pools of the Sou'west Miramichi is known as Hayes's Bar. Boiestown is the nearest railway station. It would be entirely feasible for the fisherman to have his canoes and men meet him at Boiestown, but this would mean that the guides, who reside at the Bar, must drop down the river nine miles or so and then fight the rapid current for an equal distance before the journey up the river has been fairly begun. Nearly every one prefers to save time by driving up from Boiestown. The skill and strength required on the part of the guides to stem the current of this swift-flowing stream will not fail to command the admiration of the lowest orders of human intelligence to be found even among those who claim the name of sportsmen. Yet the native of the Bar picks up his long spruce pole, vaults into his canoe, and resumes his everlasting battle with the river with a light heart. He knows the name of every rock and ripple from the Bar to the Forks, and just how to thread his devious course through the rocky shoals and foaming rapids. He can tell you within a yard of where the salmon lie in different kinds of weather and at different times of the year. He has lived upon the river ever since he was a boy. He has speared the salmon pools by torchlight and been chased by the wardens since he grew to the stature of man, and he will continue to spear and be chased, despite all the laws that men may devise. He is poor; he has a large and ever-increasing family; his employment, save when the lumber season calls him to the woods, is of an intermittent sort, and he feels that the river belonged to his father's father and now belong to him.

But lawless though the native of the Bar may be, according to the dictum of those who sit in the seats of the mighty and make the laws for him; thinly veiled though his contempt may be for the wandering evangelist, or "sky pilot," as he calls him, who ever and anon makes a feeble attack upon the forces of evil intrenched at the Bar; quick though he is to resent all injuries, real or imaginary, by resorting to his fists, those who employ him on the river will find his manners mild and his honesty beyond dispute.

Many times in the years that have run like the river have I embarked at the Bar to try my luck with rod and reel, but on Aug. 25 last my friend Arthur Shute and I were not on piscatorial pleasures bent. We had only a single trout rod upon which we relied to lend an agreeable variety to the larder. The real object of the expedition was moose, for be it known that when your correspondent was fishing on the upper waters of the Sou'west in the early days of summer, divers and sundry moose, doubtless pursued by the flies and heat, had revealed themselves to us on the shores of Miramichi Lake. I decided to revisit the lake as soon as the season opened and order up moose steak and onions. It would take about three days to pole the loaded canoes the distance of forty miles from Hayesville to the outlet of the lake, and in case of rain or freshet perhaps four or five. The balance of the time could be profitably consumed in locating camp and looking up the "sign."

Now, certain men who were wise in the lore of moose warned us not to put our faith in Miramichi Lake. They said that the moose that we saw there in July would be conspicuously elsewhere in September, that they would have ceased to frolic among the lilypads and would have betaken themselves to the hardwood ridges, that they would be heading north; in fact, that Miramichi Lake was not a popular resort for moose anyway. We decided, however, to proceed to Miramichi Lake and ascertain the frozen fact for ourselves.

Well, the episodal itinerary of our voyage up the river were not of special note. The weather was ideal all the time except the night that we were snugly housed at Burnt Hill, when it rained very hard and the river rose a foot. There were one or two occasions for "invidious apprehension," when the canoes hung poised on the brink of the swirling rapids of Slate Island and seemed half disposed to return to Hayesville. There was just one thing that happened on that trip up the river that was so peculiar and so impossible to believe that I desire to have it here set down in honest print, so that when I am good and old I may read it over again and perhaps be persuaded to fully believe it myself.

We were camped that afternoon at the mouth of McKeil Brook, where is one of the three great salmon pools of the river. Two men were up the brook fishing. Arthur and I were laying around loose on the bank communing with nature and Myrtle Navy plug. A big horned owl slid across the stream on noiseless wing and lit on the limb of an old rampike, or at any rate a middle-aged rampike, within 5yds. of the tent. He sat there blinking solemnly at us and otherwise acted in a very oblivious manner. I reached for the shotgun, but on fishing the ammunition out of my venerable valise found that the river had gone into the valise and the shells would not go into the gun. Now, my friend Arthur is a youngish man of a very optimistic turn of mind. He remarked to me that it had been revealed to him that he could catch that owl. He arose and seized the trout rod, made a running noose in the line, let out about 40ft. of string and prepared for business. It seemed to me as a perfectly unbiased spectator in the front row of seats that I would be safe in betting a year's salary on the owl.

Even the most intimate friends of Arthur will admit that he is not an artist with a trout rod. Howbeit, the first cast he made for the owl was marvelous for the eccentricity of the event. The noose settled fairly and squarely over the head and around the neck of the owl, and one of life's concentrated moments was forthwith ushered in. A nebulous mass of claws and feathers, surmounted by two disks of flame, shot upward from the limb, and the line hissed through the reel as though a 20lb. salmon was in tow. Arthur was surprised, but hung firmly to the rod. The owl went straight up at first, but soon the pressure of the line upon his neck seemed to hamper his steering apparatus, and he began to describe a bewildering series of parabolic revolutions overhead. He kept a full head of steam on his propellers all the time, now losing his balance and lurching heavily to the ground, and then, as the pressure of the line slackened, pulling himself together for a more determined fight. At last his gyrations caused him to encircle the rampike with the line, and also one of the upper limbs thereof. Here he seemed in imminent danger of being hanged, whereupon Arthur ascended the tree, took off his vest and threw it over the owl, brought him down safely, and the noble bird is now an object of much interest to poultry fanciers in the city of Fredericton.

On the following day we poled up to Lake Brook, the outlet of Miramichi Lake. We decided not to camp at the lake itself, as being too contiguous to the game, but to pitch our tent at the mouth of the brook. It is about three miles as the nighthawk flies from this point to the lake, and the brook is navigable for canoes the entire distance. After you ascend the brook a mile or so it assumes the form of a long, winding deadwater, where the deer-grass and pond-lilies are abundant, and where, in the month of July last, the sight of moose or caribou by fishing parties was a matter of almost daily experience. The lake itself is three miles long, and nearly a mile in greatest width. It has a beach of pure white sand at the eastern end and a clean, pebbly bottom, and is one of the most beautiful of the numberless woodland lakes of the Province of New Brunswick.

In the afternoon we cautiously explored the brook for sign. The result was disappointing. A few fresh trails of moose were found at the upper end of the deadwater, but a careful examination convinced us that they were produced by a cow moose and her two calves. Bear signs were numerous. Whether from this or some other cause, it was evident that the moose had for the most part deserted their summer haunts. We did not go clear to the lake, but stopped at a place known as the Gueggas, where the waters of the brook tumble boisterously through a rocky defile hardly 5ft. wide, making a descent of at least 6ft. in a distance of 15 or 20yds. It is a wild-looking place to take a canoe, but the Hayesville men had no fear of it whatever. While the tenderfoot contingent stood on a big rock at the foot of the rapid one of the men, Bob McCoy, poled his canoe single-handed up as well as down the Gueggas just to show how easily it could be done. There is said to be no previous record, however, in the annals of the Bar, of the ascent of the Gueggas ever having been made by a single polesman. The usual method is to haul the canoe up from rock to rock.

Monday and Tuesday were devoted to a careful exploration of the lake and all its inlets. An occasional moose or caribou track of recent date was found, and once we heard the peculiar bark or cough that forms the only vocal sound ever uttered by the caribou. It was too early in the season to call for moose with any hope of success, and it looked as if we might prowl around the lake for many days and not see a decent pair of horns except by the merest accident.

Next day was Sept. 1, and though somewhat subdued over the absence of game at the lake, we felt a degree of thankfulness that we had been spared the sight of a big moose before the arrival of the legal hunting season. From this time forth, our quest of game was attended by a righteous sense of duty. In the meantime some fine hauls of trout were made at Half-Moon Cove, on the main river. Just where the river caroms off an uncompromising bluff and bends abruptly to the north, a cold, clear mountain brook pours in, whose mouth is concealed by a riotous tangle of alders. At and below the mouth of the brook, the river seemed to be fairly alive with jumping trout. They hardly deigned to notice the fly at first, but as the declining sun threw the forest shadows further and further across the pool, they began to rise in earnest. In less than two hours' fishing, eight dozen trout, averaging ½lb. in weight, and occasionally reaching 1½lbs., were taken. The entire catch was cleaned and carefully smoked by the cook. A week later their flavor was hardly to be distinguished from that of newly-taken fish.

It was on the occasion of our second visit to the cove that the crisis of the expedition was reached and passed. Our trip had been an unmitigated success in every sense but one. There was still the aching void for moose. On the morning of the 2d we poled up the river again to interview the speckled inmates of the cove. The sun was shining brightly, and only a faint suspicion of mist curled upward from the surface of the water. As the canoes approached the cove a large bull moose was discerned crossing the river between 200 and 300yds. ahead. Precisely what happened then I have been vainly endeavoring to recall ever since. I can recall some of the salient features, but not all. I remember that I thought the moose was 300yds. away, that I shoved the sights of the Martini up to that figure, that the first shot plowed up the water beyond the moose, and then I shoved them down again. The second shot hit the moose and he stopped and faced us for an instant, then turned about and made for the same bank from which he had emerged. I remember that Arthur, in the other canoe, fired several shots, and that I fired about the same number; that the men were distributing the English language around in a very reckless way; that they were trying to hold the canoes steady for us to shoot, and at the same time poling for dear life to overtake the moose; that the moose by this time had reached the further shore and was endeavoring to ascend the bank, and I seem to remember that a number of people, whose identity is lost in the limbo of forgotten things, kept making remarks like these:

"Boys, he's done for! He can't git up the bank!"

"No, he ain't! The bank's too steep. He's just lookin' for a place to git up!"

"Now, give it to him! I'll hold the canoe!"

(Bang.) (Bang.)

"That's the stuff! That last shot fetched him!"

"No, it didn't! Shove her over! Shove her over! Look, he's swimmin' up the shore!"

"Keep back, Bob, or you'll git the top of your head blowed off!"

"Boys, were goin' to lose him. He ain't hurt a mite! Shove her over now, quick!"

(Bang.) (Bang.)

"Look! Look! He can't git up! He's our moose, sure."

"No, he ain't! He's only lookin' for a landin'!"

"Oh, give it to him now, boys! He'll be in the bushes in a minute!"

"Say, lemme out of this cussed canoe!"

This last classical observation emanated from the undersigned. I jumped into the river waist-deep in order to get a standing shot, and then discovered that I had no ammunition. I shouted to Arthur for a cartridge. That precocious youth had been calmly smoking a corncob pipe through all the disturbance and banging away at the moose at every opportunity. It was his first experience, and he acted like a seasoned veteran. He tossed me a cartridge, which I fired, and am inclined to think it did the moose no good. At any rate, he immediately dropped with a splash in the water, and when we reached him he was floating with the current. He was a four-year-old bull, very large for his age. His horns had a spread of 40in. He was towed down stream about a quarter of a mile to a little grassy island that offered a convenient landing place, and there hauled ashore by the united muscle of the party. Five Martini bullets had passed clear through the animal, all well centered, and any one of which would doubtless have finished him! We hung the meat up at the camp and smoked it all that day and night. The next day we made a rapid run down river to the railway station at Boiestown and brought the entire outfit to Fredericton. And so it was that the wise men were justified of their wisdom, but the chosen people got the moose.

Frank H. Risteen.

Fredericton, N B, Sept. 10.

A TRAMP AND A CAMP.

As we had camped on the Upper Chateaugay Lake in the Adirondacks several vacations in succession, a change was wanted in 1896; and after talk, it was agreed between Clark and myself that we should make a circuitous trip into the woods, starting from the old camp, and after wandering seventy-five or 100 miles, returning in a circle, like the lost man, to the point whence we had set out. Arrangements were accordingly made with our guide. The camping outfit was gotten ready, and when the wished for day arrived, we left the city for the upper Chateaugay, where we spent the first night in the pleasant hotel on Indian Point.

Leaving the Point next day, we took the Ragged Lake trail leading west over Hardwood Hill and Ragged Lake Mountain, Martin, our guide carrying the boat on his shoulders, and Clark and myself each with a well-filled pack-basket and our rods and rifle. The trail was a good one, but it was mostly up hill or down; and our loads, to which we had not yet become accustomed, compelled us to stop frequently to rest. One rest was a long one. For almost without warning the sun went out of sight, the forest became dark, and rain began to fall. We leaned one end of the boat against a tree, and scurried under it, luggage and all. Here we staid until the rain was over. But the stop was not without interest, for such a storm in the dense forest was something novel. The brightness of the morning had quickly given place to a deep gloom, pierced at short intervals by sharp flashes of lightning which almost blinded us as they came, and as they passed away left the gloom more intense than before. The rain first pattered, and then poured on the roof of our little house; but we were snugly housed, and kept quite dry while we watched the play of the lights and shades among the trees.

Just before sundown Ragged Lake was reached, a long and narrow sheet of water about five miles west from Indian Point. In a few minutes the boat was launched, the luggage loaded in, and we were off up the lake to the proposed camping place. But before it was reached another storm appeared over the mountains, and it was evident that to prepare a camp that night would be wet and unpleasant business. Seeing a column of smoke curling from the trees at a point on the west shore, we rowed across, and had the good luck of being welcomed by some campers that had room enough and to spare. It rained all the evening and most of the night, but we were in comfortable quarters, and after a hearty supper chatted around the fire until bed-time.

Next morning the sun rose bright and clear, and the day was a beautiful one. Of course the trout were first to claim our attention. All day long we fished for them—at the head of the lake, foot of the lake, and middle of the lake; also up the principal inlet and down the outlet. But our string was small—just about enough for supper. The following day, however, the fishing was better. Going far up the inlet, some cold spring pools were found that proved to be well stocked. The trout were good-sized, too, the best ones weighing nearly a pound each.

But fishing was only part of our proposed sport The rifle was brought along for the purpose of shooting a deer. As hounding and stalking were out of the question, there was no feasible method left but jacking. This was adopted. And each evening found us floating about the head of the lake, the inlet, and small ponds above, anxiously watching and waiting for deer. But in vain was the watching. Deer were heard, but not seen. They didn't even come near enough to give us the buck fever. If we shivered at all, 'twas only with the cold.

Sunday came; that quiet, peaceful, restful day in the woods. Early in the morning Martin left to make a trip to Indian Point for the purpose of rep'enishing the larder. Four of us were left, Clark and myself and the Rev. Mr. T. and his son, the proprietors of the camp. During a morning stroll beside the lake some blueberries were found by a couple of the party, who thinking they would go well for dinner, picked a quart of them. As the day was very pleasant the dinner table was set outside of the shanty in a clump of birches. The berries were dished out by an impartial hand, each being served a half pint, which he sweetened and creamed to his taste. For, thanks to a club house down the lake, we had cream for dinner that day. Right delicious were those berries. And we young sprouts dipped our tin spoons into them and ate them down with the baked potatoes, speckled trout and brown bread. But not so the Rev. T. He allowed that he was not accustomed to "mix things," and that he always "saved the best of the wine till the last of of the feast." When ours were all gone, therefore, his well-rounded dish still sat before him ready to serve his purpose of topping out a hearty meal. The substantials finally put away, he lifts the dish of berries from the table and draws back a little to enjoy his dessert. But as he takes the first spoonful, ye living birches, what do we behold? With as wry a face as ever toper made, and with words as strong as would well become a clergyman even in the forest wilds, those berries, dish, spoon and all, go flying over his head and rolling down the mossy bank, even into the lake. Alas, for his dessert! our sugar-bowl and salt-cellar were just alike—two paper bags sitting in the middle of the table.

Monday morning found us again on the move; this time for Plumadore Pond, by way of Round Pond and Salmon River. The carry of several miles to the latter pond was easily made before noon. Here lunch was eaten. Then across to the outlet, down which we paddled in a few minutes into the river. It was our intention to spend the night at Wine Shanty, a landing pretty well up the river, where there was a short carry to Plumadore. But we had not gone far up the river when some green cedars were encountered, felled by malicious hands directly across the stream.

These continued at short intervals for several miles. So close together were the obstructions that we would scarcely get under way in the free water, after cutting through one, before another would be in sight. Thus the afternoon was spent in heavy work, instead of easy rowing and fishing; and darkness overtook us still chopping our passage. The jack was lighted, however, and placed in the bow. But finally the stretches of open water began to grow longer, and the snags smaller and less difficult. Our hopes of making Wine Shanty for the night really began to brighten. But as the boat swung around a bend, the jack shone upon a pile of logs and brush across the stream a few rods ahead, that appeared the largest and most difficult of all. So we at once landed and prepared an open camp for the night. Soon after supper we stretched ourselves before the fire upon beds of balsam boughs, which, after the hard day's work, seemed downy indeed. For a few moments we watched the stars twinkling through the foliage and then fell asleep; only to be awakened, however, at about 4 o'clock in the morning by rain falling in our faces. The camp was at once abandoned. And hurrying into the boat, without breakfast, we again pushed up the Salmon. What was our chagrin, upon reaching the huge snag that had blocked our way the night before, to find that the logs and brush were not in the water at all, but were piled high upon the bank, while the stream, with a sharp turn to the right, stretched away in open water, with the cosy Wine Shanty only ten rods distant.

From this landing a carry of a little over a mile brought us to Plumadore Pond, where we expected to camp for a week or more.

This is a beautiful sheet of water about three-quarters of a mile by a mile and a quarter in size, nestled away among the mountains that rise on all sides in green-capped terraces from its very shores. Its trout are of the red-meated variety, and we found them large and gamy, most of them running at about 1lb. in weight, with frequently a 2-pounder and now and then even a 3-pounder to add variety and zest to the sport. It was truly a pleasure to catch them. No fingerlings to bother. No brush to crawl through or logs to climb over. Not even was the humble worm required, but sitting quietly in the boat guided by a master of the oar, we cast the fly upon the rippling waters while the noble fish came to their breakfast and also to ours. The early morning was their favorite time to feed. In the middle of the day, even with an ideal ripple, one would scarcely get a rise, but just after daybreak they were ready for sport.

One beautiful morning while casting on the pond I enjoyed a sight that I had never seen before, except in a chromo. Some 10yds. of line were out and the drop fly was dangling in the air about 1ft. from the surface, when a 2lb. trout leaped from the water about 15in. to the right, and coming over in a graceful curve, took the fly as it hung in the air, and disappeared again about as far to the left. For a moment he seemed suspended between water and sky, and his dark-brown back, his rich cream belly and golden sides, made a charming sight under the mellow light of the morning sun. In fifteen minutes he came to the net, but during that time he put up a fight that was worthy of his first brilliant dash.

While we rejoiced in the fishing day after day, our hunting was not so successful. Each night one or the other of us with Martin floated about the pond in search of deer, and each night the hunters returned to camp with the same old story. While always present, the deer displayed wonderful tact in keeping just out of range.

All too soon the day came to turn our steps homeward. Between the pond and the Upper Chateaugay Lake, where we had first taken the trail, there was a long carry and a six-mile paddle down the South Inlet. On the way we would naturally spend a night at the "springs," a name given to a widening of the inlet at a point where there are numerous springs, about six miles up from the lake.

Rising early in the morning on the day of our departure, we whipped the pond diligently, and procured a handsome mess of trout to carry home, to gladden the hearts of our friends. By 10 o'clock the luggage was packed, and we set out on the last tramp. At noon we stopped for an hour's rest and enjoyed a cold lunch; then on again, with occasional short rests to the "springs," which were reached a little before sundown. To our delight, we found that deer were coming in here, and we indulged the thought that still it was possible to capture one of the noble fellows. A hot supper was gotten ready and eaten, and we were soon sitting about the camp-fire discussing the prospects of the night's hunt. So swiftly did the minutes run into hours, that before we were aware it was 9 o'clock—a time somewhat later than that set for beginning the hunt. It was my turn under the jack; so leaving pard to keep lonely vigil in the open camp, Martin and I started for the boat at the foot of the "springs."

Somehow in the last tramp the door to the jack had been lost, and we found ourselves at the boat with no door. This would not do, so Martin whipped out his red bandanna, folded it twice, and tied it to the jack in front of the opening. It made the best door that old jack ever had. In a few minutes we were quietly running up "the springs." But alas! too late! A deer had gotten there ahead of us, had passed down through the "springs" and gone to the bank on the east side. Without the usual warning he bounded away into the woods as the boat glided by. But with the hope that another might come, we paddled to a point halfway up the "springs" and stopped in the shadow of the timber on the west bank, for the moon, being a little beyond the new, was half-way down toward the western horizon. From this on it was a waiting game. Our boat didn't move for four long hours, and only the strange sounds of night in the forest kept us awake. The wind sighed through the pine tops; the rabbits scurried along the shore; the muskrats sozzled in the water. Now and then a lonely owl hooted from his distant perch, and a whippoorwill piped his note in a shrub near by. Truly, it seemed as if we were the "Wills" that were being "whipped."

But the scene changed. It was after 1 o'clock in the morning. The moon had set. Only a few stars peered through the drifting clouds. Suddenly the heavy steps of an animal moving swiftly were heard at the head of the "springs." He soon struck the water, and with splashing feet came directly toward us. The boat moved up to meet him, and as the red bandanna swung to one side the jack revealed the outlines of a noble buck. In a moment his eyes caught the light. He stopped, and with head erect and every muscle tense, gazed at the unusual sight. Martin, to whom the seconds were now minutes, thinking that his "sport" was a trifle slow, whispered eagerly: "Shoot, shoot." The sharp crack of the rifle answered his urgent command. And the deer, with one last leap, fell dead in front of the boat.

The next morning deer's heart was served in camp for breakfast. We all ate heartily. But by 8 o'clock the boat was again in the water and we were paddling down through the alders that interlock their tops over the winding south inlet.

ROBE.

SYRACUSE, N. Y.

A MINNESOTA CHICKEN SHOOT.

IT is a peculiar thing about upper Minnesota and Dakota, that every time you want to go anywhere you have to sit up all night. When you are in New York or Chicago, or St. Paul or Minneapolis, you can start out at night or get in at morning; but if you travel out in that country, you start at midnight and you get there at midnight, no matter where you go or how you come. I figured for a long time over this with the Chief, who was out in that country at the same time, and we concluded that this funny state of affairs was one of the drawbacks of that region; and the only reason St. Paul and Minneapolis have grown to be such big cities, is because the railroads favored them by locating them at that point on the time card where the trains start and get in at evening or morning. This, we are sure, was discrimination of the rankest sort, and in contravention of the inter-State commerce laws, under which any town should be granted its inalienable right to have its trains start mornings and evenings, and not at midnight's unholy hour.

When we all arrived at Fargo after our Dakota duck shoot, we were sleepy and tired, for we had been obliged to take the train at 2 A. M. at Dawson. I noticed that Mr. Bowers was not eager to go out snipe shooting as I suggested, and somehow the Chief had changed his plans. He now said that he could not stop to take the chicken shoot with me that we had arranged; so he shook me at Fargo and went on to New York, sinking into a deep silence, which makes me fear he may be making up some of his lost sleep. On my part, I had promised to meet State Warden Fullerton, of Minnesota, for a chicken shoot at Campbell, Minn., and of course I did not want to make any changes in plans. The usual hitch in train time ensued, and I found that I should have to lie at Fargo from 7 A. M. till 10:30 P. M., before I could catch a Great Northern train south out of Fargo over the Breckenridge division. So I put in the day very pleasantly with my Fargo friends, and with regret said good-bye to Mr. Bowers that night. Then I got on the train, and promptly went to sleep.

I had enjoyed a pleasant little nap, as I thought, when the conductor came along and asked for my ticket—a brand new conductor whom I did not recognize. He looked at the ticket and calmly told me that we had passed Campbell about five miles back, and that he couldn't stop the train and back up for me. Here was a pretty kettle, for I supposed Mr. Fullerton would be waiting to meet me at Campbell. Luckily that midnight business now came in handy. All the trains run at midnight up there, so pretty soon another train would be coming along, going the other way. I got off about a dozen miles or so down the road, at Tintah Junction, and after a wait of an hour in a depot full of fighting hobos, who were returning from the harvest fields, I at length arrived, about 2 A. M., again at the little town of Campbell.

Terminal Facilities.

No Mr. Fullerton appeared, and I was at a loss to know what to do, when I saw a man with a lantern, and accosted him at random. He asked my name, and so it developed that this was Mr. J. H. Jones, the deputy warden in that county, who was to take out our party to his farm and give us a shoot as his guests. Mr. Jones had had a hard time of it also, for he had expected us all a day earlier, and he had driven over and waited for us two different times till this uncanny hour of the night. This day he had received a telegram from Mr. Fullerton from quite another city, saying that he had been called away and could not get there on time. So I was left alone at midnight, abandoned by all my friends in a strange land. In such a case only one thing remains to be done, and that is to make new friends. At once I told Mr. Jones that we would have that chicken hunt anyhow, for I never had been known to go back on a shooting trip in all my life. I referred with pity to the Chief, at that hour no doubt sleeping the sleep of tired innocence somewhere on the trail to New York, and allowed that Mr. Fullerton didn't know what he was going to miss. So then we hunted up the hotel.

The hotel at Campbell, Minn., is run by a widow and her redheaded boy, and they go to bed at 8 o'clock and die till the next morning at 9 o'clock. If it had not been for Mr. Jones, who was acquainted there, I should have had to sleep on the platform that night. With difficulty he broke into the hotel, and I took possession of the bed which he had reserved for me. In the morning we had the worst breakfast ever was on land or sea; but soon thereafter we were trundling out over the hard prairie roads behind a pair of good horses, and likewise behind a pack of rattling good chicken dogs, which ranged in the good old-fashioned way, on both sides of our course as we crossed the wide stubble fields and stretches of unbroken prairie.

The Ancient Lake.

My friend, Mr. Phelps, tells me that in the neighborhood of Campbell we are upon the edge of that prehistoric body of water known as Lake Agassiz, which once upon a time occupied all of what is now known as the valley of the Red River of the North. In this neighborhood one is close to such points as Fergus Falls, Tintah Junction, Campbell, Breckenridge, and he hears of Ten-Mile Lake, Lake Christian, etc. As we drove on over these wide, flat prairies that morning my companion pointed out to me that beyond us, and beyond his farm, which was some eight miles away, there rose a rim of rough, low hills, from which a great view could be had of the surrounding level country. From this farm, I was told, the town of Campbell could be plainly seen across the prairies, and of a clear day even the town of Breckenridge, some eighteen miles away. Probably most of the dwellers in that country have not heard of, or remembered the story of this ancient lake, and do not realize that the land, apparently flat, really slopes gently up to the rim of this great lake bottom, this wonderfully rich valley of the Red, whose soil is so deep and black. When this odd old lake had filled its mission, and had gone into other fields of activity, as all earthly things must one day do, its waters drained off through the narrow, deep, dinky little channel of the Red River, but here and there there were lakes left, disconnected from the river, and even the head of the river does not reach back so far as what was once the ultimate edge of the valley at its southern end.

Somewhere to the east of us lay the divide which sends the Mississippi waters to the south instead of the north, dividing the muscallonge from the great northern pike, the redfish of the South from the whitefish of the North. All over this uncovered lake bottom the soil is so rich that the prairie grasses have grown deep and strong, and after them the wheat has come, standing tall and sturdy, so that by wheat alone man has held his own here, selling that for fire, house, clothing, everything. Meantime man has disputed with the prairie chicken the ownership of this wide valley land, which to-day is the best chicken country left in Minnesota, and perhaps in the entire West. As yet the chicken crop has not yielded, though its numbers are growing less. Still these wide reaches of untroubled grass hold the nests of the big brown fowl of the West, and still man's stubble fields are poached upon by these birds, which know also that wheat is good to eat. The heaviest bags of which I got any knowledge this fall were made not far from this same locality. This may be remembered for next year.

My new friend, Mr. Jones and I did not worry much about geology as we rode on over these wide green and yellow flats, but we kept our eyes on the operations of our chicken dogs, a liver-colored pointer and a lemon and white setter. The latter belonged to a friend of Mr. Jones, a Mr. Roberts, and I must say that had I had proper transportation facilities I should probably have stolen this dog, for she was a mighty good one. All the morning long she kept out ahead, from 200yds. to a quarter a mile, never stopping her steady and methodical gallop, and quartering the fields as handsomely as though worked by automatic machinery. The pointer was a bit jealous and did not do so well, his eyes being always fixed in envy upon his handsome running mate. Yet far as they both ran and careful as was their every motion at the faintest suspicion of a bird, we found nothing for nearly two hours. Then we put up wild two birds on a piece of stubble. These we marked down on grass, and when the first went up it hardly got well started till it fell, as badly shot up as Marco Bozzaris in the fourth reader. Another bird rose wild out of the grass, and marking this we put it up, and Mr. Jones killed it with his second barrel as it rose in front of him. After that we found nothing for a long time, until about 11 o'clock we saw the setter drop into a handsome point on a piece of grass some 300yds. ahead of us. Unfortunately the dog Brownie also saw her, and at once concluded to steal her point. This he did by means of flushing the bird, an old hen, with a wild run over in its direction. Yet again the two got a flush between them a little later, but this bird we marked and I got it as it rose strongly from a hard field road in which it was running ahead of the dogs. Then we drove over to Mr. Jones's farm, he not very enthusiastic over the morning's sport, and I by this time so sleepy that I did not much care for anything in the way of sport.

To Mr. Jones's surprise, he found waiting him at his house two gentlemen from St. Paul, Mr. J. M. Smith and Mr. F. B. Brace, who had come out for a little shoot. After dinner we all went out together, and as by this time I had caught a little nap by way of equalizing the time cards of all these railroads in that country, I felt keen enough for the fun. This time our luck changed, and before we had gone a quarter of a mile from the house we began to find birds. We now had a third dog along, Blucher, a black pointer, and between the three we covered a wide strip of country. I shall not weary readers by any detailed description of the sport, for at chicken shooting the sport is all pretty much alike. We found the birds well grown, and had full proof of the fact that they had been protected in this part of the country, as Mr. Jones had said they had been. The coveys, except those which he knew had been shot into, were full and strong, and though it was now only just past the middle of September, we found some of them quite able to take care of themselves. At best, however, this big grouse is but a helpless bird in that environment which he has chosen for himself, of flat open country, with no cover offering concealment of his flight. Those birds which we did not kill we could easily mark down, so that escape was all too difficult for them. One by one, in twos and threes and fours they began to come into our buggy boxes, until we approached the dignity of near two dozen. Some of the shooting was at long range, and offered good fun enough, though in the short range work the sport was handicapped by there being so many guns. The dogs did their work beautifully, Mr. Jones having been wise enough to tie up the city dogs of the visitors, and take out country trained rolling stock of his own and his neighbors. These dogs were in part of his own breaking, and I must say that as a dog handler and as a field shot there are few who have any business with Deputy Warden Jones. I fancy that it was his gun which was responsible for a good share of our bag.

How the Chicken Hides.

Along toward dusk in the evening we began to find birds everywhere, the cool of the evening seeming to start them moving all at once. It was nearly dark when we marked down a covey on a bit of stubble and followed them up. As we drove on and pulled up the horses near where we expected to see the dogs point, we stopped nearly in the middle of the covey, which rose so close to the horses' heads that we did not care to fire. We saw that these birds were young and not very wild, and were not surprised to see them pitch again on the same stubble field, not 300yds. away. As we walked toward them, a single bird that had tarried behind the others rose in front of me, and I killed it. Then we went on after the rest. We walked quite beyond the spot where we thought the birds had dropped, but to our surprise no bird arose, and we thought they must have run. Finally Mr. Jones called attention to the actions of the setter, which was just stiffening into a point some 20yds. back of us. We two turned back and killed this bird as it rose, about the same time that the others killed a bird just beyond us. Then we tried to find the bird we had killed, which had fallen fairly cut to pieces; but as it was growing dark we could not at once pick it up. I tramped all around over the place where we thought it had dropped, and was joined by both Mr. Jones and Mr. Smith, the three of us covering what seemed to be every inch of the ground. Meantime

the dogs all showed signs of birds right among us, and at last, several minutes after we had begun our tramping there, out went the whole of the covey from under our very heels, where it would have seemed simply impossible for them to have lain so long without discovery! We cut down four birds out of the rise, doubling on more than one of them, of course, and all being empty when two more birds rose from under our noses and sailed off unsaluted. Then a still stranger thing happened. We only picked up two of the last birds killed, and we all, four men and three dogs, hunted for half an hour in the dark and never did find three of the birds, which must have been killed quite instantly, as they were young birds and the fire was close and accurate. The dogs seemed to think that their day's work was done, and none of them being trained to retrieve, they simply quit when it got dark and refused to hunt dead for us. Much as we regretted it, we had to go away and leave three nice young birds on the stubble unfound. This little incident was fairly a puzzle to us, familiar as we were with the habits of these birds, and it shows well enough the main reliance of the prairie chicken for protection, that of protective coloration. Once in the air, there is no disguising of itself possible for this bird, but many a dog treads close to where it lies and never gets a notion of its presence.

No Future for the Chicken.

We killed that day in all twenty-nine chickens, losing three, but still having a bag rightly to be called a fine one. We had a fine afternoon's sport, as we take it; though it cannot be said that we saw any great body of birds, for we killed a very large per cent. of all the birds we saw or shot at. This is what chicken hunting is to-day, not the old time sport when it was no trouble at all to bag twice as many to the single gun. As to the number of guns, the bag would no doubt have been practically the same had any two of them been out instead of four. A couple of dozen birds to a pair of guns is a good bag these days, and ought to be good enough. I really do not know of very many places in Minnesota where so good a bag as that could have been counted upon in the middle of September. Mr. Jones thought the law would be better if it opened the season Sept. 15. All of us agreed that the date of Aug. 20 means absolute extinction for the prairie chicken. It is too eagerly hunted nowadays by great numbers of shooters, and it is too defenseless for us to hope that it will ever regain much of its former abundance. A noble bird it certainly is, and worthy of a better fate than slaughter at a time when it flies like an owl, and can hardly keep its head out of the grass for more than a couple of hundred yards. Even as we saw this bird, wilder, and more wary and more powerful, sometimes flying to a distance of a mile or more, the chance was 100 to ten against the bird in favor of the gun. I like a day now and then after chickens, and love the air of the wide fields of the prairie lands; but of the sport of shooting these birds I would soon tire, for it would seem too much a certainty to be a pleasure. For the experience of going out and hunting them for a week steadily in a country where they were abundant, I should not now care in the least. October is the best time to have fun with them, for then they have a little fun with you once in a while.

Good Work.

I will say for Mr. Jones that he has done his work well indeed in his part of the State, and kept the birds from the sooners. He wanted very much to have Mr. Fullerton see this with his own eyes. We found some coveys, such as that found last in the evening, which had never heard the sound of a gun before. There are many strips of good chicken country where the sound of the gun is all too familiar to the chicken, from the middle of July till snow falls in the winter. In spite of all that the best protection can do, I do not believe that this bird can be kept from extinction as a game bird worth counting upon. I shall next summer view with very great reservations any early statements to the effect that the chickens are going to be abundant at any place, no matter what part of the country. I do not believe that the chicken is destined to survive in any numbers of consequence. Each season there will be a scrambling rush for the chosen locality, a few days of hurried and deadly shooting at what is left unshot by the sooners; then there will be a hiatus, of poor bags and of discouraging reports from parties who expected to get big shooting and failed to do so. As a bird to offer steady material for fall shooting, I think the chicken will henceforth be a failure. If we are to try our guns and break our dogs, we shall have to fall back on the quail and the ruffed grouse—birds which are more tenacious, and more cunning in their choice of a home. I read and hear of many good bags of chickens made at one place or another—different points of the Northwest—but this does not mean anything as to the permanent supply of the birds upon the country. In the old days we never heard of any big bags at all, because there was no news in a bag. Now we learn of such shooting with interest, forgetting the many shooters who went out this fall and had no luck at all, but came back disappointed.

I had only this one day with Mr. Jones, who entertained me very nicely, putting me in the place of one of those fortunate ones who wanted a bit of chicken shooting this fall and got it. It was a touch of the old times to see the good chicken dogs at work, and to hear the burst of wing of the big birds and to see the feathers floating off on the slant wind of the prairies. As such it was a pleasure, though nowadays it is hard to go chicken hunting without feeling a little bit sad over it—the change is so apparent from the earlier days. But one thing is sure: if this bird can be kept alive in numbers sufficient to make it a factor in our Western sports, it will be done by the work of such men as the wardens of this Northwestern country and their able deputies. It has been my good fortune to see some of the work of these wardens on the ground in the hottest battlegrounds of protective work in the entire West, and I come away with nothing but confidence in them and admiration for them and their success. If they do not win, it will not be their fault. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Mississippi Quail.

BLUE MOUNTAIN, Miss.—The crop of quail is good. The dry weather was favorable to them. Some are full grown and some cannot fly yet. There are very few squirrels, there being no mast for them. Turkeys are few and far between.

S. N. A.

A TIGER HUNT IN COSTA RICA.

Big preparations were being made for our Christmas dinner of roast pig with apple-sauce, venison chops and other dishes, and it was impossible to escape the odors from time to time wafted in fragrant breezes from the outside kitchen. All the doors and windows were of course wide open, because in Costa Rica we do not know what winter is, and there is hardly any change in climate the year round. As I was sitting at my desk, thinking of all the good things for dinner, one of my men comes hurrying up with gun over shoulder and dog at heel, to tell me that he has that very morning and not a half hour before, seen a tiger pass through the bottom of the farm and enter the bush about a mile from the house. He had seen the tiger carrying a young one in its mouth. Would I get my dogs and gun and hunt her? Well, yes, I would, and pretty quickly, too.

My neighbor, Mr. S., was easily induced to join the party, also a friend of his who was staying with him. So in all we were a party of four, including the man who had seen the tiger. Mr. S. had a repeating shotgun, his German friend a rifle which would not go off, our guide a double-barreled shotgun, and myself a .44 rifle. It took us about three-quarters of an hour to reach the edge of the forest, where the tiger had been seen. Here the dogs became very excitable, taking the fresh trail with spirit. No one who has not hunted in a tropical forest can realize how hard it is to make one's way through the bush; it is a matter of patience and machete work. Our German friend concluded to sit himself down on a log and await developments, while the rest of us followed after the dogs. We supposed the old tiger would not travel far, and this proved to be a good guess. What with the barking of the dogs and the noise we made cutting the way with our machetes, the old tiger must have been badly frightened.

At about this time we heard our German friend, whom we had left on the log, calling us at a great rate, and, as we made a circle back, could hear him calling, "I hear the tiger!" and there he sat on the same log, with his old rifle that would not go off cocked, and looking pretty expectant. We all listened, and sure enough, we could hear a crying and spitting about 75yds. off in the bush. We followed up the sound till we came to a snarl of old tree trunk and vines. We cut away the vines as best we could with our machetes, and there, squeezed up as close as he could get to a big tree root was a young tiger, scratching and spitting away at a great rate, and doing it well, too! I crawled in and grabbed him by the back of the neck.

There were no signs of the old tiger; she must have been too scared to stay and see what was going on. Our German was very mad when told that his gun would not shoot, and in fact, threw the gun down on the ground and said that he would be blowed if he would carry it home; and so a peon was sent out for it. I took the little tiger home with me and kept him some time, but the facts are that the cook overfed him, and he died from the effects.

We all enjoyed our Christmas dinner that day, including the little tiger, who had his share.

A week later we had a calf killed by a jaguar, but that is a different story. They are all cowardly, and will not show fight to a man unless badly wounded. The black panther is also found here, but is quite rare; on the other hand, the jaguar is common enough.

This country is rich in game, and should be better known.

FRED S. LYMAN.

HACIENDA LA COLOMBIANA, Costa Rica, Central America.

THE JACKSON'S HOLE ELK.

Editor Forest and Stream:

It is a very fortunate thing that the FOREST AND STREAM expressed its views on this matter so plainly, and brought it before the public notice so promptly; and there is no doubt that this highly-esteemed medium is thoroughly sincere in the view it takes of the matter, which is now open for discussion, and which should interest everyone, and be entered into with a determination to suggest some plan to protect the elk from the fate of the noble buffalo, almost extinction.

The writer is equally in favor of enforcing the game laws to the letter, as these laws are supposed to be made by men who thoroughly understand the habits of the animal and study its protection. But every sportsman knows (many of them much better than those who write the laws) that many of the game laws and conditions in a number of States are positively ridiculous. A very serious condition is going far to fast aid in the final extermination of the elk. The great inroads of civilization over the prairies and through the West soon thinned the buffalo out to an alarming extent; but this was due largely to wanton slaughter, when every cowboy would ride his mustang to one side of an advancing herd and empty his revolver into the poor beasts as fast as he could load and fire, leaving dozens of dead and wounded animals on the plains to rot or be eaten by the wolves.

An entirely different and more serious condition the elk have now to contend with, and one that will have to be considered with great importance in framing a law for their protection in the future, notwithstanding the remarks of other old residents of Jackson's Hole, who (when they were told in explanation that Joshua Adams had taken pity, corraled and fed some of the starving elk), stated that it was unnecessary, that the elk thrived in Jackson's Hole long before Adams settled there.

I am acquainted with Mr. Adams and with Mr. H. K. Glidden, the manager of Moose Head Ranch. They are hard workers, very energetic and very successful, which accounts for the jealous remarks of their less successful neighbors. Let it be understood that I am not upholding Mr. Adams for violating the law, if he has done so. The very remarks of these narrow-minded old settlers proves the very point that is so disastrous to the elk. It is just this fact, that before Mr. Adams and dozens of other settlers came into the elk country and fenced off all the best feeding grounds in the beautiful valleys for their cattle, that the elk did thrive. They are obliged to come down from the mountains in consequence of the heavy snows and seek their food in the valleys, to find their winter feeding ground nature made for them fenced off for the benefit of cattle and for the starvation of themselves. This condition does not only exist in Jackson's Hole nor in Wyoming alone, but in nearly all the best Elk countries. In my business I am in touch with all the guides and hunters of Montana and other States, and the same story comes forward in the following heartrending words: "Elk died of starvation by thousands last winter, valleys being mostly fenced off for cattle." One man writes that he found nearly 200 one morning in with the cattle stealing hay from the large stacks. Many were so weak with hunger they could scarcely stand.

With all due respect to the game laws, it seems, under such conditions, the laws of humanity would be uppermost in any good man's mind, and no one would blame Mr. Adams or any other man to open the bars, take in the starving elk and feed them. It would seem that even if they were furnished to public or private gardens and preserves it would be much preferable to the present and what appears a much worse future condition.

WM. W. HART.

NEW YORK.

VERMONT COVERS.

Editor Forest and Stream:

After thoroughly beating through many of my favorite covers with Bruce M., I am more and more convinced that this is an off year for game birds in this section of our country. We have not found half a dozen young ruffed grouse and very few old birds, which we have allowed to go unshot at, preserving them for seed. In many of the woodcock coverts we did not find a single bird; in others one and two birds, all old birds.

In company with Homer Lovering, Esq., of East Berkshire, Vt., we visited a new ground where he was sure that we would find a few brace of woodcock. We arrived at this cover in a heavy rainstorm and saw signs enough to convince us that there were birds there. The next pleasant day, Sept. 18, we took along the colored wing-shot, Tom Anderson, and again visited this ground. We inquired of a nearby resident if there were any woodcock in his vicinity. "Oh, yes," he replied, "there are some hollow stubs over in that lot where they breed, and my brother got seven or eight one day." Thanking him for the information we passed on, and remarked that we were not after that kind of woodcock. We could write an interesting tale of the few hours' sport that we had that afternoon, but for the fact that the grippe has left us so enervated that we have not energy enough left to tell the truth in full detail; though it does make us snicker when we think about our two companions shooting the same instant at the same woodcock, and hear Homer sing out, "I hit him; he's my bird!" "All right," says the redoutable Tom, blowing the smoke out of his gun, and turning the white of an eye in our direction, "you can have the bird, and done take the glory too." Tom gathered in the next bird, which we kicked out from under Bruce's nose. Then they began to make remarks about our empty pockets, etc.; and it again makes us snicker when we think how the "old gentleman" went in, and snapped every other bird before H. or Tom could raise their guns. "It's the old hound that is the surest trailer"; on him nail your flag for sure victory nearly every time.

These were flight birds, and we took them all away with us. That evening, a nice little supper with our genial host put us in good humor for our ten-mile drive home.

Yes, Awahsoose, gyascuti were formerly quite common here in northern Vermont, and when the cars first began to run in our county, many a night gyascutus's shriek set numerous hairs upon end and the cold shivers up and down many a spinal column. There is now living in this village the son of a man who said that he would go "clear over to Plattsburgh" to see even the skin of a tornado that had done so much damage in the woods about there. In hunting the gyascutus the hunter should bear in mind that this animal has the power to eject a wad with great force and accuracy, even around a corner.

Our club offers a reward to whosoever in this State, outside of the county of Essex, kills by fair, legitimate still hunting, a deer with horns, and $10 a pound for the rump steak if it has a turnip's flavor. Out of some forty more or less deer that have been seen during the past summer in this section the writer has traced them down to a single pair, a buck and doe, that have been roaming about the county among the farmers' cattle, creating a great deal of talk and excitement among the rural inhabitants. If either is shot it's ten to one that it will be the doe that will be potted.

STANSTEAD.

SHELDON, Vt., Sept. 25.

BAGS.

IN the course of last year there appeared in a sporting contemporary Lord de Grey's wonderful record of game killed from 1867 to 1895. In yet another journal the present Kaiser William's record up to May, 1896, was published. Comparison, of course, is out of the question, but in placing the Emperor's figures by the side of the Earl's, we realize what a marvelous shot the latter gentleman is; for the Emperor is no mean sportsman, and yet his figures look very mean when placed side by side with those of the heir to the Marquisate of Ripon.

Of pheasants the Kaiser has disposed of 7,387, to the Earl's 111,190; 407 partridges are all the Emperor can put forward, while the earl's score is 89,401; the imperial record of grouse has apparently not been kept, 47,468 are Lord de Grey's figures; of rabbits the Kaiser has shot 638; Lord de Grey killed 300 more in the course of 1893 alone; during his career he has disposed of 26,747. Hares are the Emperor's strong point. He has shot 11,466, and even Lord de Grey can only point to two and a half times as many; 2,735 snipe have fallen to the unerring aim of the Earl, and he has shot 2,077 woodcock to the Kaiser's two. The fifty-six wild ducks shot by the Emperor compare but poorly with the 1,393 that the Earl has killed; but the Imperial record of red deer is 738, while that of the Earl is 381. One thousand, five hundred and twenty-four large wild boars and 181 small boars appear in the Emperor's list, against ninety-seven pigs in the Earl's; but while the latter can point to twelve buffalo, eleven tigers, two rhinoceros and 8,424 various beasts, the Emperor can quote but one whale and 559 different sorts of game—at least in this country, but at home he can boast of seventeen foxes. Altogether the imperial bag shows 25,376 head of game, while Earl de Grey's contains 316,699.

The King of Naples in a sporting tour through Austria disposed of 51,058 head of game in the year 1793 alone—shooting twenty times as many foxes as the Emperor has done in all his sporting career. Exactly 100 years later Earl de Grey disposed of 19,135 head of game, but no foxes, in the same time. In view of the fact that some 3,000 head of game were bagged in one day at the Marquess of Ripon's moor at Stutton last year, the great record of the Duke of Rutland, who in one day in the October of Waterloo year killed 125 head of game, does not look a very formidable bag for five hours' shooting, although early in the century it was considered to be a prodigiously fine achievement and worthy to be quoted with the forty-one and one-half brace of partridges that Lord Kingston shot at Heydon on Sept. 1, 1810, between sunrise and sunset, thereby winning a considerable wager. For wagers to be made on "bags" was quite a common thing early in the century. In

1811, for instance, a Mr. Clark, of Wollingham, Suffolk, made a bet of 50 guineas that he would kill and bag 47 shots out of 50; as a matter of fact, he killed 59 birds in 60 shots. It is also recorded about this time that a gamekeeper in the employ of Sir H. Mildmay, for a considerable wager, "hit a cricket ball, with common shot, twelve times successively, between the wickets, bowled by Harris, one of the sharpest bowlers of the Hambledon Club." Can it be possible that the expression "bagging a brace" when a batsman retires the second time from the wicket with a nought to his discredit arose from this conjunction of gun and cricket-ball?—*London Standard.*

CHICAGO AND THE WEST.

War at Chicago.

CHICAGO, Ill., Oct. 2.—Yesterday was the date originally set for the public auction sale of a large lot of confiscated game by State Warden Loveday, but after deliberation the latter determined not to put the game upon the market at just this time, when the opening of the season for the general sale of game will bring down the prices with a run. The bulk of this game was taken from the Monarch Cold Storage Co., which delivered up 1,500 grouse at one time, on last Saturday afternoon. Other dealers, commission firms or cold storage companies who have contributed lately to the property of the State in Mr. Loveday's hands are Lalley & Sweeny, A. M. Lynch, A. L. Brown, F. M. Smith & Co. and others, who have for the most part been tackled because they found themselves unable to resist the temptation to handle prairie chickens and grouse ahead of the season, as a great many of their neighbors have been doing. Most of these men are taking their medicine all right, with exception of Mr. Sweeny, of Lalley & Sweeny, who objects to being fined or interrupted, and threatens to do and cause to be done all sorts of things, the least of which is the uncovering of a system of favoritism to which he darkly alludes. He threatens to expose, undo and make evident all kinds of persons and things, unless the warden agrees not to "persist." The assurance of the average game dealer on South Water street is something Homeric. The whole business system of the street is so honeycombed with the commercial dishonesty of years that the continuous violation of the law is looked upon as a matter of course, and its disturbance regarded with resentment. If Warden Loveday is able to go straight through South Water street from front to back and rip it wide open and show its condition of moral decay and business degeneration, he will do a work which will put him at once at the head of the game protectors of this country, and make him one of its most talked-of men. That would be a work well worth a man's while. It would be an honorable calling, to break up this dishonorable pursuit.

War at Koshkonong.

Grim-visaged war has shown its front at Koshkonong Lake, Wis., the most famous canvasback country of this part of the West. This time it is the market hunters again. The members of the Blackhawk Club of sportsmen, who have grounds upon the lake shore, have long been regarded with anything but favor by those who in their selfishness and love of fair play want the whole thing for themselves. Under the lead of a certain Milwaukee "hero" these malcontents, or soreheads, whichever title prove most accurate, have organized a hundred strong to fight the Blackhawk Club men. Meseems the fight will be mostly of the balloon ascension order, mostly operated by hot air.

War at Tolleston.

The fight goes on still upon the lands of the devoted Tolleston Club, on the southern edge of this city. Last Friday the old-time threat of blowing up the Tolleston Club's dam was carried into effect, and the drainage of the club marsh has been going on since then, much to their damage. It is not yet decided what will be the course of the club in regard to the rebuilding of the dam, but heretofore it has always been the policy of the club to meet such efforts with a quieted and dignified but none the less firm and steady course of persistence in its regular lines.

War in Utah.

The White River Utes are this week getting ready for one of their big game round-ups, regardless of the past and of the warnings of the white men interested in preventing the certain butchery of large amounts of game. The Indians say that their ancient right was to kill all the game they wanted to, and they are going to keep on doing that still. They claim that their treaty rights also allow them to do this, and disregard all talk of the abrogation of such rights. The agency authorities are doing all they can to keep the hunters on their reservation, and the officers of the law in Utah and Colorado are trying to aid in heading off the outbreak from the reservation into the game country, where there may be a clash between the reds and whites.

Organizing.

Warden Sharp, of Utah, is trying to effect an interstate alliance with Warden Swan, of Colorado, the working plans to be perfected at a little convention of wardens and deputies to be held at Salt Lake City. Wardens Sharp and Swan will both go to Price, Utah, and to Ft. Duchesne, to interview the military authorities about the Indian circle hunts. A mutual understanding between wardens of States so nearly identified cannot fail to be of value.

The State of Kansas is to have an organization for the purpose of game protection, or rather at this writing perhaps has such, since the call was for a meeting to be held at Wichita, Kan., Oct. 1. The initiative was taken by the Wichita Fish and Game Club, which asks a general meeting for the organization of a State sportsmen's association. One observes with pleasure the fact that the moving club is not the "rod and gun" club of some town, and, therefore, has no savor of trap-shooting attached to the "State's sportsmen's" body. It is a curious fact of history that most rod and gun clubs have nothing to do with the rod, and that very many State sportsmen's associations have little to do beyond trap-shooting. Wichita has lately been showing much good fruit from the hard work of the State Warden, Dr. Shults.

Soaked.

A few more cases of soakings come to hand this week. At Spokane, Wash., Rev. Evan P. Hughes, pastor of the Congregational Church of Hillsboro, paid fine for killing illegal birds. Let him not be cast down over this, for he has good company.

At Salt Lake, Utah, last week, J. F. Ehbert was fined $8 for killing ducks and snipe out of season.

On the train bound east overland in North Dakota last week were two gentlemen of Oxford, O., their names C. Widerman and Fred. Carmeier. On the same train was a pleasant sort of man with whom they scraped acquaintance without much trouble, and him they advised that they had just had fine shooting at a point in North Dakota out beyond Jamestown, and that they had been altogether too shrewd for the State Game Warden, and had not taken out any non-resident licenses. They didn't believe in such a license, anyhow, and thought it defrauded them of many of their inalienable rights. And then the pleasant stranger introduced himself and his star as the State Game Warden, Mr. George E. Bowers. They reluctantly separated themselves from fifty of their inalienable dollars and went on back home. They regret their predisposition to converse with strangers.

Warden Bowers, of North Dakota, writes me that the non-residents are coming in very fast out in his country now, and he is having his hands full in watching a good many widely separated points for persons who try to evade the license law.

Migrations of Game.

Owing to dryness of the country in parts of central Illinois, the quail are making quite an extensive migration to the South this week, and have appeared in numbers at many towns in the lower part of the State. This migration of the quail in Illinois and Missouri is something to which I have often called attention before, and it is one of the odd but well-recognized facts regarding the wild game of those regions.

A big movement of gray squirrels is going on up in Wisconsin just now, and at Baraboo, Wis., last week, the squirrels had appeared in hundreds. This is the first squirrel migration seen at that point in eight years, and one of the largest ever noted. The local paper calls attention to the fact that it is only the gray squirrels which migrate, and says that the fox squirrels remain in the country where they were born and reared. The migration is expected to last about two weeks in passing a given district, and no one knows how far to the South the little animals will go. The last two years have been very good squirrel years in lower Wisconsin, as I can personally testify. What will be the next two years no one can tell, as sometimes one of these big movements will clean out the squirrels over a large strip of country for quite a time.

Migrations of Sportsmen.

The twenty-fourth annual trip of the Jerome Marble hunting party of Worcester, Mass., in the hunting car Yellowstone, is now in progress in Minnesota and Dakota. Following are the names of those who accompany Mr. Marble: A. W. Gifford, Arthur E. Gifford, Mrs. A. B. F. Kinney, V. D. Kenerson and wife, Lester Kenerson, Worcester; T. L. Sturtevant and wife, L. H. Sturtevant, Miss L A. Putnam, Quincy; W. E. Harmon and Miss Helen S. Griffiths, Lexington; John M. Johnson and G. Pearce, Norwich, Conn.; Lewis Eddy, Dorchester.

Mr. J. J. Gokey, of Dawson, N. D., writes me as follows regarding shooting parties at his town: "Mr. Chas. Raymond and son, of Chicago, are here for a hunt. They only intended to stay one week, but the shooting is so good they will make it two weeks. Mr. Eddy and party of eight, from Boston, will be here Oct. 5 for a hunt and have asked me to take charge of the party. The northern birds are just beginning to come in, and it makes fine mixed shooting, ducks and geese."

Mr. Gokey adds a little story of a happening in the goose pits last week, when he had out a tenderfoot who had never before shot at geese: "A big bunch of geese was coming in," says Gokey, "and when I gave the order to shoot I saw this young man jump up, when the geese were right over him, and let off both barrels in the air, and then he began to yell. I got out of my blind and went over to him, and found him white as a ghost and trembling. I hardly blamed him for yelling. I got two geese out of the flock as they came in, and one of these, a 12½lb. honker, dropped right on top of him as he had his gun in the air and struck him on the chest, knocking the gun out of his hands and nearly scaring him to death. He roared so you could have heard him a mile."

Gokey says a good many fine bags of canvasbacks have been made, and that the shooting is as good all round as could be asked by anybody.

Messrs. W. P. Hilliard, E. C. Copelin and G. E Marshall, of Chicago, are just back from a hunting trip, where they were in camp some eight miles north of Herman, Grant county, Minn., about 200 miles above St. Paul. They had a team, driver and cook, and were out two weeks, killing in all above 700 ducks, one day killing seventy birds. They had the finest shooting any of them had ever known, and say that the sloughs all over that region were simply alive with ducks. They shipped 500 birds to St. Paul—for what purpose is not known. What to do with so large a number of birds as such a hunt produces is one of the problems of the hunt. The ducks killed were teal, spoonbills, mallards, redheads, and a few canvas.

Where to Go.

M. E. W., of Peoria, Ill., writes as below in search of information about ducking country:

"Will you kindly inform me through the columns of FOREST AND STREAM where I can get good or fair duck shooting this fall, and how far from Peoria, Ill., and the expense of the place, best time to go, whether you can get decoys at the place or not?"

The answer to the above may be found herewith in the news of the Chicago hunters or in the report by Mr. Gokey, at Dawson, N. D. The points thus mentioned are only a few of a great many which are this season extraordinarily good in the Northwest. As to detailed information about prices, etc., it is not always easy to get this for each and every point. The Chicago party took portable boats (Kankakee model) in with them. At Dawson one can depend upon getting boats, decoys, dogs, and any material he may need, from shells on up. The regular charge there for a guide, team, wagon, boat and decoys is $5 per day. There will be many points closer home than Dawson this fall, and points even in Illinois, where the duck shooting will be fair, though hardly approaching that of the banner point in this banner year for wildfowl in the further Northwest. It is too early to speak with with any accuracy about shooting points in this State or in Wisconsin. If one can take the North Dakota trip it is time to start at once.

Chickens.

The largest bag of chickens made in Illinois this fall, so far as I have known, was made by Victory Emery and Hal Opperman, near Pontiac, Sept. 20, forty-seven birds. Most of the shooting was in the cornfields, and in one such field nineteen birds were killed. The habits of the chickens have undergone change in Illinois with the change in the environment. The chickens take to the corn as they used to resort to the grass in the early days.

Manitoba Geese.

Mr. Thomas Johnson writes me from Winnipeg that his friend Mr. George Manson, of Shoal Lake, wrote him on Sept. 23 about some good goose country near his home:

"We have a strange thing here, south of the lake, about six miles from town, between Shoal Lake and Raven Lake, every fall for the past five years Large flocks of wild geese congregate about the same place and are really a pest to the farmers. They are there now in great numbers."

A Washington Game Country.

Word of a good game region in far away Washington comes from Mr. William Nelson, at Spokane, Wash., to his friend Mr. L. P. Good, of Chicago, who is kind enough to send the matter to FOREST AND STREAM.

"I left here with my family and team on July 12," says Mr. Nelson, "and drove to a small lake thirty-five miles from here, called Fish Lake, and camped there that night and the next day and night to rest my team a little. At the end of the fourth day I found Priest Lake, a beauty, twenty miles long by twelve miles wide at the center, but the lake is only three miles wide taking the average. Here I got a little 'jim crow' steamer, the only one up there, to take us up to the head of the lake. The best time the steamer can make is four miles an hour, but we finally got there and made our permanent camp for the whole six weeks on the lake. On Monday I started out to get some venison for my own use, but came back without even seeing one, but there was plenty of tracks. On Tuesday morning I took my boat and started after trout, and was having fine sport when I heard the water splash behind me, and on looking around what should I see but two full-sized deer, a buck and doe, standing in the lake up to their knees drinking and fighting flies. I picked up my oars and rowed back to camp, and I couldn't relish my breakfast for thinking what a fool I was for not putting a gun in the boat before I started.

"After dinner that day, I took a stroll over to a beaver dam about half mile from camp, and walked around it, and by doing so I saw the trails made by the deer when they came in to feed. Early next morning I then took my .38 55 and started. After walking about half-mile, I sat down behind a big pine tree and waited; but did not have long to wait, for in less than fifteen minutes I heard the brush crack. I looked sharp in the direction, but could see nothing; then in a moment I heard the brush crack again, and still I could not see anything. So I raised to my feet to look again, and in doing this I stepped on a twig and it cracked, and this no sooner done than up went the head of a fine deer about 125yds. in front of me. I waited until she gave me a broadsider, and then cut loose for her just behind the shoulder. She dropped, and then jumped up to run again as I supposed, so I sent another bullet after her, and down she went again. Now, what do you think? I had not only killed one, but two! I ran to bleed the last one, thinking that it was the first one shot twice; but after I had bled this one, I looked back and saw the grass move, so went there and found that I had two dead deer instead of one. I had not seen the second one until after I had killed the first one. I was sorry for this for I did not want so much venison at once; but I got the two out and dressed them, and by hard work succeeded in giving half of one away and we used the other one and a half by being very good to my two bird dogs, and then it is no trouble to keep meat up there ten days by putting it into sacks and hanging it in a tree out of the sun. It needs two sacks to keep the flies away from it, for they will sting through one. I first put it into a cotton sack and then the cotton sack into a gunny sack, and that is too much for the flies to sting through.

"I had been at the lake less than a week and had trout, grouse and venison. What more did I want? I thought that I would put in a few days catching trout and salt them down for my next winter's fish, and so I did. I soon caught and put down 100lbs., all I cared to bring home. Then what I was to do was the question. After our venison was getting low I thought I would go over to another meadow about two miles from camp and kill a caribou, but they are too slick for me. While I could see plenty of tracks, I never could get near enough to see the great reindeer, for he was too cunning and could scent a man too far. So I had to give up that, but not until I had worked very hard.

"On the whole, I had a very delightful trip, and it did me lots of good, and I only wish that you could have been with me. When I tell you that it is no more trouble to kill a deer up there around Priest Lake than for a farmer to go out and kill a sheep, I am telling you the truth; and as to taking trout out of that lake, it is too easy, and the strangest thing about it is that the trout are all of one size. They are from 1¼lbs. to 1¾lbs., and take the fly very wickedly, jumping above it and then turning down; and then comes the fun, as they fight from start to finish, often jumping their full length out of the water six to ten times before you can land them. After we had been there about four weeks, I thought that we needed some more fresh meat, so I went after another deer, but by this time they had quit my first meadow, from the fact of our being so close, dogs barking, our shooting, etc. I went up on the side of a small mountain and waited on a trail one afternoon, and after being there for about an hour and not seeing anything, I started to cross a small ravine, and jumped only thirteen in one bunch. They were lying down in the shade. I picked out a large buck and pulled the trigger, but still he went on. I gave him another, and this time he fell, but only to get up and go on again. I still kept pumping lead into him until I had hit him twelve times before I killed him, the last shot breaking his neck. I could not have shot so many times only I was on one side of the ravine and he on the other, so he could not get away. He was a very large deer and I was forced to cut him up before I could get him out. This was the last deer I tried to get. If you will join me up there next summer I will guarantee that you will have the sport of your life. Think of the good it does a business man to get away from the cares of life for a month or two. I was gone about seven weeks and had a bully time from start to finish."

Hurt by a Grizzly.

On last week Alexander Tolman, of Marion, near Pocatello, Idaho, while out hunting near the head of Rock Creek, was unlucky enough to meet a she grizzly with cubs, and he wounded the mother. The bear charged him and struck him over the head, then bit him savagely and mangled him in a fearful manner before she left him lying unconscious,

He crawled a quarter of a mile before he was observed, and is now lying at the point of death. He was bitten almost into pieces by the beast, which he had enraged by wounding it in the head. The story comes by despatch from Pocatello to a Chicago daily. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

NOTES FROM NEW BRUNSWICK.

JUST one month of the legal season in this Province has elapsed, and already a good many of the big game hunters have returned from the wilds.

The party consisting of Carl Pickhardt, Dr. A. Caille and Dr. F. Krug, with their three Maine guides, Vince McKenney, John Francis and Michael Francis, reached Fredericton yesterday from the Gueggas lakes on Little Sou'west waters. They had been out just three weeks, and brought back the heads of three moose and three caribou. The moose heads were all good specimens, measuring respectively, 54, 48 and 46in. Mr. Pickhardt was warm in his praise of the country, also of the .30 30 Winchester.

Prof. Waite, of the University of Tennessee, Knoxville, has returned from his trip on the Nor'west with Arthur Pringle. He shot one moose and two caribou. One of the caribou had exceptionally fine antlers. The Professor reports that he saw altogether on the trip thirteen moose and fourteen caribou.

Fred Harris, H. F. Hunter and Ralph Johnson, of Boston, emerged a few days ago from the Cains River region. They got no moose, but bagged a bear and lynx, and narrowly escaped taking in another bear.

Lieut. Hincks, of the Royal Berks Regiment, spent his vacation of two weeks on the Nepisiguit River. He shot two fine bull caribou.

John Bodkin, of Kingsclear, a veteran English sportsman, is back from a four weeks' tour of Cains River and the sou'-west. He brought in two caribou; no moose.

Henry Allen, a guide from Maine, formerly a resident of this Province, two weeks ago conducted a party of Lawrence, Mass., sportsmen into the Little River district. The party is still in the woods. They have sent out the carcass of a very large moose.

The gentleman who went out with Tom Pringle on the nor'west would have slain a fine moose, but at the time the moose arrived omitted the formality of loading his rifle.

George H. Warrington, Cincinnati, and J. Henderson, New Haven, have returned from Miramichi Lake. They had no callers with them and failed to connect with a moose. Mr. Henderson is coming again in November and will try the Dungarvon.

Local sportsmen have had more than usual luck with deer up to the present date. Among the fortunate are Duncan Glasier, George Hoeg, Wm. Walker, George Worth, and Percy and John Powys.

There is still some doubt as to whether the prohibition against the export of the "carcass or part thereof" of big game from Canada applies to the shipment of the green head. Some of the customs officers construe the section in one way and some in the other. The matter has been referred to the Department at Ottawa, who have not, as far as I can learn, yet rendered a decision. Mr. S. L. Crosby, the well-known Bangor taxidermist, says if the export of green heads is prohibited, he is coming to Fredericton to set up a branch establishment. FRANK H. RISTEEN.

FREDERICTON, Oct. 1.

A Virginia Test Case.

Editor Forest and Stream:

A recent decision has been made in this State with reference to the game law of the State, which is perhaps of interest to sportsmen all over the country.

Owing to the unusual severity of the winter of 1892–93, the number of birds (quail) was materially lessened, and the next Legislature thereafter passed, very wisely, a stringent game law prohibiting the killing of quail for two seasons after the passage of the act. The time limit of this act expires on Jan. 1, 1898.

In a section of the State where quail are now reported to be very plentiful, a test case was made. A prominent sportsman shot a bird on his own land. He was promptly taken before a justice of the peace and was fined $10. An appeal was taken to the county court. The court promptly discharged the accused, holding that the law is repugnant to the constitution of Virginia, in so far as it undertook to prohibit a man from shooting birds on his land—for two years—this being an unreasonable restriction of a citizen's right.

Prominent legal talent was displayed on both sides.

This judicial decision is of serious import to those sportsmen of the State who have long been striving for the increased protection of game, which, otherwise, will soon disappear. D. H. LEAKE.

EAST LAKE, Va., Sept. 29.

Illinois Association.

PEORIA, Ill.—*Editor Forest and Stream:* At the first regular meeting of the Illinois State Sportsman's Association, the president announced the following gentlemen as the Law Committee for the term of 1897-98: R. S. Mott, chairman, 108 La Salle street, Chicago; S. M. Booth, 36 La Salle street, Chicago; Daniel Raum, 413 Y. M. C. A. Building, Peoria.

Board of Directors as follows: G. N. Portman, chairman, 120 N. Adams street, Peoria; C. J. Sammis, Peoria; William Ohl, Peoria; Charles Bartson, Peoria; R. D. Clarke, Peoria.

Roll call showed the following present: President H. H. Fahnestock, G. N. Portman, C. J. Sammis, William Ohl, Charles Bartson, R. D. Clarke and G. F. Simmons. The Board of Directors and officers held quite a lengthy discussion as to the best means of keeping up the interest of the Association, and to ask the assistance of the sporting papers in their behalf.

The secretary was instructed to prepare a circular letter to send out to the clubs, urging them to join the Association, and assist in every way to make the twenty-fourth annual meeting of the Illinois State Sportsmen's Association one of the best it has ever had. G. F. SIMMONS, Sec'y-Treas.

Deer Plentiful in Muskoka.

TORONTO, Sept. 11—"The prospects for deer this fall are very promising," said Deputy Game Warden Lawrence, of Muskoka this morning. 'There never was such a good outlook. Never before have so many deer been seen at this time in the year." The Ontario Government is anticipating a large increase in the number of hunters in the region, and has decided to increase the staff of officials in the district.

Golden Plover at Barnegat.

NEW YORK, Sept. 30.—*Editor Forest and Stream:* In response to query of Sam'l J. Fort M. D., of Elliot City, Md. in the last issue of your valuable paper, would say that I shot a golden plover on the beach near Barnegat Bay inlet, on Sept. 20, 1897. The bird seemed very tired and was undoubtedly traveling south. I had the bird mounted.

ALBERT SCHOVERLING.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

THEY OUGHT TO HAVE BEEN.

THERE seems to be a propensity in men to tell of what they have done. Fishermen talk of the fish they have caught, the sport they have had; hunters of the game they have shot, and the difficult shots they have made; scholars of the books they have read; mathematicians of the problems they have solved; and so on through the whole range of human occupation and human pleasure.

But no fisherman tells of the fish he didn't catch, of the sport he didn't have; no hunter of the game he didn't shoot, of the difficult shots he didn't make; no scholar of the books he hasn't read; no mathematician of the problems he hasn't solved. All our "tales told by the camp fire" may be indexed in Virgil's line, "All of which I saw, much of which I was."

I heard a fellow tell of shooting at a goose at 212yds., measured with a tape line, and shooting her square in the eye, with a muzzle-loading rifle, and swear he aimed at her eye. I'd have believed him if he hadn't put on the 12yds., or if he'd have made it 225yds. But that twelve has an air of exactitude that arouses one's incredulity. Just 36ft., you know.

I heard another tell of shooting two pheasants and a woodcock at one shot from a rifle with a single ball. Here the woodcock caused me to be a doubting Thomas. I'd have believed him if he'd left the woodcock out

Last summer I heard of a fellow catching a 4lb. black bass, a 6lb. catfish, a 5lb. carp, and a big turtle, on a gang of hooks, at one and the same haul, with a Japanese cane pole and without a reel. I'd have believed this, for I'm very credulous of fishing stories; but three things were in the way—he didn't give the weight of the turtle, he didn't tell what kind of a line he had, and he was so careful to tell us that he had no reel.

And so I might go on telling such things by the hour, but I don't want to do it. Life is too short, and your readers might think that I was drawing on my fancy for my facts. Let me tell you of a few things that I've failed to do, of a few shots I haven't made, and maybe somebody will join in in the same vein, and by and by you'll have a history of events of which we can only say, "They ought to have been."

Years ago, when a boy, I shot a muzzle-loading rifle, and was a good shot, too. One day I was out in the woods and saw a sitting rabbit not 20ft. away, pulled on his eye with a dead rest, the gun cracked and the rabbit ran as if he were scared to death. I had not touched hide nor hair of him. Why? I don't know; never did know.

Another time with the same gun and a friend who has long since "passed into the shadow," I was out after squirrels. We had several each, and were on our way home, when my friends remarked: "It's your shot, and yonder's a crow's nest. I've often got a squirrel by shooting through a crow's nest; try that one."

I glanced through the sights, the ball went true to its aim and passed through the nest, but no squirrel sprang from it. I've always thought I ought to have had that squirrel, that he ought to have been there, but he wasn't, nothing only an abandoned crow's neet, dead twigs, dried leaves, dust, ashes, disappointed hopes. Many a time since, when thinking over some visionary scheme, I have abandoned it as only another old crow's nest, which didn't need the waste of a shot to tell me that there was no squirrel in it I was riding through the woods one day, not so many years ago, a Winchester lying across the pommel of my saddle, a .38 Winchester, with which both before and since I've broken glass balls from a trap, twenty straight, when a deer came bounding along, a five-spike buck, and stopped not 30yds. away, with its left side toward me. I think it didn't see me. I took up the gun, held my finger against the trigger to shut off its click as I cocked the weapon, aimed fair behind the shoulder, as easy a shot as man ever had. The gun cracked and the deer ran off untouched. He should have been shot through the heart. Buck fever? Oh, no; I don't get it. I've killed too many deer even to feel joyous over seeing one. Why did I miss? Call up the "Angel of the Odd" and interrogate him; maybe he can tell you; I cannot.

Early one morning in Missouri I was riding along a road over what had been a prairie, when at some distance ahead I heard the peculiar call of the prairie chicken, and presently came on them sitting on the rails of a worm fence. I had a .32 6in. Smith & Wesson revolver, one of the old pattern rim-fire long with square handle, "to go at a touch." I have it yet, and have often before and since the time in question fired its six bullets into a percussion-cap box at 30yds. I drew the pistol and fired at not more than 20ft at the head of one of the birds, and missed. I discharged all the rounds in the weapon at that same bird, and the last shot fired at its body, but not a feather of the bird was touched. Who can account for such a thing? I can't.

Hunting quail once, "Bob Whites," you know, before breech-loaders had become common, I was using a 10-bore muzzle-loader, an excellent gun, well loaded, for I had loaded it myself, with 3½dr. powder and 1½oz. of No. 8 shot in each barrel. A large flock sprung up, in open ground; I pulled on them with the right and then the left, and not a quail fell. Why did I miss them? I killed others that day, far more difficult shots, but not one out of that flock fell at those two shots.

Only last season a gray squirrel sat on a limb not 20ft. high, and barked at me until I brought a Stevens' rifle to bear on him, a .25-bore, and he not 50ft. away. How could I miss him? The gun went off and so did the squirrel. I had not touched a hair of him. I don't know why I missed, and it will not do with me to say "Oh, you're a bad shot," because I know, and my friends know, that it is not the case.

Two or three years ago the wild geese were flying very low; I tried at the leader of a "drove" with a shotgun loaded with BB's, two barrels, in still air, and not a quill floated down the wind, not a single "hauk" to tell that my load had gone within many feet of the birds. There was no misjudging of distance, nor of the speed of their flight. I had simply missed, and that's all.

I could go on, page after page, of these experiences, but what's the use? Have others had similar things happen them? I guess so, but they don't tell them. Most men think there's nothing wonderful in a miss. But the man who knows that he can shoot, that the shot was "dead easy," and so on, not only thinks, but is willing to swear, that a miss is a wonderful thing. Why shouldn't he? He knows his gun, his ammunition, his distance, himself—and yet he has missed. Why shouldn't he think it wonderful?

Fishing—I'm not a fisherman—never was—and yet I distinctly remember working hard all day on the banks of a trout stream years and years ago, and while my brother caught many, yet not a single speckled beauty rewarded my efforts. I never caught a trout in my life, and "my days are in the sere, the yellow leaf." I'm too old and too heavy to tramp along the streams, and that will be another of the things that ought to have been. We used to fish for chubs and suckers and sunfish and little mudcats when I was a boy, along in the '50s and early '60s, and I was never a success. Fish would always take my brother's hook in preference to mine, though he had baited them both.

Once I remember he had been fishing alone, and on his return told me of a wonderful chub that he'd seen in a deep hole and had tried to catch, but had failed, and proposed that we go together next day and try to get this monster chub, which he averred must weigh at least 50lbs. Boys see things through magnifying glasses, you know. Next day we went. I can see that hole now, in my mind's eye, its clear waters, its grassy banks, but never more can I see it in fact, for it doesn't exist. It was formerly the tailrace of an old mill. The mill has been torn down, the race and the tailrace have been filled up, and where that "big hole" was, an embankment of the Baltimore & Ohio R. R. is, and the wheels of commerce run above the banks on which we lay that day and fished for the monster chub. My brother caught several big ones—about 6in. long, but they looked big then—but they neglected my hook, as usual, and as I looked listlessly down the stream I saw a big bumblebee light on a thistle's purple flower. I went down and got the bumblebee, put it on my hook, and "threw in." There was a rush, a swirl of the waters, as I jerked out the monster chub, and there was a sudden plunge as the hook lost its hold, and the monster chub was lost to me forever. 'You had him," said my brother; "but what bait had you?" "A bumblebee," I replied, "but I don't believe that fish weighs 50lbs."

"Yes, he does, and more too," was the reply; "why, if he didn't your hook would have held him. But I'm going off to get a bumblebee."

I lay on the grass and waited, for the excitement was gone. I knew that the monster chub was not for me. My brother returned with his bumblebee, and as he baited his hook I remarked: "Now, don't try to jerk that fish out at once, give a smart pull, to make sure your hook's well caught, and then you can get him, maybe."

"If he takes my hook I'll get him," was the answer, "if I'm strong enough to pull him out. But I never knew a fish to refuse nice, fat fish worms and bite at a bumblebee. Who told you about the bumblebee?"

"Nobody told me," said I, "I just saw that one I used light on the thistle and concluded I'd try him for bait."

My brother's hook struck the water, but the bee did not sink, as mine had, and he drew it back and again threw it in, suddenly an enormous fish form appeared, the bee vanished between a huge pair of capacious jaws, a giant tail twinkled for a moment in the air as the monster chub headed for his favorite haunts at the bottom. I heard the swish of the line as my brother struck, the peculiar sound of a large body drawn forcibly and quickly from deep water, and the monster chub lay on the grass at our feet, the victim of my brother's arts. I can see that fish yet, the biggest chub that I ever saw, he measured 16in. from tip of nose to tip of tail, and when cleaned for the table he weighed just 2lbs. I can hear our boyish expressions of delight as we surveyed his magnificent proportions, for there was never any jealousy between us, the triumph of one was that of the other; and it is so yet, thank God, though our hairs are turning gray, and we are, to say the least, elderly men. But the monster chub, I always thought, should have been mine. Don't you think so? AMATEUR.

PENNSYLVANIA.

Delaware River Bass.

BROOKLYN, N. Y.—In the last issue of FOREST AND STREAM Mr. Philip F. Fulmer records a bass—presumably a black bass—caught in the Delaware River by Mr. J. D. Jais, at Dingman's Ferry, Pike county, Pa., which weighed 6lbs. 12oz. So far the statement seems good and the bass was a good one; but when he says that the fish measured 26in., it seems to be a long one for the weight. As I know, big—and consequently old—black bass, they do not grow much in length, but increase greatly in depth and thickness; in fact, take on Aldermanic proportions. I should think 20in. sufficient for a fish of that weight, measuring it as anglers do, "over all," which is really incorrect, because the caudal fin has no more right to be included in the length of a fish's body than the dorsal and anal fins have to be reckoned in its depth. All scientists measure the length of a fish only as far as its body extends, and that is the correct way, because the tail fin is not entitled to be included in the length any more than the other fins are part of its depth—but anglers have always so measured fish and probably always will so measure them.

Taking Mr. Fulmer's measure of 26in., as an angler's measure of caudal fin and all, it seems to me that a 26in. black bass should weigh about 15lbs., that is, if it was as well-fed, deep, and had the breadth of beam of the average big black bass. Perhaps the figures are wrong; perhaps my notions of weight and proportions are wrong. Who can say? KEGO-E-KAY.

Are Salt-Water Angler's Selfish?

JUST why it is that salt-water fishermen are so quiet in reporting success. I have often wondered. I sometimes think there is something in the idea I once heard Prof. Baird advance, that constant association with salt-water fishing makes a man reticent on his success from selfish motives.

H.

MEN I HAVE FISHED WITH.

LVII.—Thaddeus Norris.

When I bought a farm near Honeoye Falls, Monroe county, N. Y., in 1868, to begin raising trout, I also bought a book entitled: "American Fish Culture," which was published in that year by Porter & Coates, Philadelphia, and the author was Thaddeus Norris. Just who he might be, or what he might know of the subject, I did not know, but it was the first publication of its kind that I had heard of, and I bought it. It has little value to the fishculturist to-day, but it gave all that was then known about breeding trout, salmon, oysters and other things, and yet I had much to learn. I do not think he said so in the book, but at that time he had gone into trout breeding at Bloomsbury, N. J., had tried it a year or two and sold out to Dr. J. H. Slack, who ran the place until he died, some five or six years later.

In September, 1873 I was called to Washington to consult with Prof. Baird, the United States Fish Commissioner, and there I met Mr. Norris, and we struck up a friendship which lasted until he died. I was then forty and he was sixty-two. He was a lovable old man whom many people called Uncle Thad, and I soon dropped into the habit of so addressing him. Business over, he said: "Freddy, I'm going down to Betterton to fish for perch, and I'd like to have you go with me. Will you do it?"

"Where's Betterton?"

"I think there is a previous question before the House. Let us finish one at a time. The question is: Will you go?"

"Yes."

"Well, now that we have settled that, the next thing is to take up your question. Betterton is in Kent county, Md., and is a paradise for the angler who is contented to fish for white perch. It is not on the map, has no post-office, and therefore we can rest assured that we can't be called home by the demands of either family or business. There is no village of Betterton, only a few scattered farmhouses, and unless I am greatly mistaken it is a place that would just suit such a quiet, easy-going fellow as I take you to be."

"No railroad whistles, umbrella menders, steamboat nor church bells to destroy a morning nap?"

"Nothing of the kind, my boy, the place is on the eastern shore. At the upper end of Chesapeake Bay is the confluence of the Susquehanna, Northeast, Elk and Sassafras rivers, all within sight, and a grand sight it is over the upper end of the bay, and Betterton is about a mile below the mouth of the Sassafras. So much for geography. Anything else?"

"Not a thing. You've asked me to go to Betterton with you and I am your guest. I haven't the slightest curiosity how we are to get there, whether we walk, row, sail or swim. I did not bring any fishing tackle, but can easily get what will be needed for white perch. I suppose none of them weigh over 100lbs."

"No, there is a law which limits their size, but you'll find 'em up to the limit. Come up and stop with me in Philadelphia to-night and give no thought to fishing tackle or other thing, we will talk fish until bed-time and possibly dream of them before morning."

That night one of the most lovable of men spread his heart wide open and captivated me. When I was a young man I was fond of the society of some older ones, and I say "some" advisedly, now that I have had my hair bleached and am posing as a blonde, a condition which I insist is not due to "peroxide," or any other preparation, but has been brought about solely by Anno Domini, which you can't buy ina drug store. I find that I like boys, that is, if they are the kind of boys which I like. There's just as much difference in boys as there is in dogs: some wouldn't have you like 'em under any circumstances, and as for old men, they are boys who have been boiled down and all their traits intensified. A disagreeable boy will grow into ——. Pardon me, we were going fishing.

We took an Ericsson steamer somewhere above Chestnut street, Philadelphia, about 4 P. M., and went through the canal from Delaware City to Chesapeake City, down the Elk River and into the bay, reaching Betterton at the uncomfortable hour of 4 A. M. Neither of us grumbled, we made light of having to turn out at that time; and now, while writing this sketch, nearly a quarter of a century later, and with an experience as much riper, it seems to me that "Uncle Thad" and I had the one common trait of accepting whatever came to us without grumbling.

As old Nessmuk said, "Bismillah, it is well!" Others say, "Kismet, it is fate!" And in these sayings lie all the philosophy contained in that scriptural warning which says that it is "no use to kick against the pricks." Resignation to the inevitable has preserved my life where others have died. Norris had the same turn of thought, and as we walked up from the landing to the house where we were to stop, he said: "The only thing I prefer to getting out of bed at 4 o'clock in the morning is sitting up all night."

I remarked that I would prefer sitting up two nights; but we had not far to walk. Our host, Mr. Thomas Crew, was astir, as is the custom of farmers and dwellers in the country, and we entered his hospitable home, lay down and had our sleep out, because Crew said the tide would be about right four hours later. About 8 o'clock we had finished breakfast and were sailing away to the perch grounds, some two miles distant, with young Jim Crew as captain as well as crew. There were some other boats there, and more came later, making eleven in all, and about fifty anglers. As we anchored, Jim pulled out a half-bushel basket of peaches, and such peaches! I realized that we were right where peaches grow in both quantity and excellence. The tide ran from two to three miles an hour that day, the ebb being strongest. The average depth of the water was 30ft. We used 9ft. bass rods, with multiplying reels and a dipsy of 2oz "Dipsy," in the Philadelphia language, means a piece of wire to keep two hooks on short snells apart, and a sinker hangs at proper depth below. It is said to be a corruption of "deep sea," but I never heard it east of New York, and rarely then, although the thing is sometimes used about New York Harbor, and called a "spreader." We used shedder crab and angleworms, the former being plenty and the latter scarce, owing to the lightness and dryness of the soil. Some of the anglers used clams and shrimp.

Our largest perch that day weighed 18oz., the average was perhaps less than half that weight. Capt Jim did not fish, and we two filled three peach baskets with such good measure that they ran over. Perhaps we counted them, but I don't remember. From conversation with the men in other boats we estimated the catch of the entire party that day at 6,000 white perch, besides a few other fishes, and Jim said it was not a very good day for perch.

Filled to overflowing with humor, Uncle Thad was as charming a man as one could wish for on a month's trip. His specialty was the songs of the plantation darky and stories of him in a most perfect dialect. He was past middle

THADDEUS NORRIS.

age and not strong nor active, but bright as a button. His "American Angler's Book" was the first good American book on angling. It treated of native fishes and methods of fishing, while all other fishing books up to that time were rehashes of English publications. It was first published by E. H. Butler & Co., Philadelphia, in 1864, who printed two editions. Of the last, Porter & Coates bought 699 copies in 1865, with all the plates and issued an edition with their imprint. This was a volume of 692 pages, and the only edition I have. The latter firm printed editions in 1881, 1886 and 1891, each being of 250 copies. In the last three editions there is an excellent obituary notice, written by his friend Mr. Joseph B. Townsend. My volume is well thumbed, for I still delight in the quaint stories in which he embodies information, especially in those charming pages which he calls "Dies Piscatoriæ" If any man is entitled to be called 'The American Walton" it is Thaddeus Norris. His book may not be read by scholars who regard Walton as an English classic to be studied by non-anglers as a choice bit of literature, but it can be read with pleasure by anyone who appreciates clean humor, even if he cares nothing about fishing. Some years ago it was proposed that I should edit "The American Angler's Book," but business forbid. I am indebted for many of the above facts and dates to Mr. J. B. Townsend, Jr., of Philadelphia.

The winter of 1875–76 I spent at Lexington, Va., quartered in the Military Institute, together with my assistant, Mr. Wm. F. Page, now a well known fishculturist; and I ran down to Richmond and met Uncle Thad by appointment, and tried to get him to go to Lynchburg to fish for pike with my friend Capt Jack Yeatman, of that city, who was an excellent angler, and had a rod that I wanted Norris to see. It was a natural bamboo, carefully smoothed inside where the partitions had been, and the line was run through the inside of the cane. "This," said Capt. Jack, "puts the strain on all points, instead of a few, where the rings are." This idea has been put on the market since, but I have a notion that it is very hard on lines. Time did not permit Mr. Norris to go there. He arranged with me to go to Philadelphia in the spring, and try to build an aquarium for the Centennial Exposition. I went, tried, and failed for want of financial support.

That summer it was my custom to visit Uncle Thad in his home on Logan square every Tuesday evening, and we would go up into his workshop where the justly celebrated "Norris split-bamboo rods" were made, and often talk until "the wee sma' hours ayont the twal." If we talked of fishing, it was not of perch catching at Betterton, but of grander sport. We had both fished, but not in unison, with Dan Fitzhugh, of grayling memory, and our thoughts turned to that royal and generous angler. We would repeat some of Dan's stories; Uncle Thad would slap his knee and laugh until the tears came, and say: "Dan was a glo-o o-rious fell-low!" and then we gave a few moments of meditation to Dan.

In his "American Fishes," 1888, Prof. G. Brown Goode says, writing of the white perch: "In a single paragraph Mr. Norris, who, making no professions of scientific skill, has been one of our best observers of fishes, has given almost the only reliable information which has ever been collected regarding this species."

It so happened that the Philadelphia Academy of Sciences met at the corner of Logan square and Race street every Tuesday night, and we would often get a tip from Prof. Cope if the talk was to be about a lot of prehistoric fishes, mammals and birds, in a densely scientific manner in which we had no interest whatever, or whether the discourse was to be upon the fishes of to-day. In the latter case we often spent a profitable hour on many evenings.

I recall one of these meetings when a freshly killed fish was on the table and was to be the subject of the lecture. It was a salt water fish, which is not caught by anglers and is never in the markets. It is about 1ft. long, heavy-bodied and triangular, the back being the apex; it has a greenish color, a body like jelly, and is covered with a thick skin on which are many tuberculous or spiny plates.

"What kind of a fish is that, Fred?"

"Well, Uncle Thad, that is a lumpsucker or lumpfish. Notice its build. It is so weak behind that it can't swim much, but see its ventral fins how they are modified into a sucking disk on its breast, whereby it can hold fast on a rock and let the tide bring food to its mouth."

"Don't you wish that you were that kind of a sucker? What did you say its name was?"

"Lump-sucker or lumpfish on our coast. In England it is called sea-owl, cock-padle, and it doesn't seem to mind what they call it, at least it never resents these names. That's all I know about the fish."

"Then you don't know what these musty old scientifs call this queer-looking beast?"

"Oh, yes; they call it *Cyclopterus lumpus*. I didn't knowyou were after that."

"Lumpus, lumpus; and they call the tomcod *Microgadus tomcodus*, and one species of catfish *Ameiurus catus*. Now, honestly, my boy, don't you think we can make as good Latin as that? Well, well, it is lumpy, sure enough; but lumpus! Let's go back to the workshop and digest the scientific information we have obtained here to-night. If we get more at one sitting we may not be able to assimilate it, and may not be able to retain what we have learned."

There were banjos in those days. They are rare now. They have put frets on them and made them merely guitars with a calf-skin head, on which can be played operatic music, but not real banjo music, which in these degenerate days is called "rag time." Just as negro minstrelsy has decayed, because of the abandonment of the "plantation" darky, so has our national instrument been evoluted into a nondescript thing which has lost its individuality. Possibly this is because the abolition of slavery has divested the negro of a certain interest as a character to be sketched.

Uncle Thad's banjo had a serious fracture in the cranium. Mine was in a trunk in storage, but he had to have it got out in order to properly recite the mishaps of "Johnny Booker," "Uncle Gabriel," and other epics. Our national instrument had no frets upon it, nor additional strings to play difficult marches and operas; in fact, it was a banjo, and not a hybrid guitar and mandolin; and was just suited to the simple plantation melodies. Bless you, they can't play "ragtime" on what is called a banjo to-day. As I write I glance at my old-timer on the wall—which is always kept strung—and it brings back the night when Uncle Thad took it and sung:

"In eighteen hundred an' twenty-nine
I hung my banjo on a vine,
De banjo dropped upon de groun',
An' banjos grew up all aroun'."

Or:

"Ole Massa an' Missus promise me
Dat w'en dey'd die dey'd set me free,
But now dey bofe am dead an' gone
An' lef' ole Sambo hoein' de cawn."

One night after the old man had finished 'Dandy Jim," I said: "Uncle Thad, once I attended a dance down in Texas and was greatly interested in the orchestra, which consisted of only two pieces—a fiddle and a boot; both were good in their way, and if the dancers missed the fiddle when conversation was loudest, the boot heel gave them the correct time. I have noticed that in your enthusiasm you have emphasized

certain crescendo passages with your heel, which might offend any musical ear which was trying to sleep on the floor below."

"I think you are right in this matter," he said, "where the orchestra consists of a banjo and a boot, the latter should subordinate its tones or be abolished entirely. Perhaps the banjo should be hung up until next Tuesday night and I'll tell you how Fish Commissioner Reeder, of this State, had his nose sunburned. Do you know H J. Reeder?"

"Very well. Met him when his father was Governor of Kansas, and since that time he has been a fish commissioner and I have met him frequently and have had much correspondence with him. We've all had our noses burned, blistered and peeled by the sun. Was Reeder's nose an exception in any way?"

"No," said the veteran angler, "it was as susceptible to the influence of the sun as a Maryland peach, and that's the point. I made some verses on it to an original meter, I'll read 'em:

'The shades of night were falling fast.'"

"Yes, that is original, and grand! How on earth did you ever come to think in that direction?"

"Never mind about the applause until the curtain is about to descend, and please do not interrupt again until this lyric is finished."

"Go on!"

"The shades of night were falling fast."

"Yes, you remarked that before, the window shades were being pulled down."

"As o'er the Bel. Del. Road there passed
A sun-burned nose, with face attached,
That had been to the South dispatched
For catfish!

"'Neath forehead high and yaller hair
Was a Grecian nose and complexion fair,
A bright blue eye and curled up lash,
And he ever kept shouting through his mustache:
'Oh, catfish!'

"'Oh, don't go out,' quoth Howard, 'stop!
It's awful hot where the white-caps hop;
You'll burn your nose on the upper side,'
But the ghastly fisherman still replied:
'More catfish!'

"The boat at length came up to land,
With a sun-burned nose, a line cut hand,
And a barrel of fish bought for a price;
Says the nose-burned man, 'they're remarkably nice,
Fresh catfish!'

"Now, young man, be warned by me,
If ever again you go to sea,
Bear this painful burn in mind
And leave your tender nose behind,
For catfish!"

Tears as big as goose eggs came to my eyes as I grasped the poet's hand, and asked his pardon if the ceiling below should fall on account of my tears; I'm so easily affected. When he handed me the paper I pocketed the poem in order to give it to an appreciative world, which his modesty forbade him to do.

The workshop of Uncle Thad, I love to call him so, differed from that of the rod-maker of to-day. The latter has his ferrules drawn by an expert, who perhaps draws tubes for microscopes and telescopes; and they fit throughout the whole length, and never throw apart. In Uncle Thad's day, and he was abreast of the times in rod-making, if not ahead of it, he made his ferrules by hand and brazed them, afterward smoothing them with flat files, grinding them together with emery powder and oil, and then burnished them in a lathe.

I handled many of his rods, and wanted one. I feared to tell him so, because the notion might occur to him to give me one; so I had a friend buy a rod for me, and I used it several years, its value increasing each season, until it was stolen from me in a car while returning from a fishing trip.

If I had used that rod until it was "superannuated" it would be in an honored place on my wall in company with a pair of buffalo horns from the only buffalo I ever killed, a pair of snowshoes worn in Wisconsin in 1856, a banjo made by my own hands, and a sword which I wore in the early 60s, which was "Held by the Enemy," as the title of a play goes, for over a quarter of a century.

In the day on which things happen they are merely incidents which are not forgotten, but laid aside as trifles. Half a century later, or even half of that, they assume an importance which is surprising. An instance of this is my reminiscence of perch fishing at Betterton. There was nothing of importance to record; but the lapse of time serves to figure "Uncle Thad" Norris in a strong light, and to bring up the man so that I can attempt to sketch him in a manner that will interest people who never knew him. The photograph which is here reproduced was apparently made from a painting of Mr. Norris when he was nearing middle age, and is the only one I have been able to get.

Thaddeus Norris was born near Warrenton, Fauquier county, Va., in 1811, and moved to Philadelphia about 1835, where he resided until his death, which occurred on April 11, 1877. A widow, two sons and two daughters survived him.

An incident occurred which illustrates his dry humor. We were looking at some fish in the tanks at the Centennial Exposition, when a noisy sort of fellow introduced himself to Mr. Norris as "a brother of the angle," and after a long recital of his exploits, said: "Yes, Mr. Norris, I'm the boss fisherman of western Pennsylvania, and I can catch more fish than any one I ever met."

"I am always pleased to meet a thorough angler," said Uncle Thad, very seriously. "I suppose you fish with the fly?"

"Always, Mr. Norris; always."

"Always rig the line properly with a float and sinker?"

"Oh, yes, always use the float and sinker."

"That's right; I see that you are really an expert angler, and I am glad to know you."

Mr. Norris never smiled, nor did his eye change when it met mine, and the man suspected nothing. After the man departed Uncle Thad said: "I often meet such men, and I sized him up for a man who knew nothing of fly-fishing and would need a float and sinker if he tried to cast a fly."

Genial Uncle Thad! When I read of his death the words came upon me "like the falling of a great oak in the stillness of the woods."

FRED MATHER.

UNIFORM PROTECTION OF FOOD FISH.

A paper read by Dr. Bushrod W. James, of Philadelphia, before the American Fisheries Society.

THE extended superficial area of the United States, with its waterways permeating far into the interior, from the Atlantic to the Pacific Ocean and the Gulf of Mexico, warrants the protection of these streams to prevent the annihilation of the fish, as well as for their extended propagation and growth, as very great values may be obtained in a few years by the operation of judicious and well-considered legal enactments for the protection of the streams in which the fish are placed when very young, and for clearing and keeping clear these streams from all devices which tend to the capture of the fish before they have had opportunity of spawning in the waters which they frequent.

Most of the States into which streams enter from the ocean have already passed laws looking to this need, and New Jersey and Pennsylvania, being border States of the Delaware River, many years ago entered into a compact to protect the stream in this manner, and keep it an open waterway or highway, and as a result the money value of the fish caught in that river is increasing annually many thousands of dollars. The Susquehanna, which passes through Maryland and into Pennsylvania, has not as yet received the ample protective laws needed, and the result is that the money value of the food taken in the way of fish from that stream has been at a standstill for years and, in fact, has been diminishing in value.

The Delaware River rises well up in the interior of the State of New York, so that we have the States of Delaware, New Jersey, Pennsylvania and New York all interested in this valuable waterway. What is said of this Eastern stream might be said of Western rivers flowing into the Pacific Ocean, and we might likewise add the great aqueous artery of the continent, the Mississippi, and its branches, which, no doubt, might contain many million dollars' worth more of food fish than they now do; and yet, each State having the right to make fish protective laws, might find the laws quite annulled by other States through whose borders the streams pass, the more northern States being at the mercy of those far down the river whose laws are not enforced, and where money can be made by catching food fish in great numbers for the market, to their probable annihilation in a few years.

We could hardly expect in the rapidly flowing streams of the mountain regions of the far West to successfully protect a very great variety of the food fish, but even those should be thoroughly protected by adequate statutes by the Legislatures of the States through which these mountain streams run. Many lakes, however, occur in some of these States, even in the mountain sections. These should be protected, and not only that, but they should be stocked with the best varieties of edible fish, and of the kind that will not destroy their companions.

This condition of things existing in almost every State of the Union, it will readily be seen how great the need is for uniform laws for food protection throughout the entire country.

I would here urge that this national society, composed of Fish Commissioners and members from the various States all over the country, consider well this subject of legislative action to this end.

The resolution we adopted last year, aiming at the harmonious action of each State with its neighbor in the interests of general propagation and protection, was in the right direction, and any action from that committee should be supplemented by a general support on the part of the American Fisheries Society.

I do not mean to exclude the interests of the Great Lakes during the past few years for propagation purposes, and with partially good results; but they can never carry out the full intent of those who have the general good of the community at stake in this matter of supplying a most valuable and delectable form of diet for the towns and cities where a market can be had for this form of food.

Good laws should be enacted all along the Great Lake bordering States, and they should be thoroughly enforced and a rigid observance of them continually maintained; and under no circumstances should the small fish be caught before they are of a size to have spawned at least once.

By this method an amply sufficient supply of growing fish would constantly fill the waters of the Great Lakes along our northern border. Canada should unite with the United States at all points to help fill the lakes along her shores, and by this mutual action her revenue from this one source alone would be greatly increased, as well as that of our own States

Nothing but good can be obtained from a uniform, harmonious protection maintaining all interests in this way. In this age the depredating, contentious, "grasp-all-you-can" principle should be relegated to oblivion, and unity of purpose will redound to the mutual advantage of all parties living along the borders of these great international highways and receptacles for food fish supplies. Kindness and mutual reciprocity usually work to the advantage and interest of all parties concerned; and in this matter, if in no other article of commerce, we should aim to obtain these uniform concessions on the part of all States and countries adjoining each other.

In regard to uniformity of laws for the streams running into the interior of the country from the large sea, lake or gulf areas, I believe that the United States Government should formulate a protective plan of extending not only over the commercial end of the streams, but that laws protecting the tributary divisions of those streams should be passed, and the enactments kept fully operative. I maintain that there is strong ground for governmental supervision of these waterways, inasmuch as the local laws of one individual State cannot be enforced in the adjacent commonwealths; and the great difficulty which has existed, and which it is almost impossible to overcome, as to how these various State enactments can be made entirely harmonious and uniform, it seems quite a necessity to resort to the method of Interstate protection by national enactment, and especially over all the national waterways.

I would like to impress this point still more forcibly from another standpoint, and that is that it is the duty of the Government to do all in its power to advance the interests of the citizens of the United States and enact laws which will be for their general good, and add to the prosperity of the country. The addition of many million dollars' worth of food in this shape to the country is certainly not only laudable, but it is quite important for the Government to provide this increase of provisions, and the increased value which would thereby be secured.

These laws should be enacted at a very early day likewise, because of the reckless impoverishment which is going on all over the country, in this, as well as in various directions, such as forestry interests and the valuable land grants which the government and the people have so lavishly turned into the hands of reckless speculators.

It is not too late to reform this matter, and measures should at once be instituted for the uniform codification and adoption of the best laws that can be thought out and worked out upon this interesting, important and urgent question.

THE MAINE TROUT SEASON.

BOSTON, Oct. 2.—The Maine fishing season has closed, and on the whole it has been a most remarkable one, with much high water and consequent good sport, holding out remarkably late. Still the month of September was poor in most waters, barring a few of the more distant and inaccessible lakes and streams. Small trout were freely taken on the fly late in August and early in September on the more distant waters of the Rangeleys and Aroostook county. But later in September—and in fact up to the close—the fishing was very poor. Mr. J. D. Kinsley is out from his fall trip to the Rangeleys. He found the fishing generally poor, with many a sportsman scarcely getting a fish. Still Mr. Parish, of Connecticut, had most remarkable luck at the Upper Dam, landing a trout of 9½lbs. late in September, and a landlocked salmon of 9lbs., both on the fly. The fish were taken from the pool. Mr. Michael H. Curley is out from quite an extended tour of the Rangeley waters, where he found the fishing rather slim, except at Kennebago, where he had good sport with small trout.

A later report from the Upper Dam is handed me by a gentleman who does not care to have his name mentioned, doubtless because he was there and really got hold of a big fellow, "at least 2ft. long;" but alas for the leader! It parted at the first great strain of the big trout, and he is left there to breed.

RECORD OF THE LAST THREE DAYS OF THE SEASON OF 1897, AT UPPER DAM, ME

Sept. 28—Caught by S. C. Pease.	One trout weighing 5lbs.	2oz.
Sept. 28—Caught by S. C. Pease.	One trout weighing 5lbs.	7oz.
Sept. 29—Caught by J. C. Dougherty	One trout weighing 7lbs	6oz.
Sept. 29—Caught by W. J. Farquar	One trout weighing 6lbs.	1oz.
Sept. 29—Caught by A. G. Frost	One trout weighing 4lbs.	3oz.
Sept. 29—Caught by J. C. Dougherty	One trout weighing 6lbs.	
Sept. 30—Caught by J. C. Dougherty	One trout weighing 5lbs.	12oz.
Sept. 30—Caught by J. C. Dougherty	One trout weighing 4lbs.	8oz.
Sept. 30—Caught by J. Lynch.	One trout weighing 3lbs.	6oz.
Sept. 30—Caught by R. A. Parish.	One trout weighing 3lbs.	4oz.
Sept. 30—Caught by R. A. Parish.	One trout weighing 8lbs.	12oz.

A total weight of 62½lbs. in three days, by six fly-fishermen; average weight, 5lbs. 3oz.

Mr. Parish seems to have carried off the pennant for the season of 1897. He is greatly charmed with the Pool at the Upper Dam, and well he may be, for where in the wide world could another such a record have been made? It is all the more remarkable when it is considered that this wonderful pool is reached in only one day from Boston, since the opening of the Rumford Falls & Rangeley Lakes Railroad, or in a day and a night from New York.

But the crack of the rifle is sounding in that section now, and the fish rods are put away. Mr. W. S. Bemis is out from that region with the first deer of the season, to come to Boston. I understand that he took it in the vicinity of Billy Soule's Camp, Cupsuptic Lake. He was absent from Boston only three days; going in Sept. 30, via. Rumford Falls and Bemis, and hunting Oct. 1, and home again Oct. 2.

A report from Bangor says that the woods above that part of the State were full of hunters on the night of Sept. 30, and that they commenced operations a 12 o'clock. I have not yet seen any deer from that section, though doubtless they will be here early this week. The new law has cut up and cut down the moose-hunting season, commencing Oct. 15, and closing Dec 1. The hunters will all be on the ground on the opening date. If the moose are not located beforehand, then I don't understand hunters.

Reports from Farmington and that region are not so pleasing. The hunting season has opened with plenty of game and hunters still more plenty. But one has made the old mistake; taken his friend for a deer and shot him dead, according to the daily papers.

SPECIAL

NOTES FROM HEMLOCK LAKE.

MADAME and I are on our annual vacation at Comfort Cove Cottage, Hemlock Lake, N. Y., and we are more than ever convinced that September is the month of all in the twelve for real restful comfort at the Lake.

Having in middle life taken to the wheel as a sensible and healthful means of locomotion, we were entirely independent of horses and wagons and made our sixteen miles in excellent form, while our supplies were delivered free of expense at the barn opposite our cottage.

Our daily routine would not interest the readers of FOREST AND STREAM, being simply what all who have spent two weeks at a cottage by the lake have experienced, but there have been a few side issues that possibly may prove worth noting, being perhaps a little out of the ordinary.

All along the east side of the lake is an excellent road. In many places it is dug out of the steep banks and skirts the water's edge; again it winds through the woodland, shady and cool, but always in sight of the water. Every day we would cross to the barn take to our wheels and spin down this delightful highway. The precipitous nature of the shore prevents cultivation, and the hills are clothed with virgin forest clear to their tops. Grouse are abundant, and as we speed noiselessly along we never fail to get up from two to half a dozen in a four mile ride. In my palmiest schooling days I never got so near these wary birds as in my rides along this road. Often I come on them feeding in the ditch, and it is interesting to watch them eye the strange machine stealing up on them before they break into flight. Again they will be seen dusting themselves in the middle of the track, and one can make quite a study of their form and color before discovery. All this suggests that knowing the tendency of the grouse to frequent wooded highways, won't some inventive genius arrange a scatter gun to carry on the handle bars, worked by the teeth perhaps, that will fill the air with shot and down the innocent bird before he knows an enemy is approaching?

I have often heard of squirrels swimming lakes and streams, but never until the other day did I see it myself. I was rowing down to the lumber camp after milk, when I saw something bobbing along in the water behind me. At first I thought it was a muskrat, but discovering my mistake stopped rowing and watched the little fellow make for the shore; he swam very swiftly, and as he leaped on the bank I saw it was a large gray squirrel; he paused on a log, looked

back coyly at me, flirted his tail in adieu and disappeared in the wood.

In going down the road one evening just before sunset I saw an exemplification of Mr. Hough's astral body. I was wheeling along a portion of the road cut out of the side hill and open to the lake. The sun was nearly down, its slanting beams flooding the water with glory. Glancing to my right, I saw clearly defined on the steep bank two shadowy wheelmen, one above the other, pedaling along beside me. I called to my wife, and being assured that she saw the same phenomena, I thought of E. Hough and theosophy, and —bosh!

We have been very fortunate this year in having for neighbors in a deserted cottage but a gunshot away, a gentleman and his two sons, who are fishermen "from 'way back." They bring us daily, pickerel, pike-perch and bass until we are surfeited, and we send home fine fellows, and get the reputation of being what we are not. One lovely day just after dinner we shut the doors and mounting our wheels struck out into the country, over roads we had never traveled. It seemed like spinning through fairyland. Nor was the idea dispelled when we came to the great, comfortable farmhouse of a cousin, where a warm welcome and a splendid supper awaited us. Here we tarried all night, and in the morning wheeled over to another cousin's, a veritable Sir Roger de Coverly, eighty two years of age, of whom I hope to write some time—whose yards, although thronged with picturesque hop-pickers and the whole household busy as bees, still had time to sit down with his hospitable wife and bid us welcome. We were at the cottage again at 4 P. M., vowing this little side issue the pleasantest of all.

The Rochester Water-Works people have acquired a large amount of shore rights at Hemlock Lake, but a great many cottages still remain. So long as visitors to these cottages comply with the simple requirements of the water-works people, none of which are beyond the pale of decency and cleanliness, no one will be interfered with. The company have broken up the excursion, hotel and picnic business, and that seems to be all they desire. So for a quiet outing your correspondent sincerely hopes that Hemlock Lake may be his Mecca for many years. H W. D. L.

Comfort Cove Cottage, Hemlock Lake, N. Y, Sept., 1897.

MEMORIES OF THE MERRIMAC VALLEY.

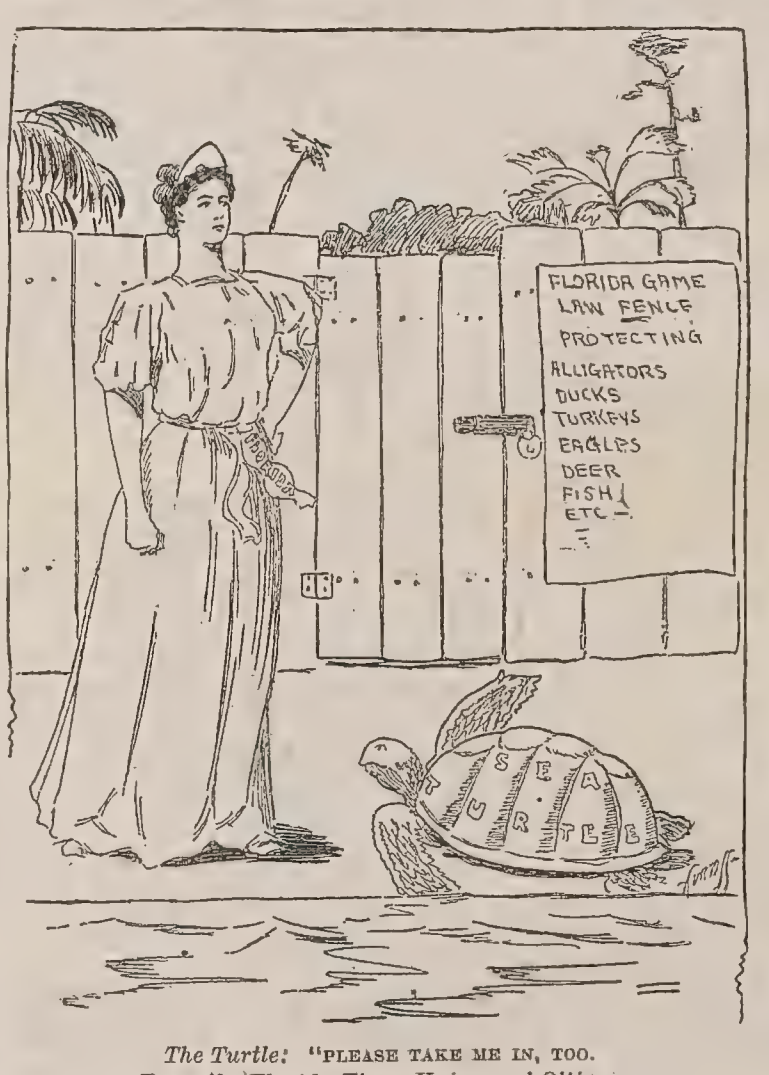
Charlestown, N. H., Sept. 27.—*Editor Forest and Stream:* One of your correspondents, a few weeks since, speaks of catching some fine trout in a brook long since supposed to be depopulated, within fifteen or twenty miles of Boston, and it has recalled to me memories of some such brooks, not quite so near, perhaps, which had good trout in them fifty years ago, but which were known only to a few, and the secret of which was jealously guarded. They were in the towns of Tewksbury, Billerica and Wilmington, and were affluents of the Merrimac River, in former days one of the most fertile streams of any in New England for all the varieties of the *Salmonidæ*. These brooks were known to a few old anglers in Lowell, when I went there in 1841, fresh from the New Hampshire trout streams, but I never could find out just where they were.

Robert Butcher, a skilled English angler, who has charge of the finishing department of the Merrimac Print Works; Chas. Leighton, the overseer of the packing room, and Grosvenor Buttrick, commonly called Grove, one of the master mechanics in the Lowell machine shop, knew them and used to get some good trout out of them every season, but the youngsters were never let into the secret of the locality.

I remember Leighton bringing home a 3lb. trout one day, which he said he caught in a brook in Pepperell, Mass., which emptied into the Nashua River, and that into the Merrimac, and this brings me back to my statement of the wonderful fertility of the Merrimac River and all its tributaries, in all the varieties of the trout and salmon family. All these streams come direct from the granite hills of New Hampshire, and are usually as limpid and clear as crystal, and while within my recollection the salmon went freely up the river until they came to the dam at Lowell, for I have eaten salmon at Lowell caught in the Merrimac the same morning—all the tributaries and feeders were full of trout, which were to be taken at the very mouths of the brooks where they discharged into the river. Here on the Connecticut the case is different. The long, broad stretches of "intervale" or meadow land next the river make the brooks still and sluggish when they are reached, and I have never found it worth while to fish a brook clean down, but on the Merrimac the last few rods are often a set of rapids, and I have taken the biggest trout of the day in such a rapid the very last thing.

As I said, "we youngsters" were never initiated into the homes of "the big fellows"; but during my six years' residence in Lowell, I found a few small brooks quite near at hand, where I could get small trout every spring, though I usually reserved my fun for my annual fortnight's vacation, the last of May or the first of June, when I came up home and spent most of my time on my old tramping grounds.

In 1848 I went down to help build the new city of Lawrence, and I found one brook "right in the limits" (where it is all built over now), and still another down on the Haverhill road, the north side of the river. I remember one day's outing from Lowell up into the town of Litchfield, N. H., just over the State line, to what has always been celebrated as "the Brickyard brook."



In a sketch of "A Day on Bear Brook," a few weeks since, I spoke of some of my Lowell friends coming up to Hookset, N. H., and having great success, and as it happened the chances and changes of life planted me for a few years in Manchester, N. H., in 1858, and it was not long before I made the acquaintance of a number of good brooks in the immediate vicinity of that growing and thriving city. My first visit to one of them, the Bowman Brook, not three miles from the city, I well remember. It was a warm Saturday afternoon in early May, and after hitching our horse to the woodshed of an outlying district schoolhouse, my companion and guide and I struck the brook, which dove under the road within a few yards. My first cast was into the fall which the brook made into a culvert under the road, and was instantly rewarded by a trout a foot long, greatly to the astonishment of my companion, who was used to fishing in deep holes and quiet waters. We followed up the brook through an overflowed meadow, where we could sometimes only trace the channel by the little bushes which grew on the proper banks, and before nightfall I had a very nice basket. I afterward fished the same brook down from the same point with good success, and found three or four more good brooks in the immediate vicinity of the city, one of which, the Dawah, I often visited a dozen years later in company with your correspondent, Mr. W. W. Colburn, of Springfield, Mass., then the principal of the High School at Manchester.

Then came the troublous times of the war, and I did not have much cance for angling; but there was a time when there was a coal famine in New England, and the large manufacturing concern of which I was manager had to burn wood under their boilers, and I was obliged to go out into the country every spring to inspect lots of wood which had been cut the previous winter and piled where it lay. These trips took me up the valley of the Piscataquog, a tributary which falls into the Merrimac at West Manchester, through the towns of Goffstown, Weare, Dearing and New Boston, as far as Francestown and Lyndeborough, and I always started early and took my fishing tackle and a lunch along, so as to get in a full day's work of some kind. I found plenty of trout streams and plenty of trout in them, and I think the Hon. John M. Parker, of Goffstown, ex-State Senator, member of the Council, etc., etc, will recall one memorable day on the headwaters of the Piscataquog, when he took the main stream up into Weare, while I followed up a branch into Lyndeborough, and both of us filled our baskets. We had several other good days together on other branches of the stream.

In '65 I left Manchester for some years, returning in '71, and then Mr. Colburn and I "took to water" together, and still later my youngest son, Rob, came in as a pupil, and he afterward joined me in several trips up to Plymouth and Waterville. I will not take up time in further enumeration. Whittier made "Babboosac Brook," not far west of Manchester, famous in the "Bridal of Penacook," and I will only say that the Valley of the Merrimac, as I have known it, and as it may be again by careful stocking, is one of the finest natural trout regions in New England. Von W.

FLORIDIAN AND TURTLE.

Forest and Stream reasons well when it declares that our wholesale destruction of turtle eggs must cease or the "ocean hen" will soon be unknown along the Florida coast. But it mistakes the name of the beast. The green turtle is only found in Florida waters during the winter, and does not habitually trust its eggs to our sand. The loggerhead and hawksbill or turnback are our familiar varieties. And the slaughter is not confined to their eggs. The layers themselves are butchered for a dish of soup, and the greater part of the huge carcass is wasted. What can be done?

The Turtle: "PLEASE TAKE ME IN, TOO.
From the Florida Times-Union and Citizen.

The private owners of Cumberland Island, on the Georgia coast, forbid the slaughter of the turtle, and leave a reasonable percentage of the eggs to hatch. If so much should be done on the Government reservations along the coast, great good might be accomplished. And the State could easily supplement the work if more should be needed. For two months the turtle is helpless, and the butcher exerts neither labor nor skill. The flesh is not so delicate as that of its smaller brother, the green turtle, but as the latter disappears the sauces make up the difference between the two.

Our Florida turtles are of great value as a food supply, but if man joins the bear and the hog to destroy their nests, their day is not long in the earth or on the sea.—*Florida Times-Union and Citizen.*

The Furlough Lake Trespass Case.

The case against Hiram and Aaron Graham for fishing trespass on Furlough Lake, on Mr. George J. Gould's preserve in the Catskills, was decided last week. The defense made the claim that as Furlough Lake had been stocked by the State, it was open to the public for fishing, but the plaintiff showed in rebuttal that the waters could not be reached except by trespass upon Mr. Gould's lands surrounding the lake. The jury found for the plaintiff in 6 cents damages.

SCHOOLING THE DOG.—XIV.

To the novice, the manner in which a dog conducted his ranging would seem to be a simple matter, one which was deserving of but little consideration. It would seem that a dog would only need to gallop out and search for birds and, so that he kept on galloping, nothing more was required. In practice he will find that a dog may be a good galloper and, even in a section of country containing an abundance of birds, he may succeed in finding but few. Heels require brains and nose to supplement them.

The best ranger is the one which beats out the ground on both sides of the shooter, crossing from right to left and from left to right with intelligent regularity, governing his course by the nature of the ground. Let us assume that he is seeking quail. Bare or unpromising ground, such as plowed ground, closely grazed pasture land, etc., he skirts or avoids. In a favorable section of country the dog beats out the ground on the right and left of his handler, but with no strict observance of a regular range. He governs his efforts by the circumstances of the bird's habitat. He ranges from one likely place to another, and he skirts along at all times the stretches which in his judgment are the most promising for concealment to the birds. If birds are plentiful, he beats out a much less area than when they are scarce. He knows what is good feeding ground and the best time for finding them on it.

In the chicken country, that is, on the broad prairie, where there is but little difference of surface apparent to the untrained eye, the dog may not need to exercise so much good judgment in beating out his ground as he needs in seeking quail, but it is a mistake to assume that he does not need to range with good judgment nevertheless. The prairie has its undulations, its little watersheds, with their irregular network of coarser grasses, much coarser and of ranker growth than the grasses of the higher ground, and these places are the favorite haunts of the birds during the warm hours of the day. In the morning and evening, the favorite times of food seeking, they are to be found on the higher ground, where the growth is shorter and insect life more abundant, and in season on the grain fields.

Of two chicken dogs of equal ability in everything but knowledge of the bird's habits and habitat and judgment in ranging, both running together and each covering as wide a range as the other, the one with the better knowledge and judgment will find many more birds than his fellow.

The successful finder notes all the different conditions which are favorable or unfavorable to his seeking, and takes every advantage which may be of use in making a find; the other runs as fast and as wide, but over all parts of the prairie alike. The wise dog ranges much wider where birds are scarce than where they are plentiful.

Some chicken dogs, naturally intelligent and wise from long experience, rarely beat out a wheat stubble across and back; they skirt along the edge, going clear around it, using their noses carefully every moment of the time. If birds have gone in to feed, or, having fed, have run out into the grass, the dog is sure to cross the trail. Catching scent, it is but the work of a moment for him to follow it up and locate the birds. A skillful dog, after catching scent, will go to his birds with a quickness and directness which seem marvelous to those who have been accustomed to shoot over dogs of mediocre ability. Yet it has been shown in a prior paper that a dog may range well and still find but few birds; and this may be the result of functional dullness of the nose as an organ of scent, or from inattention to the practical use of it, though the dog may seem to beat out his ground with an earnest purpose to find.

To sum up as to what constitutes ideal ranging, the dog must possess a high order of intelligence. Before he can range in the best manner he must have had sufficient experience to learn what sections the birds prefer for a habitat, their habits and the peculiar devices they exercise to evade pursuit. Without such knowledge he may, apparently, range well, but he simply runs till he comes across birds. In a way, it is precisely the same knowledge that the shooter must also possess. Of two shooters, the one knowing what habitat the birds would seek and also knowing their habits, the other not knowing anything of these, no explanation is needed as to which would be the most successful. The intelligence which the shooter must exercise to make the gun a success, the dog must similarly exercise in behalf of his nose. The range should be bounded by the peculiarities of the section worked, and also, as to its width, should not be too wide with reference to the gun. The ground should be worked out with reasonable thoroughness; and as to that, what might be a thorough working of the ground by one dog might not be at all so when done by another, thus a dog with a very keen nose, which would command a wide scope, would thoroughly beat out a certain section in a manner which would be impossible for a dog with a dull nose to copy and do thoroughly. Whether the dog's range be wide or narrow, he should always adjust it with reference to the whereabouts and purposes of the gun.

In a close country he should not range so as to be out of sight any appreciable length of time, nor should he range too far on the prairie. If the dog is out of sight the shooter cannot know what he is doing, and if he points he is difficult to find; if he points a mile away on the prairie it is more of labor than of pleasure to go so far for a shot. In ranging at his best, the dog should take an easy, ranging gallop, one that he can maintain several hours in succession, or all day if he have the endurance. A dog which trots all day a few yards away from the shooter is but little better than no dog so far as quail and chicken shooting is concerned, and the one which runs furiously, extended to his utmost, for thirty minutes or an hour, then quits from exhaustion or from having enough, is no better, and in fact is not so good. When a dog is going at his utmost, it rarely happens that he is using his nose, and still rarer is it that he can use it if he tries, for from the great exertion and labored breathing which follows, the scenting powers are impaired for the time being and the dog is then said to be "off his nose." The same phenomena are exhibited by some dogs when they are greatly fatigued. They make many flushes and false-point frequently.

The general circumstances of good ranging now being

touched upon, the common variations of it and from it will next be considered. Nearly every dog has his own peculiar manner of ranging, and there are few indeed which have not some faults which are habitual, and many have a manner which is entirely faulty. No dog can perform in a manner higher than his intelligence will permit.

Having the knowledge of the habits of birds, and the ability to work out scents, the dog of inferior range will often excel the dog whose range is wide and superior in appearance. However, it is self-evident that of two dogs seeking for birds, the one which ranges wider than the other will have the more chances of finding them; and yet the wider ranger, if he is without the requisite knowledge aforementioned, may not be able to find more than a fraction of the birds in the area he works in. Here again comes in the distinction of finding birds and coming across them. The wide-ranging dog which trusts entirely to his heels, instead of to his heels and head, can run through a good bird country and make very few finds. This will explain why some wide-ranging dogs are so unsuccessful, while dogs of a lesser range succeed in finding better.

The most common examples of bad ranging are those wherein the dog takes his casts, be they long or short, out in any direction he first starts in, generally up or across wind, then turning and coming back directly to his handler on the same line on which he went out. On the return he in most instances uses his eyes to see where the shooter is and hurries straight to him. Thus in going out he may use his nose, but returning he does not attempt to use it, and if he did it would be wasted effort to use it on the ground which he has but just run over. Some dogs return to the shooter on their trail with almost perfect accuracy. A particularly annoying feature of this exceedingly faulty manner of ranging is where the dog habitually takes a cast in a straight line ahead of the shooter in the course in which he will walk. More then half of such dog's time and effort is wasted, for it takes him as long to return as it does to go out, and the ground, being worked in straight lines which cover so little of it, may appear to be worthless for hunting purposes when in fact they may contain birds in plenty. A dog which goes and returns in the same line seldom shows any intelligence in selecting his ground. He knows no difference between the best and the worst. He may point birds when he comes across them, as is sure to happen sooner or later in a bird country, for even the shooter will come across birds and walk up a bevy now and then.

As to such habit of ranging, the trainer can do but little to correct it. He can prevent the dog coming quite in as some will do, or from coming quite close in to heel to be ordered out again, and this by cracking the whip at him and ordering him to go on. If need be, he can stop him by receiving him with some earnest cuts of the whip if he comes within reach of it. If he learns that he will be received in such a hostile manner, he will stay away from his handler, which is some gain. If he should be a sulky brute in addition to being stupid in his ranging, he may quit work and loaf surlily, but it is not much loss, for casting out and in on the same lines is next to not casting at all.

If the dog have not "bird sense," that is to say, if he have not the intelligence and skill which go with correct methods of seeking, the trainer can do little for him in the way of improvement. As before remarked, the trainer cannot supply the brains which nature omitted If a dog is a fool or erratic or naturally inefficient, he is likely to show its effects all his life, though in some cases experience and maturity make great improvement.

Another faulty manner of ranging is that wherein the dog, instead of turning onward and crossing well in front of his handler, turns back on the course, crossing behind his handler, and then perhaps crossing in front and taking a cast on again on the side he left but a moment before. Then there is the dog which beats out his ground entirely on one side of his handler. If called in and sent out on the unworked ground, he in a few moments is back on his favorite ground again, and there remains. Some dogs have the very annoying habit of working behind the shooter with more or less persistency and frequency. Some dogs work close, then take a very long cast without much purpose to it, return and settle into a narrow range till they feel inclined to take another long cast. Some dogs stay far out all the time, leaving the ground near the shooter practically unworked. Some dogs are industrious and never for a moment cease using their noses; others never for a moment use their noses till they flush the birds.

The wind is an important factor in ranging. All dogs work best when the shooter is going up wind. The dog can then beat across wind to and fro, and in his turns he can turn up wind, thus nearly always having the wind of the birds which are within the range of his nose. If the shooter is going down wind, the dog, though he can beat across wind as before, must turn down wind at the end of his casts, or, turning up wind, he crosses back over the ground he has already worked, making thus a loop at the end of his casts. Some dogs, when the shooter turns down wind, lose all ideas of intelligent range and go as it happens, though they may range well up wind. The shooter going across wind makes the most trying course for the dog to range to, for then if he range across the shooter he must go straight up or down wind. The wise dog—one of good sense and good experience—will range well to the gun whether the shooter's course is up, down or across wind, for he casts out far enough so that he has a good fling and works to the best advantage.

Quartering, as artificially enforced, is where the dog crosses to and fro in front of the shooter on parallel lines, and covers a strip of ground such as his speed will permit while keeping in front of the shooter. It is apparent that if he made his casts too wide, the shooter would walk faster than the dog could cut out his parallels. In this country, where the habitat of the birds is so irregular and where there is so much barren ground mixed in with what is fertile, and where intelligent effort is so much superior to set forms, the strict quartering part of ranging is not taught nor desired. In sections where the birds may be plentiful when sought by a dog ranging on his judgment, they would appear to be very scarce when sought by a dog which hunted in parallel lines across his handler's course.

The Brunswick Fur Club.

THE secretary of the club, Mr. Bradford S. Turpin, Roxbury, Mass, has issued the following invitation in a folder giving all necessary information, as follows:

The Brunswick Fur Club cordially invites you to take part in its ninth annual field trials, to be held at Barre, Mass, during the week of Oct. 17.

Barre is on the Central Massachusetts Railroad. Sportsmen passing through Boston will take the cars at the Union Station.

The club headquarters will be at Hotel Barre, where the rates will be $1.50 per day for those who take a luncheon to the field; $2.00 per day for those who take dinner at the hotel. The trials will be judged by Messrs. S. B. Mills, Needham, Mass.; Stephen Decatur, Portsmouth, N. H.; Eugene Brooks, Vernon, Vt.; A. B. McGregor, Middleton, Mass.; Bradford S. Turpin, Roxbury, Mass.

The Derby, open to all hounds whelped on or after Jan. 1, 1896, will be run on Tuesday, Oct. 19. Entries close on Monday evening, Oct. 18. Fee to start, $2.00.

The All Age Stake will be run on Wednesday, Thursday and Friday, Oct. 20-22. Entries close on Tuesday evening Oct. 19. Fee to start, $3.00

The winner of the Derby will hold the R. D. Perry cup for one year, and receive the club medal. The winner of the All-Age Stake will hold the *American Field* Cup for one year, and receive the club medal. The Norton Q. Pope memorial cup will be awarded to the hound showing the best combined trailing, speed and driving, in the All Age Stake, and will be held for one year. Silver Medals, donated by members of the club will be given to the first prize winners in the Hunting, speed and driving, trailing and endurance classes of the All-Age Stake. In addition to these special prizes, field trial certificates will be given to every hound winning a place in the Derby or the several classes of the All-Age Stake.

The trails are open to the world. All sportsmen will be heartily welcomed.

FIELD TRIALS AND FIELD TRIAL JUDGES—V.

THE mistakes, qualifications and labors of judges having been dwelt upon at some length in prior papers setting forth mostly what shouldn't be done, the manner in which a judge should conduct a trial will now be explained, and thus bring the matter to a conclusion.

First of all, the judge should never waver in his determination to be the judge. If there is any exhibition of a lack of self-confidence, it will be instantly detected by the competitors. They will chaff each other, one loudly proclaiming the excellence of his own dog and pointing out the defects of others in the competition, while the other handlers in turn retort in kind; and while ostensibly talking to each other they are talking at the judge.

A judge who is at all timorous, whether in respect to confidence in himself when assuming responsibility, or in respect to his proper knowledge of his subject, would better never accept the position at all. He will have the rules to enforce in conducting the competition and innumerable details to rule upon which are not governed by any written rules, but which in their settlement require good sense, a knowledge of usage in such matters, and a firmness of character It is one of the peculiarities of life that timidity invites attack, and competitors are seldom backward to make what capital is possible from the judge's timidity or inefficiency. A "kick" is made on one ground or another, much to the disturbance of the judge's peace of mind and confusion of purpose.

The dogs being drawn to run, sufficient information has been given in preceding papers as to the proper manner of conducting the course and the selection of one which will give each brace a reasonably good part of the grounds, etc. Regardless of the time limit which some clubs deem necessary to adopt as a sop to competitors, the judge should run the dogs till he has reached something like a definite conclusion as to which dogs are meritorious enough to take into the second series. Some judges seem to interpret the thirty-minute limit as restricting the heat to thirty minutes, neither more nor less, whereas it is intended as a minimum, and the judge can run longer than the thirty minutes at his discretion.

It will now and then happen that, from a brace running in the midday hours, or from running through a section where there are no birds, the judge cannot satisfactorily determine the quality of the dogs. If he runs them on and on, he will run them to a standstill, and if he is running the dogs on ground where there are no birds and running in the midday hours, he knows that he is not giving them a fair trial as compared with other dogs which ran under more favorable conditions of time and birds; so he orders them up and takes them into the second series on the ground that they should have a further trial. Other dogs are brought into this series for superiority shown, therefore the judge can make up his second series of dogs which have shown superiority and ones which have not had a satisfactory trial as to ground, birds and time of day. Often it happens that under favorable conditions the unfinished heats can be determined in a few moments when the dogs have the desired opportunity to show what class of work they are capable of doing. On the other hand, dogs which have shown palpable inferiority should not be taken into the second series. It is a mistake on the part of a judge to take dogs into a higher series as a sop to the owners or as a bid for popularity with them, or as a way to placate those who are known to be kickers. There is only one true way to do the thing properly, and that is to do what is right without fear or favor of any one. If any owner later asks for information as to why a decision was made, it is well to give him the desired information; if he then seizes it as a ground for his kick, the better way then is to ask the kicker what he is going to do about it.

In taking dogs into the second series, the ones the judge rates as superior, he should be careful to select on the class of their work and not on any detail of work alone. For instance, an inferior might point three bevies within 300yds. inside of five minutes after starting, and the whole affair, aside from the mere act of pointing, might be an accident. That is, there were three bevies close together, which the dog couldn't help but find, whether he was seeking or not, and, on the other hand, a dog of high-class merit might have poor success in finding in a section of ground where there were very few birds. And yet to read that one dog found three bevies and the other found nine would on the bald statement indicate everything in favor of the dog which found. Thus it is always well to note whether work comes from accidental circumstance or from meritorious effort. A dog which is taken up into the higher series on the class of his work, will always repeat well. One taken in on the record of the details may repeat and may not, just as it happens. A judge who cannot judge of class will never be an accurate judge. Where a class is recognized everything works to a natural and definite conclusion. Where it is ignored, there is often the pitiful and ludicrous spectacle of a pottering, low class dog competing for first or winning first when there are high class dogs left in the stake.

When the final rounds are being run, it is particularly unwise to take in inferior dogs as a complimentary sop to owners, for the reason that such dogs may be lucky in abundance of opportunities, and thus may make a great showing from the accident of having such greater opportunities; then the judge finds himself in the embarrassing position of having dogs on his hands which he cannot drop without still further running of them.

Generally there are three or four dogs which are close competitors, or if there is one distinctly alone in merit for first, there are several which are close in merit for the other places. If the competition is handled skillfully, everything works to a natural and definite climax; if the judge, either from want of knowledge or a desire to please the gallery, runs the dogs by the natural climax, that is to say, if he runs them by the point where the competition is naturally concluded, the whole aspect changes. The accidents of time of day, favorable or unfavorable grounds and presence or absence of birds come into play, and the judge becomes confused. His decisions then are very much after the style of hit or miss.

The dogs in each series should be run long enough so that there is definite data established in making the selections of the best dogs. If the dogs are run exactly thirty minutes in each heat, the judge may not know much more about the relative superiority or inferiority of the dogs than he did before he began.

In conducting the trial he should know what to do, and, knowing it, he should insist on having it done. If he doesn't know, the best he can do is to drift along to some sort of a lucky or unlucky ending.

When he is judging, he should go along calmly 10 or 15yds. behind the handlers in the open, closer in the thickets, and under no circumstances of frantic calls of point should he permit himself to gallop furiously here and there. And yet this is a trick some judges, and new ones in particular, are much given to. Keep the handlers together. If they will separate, keep with the one who keeps the directed course. Let the other one go off by himself if he chooses to do so. If he cannot keep his dog to the course, it is an open confession that his dog is not broken, and as such he should suffer the penalty. When an order is given, no back talk should be tolerated. Judging dogs is not accomplished by debating matters with the handlers.

When a man reaches the point where he can judge correctly, fearlessly, and with the one test of what is right and just, it doesn't matter whether he is a pointer or a setter man.

ABOUT FUN.

NEW YORK, Sept. 22.—*Editor Forest and Stream:* In your issue of Sept 11 appeared a contribution from H. L entitled "A Night in Texas," in which the correspondent fairly revels in the spectacle of a "bob cat as big as a calf" being chased to the death by a half-dozen hounds, who—after a "grim, and grand, and perfectly silent fight," at the termination of which, the cat, "on his back, and with the claws of both forefeet firmly fixed in poor Rummager's nose, and a big piece of one of Sultan's long ears in his mouth, gives up the battle"—are "too tired to worry and quarrel over his remains; but panting and exhausted, they lie down by his side, and the fun is over." Fun! That's the word that staggers me. Just where the laugh comes in I have, so far, been unable to determine; but I presume it must have been excruciatingly funny to those who witnessed the incident.

It was apparently the same kind of fun the savages used to enjoy when their scalped victims amused them with their agonizing cries while the merciless flames enwrapt their writhing forms; the same kind of fun—only more so—that the untaught urchin enjoys as he plucks the wings—then the legs—one by one, and finally the head, from a tiny house-fly; and much the same kind that makes the gore bepuddled bull ring and kindred amusements interesting—but is not the class of fun, I think I am free to say, that is mostly appreciated by the majority of gentle minded folks who make up the population of this enlightened country to-day.

Now, don't set me down as an uninformed tenderfoot, although I may be tender hearted—and not ashamed of it—for I am in a position to realize as much as any one the necessity of ridding a new country, for economical reasons, of the "varmint" which infest it; but it seems to me deplorable that any member of the great FOREST AND STREAM family should turn to the account of sport an accidental run of the hounds with its natural consequences and call it "fun"

If we who are constantly making such earnest efforts to imbue into the hearts of our fellow men the soul-satisfying love of nature and her creatures, are to attain satisfactory results, it will be largely by the power of example; but such examples as this can never have aught but the opposite effect to that we so much desire.

It is bad enough to kill at all for sport; in fact, I personally don't consider it at all requisite that blood be spilled that the enjoyment of a day in my own beloved native mountains—far beyond Texas—be perfect. But if life must be taken, let it be with all possible mercy and no gloating over the death struggle. That has always been a sad moment to me and one I would wish to forget.

Brethren, be gentle. The more gentle you are, the more you'll find that your life, while

> And good in everything"

LOUIS BENSON AKIN.

POINTS AND FLUSHES.

In regard to the prospects of the E. F. T. C., Mr. S. C. Bradley, the secretary, writes us that "the members of the Eastern Field Trials Club are making a great effort to have their Members' Stake a big one and a good one. Four special prizes have been offered, and a silver cup has been subscribed for to be presented to the winner. One of the special prizes is to be a painting by Prof. Osthaus, which that genial sportsman and artist kindly offers to the first dog. That the stake will be a success is already assured, as in the neighborhood of twelve dogs have been promised as starters, with the chances in favor of three or four more additional, as all members have not been heard from as yet."

Under date of Sept. 28, the Canadian Kennel Club has issued the following circular letter:

"As you are doubtless aware, the Canadian Kennel Club at its annual meeting held on Sept. 9 last, decided to annul at the end of the required six months the agreement lately made with the American Kennel Club. The A. K. C. has waived its claim to this six months notice and has agreed to cancel the agreement immediately. This being the case the business of the Canadian Kennel Club will be at once resumed and registrations accepted from this date. The club looks for your support and trusts that the future will see the Canadian Kennel Club a strong national organization, combining the kennel interests of the whole wide Dominion."

H. B. DONOVAN.

Mr. H. B. Donovan, Secretary of the Canadian Kennel Club, by order of the president, has notified members that a meeting of the executive committee will be held at Queen's Hotel, Oct. 12, at 8 P. M.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Trap-Shooting.

FIXTURES.

Oct. 12-14.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Company.

Oct. 13.—HACKENSACK, N. J.—Sixth contest for the Recreation cup. E. A. Jackson, Sec'y.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

Oct. 19-20.—CHEROKEE, Ia.—First annual tournament of the Cherokee Gun Club. For amateurs only. Added money. A. W. Luehrs, Sec'y.

Oct. 19-21.—DAYTON, Ia.—Second annual tournament of the Dayton Gun Club. First two days, targets; last day, live birds. "Cannot divide with professionals or manufacturers' agents."

Oct. 19-22.—BALTIMORE, Md.—Four days' tournament of the Baltimore Shooting Association. First two days, targets; last two days, live birds. $500 added money. Geo. L. Harrison, Sec'y.

Oct. 22-23.—HUNTINGTON, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Erie Gun Club.

Oct. 26-28.—COUNCIL BLUFFS, Ia.—Tournament under the auspices of W. D. Hardin, F. S. Crabill and C. B. Randlett. $300 added. Programmes later.

Oct. 27-29.—DES MOINES, Ia.—Amateur tournament at the Des Moines Gun Club's park. $300 added. W. R Milner, Manager.

Oct. 29-30.—GRAND RAPIDS, Minn.—Tournament of the Itasca Gun Club. Dr. W. P. Brown, Sec'y.

1898.

March 22-24.—ELKWOOD PARK, Long Branch, N. J.—Sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added.

DRIVERS AND TWISTERS.

On Saturday evening last, Oct. 2, Capt. J. A. H. Dressel invited a few friends to dine with him at the new café—La Rochelle—corner of Seventy-fifth street and Columbus avenue, New York. The occasion was the opening of this front-rank café and restaurant by Mr. Haan, a friend of Capt. Dressel's, and a member of the Sportsmen's Association. Among the guests were: A. S. Williams, the well known press agent of Madison Square Garden; Capt. Money, Noel E. Money and H. Hawkins, of the E. C. & Schultze Powder Co.; U. M. C. Thomas, of the U. M. C. Co., Bridgeport, Conn.; Rolla O. Heikes, Dayton, O., representative of the Winchester Repeating Arms Co.; John J. Hallowell, Bethayres, Pa.; Elmer E. Shaner, Pittsburg, Pa.; B. Leroy Woodward, Campello, Mass., now with the Remington Arms Co.; E. D. Fulford, Utica, N. Y., also with the same company; Ed Taylor (of the Laflin & Rand Powder Co.), late of Cincinnati, but now, we are glad to say, of Jersey City, N. J.; C. C. Beveridge, of Fremont, Neb., but for some months past a resident of Newark, N. J., and the trap editor of FOREST AND STREAM in an unofficial capacity. The dinner began at 8 and did not end until close upon 11 o'clock. During the three hours the *cuisine* of Mr. Haan's new venture underwent a thorough and satisfactory overhauling, interspersed with some beautiful selections from the Hungarian band that will perform there nightly.

Live blackbirds from five Mott traps on a windy day are quite a revelation. They have a variety of flight that is puzzling, sometimes skimming low over the ground, while at other times they tower like a black duck. They can change their course, too, so rapidly that anybody is liable to get fooled on them. Several hundreds were trapped at Elkwood Park on Saturday last, Oct. 2, and they caused ciphers to spring up on the score sheet far too rapidly for some people's conceit. Leander Campbell, the man in charge of the pigeon and blackbird coops at Elkwood Park, has a couple of thousands or so under his care now, and promises to be able to supply them until the new year comes in. Daly & Chanfrau also promise to hold a blackbird shoot once a week until the above date, and should the days chosen prove anything like Saturday last, barring the rain early in the morning, there should be a good attendance at these shoots, if ample notice is given. The sport is far less expensive than pigeon shooting, and has many features that recommend it strongly in preference to that branch of sport. Some of the features are: Absolute absence of sitters; no incomers; plethora of twisters, etc. It must be remembered, though, that wind is just as necessary to make the sport extra as it is in pigeon shooting.

Something delightfully novel in the way of live-bird shooting is suggested in the following item clipped from the *American Field* of Oct. 2: "An interesting live-bird match has been arranged to take place at the grounds of the Brooklyn Gun Club, on Saturday afternoon, Oct. 9. The contestants will be Theodore Baron, the secretary of the club, and W. H. Sanders, and the conditions call for 50 birds each, unknown angles, for $25 a side. The match will be decided immediately after the club shoot." Live birds at unknown angles is just what we have been looking for. It does away with the monotony of handicapping by distance; the experts could be made to shoot at unknown angles, while the poor novice could be relegated to live birds at known angles. The chief beauty of unknown angles is that it does away with all chance of collusion between the bird, the trap and the shooter. And what a weight of responsibility it takes off the pigeon's mind! It would no longer have to decide upon its course when leaving the trap. How would it do to suggest in regard to a certain trophy, that the challenger must shoot at live birds, unknown angles, while the holder shoots at live birds, known angles? Surely this would insure some recognition of a challenge, whether technically incorrect or not.

The Carteret Club formally opened its new grounds at Garden City, L. I., on Saturday last, Oct. 2. There was a good attendance and some good shooting. In view of the fact that this was the club's opening day, it was really most appropriate that the popular president of the club, George Work, should win the first trophy offered for competition on the new grounds. It is doubtful whether any other win could have been as enthusiastically received, for Mr. Work has probably more friends among his fellow-clubmen than any other shooter now before the New York public. The grounds are said to be very fast, and to be perfect in their appointments; most of the credit is due to the efforts of Walter W. Watrous, who has been considerably aided in his work, we understand, by Geo. S. McAlpin. The high wind on Saturday gave the shooters a taste of what they may expect when the northwest winds of winter sweep over Hempstead plain where the club house and grounds are located. The shooting grounds are under the control of a Mr. Mott, brother of George Mott, who so ably looks after the shooting interests at the Westminster Kennel Club's grounds, Babylon, L. I.

The Baltimore Shooting Association's programme for its shoot, Oct. 19-22, is a good one, and full of interest. One hundred and fifty dollars a day is added to the purses in the target events. On Friday, Oct. 22, the Association announces the Maryland Handicap, 25 birds, $25, birds extra, high guns. Five hundred dollars guaranteed, and *$200 added* by the Association, or $700 in all, to go to the four high guns; $230 to first, $210 to second, $140 to third, and $70 to fourth. All surplus will be added, and will be divided among the other shooters after the fashion adopted by the Interstate Association for its Grand American Handicaps. This event should be a very good one indeed, as there is enough money in the purse to draw shooters to Baltimore for this one event alone. The programme is noticed in full elsewhere in these columns. It should be noted specially that in all target events the purses will be divided under the old system, four moneys, 40, 30, 20 and 10 per cent.; in all live bird events, it will be a case of high guns all the time.

The Piasa Gun Club, of Alton, Ill., seems to have had a most successful shoot last week. The Alton *Republican* of Thursday, Sept. 30, says of the company present: "Of this company were Jack Parker, the famous athlete and manager of tournaments, from Detroit, Mich., who manages this shoot, representing the Peters Cartridge Co; Chas. Grimm, of Spirit Lake, Ia., the holder of the famous 'cast-iron medal;' S. A. Tucker, the traveling representative of the Parker Gun Co.; James Barr, of Louisiana, Mo.; C. W. Budd, of Des Moines, Ia., and traveling representative McMurchy, of the L. C. Smith Gun Co.; Ed. Rutledge, John Todd and James Landes, of Winchester.' The true worth of the cast-iron medal is apparently properly recognized in Alton.

John Shaaber, of Reading, Pa., was in New York to day. Mr. Shaaber was laying in a stock of material for shooting this winter, and was also talking about the Pennsylvania State shoot next year. This tournament will be held early in the spring, under the auspices of the Independent Gun Club, of Reading. The dates chosen will probably be the week following the Grand American Handicap, viz., March 29-April 1. This seems a good idea, as many from the West and from the extreme East will be on here at that time; and most of them would remain over for a few days, if Pennsylvania's State shoot was available as an excuse.

Since it has been settled that Elkwood Park will be the scene of next year's Grand American Handicap we have heard nothing but commendation of the Interstate Association's action in this matter. From what we can hear, and from letters we have received, it begins to look as if the labors of the handicapping committee will be added to next March, when it comes to apportioning distances to the entries for this event. Last year there were 146 entries and 135 starters; next year there will be —?

Carl von Lengerke shot his score in the Jersey Handicap last week under most disadvantageous conditions. His elder brother, Justus, had entered him for the race over night without notifying Carl. It being the last day for snipe shooting in New Jersey (although, by the way, it is just about the best season for that sport!), Carl got up early and tramped the meadows in search of some of the long bills. He found some, and got to the store rather late and well fagged out. His gun was at home, but he got that, and went over to Passaic and tried to get into the "three high guns" class. With such a start for the day, it is little wonder that he did not land there; still, he was in the 23 hole until the last gasp.

Charlie Hebbard, late of the Empire Target Co., has left his home in New Jersey, and his business location with Fred Quimby in New York city, and has betaken himself to a spot about twelve miles from St. Louis, Mo. Charlie has not gone alone, his wife and family having accompanied him. The fact of the matter is, we shall soon hear of Hebbard in connection with a new target—"the White Flier"—a special feature of which will be a white ring instead of a yellow one. Charlie has left many friends behind him, but he is not unacquainted in the South, for it was in Knoxville, Tenn., we believe, that he first started in the target business.

The Cherokee, Ia., Gun Club will hold its first annual target tournament Oct. 19-20. The dates first selected were Oct. 27-28, but as these dates conflicted with those chosen by the Council Bluffs Gun Club, the ones first above mentioned have been finally decided upon. This tournament is "for amateurs only." The club will add some money, over $100 in cash having been raised by Sept. 30. We understand that the shooters in the vicinity of Cherokee have promised their support, in which case the local club should have a good shoot.

B. Leroy Woodward, of Campello, Mass., has joined the ranks of expert professionals. He is now a full-fledged exponent of the art of shooting the Remington gun to the front. "Leroy," as he has come to be known by shooters throughout the entire country, is a rattling good shot, quick and accurate, pulverizing his targets in excellent time. His duties for the above-named firm commenced on Monday of this week, Oct. 4. He has many friends among the trap shooters, and every one of them will watch his career with interest.

While riding from Clifton race track to Passaic, N. J., on a trolley car last Thursday evening, D. A. Upson was our companion. Mr. Upson interested us by the deprecating manner in which he referred to his live-bird shooting. "I can't shoot live birds," said he. Yet on the second day after he made that remark, he went down to Garden City, L. I., to the Carteret Club's opening shoot, and scored 28 out of 30 shot at. And the birds, we are told, were as fast as any ever trapped! His mark was 31yds.

C. C. Beveridge, of Newark, N. J., and Hank White were the blackbird champions at Elkwood Park on Saturday last, Oct. 2. Beveridge may be only an 82 or 84 per cent. man on targets, but he's all there when it comes to blackbirds in a gale of wind. We know some people who found the figure 0 creeping into their scores far too frequently for their entire satisfaction. And all this time Hank White and Beveridge were fighting it out for first place.

The programme for the tenth annuual tournament of the Iroquois Rifle Club, of Pittsburg, Pa., Oct. 11-14, contains contests for both shotgun and riflemen. In the "clay" target events, all purses will be divided under the Rose system. The trap-shooting grounds are located at Howard Station, P. V. & C. R. R., and can be reached easily either by trolley cars or by steam cars. The headquarters and indoor rifle range of the club is at 1717 Jane street, Pittsburg, Pa.

D. A. Upson has arrived on the scene from his home in Cleveland. Since his arrival here he has done some shooting, both at targets and at live birds. One afternoon at the Jersey State shoot last week, he sprung the old chestnut that he was "going to give up shooting." Rolla Heikes, Tom Keller, Noel Money and one or two more fell from their chairs when they heard Upson's solemn statement.

We are glad to be able to report that the injury to Mr. E. A. Jackson's eye, reported in Drivers and Twisters of our last issue, is not liable to prove as serious as it was at first thought it would prove to be. Although Mr Jackson will have to be careful about exposing his eye for some time, the doctor in attendance expresses himself as satisfied that he will not lose the sight of injured eye, his right one, by the way.

Jack Fanning, the Gold Dust representative, has gotten back to the East again after a brief trip to Western points, and to Chicago in particular. Fanning tells us that trap-shooting is booming in the Windy City, and that much interest has been taken in the sport this season. A study of the weekly reports we have had from that city during the past year, will show that Fanning's estimate of the case is about right.

Ferd. Van Dyke has challenged Justus von Lengerke for the cup emblematic of the championship of New Jersey at targets, so Justus will have to defend his title to the cup before this month is out. The race, which will be at 50 targets, unknown angles, should be well worth seeing, for both men are capable of doing very good work, particularly when under pressure.

The return match between the Bergen County Gun Club, of Hackensack, N. J., and the Riverside Gun Club, of Red Bank, N. J., will take place at Red Bank, Friday of this week, Oct. 8. The visitors will travel to Red Bank by the 10 A. M. train over the Pennsylvania R. R., N. Y. & Long Branch division. A schedule of events to suit all shooters will be arranged by the home club.

Wednesday, Oct. 13, is the date set for the sixth contest for the Recreation cup at Hackensack, N. J. This race is always productive of a good entry list, and although there is going to be a lot of shooting in the vicinity of New York this month, the Bergen County Gun Club can safely expect a good crowd on the above date.

J. A. H. Dressel, president of the Interstate Association; John L. Lequin, its secretary, and Irby Bennett, chairman of the Association's executive committee, were all interested spectators at the Jersey State shoot last Thursday afternoon. They seemed to be relieved of a great burden now that it is settled that the Grand American Handicap for 1898 is going to be held for the third successive year at Elkwood Park.

George Mosher, of the Syracuse Arms Company and Hollenbeck gun, was one of the entries in the Jersey Handicap last week. George pointed his gun all right, every time but once, a driver in the 17th round getting the best of him. To score 24 out of 25 and get nothing was hard luck, but George was not alone in this respect.

The headquarters of the Cobweb Gun Club, of New York, have been removed to McKeon's Hotel, 2314 Third avenue. The club held its first monthly meeting after a disbandment of four months, on Monday evening last, Oct. 4. The regular monthly shoots at live birds for the fall and winter season will commence on Thursday next, Oct. 7, and will be held on the first Thursday of every month until the season closes next spring.

Elliott ought to challenge Grimm once more for the cast-iron badge. But in doing so he must not forget to comply with all the conditions surrounding challenges for that trophy; most particular, too, should he be to see that his forfeit is deposited with our Western contemporary, in order that no one's feelings may be hurt.

On Thursday of next week, Oct. 14, there will be a live-bird shoot at Willard Park, Paterson, N. J., where Boyle Bros. will trap some of their best birds for the boys to shoot at. Several shooters have already signified their intention of being present on the above date, so a good shoot should be a certainty.

At the Limited Gun Club's tournament, held in Indianapolis Ind., Sept. 28, Whitney M. Thompson, of Lafayette, won the championship cup with 91 out of 100. There were over twenty entries, among them Ed Rike, Beck, Tripp, Dietrich, Parry, Corbett, Link, Stillwell, Stone, Wallace, etc.

The Riverton Gun Club's invitation shoot, Friday and Saturday, Oct. 15-16, promises to equal any of its predecessors. The programme issued for the occasion is an interesting one.

At the Piasa Gun Club's tournament, held in Alton, Ill., last week first average for the day was won by Frank Black, of Kirkwood, Ill., an amateur, with 319 breaks out of 350 shot at. S. A. Tucker and C. M. Grimm were second and third with 317 and 316 breaks respectively.

The Baltimore shoot, Oct. 19-22, practically closes the target season for 1897 in this section of the country. Of course there will always be plenty of club shoots going on, but no tournaments of any kind are scheduled for the East until the Grand American Handicap of 1898.

H. P. Du Pont Collins was to have been on hand at the Clifton race track last week. At the last moment, however, he had to disappoint us, sending his regrets. His absence was caused, we are sorry to say, by the sudden and serious illness of Mrs. Collins.

The chief feature of interest this week is the Gilbert-Elliott match at Kansas City, Mo., Oct. 8, for the title attached to the Kansas City *Star* cup. The general opinion here seems to be that Elliott will win, but that he will find the Spirit Lake shooter a hard nut to crack.

The J. Stevens Arms and Tool Co., of Chicopee Falls, Mass, has recently issued an interesting circular on reboring and small-bore cartridges. Any one interested in small bores can obtain a copy of this pamphlet by addressing that firm.

The position on the staff of the American *Field* vacated by Major Taylor has been accepted by W. R. Hobart. Mr. Hobart will look after his paper's interest in the shooting line in the vicinity of New York city.

The Brooklyn, N. Y. Gun Club will hold its regular monthly shoot next Saturday afternoon. Special attractions are promised to those who attend these popular gatherings at Union Course, Brooklyn.

D. A. Upson is located at Elkwood Park for a portion of this week. Phil Daly, Jr., and the Cleveland crackerjack are going to try conclusions at live birds over the Elkwood traps.

There is going to be a hot time this week at Warwick and Newburgh, N. Y. Some of the best in the land will be there, and some targets will be broken.

Mr. Willard Shiner, of Towanda, Pa., announces a live-bird tournament at Towanda on Oct. 14. Mr. Shiner will manage the shoot.

OCT. 5. EDWARD BANKS.

Around Buffalo.

MERCHANDISE PRIZES AT AUDUBON PARK.

BUFFALO, N. Y., Sept. 30.—The annual merchandise shoot of the Audubon Gun Club attracted many prominent trap-shooters to Audubon Park to-day. The weather was all that could be desired. In addition to the sixty members present there was a strong delegation from the other gun clubs of the city. Mr. Garbe, manager of the hotel on the grounds, had made every preparation for the entertainment of his guests, and his efforts were well rewarded.

In the merchandise shoot only members could compete for the prizes donated by members. The first seven events were open to all. In these events there were six merchandise prizes for best scores. The following were the winners: First, F. D. Kelsey; second, E. F. Hammond; third, A. Forrester; fourth, R Stacy; fifth, C. S. Burkhardt; sixth, H. D Kirkover. No. 8 and No. 9 events were merchandise races in which all contestants received a prize. Kelsey again appeared for high honors, dividing with E. W. Smith, while A. Forrester and C. S. Burkhardt finished a close second.

AUDUBON'S WEEKLY SHOOT.

Oct. 2.—The fifth shoot of the series for the championship of Buffalo between teams of five men from the local clubs took place at Audubon Park this afternoon. The Audubons scored 99 out of a possible 125, the Cazenovias were second with 87 and the Bisons last with 81. The heavy wind interfered with the shooters.

In the badge shoot of the Audubons E. C. Burkhardt carried off first honors in A class. George Zoeller led in B and U. E. Story beat out the field for the C class badge.

One of the features of the day's shoot was a match race for a loving cup presented by an unknown to be shot for by Messrs Reid, Hebard, Kennedy and Storey. Mr. Hebard captured the trophy.

In the table below, No. 3 is the badge shoot, Nos. 6 and 7 being at 5 pairs. Scores were:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

Trap at Harper's Ferry.

HARPER'S FERRY, W. Va., Sept. 28.—During the late unpleasantness there was much burning of powder going on about this historic town, but since 1865 the tournament held here by Drs. Stotler and Fort, Sept. 28, has been the first of anything like file firing, and it brought out a large number of interested spectators to see the experts smash ashphalts. A handsome and valuable silver cup, presented by the E. C. & Schultze Powder Co., brought out twelve entries, and resulted in as pretty a race as one would ever see. The conditions were 25 targets, with a handicap of from 1 to 10 targets; all ties shot at the original number and handicap.

Drawbaugh, of Shenandoah Junction, W. Va., with a handicap of 1; Bellmeyer, of Shepherdstown, W. Va., with a handicap of 3; and Smith, of Frederick, Md., at scratch, tied on 23; the second tie saw Drawbaugh out with 23, Bellmeyer and Smith again tying, on 24; the third tie resulted in a well-earned victory for Smith with 23, to Bellmeyer's 22. Smith is a comparatively new shot, but a good one, his youth and physique carrying him along to best the handicap of 9 extra targets of his opponent, whose age and poor health proved a heavier handicap than the extra targets could overcome.

The features of interest next to this race were the handsome exhibits of the Winchester Repeating Arms Co., consisting of a case showing a full line of its shells, wads and primers, and a repeating shotgun for the use of anyone who wanted a gun; there was also plenty of E. C. literature and loaded shells, backed up by the glib tongue of Dr. Stotler, who is an enthusiast on the above subjects. The traps threw fairly well, and everyone had a good time.

Scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	*15*	*15*	*15*	*15*	*15*	*25*	*15*	*15*	*15*	*15*	*15*	*20*	*10*

VISITOR.

Piasa Gun Club's Tournament.

ALTON, Ill., Oct. 1.—I send you herewith the official scores made at the first annual tournament of the Piasa Gun Club, held in this city Sept. 30 and Oct. 1. There were, as you will perceive, over sixty shooters present during the two days, and more than 12,000 targets were thrown. Moneys were divided 40, 30, 20 and 10 per cent., with first, second and third moneys for high average for the two days. In addition, there were more than 100 prizes of merchandise donated by local business men, making eight prizes to each event, with several specials. The event altogether is pronounced by the professionals to have been the best given this year in Illinois, and the Alton club is justly proud of this record.

The contest among the old shots was very close, the high average going to Frank Black, an amateur of Kirkwood, Ill., on 319 kills out of 350 shot at. S. A. Tucker, of the Parker Gun Company, got second high money on 317 birds, and Chas. Grimm, of Clear Lake, Ia., won third on 316. Besides the shooting of the leaders, however, there was much interest in the development of new material by the home club, some of the men who made good scores—namely, Schiess, Adams, Kauffmann and Riehl—having never before shot over the traps.

SCORES OF SEPT. 30.

F. C. RIEHL.

Indiana Trap-Shooters' League.

PLANS FOR THANKSGIVING DAY.

PERU, Ind., Oct. 2.—*Editor Forest and Stream:* While the trap-shooting season in Indiana is not by any means drawing to an abrupt close, there being yet two tournaments to be given by league clubs: the Greensburg, of Greensburg, and Erie, of Huntington, both of which promise to be as good as have been given in the State (outside, of course, the first annual, which had unusual attractions), and there yet being plenty of time for one or two clubs to claim dates before cold weather, yet I cannot refrain from saying that the season has indeed been a successful one and very gratifying to the promoters of the Indiana Trap-Shooters' League. It has proved entirely satisfactory to those clubs which have become members of the League, and which have given tournaments under its sanction. True, some of the tournaments have not been extremely large affairs, but the attendance has in all cases been sufficient to warrant the shooting out of the programme. Where the attendance has not been large, I think it was due to a combination of circumstances, such as too frequent tournaments in the same vicinity; extremely warm weather, or open tournaments where the professionals were allowed to compete upon an equal footing, which has been clearly demonstrated is not conducive to a large attendance in this State.

However, not the least gratifying condition of affairs which now prevails in Indiana is the extremely harmonious feeling which seems to pervade the League clubs and trap-shooters of the State in general. Every shooter one meets has nothing but praise for his own State and the shooters. Chancing to meet several weeks since one of the most prominent shooters of Indiana, Mr. Joseph Blistain, of the Lafayette Club, he offered a suggestion which the more thought I give it the more I feel it should be given to our friends of the League. Mr. Blistain's suggestion was as follows: "Now that everyone feels good over the splendid season now drawing to a close let's do something on Thanksgiving Day to properly close such a season, and let that something be a tournament at some League club's grounds, that will live through the winter in the memory of every man that attends, and keep alive the harmonious feeling now prevailing and make everyone anxious for the opening of the season in the spring of 1898. As this will be during the game season, let every shooter send to the club giving this tournament some kind of game of his own killing, and have a grand dinner at the club house during the progress of the day's shooting. This would not partake in the slightest of those game-destroying affairs like side hunts for points, and the dinner could be served at a nominal cost to each shooter who attends."

Of course, there are not many clubs in the League who are prepared to entertain a crowd at dinner, but the Limited Club, of Indianapolis, is, and so is the Indiana Mineral Springs Club, though not so easy of access as the Limited. Fred Erb, of the Lafayette Club, when spoken to about it says: "You bet I'm in, and let's give a reward to the man sending in the most hawks."

While I have not interviewed any of the shooters in regard to this tournament, and do not know that either of the clubs mentioned would undertake its management. I would be pleased to receive suggestions from any League member through the columns of this journal. J. L. HEAD, Pres. Ind. Trap-Shooters' League.

ON LONG ISLAND.

NEW UTRECHT GUN CLUB.

Oct. 2.—Below are the scores made to-day by members of the New Utrecht Gun Club in the regular semi-monthly club shoot, and in the prize gun shoot. In the club shoot P. E George was the winner in Class A, Dr. O'Brien winning in Class B. For the prize gun contest, Donley Deacon put on his shooting clothes and broke 25 out of 26, winning easily. Scores in detail:

Club shoot, 25 targets, handicap allowance:

P E George (A)	0110101110110011111111011111—20
C Dudley (A)	0101111111011111101111010 —19

P E George (5)	1101000001011011010010001 —11

*Guest.

As Deacon had a straight score after using one bird of his handicap, and there was no ceance of a tie, no other handicaps were shot off.

Four 10-target sweeps, all at unknown angles, were shot with the following results:

Events:	1	2	3	4	Events:	1	2	3	4
Dudley	7	10	7	9	F A Thompson	7	8	4	9
Gaughen	6	6	6	9	O'Brien	..	..	7	6

G. E POOL, Sec'y.

HELL GATE GUN CLUB.

NEW YORK, Sept. 30.—Inclosed please find score of Hell Gate Gun Club. The shoot was very well represented, and never since the day of their existence have the members made such good scores. Most of them never shot over the traps till they joined this club. The birds were a fair lot of flyers; only two or three had to be put up by the rope:

CARTERET CLUB.

Oct. 2.—The Carteret Club celebrated the opening of its new grounds at Garden City, L. I., to-day, by holding a big shoot at live birds. There was a good attendance of shooters, and some excellent birds were supplied for the occasion. The main event was the contest for the silver trophy donated for competition by Stewart M. Brice, the son of Senator Brice. This contest brought out twenty-two shooters, most of them well-known to the public. The cup was finally won by George Work, president of the club, with 23 kills out of 25. He was tied for first and second money by D. A. Upson, of Cleveland, O., a guest of the club. Mr. Upson not being a member of Carteret, was not entitled to shoot for the trophy, hence the valuable souvenir of the opening day fell to Mr. Work. J. S. S. Remsen, of Brooklyn (28), George McAlpin (31) and J. Seaver Page (28) were tied for third money, with 22 kills each. The conditions were:

George Work (30)	1202222220222222222222222—23
D A Upson (31)	0222222222222222222220222—23

Van Dyke Challenges Von Lengerke.

CLIFTON RACETRACK, Passaic, N. J., Sept. 28.—*Editor Forest and Stream:* I herewith hand you $10 (ten dollars) as required by the conditions governing challenges for the cup emblematic of the individual championship of the State of New Jersey at targets; and do hereby challenge Justus von Lengerke for that cup now held by him.

F. V. VAN DYKE.

[Ten dollars forfeit received as above.]

Western Traps.

COOK COUNTY LEAGUE PRIZES.

CHICAGO, Ill., Oct. 2.—Careful study of the scores of the Cook County League shows that the award of individual season prizes will be as follows:

Winnings A Class in majority four contests in Cook County Trap-Shooters' League, 1897: J. A. Ruble, Garden City, 100%, Monon R. R. ticket; R. Kuss, Garfield, 98%, 10lbs. E. C. powder; F. P. Stannard, Eureka, 93%, 10lbs. Schultze powder; E. M. Steck, Eureka, 92%, subscription FOREST AND STREAM; G. C. Lamphere, Calumet Heights, 88%, 100 Peters shells; T. P. Hicks, Garfield, 85%, subscription *Sportsman's Review;* S. M. Booth, Calumet Heights, 81%, subscription *Western Field and Stream.*

B Class percentages in majority four contests: E. E. Neal, Garfield, 92%, Colt's revolver; A. C. Paterson, Garfield, 90%, 10lb. drum E. C. powder; Dr. S. Shaw, Garfield, 89%; H. A. Ferguson, Calumet Heights, 89%, and A. W. Fehrman, Garfield, 89%, tie for 10lb drum Schultze powder; J. S. Houston, Calumet Heights, 88%, subscription *American Field;* C. P. Richards, Garfield, 85%, and T. Graham, Garfield, 85%, tie for 100 Peters shells; L. H. Goodrich, Eureka, 84%, and A. W. Adams, Eureka, 84%, tie for subscription *Sportsman's Review;* S. E. Young, Calumet Heights, 82%, subscription *Western Field and Stream.*

Class C: E. S. Graham, Garfield, one 25lb. can coffee; O. von Lengerke, Garfield, 10lbs. E. C. powder; F. M. Fish, Garfield, 10lbs. Schultze powder; M. E. Bowers, Garfield, one year's subscription to FOREST AND STREAM; P. D. Norcom, Calumet Heights, 100 Peters shells; C. Sticklin, Garfield, one subscription to *Sportsman's Review;* S. A. Gruby, Calumet Heights, one subscription to *Western Field and Stream.*

Class D: R. A. Turtle, Calumet Heights, $5 cash; A. Hellenan, Garden City, 10lbs. E. C. powder; S. P. Goethe, Cicero, 10lbs. Schultze powder; A. Matthews and W. Chusman, Cicero, each one year's subscription to *Outing;* A. W. Harlan and A. C. Black, Calumet Heights, each 100 Peters shells; H. Levi, Garden City, one subscription to *Sportsman's Review;* A. Chusman, Cicero, one subscription to *Recreation.*

Unclassified: Wiley, Garfield, 84 per cent.; W. Schmidt, Calumet Heights, 68 per cent.; W. H. Cornwall, Eureka, 73 per cent.; E. Prickett, Eureka, 74 per cent.

The Calumet Heights Club, of Chicago, held their regular weekly contest at the traps on its grounds Sept. 25. The attendance, though large, was represented very modestly at the score, as many of the members present contented themselves by remaining on the marsh and river hunting ducks, of which some few were bagged. The air was clear and the sun bright. A heavy wind blew in the face of the traps from the north, which made the targets run high and hard. The sand from the beach blowing in the eyes of the shooters made it doubly difficult. Following are the scores:

Medal contest, 25 targets:

Class A.

Metcalfe	1011111011011100110111011—18
Booth	1010011011111001111000011—15

Class B.

Norcom	1010100100100011111010101—13

Class C.

Chamberlain	1011101011001101001111011—16
Schmidt	1110111111111101111111101—22

THE CAST-IRON BADGE.

In a personal letter to me, written last week and before he had seen FOREST AND STREAM of Oct. 2, Mr. J. A. R. Elliott had the following to say in regard to the cast-iron badge:

"It is about time now to unmask that cast iron badge trophy, and if you desire to do so I will make you acquainted with one fact which Mr. Grimm is well aware of: I did not help to buy that badge or take any part in making the rules concerning it. In fact, I would have nothing to do with it at the time, and protested that a handful of shooters had no right to plan a championship of America one day and go out and shoot it the next day."

Mr. Elliott adds that he means to "let them sweat" over this now. In this he will be upheld by a majority of the shooters of the country, as the belief seems general that he wanted to shoot and meant to shoot. The sympathy of American sportsmen is usually with the man who is willing to get right to work, and is not anxious over his conditions or his explanations. A little shooting is better than a lot of talk. A shooting match is a contest in which there is a winner, and in which it is no disgrace to be beaten. A talking match is one which never joins an issue nor declares a winner, and in which it is no credit to be upon either side.

LIMITED GUN CLUB.

Whitney Thompson, of Lafayette, Ind., won first with 91 out of the total 100 targets in events counting on the championship cup average at the tournament of the Limited Gun Club, of Indianapolis, this week.

The Limited Gun Club will give a three days' tournament at live birds Dec. 7, 8 and 9. The first day's shooting will be at sparrows. The second day will be pigeons, high guns. The third day will witness a handicap at 25 pigeons. The entrance fee will be $25, birds extra. There are already forty entries. This shoot, if successful, will be made an annual event.

GALESBURG WINS.

In the fourth tournament of the Western Illinois Trap-Shooters' League, held at Kewanee, Sept. 28, Galesburg team won first, Kewanee second, Neponset third. Galesburg thus wins the League trophy for the season, having taken first three times.

DAYTON-URBANA OFF.

The team contest between the Buckeye Club, of Dayton, O., and the Urbana Gun Club, same State, shot the first race of three team races, eight-men teams, 25 birds, with the result of a tie score, 164 out of the 200. The Buckeyes wanted to go to Springfield for the second match of the series, but the Urbanaites wish the race shot at their city. The difference of opinion about this may break up the series. Two cups, one for the team and one for the individual winner, were in competition.

EAST END.

East End Gun Club, of Toledo, O., at its regular club shoot on Sept. 27 made the following scores:

	1st 25.	2d 25.	2d 25.		1st 25.	2d 25.	3d 25.
Jennings	22	19	20	Specht	20	23	20
I W Gardner	22	20	21	Hess	22	18	20
F W Birdsall	22	21	..	Volk	17	21	23
Herring	22	..	21	Ritchey	..	18	16
McCullough	18	14	..	N Gardner	..	16	..
J Arnds	17	15	17	W Gardner	..	16	..
G Eiben	17	18	20				

SEDALIA SHOOT.

At the monthly medal shoot of the Sedalia, Mo., Gun Club the following scores were made, Sept. 25:

C. Y. Lawrence 22, G. A. Sturges 22, Joe Roe 22, Jasper Tyndall 19, W. J. Letts 19, G. C. McClure 19, F. Raymond 19, L. Ilgenfritz 18, W. W. Kerr 17, J. A. Stacy 10, J. C. Palmer 9.

Ties shot, and Lawrence won in 22 hole, Tyndall in 19. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

IN NEW JERSEY.

ELKWOOD PARK'S BLACKBIRDS.

Oct. 2.—Messrs. Daly and Chanfrau, managers of the Elkwood Park shooting grounds, announced a blackbird shoot for to-day, with sweeps at popular prices. The early morning was so threatening that only a small attendance was registered. A strong northeasterly gale drove the blackbirds from the traps in a fashion calculated to make scores run low. The No. 3 set of traps was used, the wind being thus in favor of left-quartering drivers. Only one incomer was recorded during the whole shoot. The birds flew like black streaks, and lucky was the man who did not draw "a little she one," as Dad Applegate, Elmer's father, termed them. Beveridge and Hank White did the best shooting of the day, as will be seen from the following scores.

Nos. 1, 2, 3 and 5 were at 10 blackbirds, $2.50, birds included; No. 4, at 5 pairs, $2, birds included. Nos. 6, 7 and 8 were $1 miss-and outs, re-entry in the first round. In No. 6, Daly re-entered; in No. 7, Hallowell, Banks, Daly and Applegate re entered; in No. 8, Beveridge and Hallowell re entered. The scores in the table of these three events naturally show the results of these re-entries:

Events:	1	2	3	4	5	6	7	8
Blackbirds:	10	10	10	10	10			
Beveridge (27)	8	5	7	5	8	7	3	0
Hallowell (27)	9	8	4	2	8	2	1	1
Banks (27)	5	6	5	2	3	6	1	5
Daly (28)	9	5	6	4	7	0	1	1
Applegate (27)	9	8	6	2	8	6	7	1
Patten (25)	..	5	9	4	7	1	2	2
Marryott (26)	..	..	6	4	..	5	6	3
White (27)	..	..	..	5	7	6	7	6

John Wright, the moving spirit of the Brooklyn, N. Y., Gun Club, announces that his club will hold a shoot on Thursday, Oct. 28. In addition to sweepstakes, John will provide merchandise prizes and a free lunch.

The New Jersey State Shoot.

It was a capital idea of the New Jersey State Sportsmen's Association to hold a tournament this fall, notwithstanding the short time at its disposal for making preparations for the same. Of course the time was too short for anything like a big tournament to result from its efforts; but a start has been made in the right direction, and with the experience gained at this tournament there should be something good in line for 1898.

New Jersey has not had a State shoot since 1889; a clerical error made it 1884 in our last issue. It was in 1889 that the New Jersey State Association for the Protection of Fish and Game gave its last tournament. The previous one, if we make no mistake, took place in 1884. There is plenty of material in New Jersey for a good State shoot, but the location chosen this year was hardly favorable for drawing it out. The location was forced upon the Association by reason of the shortness of notice; two months is not enough in which to prepare for a big shoot and get a large crowd together Clifton race track is an excellent spot for a shoot but it is so large that even fifty shooters make no appearance; and in so large a space there is little of the geniality that attaches to a shoot held upon club grounds of a medium size Then, again, Passaic is rather out of the way for a large portion of the State. There are plenty of ways of getting there, but none of them bring a shooter to the ground much before 10 in the morning, and that makes a late hour to start at this time of the year. But under the circumstances the Association cannot be blamed for choosing Clifton race track; it was either Clifton or nothing at all for 1897.

THE ATTENDANCE DISAPPOINTING.

The number of shooters present was disappointing to say the least. Where were all the Jerseymen? We could name over a couple of score whom we confidently expected to be on hand, but they have all to be marked missing. The absence of some may be put down to the difficulty they would have encountered in trying to get to Clifton, but the absence of others cannot be attributed to the same cause. Hard times and lots of shooting at home must be given as the cause, we suppose. Anyway they didn't come and give the revivified association a good send off We regret also to find that some little friction still exists between Jersey clubs and this friction, small as it is, must be overcome and perfect harmony restored before Jersey will be able to boast of an organization equal to those of her sister States, New York and Pennsylvania.

On the open set of traps there was some good shooting, and a fair number of outsiders were gathered together; but still we expected more, and can only account for the comparatively small attendance by attributing it to lack of advertising caused by lack of time in which to do the same. The weather was simply perfect, except on the first day, Sept. 28, when the thermometer in the early hours was down toward the freezing mark. After that, however, more delightful early fall weather could not have been made to order. The sun grew a trifle hot toward midday on each of the succeeding days, but that could be undergone with pleasure at this season of the year.

THREE SETS OF TRAPS WERE USED.

Three sets of traps were used, three traps to each set, Sergeant system. This was the first time we have had the pleasure of shooting over a set of traps under this system, so it is proper to give our ideas upon it. We can safely say that it was the general opinion of all, even of those who objected to it at first, that it is the best system for shooting unknown angle events ever devised Mr. Sergeant, we believe, recommends three traps set a yard apart. We found that 4ft. apart made it easier for the trappers to work the traps, and did away with all danger of their being hurt while filling traps. The extra foot apart, too, does not add much to the increased difficulty of shooting under this style, as compared with one trap, unknown angles. The shooting is certainly harder than with five expert traps, the angles one gets when standing at Nos 1 and 5 being often extremely acute, even when thrown within regulation limits. This style of shooting is, indeed, the magautrap made harder; it is shot in the same way, the shooters standing in a segment of a circle, whose diameter is 16yds., with the middle trap as its center.

The traps used were bluerock expert, and both empires and bluerocks were trapped from them. The background was none of the best. Too many trees got in the way, while the fact that one stood uphill from the screen, made the chances of a sky background for any target rather poor. The fall tints also in the weeds and trees made it often very hard to locate the flying targets. Low left quarterers from No. 1 got away far too often, while the same may be said of sharp right-quarterers from No. 5. Still it was most interesting shooting, and many and loud were the favorable comments made upon the method of trapping targets under the Sergeant system. Manager Shaner, of the Interstate Association, who managed this shoot, and who should be an authority on the question, was quite enthusiastic over it The scores show that the shooting was hard; nothing tells the tale better than the scores, particularly when it is stated that there was practically no wind at all, except for a few hours on the opening day.

THE OFFICIALS.

The shoot was under the management of Elmer Shaner, and of course he made it go when he got the boys together. He took charge of the two sets of traps on which the State and the open events respectively were decided. A third set of traps had been placed in position at the last moment in order that those who desired it could get some shooting for the price of targets only. This set of traps was under the direction of Treasurer Ike Terrill, but he had an easy time of it as a rule, very few shooters caring to shoot "for birds only."

The cashier's office was in charge of J. K. Starr, of Philadelphia, assisted by Mr. Jones, of Passaic. These two gentlemen had no trouble in taking care of the shooters and paying them their money. Messrs. Moss, Muller and Jewel were the pullers, while John Rock, the janitor of the Boiling Springs Gun Club, acted as squad hustler for the open events. Mr. Rock's intimate acquaintance with the majority of the shooters present made him an invaluable assistant. At the State set of traps, H.E.Taylor, son of Old Reliable Taylor, an expert bicyclist, looked after the hustling of the squads, and incidentally gave some exhibitions of trick riding in the large betting hall whenever the boys could seduce him from his labors. The trappers were local hands, and, though new at the business, they soon settled down and trapped like veterans. Speaking of traps, it is worth mentioning that we very seldom remember being at a shoot where there was less bother with the traps. Be it noted that they were loaned by the Interstate Association for the occasion, and were the same traps that have thrown so many targets at the Interstate shoots during the past three or four years.

GENERAL AVERAGES.

The tables of general averages for a State shoot. In the State events only nine men shot through the entire programme of 200 shots, team race and trophy events counted in. On the open set of traps fifteen men shot through. The averages made in these two programmes were as below:

STATE EVENTS.

	1st Day.	2d Day.	Shot at.	Broke.	Av.
F V Van Dyke	84	90	200	174	87
Capt Money	87	83	200	170	85
F Hyde	86	84	200	170	85

U M C	131	123	320	254	79.3
Wright	137	114	320	251	78.4

First Day, Sept. 28.

There was a decided touch of frost in the air this morning. Overcoats and heavy sweaters were at a premium, but most of the boys came well provided. It was not until midday that the sun's strength made itself felt; but when it did get in its work, it soon grew hot enough for a midsummer day. The mosquitoes were out in force, but they were so busy getting warmed up after the chilly night, that they seemed to entirely forget what appears usually to be their one object in life. This was somewhat strange, but not unpleasant

The poor background soon made itself felt when shooting was once started. Scores fell down, and several couldn't make out where they were shooting. The light on the State events set of traps was better than on the open set, but that was not saying much. Somehow or other, it seemed impossible to get the targets up high enough to have a sky background, unless they were thrown like skyrockets So they were kept down to about regulation height, and straights were scarce. In No. 1, open, there was not a single 15 straight. In No 2, 19 was high in a 20-target event; in No. 3, 25 targets, four 24s were tied for first place. Three 15s were made in No. 4, but only one 20 was made in No. 5. In No. 6, Glover was the solitary 25, three 24s being in second place. In Nos 7 and 8, there were respectively two and three straight scores This speaks for itself when one considers the caliber of the shooters present. Heikes was in first place for the day, with 11 targets lost out of 160 shot at; Glover came next with 13 lost, Banks was third, while Fanning and Dickey tied for fourth and fifth places.

On the State programme the chief event was the individual championship of the State at targets. Colin Wise and Justus von Lengerke tied for the trophy on 24 each out of 25; on the shoot off, Von Lengerke won the cup. In the merchandise event, No. 5 in the table, Frank Hall, who shoots under the name of Hyde, won the Smith gun presented by Capt. Money by making 25 straight. Geoffroy was alone in the second class of ties with 24. Geoffroy also won first average in the State events, with Capt. Money in second place.

OPEN EVENTS, SEPT. 28.

INDIVIDUAL CHAMPIONSHIP AT TARGETS

There were sixteen entries for the Individual Championship at targets Of this number, two, Colin Wise, of Passaic, and Justus von Lengerke, of Orange, tied with 24 each. Wise, the first man to the score, broke his 24 in fine form, but lost on the shoot-off. The scores in detail follow:

C R Wise.....111111111111111111111110—24
T H Keller.....101110111111111010111111—21

R H Brientnall.....101011110111111010111110—19
J von Lengerke.....111111111111111111110111—24
Capt Money.....111111001111111111110111—22
E A Geoffroy.....111111011101111101111111—22
B B Fogarty.....001001110001001011110010—13
N Money.....010001011111001111110101—15
W M Sanders.....110011011011011101011—17
Dutchy.....000011110011111111101111—18
G E Greiff.....111011110111101110011010—18
C Wright.....111111101111111111111110—23

On the shoot-off at 10 targets, Von Lengerke won with 10 to 8.

Second Day, Sept. 29.

After a warm night, shooters knew not what to expect on the race track. It was, in fact, a very warm day, and the heat was at times—particularly between the hours of 2 and 4 P. M.—almost unbearable without some shelter from the sun's rays. Not a breath of air was stirring, and had there been a better background, scores would have ruled quite high. On the open set of traps, straights were as scarce to-day as yesterday. In each of the 15-target events there was only one straight—Fulford and Geoffroy, respectively. In No. 2, Hawkins and Van Dyke rapped out 20 straight; 147 made 25 straight in No. 3, there being two 24s in second place. In Nos. 5 and 8 there were two 20s, but in No. 7 there was only one, while Van Dyke was alone in No 6 with a 25 straight.

Heikes won first average with 12 targets lost, Banks being second with 13 losses to his name, 6 of them in one event. Dickey was third, with 147 and Fulford tied for fourth and fifth places. Fulford's 15 straight in the first event on this day, added to his run of over 40 straight on the previous evening, made the best run of consecutive breaks for this tournament.

On the State set of traps, the team race and the contest for the Blenderman cup occupied the bulk of the attention of the shooters. The Blenderman cup was given by Jake Blenderman on the condition that it should be awarded to the individual high score in the team race. As it turned out eight tied for the trophy on 22 each. As the conditions called for a shoot-off at 50 targets per man, this gave added interest to the destination of the handsome trophy. Van Dyke, Geoffroy, Sinnock, Keller, Dutchy, Schorty, Carl von Bengerke and Palmer, the men in the tie, accordingly shot of the tie. The scores were as follows:

Van Dyke and Geoffroy 46, Sinnock 45, Keller, Dutchy, Schorty and Von Lengerke 42, Palmer 32.

Thus Van Dyke and Geoffroy had to shoot off once more. This shoot-off resulted in an easy win for Van Dyke, the scores standing: Van Dyke 47, Geoffroy 39.

In the team race the Climax team came out first, as will be seen by referring to the scores given below:

OPEN EVENTS, SEPT 29.

THREE-MEN TEAM CHAMPIONSHIP AT TARGETS.

Eight teams were entered for the team championship at targets. The Climax 750lb team won with 66 breaks out of 75 shot at. The team was made up as follows: T. H. Keller, captain, 230lbs.; L. H Schortemeier (Schorty) 268lbs; C. Dutchy Smith, 242lbs. Boiling Springs No. 2 was second with 63, the Endeavors being third with 61. Scores were as below:

Passaic Gun Club.		Endeavor Gun Club.	
J Jelleme	19	C Von Lengerke	22
S Palmer	22	E Taylor	21
B Abbott	16—57	C C Beveridge	18—61
Boiling Springs Gun Club—No. 1.		**Climax Gun Club—No 2.**	
Capt Money	21	R Manning	14
N Money	20	D Darby	18
Chris Wright	19—60	J G Lindzey	20—52
Boiling Springs Gun Club—No. 2.		**South Side Gun Club**

F Hyde	21	J S Duston	16
F Van Dyke	22—63	E A Geoffroy	22—60
Climax Gun Club—No. 1		**North Hudson Gun Club.**	
T H Keller	22	H M Hefleck	11
C Smith	22	Thourout	11
L H Schortemeier	22—66	Porter	17—39

Third Day, Sept. 30.

The third day of the New Jersey State shoot was blessed with as fine weather as had prevailed on the first two days. In fact, the weather was too fine for really good live-bird shooting. The sun was as warm as in August, and scarcely a breath of air was stirring at any time of the day. The result was, of course, comparatively easy shooting and consequent high scores. Some really good work was done by Morfey, Van Dyke, Noel Money, etc. Morfey won the Individual State championship with 22 straight, and Noel Money was only one behind him. Hank White, a veteran from Little Silver, also ran a fast heat for the championship.

A late start was made on this day, it being nearly 11 o'clock before the first gun was fired, still a total of 943 were trapped.

STATE EVENTS, SEPT. 30.

The two events on the programme for State shooters were the individual championship and the three-men team championship. The first was shot for under the following conditions: 15 birds per man, all at 18yds.; winner to take badge; all money in the purse to go to the last winner.

T. W. Morfey, of Lyndhurst; Noel Money, of Oakland, and Hank White, of Little Silver, tied for the trophy on 15 straight. They shot off, miss-and-out, Morfey winning with 22 straight; Noel Money lost his 21st bird, and White his 6th. White's one-barrel work was remarkable; 17 out of the 19 birds scored to him did not need the second barrel. The scores in this event were as below, 517 birds being trapped in the State events:

INDIVIDUAL CHAMPIONSHIP AT LIVE BIRDS.

		Ties.
Count	220121212

Morfey won with 22 straight.

THREE-MEN TEAM CHAMPIONSHIP.

Nine teams were entered for this event, the conditions of which were as below: three men to a team, 10 birds per man, winning club to take trophy. All money in the purse to go to the club winning the trophy at the last shoot

The Lyndhurst team won with 29 out of 30, but their title to the cup and first place was protested. (This protest is treated of elswhere.) Three teams were tied for second with 28 each, and shot off for first honors in case the protest against the Lyndhurst Club was sustained. These three clubs were the East Side, of Newark, and the Boiling Springs, of Rutherford, No. 1 and No. 2. The East Side and Boiling Springs No. 1 are still a tie, darkness putting an end to shooting at the end of the second round of ties. Scores were:

Lyndhurst Shooting Association.		Climax G. C.	
T W Morfey	2222222222—10	A Woodruff	1112112222—10

Hall	222—3	2			

OPEN EVENTS, SEPT. 30.

On the open set of traps three events were pulled off, two of them programme events, the other a miss-and-out. Owing to the late start in the morning the Passaic sweepstakes, 10 birds, $10, high guns, No. 3 on the programme, was dropped out. The scores in all three events decided were as below, 416 birds being trapped on this set of traps:

No. 1, Phœnix Introductory, 7 birds, $7, birds included, high guns:

Henry	2221212—7	Capt Money	2112211—7
Van Dyke	2212222—7	Heikes	2222221—7
Hawkins	2122211—7	147	122220
Malone	1021121	Hyde	0112
Cannon	2011112	Murray	01122
Morfey	22220	Wood	2202212
Hassinger	0221121	Dickey	1102222
Count	1011111	Fanning	21212 2—7
Erb	12020	Jones	2122221—7
Castle	1221111—7	Cahrs	0111101
Young	1111221—7	Grundy	2 21222—7
Hallowell	2112121—7	Glover	2111222 7
Fogarty	101121	Wise	112 212—7
Duston	1111121—7	Doty	11122 2 7
White	1111121—7	Geoffroy	1211212—7
Fulford	2212221—7	N Money	222220

No. 2, Clifton Sweepstakes, 10 birds, $10, birds included; the number of moneys (high guns) determined by number of entries. (Note—As there were twenty seven entries the number of moneys were nine, as follows: 22, 18, 14, 11, 10, 8, 7, 5 and 5 per cent.).

Nine men killed their 10 straight and divided the money up into nine equal portions. Scores were:

Fanning	1122212121—10	Capt Money	1211221212— 9
Van Dyke	1212122222—10	Mosher	2222102220— 8
A Doty	2212222222—10	Murray	122'0110
Zwirlein	1111111111—10	Hyde	22120
Dr Hudson	1111211112—10	Hallowell	11120
Heikes	1222222222—10	Young	21110

Zwirlein	1112122220	Murray	0

TARGET SHOOTING.

A match between J. 147 L. Winston and Banks having been arranged the night before between Winston and a few friends of his opponent, a special set of 5-target traps was placed in position at the extreme lower end of the track. The conditions were 200 targets per man; 100 at unknown angles and 100 at expert rule, total score to count. O. R. Dickey was referee; J. M. Hawkins worked the indicator; J. Jewell pulling the traps. By some mistake, the five traps were placed only 3yds. apart instead of 5yds.; this, of course, made the shooting easier than under regulation rules. Still the background of trees, with fall plumage on them somewhat counteracted the effects of the error in placing the traps and fixing the screen. The 100 unknown angles, walk-around, were shot first; the expert rules coming last. Scores were:

Unknown angles:

Banks....11111111111111111110111111111111111111111011101111—47

Fourth Day, Oct. 1.

The first day of October was a perfect one for spectators at a shooting match, but it was by no means one of the best to make the birds fly. In fact, the weather on both the live-bird days of this shoot was entirely against good birds. Still the pigeons cannot be called poor in quality. Although we did not have much of an opportunity of judging of the class of birds supplied for this shoot, Manager Shaner and others who were well qualified to speak on this point, assured us that they were really a good lot of birds; of course, they hadn't a particle of breeze to help them in their flight, and the sun was so hot that if a trap was not pulled very shortly after a bird had been put in it, the confinement in such a small space had its effect, and some of the birds were slow to start. There were, however, lots of good ones, and the boys who drew these found a cipher or two creeping into the scores.

With all the live-bird shooters that Jersey can boast of, it just shows the condition of things in a trap shooting line in this State when we point out that there were only nineteen entries in the Jersey Handicap, or one less than was required to fill the guarantee of $500 to the three high guns. Of this number eleven were from Jersey, and six of the eleven were furnished by Paterson and Newark! Paterson, indeed, came out of the race very well. Chris. Wright, who is just now shooting in his very best form (and that's pretty good form, too), and A. Doty, a new name to most of the readers of trap reports in these columns, both from Paterson, helped Rolla Heikes to cut up the $500 guaranteed to the three high guns.

Seven men fell into the 24-hole. E. D. Fulford was one of the unfortunates, his 24th bird falling dead out of bounds. E. D. seems to be playing in the hardest of hard luck just now, particularly in the matter of live-bird sweeps. Young Hayes, of Newark, another new man at tournaments, was also in the same boat with Fulford, his bird, hard hit with the first barrel, going out of bounds wobbling. So far as we are aware, this is Hayes's first appearance in an open tournament, so his performance must be classed as above par. The full scores, which appear below in detail, with FOREST AND STREAM's trap-score type showing the flight of each bird, are able to tell the rest of the story of the Jersey handicap; we must, however, call attention to the work of W. Canon, the one-armed expert from Newark, N. J., who scored 23 out of 25, 18 of them with his first barrel:

A 25-bird race between Capt. Money and Hallowell resulted in a tie, both parties killing all their birds. Any one looking at the scores will at once conclude that the birds were very easy, but this is not actually the case, for we are told that there were many good ones in the bunch of 50 birds trapped in this match. As a matter of fact, both men were shooting in their very best form, and it would have taken something more than ordinary in the way of a pigeon for one to have gotten away from this pair. The scores were:

Money .....11222212112212212221121 12211—25
Hallowell. 11111122221121121221221 2212- 25

Two $5 miss-and-outs were also shot. The results in these races were briefly as below:

No 1: Wood, Fulford and Duston 12; Capt. Money 11, N. Money 9, Fanning and Wright 5, Hallowell 2, P Jay and Hofler, 1; Canon 0.

No. 2: Wood, Allaire and Hallowell, 14; N Money 11, Fulford and Grundy, 0.

NOTES.

The Jersey State shoot cannot be classed as a thorough success. It was a nice shoot, but nothing like what Jersey ought to get up. There is an apathy among the trap-shooters of this State that must be corrected, or the State Association will find it a hard matter to get along.

It was quite like old times to have Dutchy Smith and Tom Keller laying themselves out to amuse the boys. When this pair tries to make fun for the crowd, there's never much doubt as to the outcome of their efforts.

With all due respect to our many good friends in this Association, we must say that the barring of Jack Brewer on the first live-bird day was a great mistake. The programme said positively in two places at least, that the shoot was "open to all." In one of these places it stated, "Bars no one, but welcomes all." There was no saving clause, reserving the right to refuse any entry, such as appears in the programme gotten out for the Grand American Handicap. This being the case, we reiterate the statement that we think the action of the executive committee in this matter was most unfortunate, to say the least.

Tom Morfey did not shoot in the Jersey Handicap, but he was at the grounds while the event was being shot. During the morning he found time to make a match with C. C. Beveridge at 100 targets, expert rules, and succeeded in losing the same with the $5 attached to it. The scores were; Beveridge 60 out of 75; Morfey retired with 50 out of 75.

Many of the old-timers were on hand at this shoot. Uncle Billy Sigler, Uncle Billy Hughes, Uncle Al Heritage, Asa Whitehead, Charlie Hedden, Sam Castle and others being among the number. Of the above Messrs. Heritage, Sigler and Castle took part in the events on the programme.

Phil Daly, Jr., was on hand the third day, and had something to say in regard to the Grand American Handicap of 1898. Mr. Daly feels satisfied that the number of entries next year will run close up to the 200 mark, and we feel very much inclined to take his view of the case. Certainly Elkwood Park is the ideal place for holding a live-bird shoot, hail, rain, snow or shine. Many improvements have been made at the grounds since last March, and those who took part in the last Grand American Handicap will, if they try again next year, find that Daly & Chanfrau, managers of the grounds, have performed the difficult feat of improving upon perfection.

Another unfortunate incident connected with the Jersey State shoot was the protest entered against the handing over of the team trophy at live birds to the Lyndhurst Shooting Association's team. The executive committee will test the merits of the protest, unless previously withdrawn, at its next meeting to be held within a few days. Things like this mar a tournament more than anything else, doing away with the general idea of good fellowship that ought to pervade all such gatherings.

Dutchy Smith said a good thing after losing a bird in one of the events on the third day. He fired both barrels at the bird, palpably hitting it hard with the second barrel. As he left the score a bystander said to him: "What did you do to that bird, Dutchy, to make it shiver so?" Quick as a flash came back the reply: "Soaked him with chilled shot, of course!" From all of which it will be gathered that Charlie Smith's popularity is well merited.

Colin R. Wise had hard luck in losing his last target in the individual championship race at targets on the first day of the shoot. Mr. Wise had run 24 straight, and only needed the last one, but—it got away. After effects showed that he needed that last target badly, as Justus von Lengerke tied his score of 24, and outshot him in the shoot-off. Immediately after the result of the shoot-off had been announced, Ferd Van Dyke handed us a written challenge, accompanied by a deposit of $10, challenging the winner, J. von Lengerke. The conditions under which the match will be shot are: 50 targets, unknown angles. All contests for this trophy must be held within the State of New Jersey, and within thirty days from the receipt of the challenge by "either of the parties authorized to receive the same." Thus the match will be shot some time before Oct. 28.

147 was in bad luck and out of form at this shoot. He had lots of grit, however, and found time to make and shoot a few matches during the week. He shot well in the programme events on the second day, and only went to pieces in the last event, just when he seemed to have a good chance for being right at the top. Dickey also found this event his Jonah one, too, for he dropped 5 targets in it, after starting in for the 20 targets tied for first average for the day with Rolla Heikes.

"The big Swede," as Tom Keller calls Rolla, landed in first place both days. He was shooting his new model '97 Winchester, and found he missed "Old Betsy" once or twice, when he drew some of those low and sharp left-quarterers from No. 1 trap as a starter in an event. Rolla says, however, that when he gets used to the new gun he'll not do a thing to live birds. Judging from his work on these articles on both live-bird days, he seems to be getting pretty well used to it even thus early in the game.

J. M. Hawkins, of Baltimore, shot targets very well on the second day, but the seventh event was fatal to his chances for a higher position than eighth on the list for the day. Event No. 3 on the same day was also another bad one for his average.

Jake Blenderman, of 100 West street, New York, an hotel shooters know well, donated a handsome ice-water set as a prize at this tournament. The conditions under which this trophy was shot for were of Jake's own choosing, and were as follows: "To go to the highest individual score in the 3-men team race for championship at targets. In case of a tie, the trophy to be shot for at 50 targets per man." This made quite an interesting race. Eight men tied on 22 out of 25: Van Dyke, Geoffroy, Sinnock, Keller, Dutchy, Schorty, Carl von Lengerke and Steve Palmer. On the first shoot-off Van Dyke and Geoffroy tied again. The second shoot-off resulted in an easy win for Ferd, whose success was most loudly applauded, the win being a very popular one. Ferd was shooting his new model Winchester, '97 model, and W. A. powder in Leader shells.

That was quite a race for the individual championship at live birds. Hank White, Noel Money and Tom Morfey tied for the badge with 15 straight. White soon dropped out of the tie, but Noel Money made Morfey kill 7 more, in addition to the 15 already shot, before losing a bird and also the badge. Morfey shot very well on this day, scoring every bird he shot at in the State events, a total of 32 straight.

The background for targets was a trying one for the shooters; so what must it have been for the eyes of the referees? Still, there were really fewer kicks at decisions than would naturally have been expected under the circumstances. Under the most favorable conditions no man can see everything, and the conditions at Clifton, although the best obtainable for this shoot, could never be classed as favorable for good refereeing.

The 750lb. sauerkraut team, as the boys termed the Climax Gun Club's No. 1 team in the three-men team race for State championship, caused lots of fun when posing for their photos before an amateur camera. Front and back views were taken, but the camera had to be 50ft. away to get in all three members of the team. Tom Keller with his 230lbs. was the baby of the team, while Schorty overtopped Dutchy by a head. The team won the trophy with a score of 66 out of 75, each man making 22.

The shoot was most wonderfully favored in the matter of weather. Although chilly in the extreme during the early morning hours of Thursday, Sept 23, for the balance of the shoot nothing better could be asked than the weather dealt out to the Association by the local weather clerk. Umbrellas were at a premium, but they were not needed to keep off rain; they were used as sunshades.

EDWARD BANKS.

The Baltimore Programme.

THE Baltimore Shooting Association has gotten out the programme for its fourth annual tournament, Oct. 19–22. A total of $500 will be added in cash to the purses. Of the above sum $150 per day will be added to both days' programme of target events, the first two days being devoted exclusively to target shooting. The remaining sum of $200 will be added to a guaranteed purse of $500, the total of $700 going to the four high guns in the Maryland Handicap, an event which takes place on Oct. 22, and which is more particularly mentioned later.

The shoot will be held at the Association's grounds, Pimlico road, where all similar events under the auspices of this Association have been held for the past few years.

THE TARGET EVENTS.

The programme of target events for the first day is as follows: Five events of 15 targets each, $1.50, with $12.50 added to each purse; five events of 20 targets each, $2, with $17.50 added to each purse. The second day's programme is precisely similar in every respect. All moneys in these events will be divided under the old system, with four moneys—40, 30, 20 and 10 per cent.

LIVE BIRD EVENTS.

The last two days of this shoot will be devoted to live-bird shooting. On Oct. 21 there will be three events, as follows:

No. 1, Suburban Introductory, 7 birds, $7, birds included. Four moneys, high guns, 40, 30, 20 and 10 per cent; 30yds. everybody.

No. 2, Baltimore Sweepstakes, 10 birds, $10, birds included. Four moneys, high guns, 40, 30, 20 and 10 per cent.; 30yds. rise.

No. 3, the B. S. A. Handicap, 10 birds, $10, birds extra. Handicaps, 26 to 33yds. High guns. If twenty entries or less, four moneys; from twenty to twenty five, five moneys; from twenty-five to thirty, six moneys; from thirty to thirty-five, seven moneys; from thirty-five to forty, eight moneys.

For the second day the Maryland Handicap is scheduled. This event is at 25 birds, $25, birds extra, high guns. Handicaps, 26 to 33yds; $500 guaranteed by the Baltimore Shooting Association; all surplus added. Also $200 added by the Association. Open to all. The following is the way in which the purses will be divided:

The $500 guaranteed, and $200 added by the Association, is to go to the four high guns. First, $280; second, $210; third, $140; and fourth $70.

Should there be more than thirty and not exceeding forty entries, all money in the purse in excess of the $700 will be divided 20, 18, 17, 16, 15 and 14 per cent. to the fifth, sixth, seventh, eighth, ninth and tenth highest guns.

Should there be more than forty and not exceeding fifty entries, all money in the purse in excess of the $700 will be divided 13, 13, 12, 12, 11, 11, 10, 10 and 8 per cent. to fifth, sixth, seventh, eighth, ninth, tenth, eleventh, twelfth and thirteenth highest guns.

Should there be more than fifty entries, all surplus over and above $1,450 (that is, fifty entries at $25 each) will be added to the sum $700 guaranteed to the four high guns, and will be divided proportionately between them at the rate of 40, 30, 20 and 10 per cent.

Briefly summing the foregoing, it will be noted that the purse will be divided in accordance with the number of entries received. It is not possible for fifth money to exceed fourth, and the moneys would seem divided in such manner as to be just to all.

It will be specially noted that in all the live-bird events the purses go to the high guns, and that class shooting is done away with.

A FEW NOTES.

All guns and shells sent in care of the A. G. Alford Sporting Goods Company, 120 East Baltimore street, Baltimore, Md., will be cared for and sent up to the grounds. The same company will also have on sale at the grounds a full line of first-class hand-loaded shells.

Shooting commences at 9 A. M. prompt each day.

The Carrollton Hotel will, as usual, be the shooters' headquarters during the tournament.

Any further information in regard to this tournament may be obtained by addressing the secretary of the Association, Mr. George L. Harrison, 120 East Baltimore street, Baltimore, Md.

Bedford Rod and Gun Club.

BEDFORD, Ind., Sept 28.—No. 1, 50 pairs, three traps, known angles, match race, entrance $5 each:

Mrs Chamberlain	4705420000—23	3533351047—40
Mrs Marshall		3033469934—43

PATERSON.

San Francisco Riflemen.

San Francisco, Sept. 27.—Shell Mound range was crowded with riflemen yesterday. The marksmen of the Columbia Club devoted their attention to their all comers' medals, and the German clubs to bullseye shooting. The feature of the day was Ernest Jacobson's clean score of 50 with a Sharp's military rifle. This was made in the Columbia Club's contest for the military medal. This is a re-entry match, best ten scores of ten shots during the year to win. At present the contestants stand: E. Hovey 477, E. Jacobson 477, F. O. Young 475, F. H Bushnell 475, J. E Gorman 466. A. H. Pape has entered the race, making 47 and 49 yesterday. This match is shot on the Columbia target, and only shots in the true 8in. circle count bullseyes.

Our marksmen are more and more convinced of the superiority of the large bullseye over the small one. The eye is less strained, and as a consequence the shooting is more agreeable and more accurate.

Scores for the day:

Rifle re entry matches, open to all comers, 200yds., Columbia target, F. H Bushnell rifle medal and cash prizes, 3-shot scores: F. O. Young, 9, 11, 12, 12.

William Glindemann military medal and cash prizes, 10 shots, Creedmoor count: E. Jacobson, 50, 47; A. H. Pape, 49, 47; F. H. Bushnell, 48, 47; F. O. Young, 48, 47, 47; E. Hovey, 47, 46.

Cash prizes on flags, inch centers made during month: F. O. Young 4, A. H. Pape 2.

Pistol, re-entry matches, open to all comers. 50yds., Columbia target. Gordon Blanding pistol medal and cash prizes, 3-shot scores: A. B. Dorrell, 9, 10; F. O. Young, 8, 12.

Howard Carr any revolver medal and cash prizes, 6-shot scores: A. B. Dorrell, 24, 29, 32; C. Roberts 32.

Achille Roos .22 rifle medal, ladies' trophies and cash prizes, 5-shot scores: A. B. Dorrell, 7. 9, 11; Mrs. C. F. Waltham, 13, 15; Mrs. M J. White, 13, 18; E A. Goddard, 26.

Cash prizes on flags, inch centers made during month, Blanding flags: Young 2, Dorrell 2, Gorman 1. Small rifle: Dorrell 20, Mrs. C. F. Waltham 7, Mrs. M. J. White 2, Jacobson 1.

BULLSEYES.

There was a large attendance of German sharpshooters on the range contesting for cash prizes and monthly medals Their scores were up to the average and afforded the shooters considerable sport. The regular bullseye contests of the San Francisco Schuetzen Verein and the Germania Schuetzen Club resulted in the following securing cash prizes, as decided by the machine that is used to measure the disks, together with the points and the order of the winnings:

San Francisco Schuetzen Verein: 1, F. Koch, 147 points; 2, E H. Goetze, 180; 3. Hy P. Schuster, 232; 4, O. Lemcke, 282; 5, L. Bendel, 441; 6, H M. Wreden, 497; 7, A. H. Pape, 582; 8, J. Tiedemann, 603; 9, Wm Glindemann. 615; 10, J. C. Waller, 629; 11, C. F. Rust, 742; 12, C. Thierbach, 750; 13, H. H. Burfeind, 753; 14, John Utschig, 828; 15. L. Haake, 895; 16. N. Abrens, 988; 17, John DeWitt, 1,053; 18, R. Stettin, 1,132; 19, Wm. Ehrenpfort, 1,295; 20. D. B. Faktor. 1,546.

Germania Schuetzen Club: 1. Bendel, 137; 2, D. B. Faktor, 212; 3, F. P. Schuster, 216; 4, J. Utschig, 315; 5, E C Rust, 319; 6, C. Thierbach, 491; 7, N Ahrens, 496; 8, D. Saalfield, 597; 9, W. Morken, 649. Roeel.

Yachting.

YACHT RACING FIXTURES 1897.

The following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.

Races of the Sound Y. R. U. are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

OCTOBER.

9. Miramichi, Gould cup, Chatham, N. B.
9-10. Cor. San Francisco, cruise, Corinthian Cove, San Francisco.
16. Cor. San Francisco, closing day, San Francisco.
17. Cor. San Francisco squadron, cruise, San Franc'sco.

The Proposed Yacht Racing Association.

As stated in the announcement published last week, the meeting for the purpose of organizing a national yachting association will be held in New York on Saturday, Oct. 30. The general plan of the proposed organization is set forth in the following, which has been sent out with the accompanying racing rules, to all clubs in the United States and Canada.

Proposed articles of Association of the Yacht Racing Association of North America.

ARTICLE I.

Name.—The name of this organization shall be the Yacht Racing Association of North America.

ARTICLE II.

Objects.—The objects of the Association shall be to encourage yacht racing and promote the adoption of uniform racing rules throughout the United States and Canada, but no association, union or club shall be bound by any action of this Association until it has ratified such action.

ARTICLE III.

Organization.—Any yacht club in North America, having a regular membership of over one hundred, and over fifteen yachts of 15ft. racing measurement or upward, enrolled in their fleet, or any association or union of yacht clubs, shall be eligible for membership in the Association.

ARTICLE IV.

Representation.—Each association, union or club shall be entitled to be represented in this Association as follows:

1. Each local association or union belonging to this Association, shall be entitled to choose from the delegates from the clubs of which it consists, representatives to this Association, the number of such representatives to be determined as follows:

(a) One representative for each club having 100 members, and one representative in addition for each additional 200 members.

(b) Each club belonging to this Association, but not connected with any local association or union, shall be entitled to choose from its members one representative for 100 members, and one representative in addition for each additional 200 members.

ARTICLE V.

Management.—The affairs of the Association shall be managed by a council consisting of fifteen representatives, who shall be elected annually by the Association at the annual meeting, and shall hold office for one year, or until their successors are elected, and shall have power to fill vacancies in their number.

ARTICLE VI.

Duties of Council.—It shall be the duty of the Council to consider and act upon application for membership in the Association, to appoint special officers and committees, to frame racing rules for submission to the Association, and to determine and settle all difficulties and disputes relating to yacht racing which may be referred to them for decision, and, further, to take such steps as they may consider necessary and expedient to carry into effect the objects and purposes of the Association.

The Council shall elect a chairman, a secretary and a treasurer.

The chairman may call special meetings of the Council whenever necessary, and shall do so upon the requisition in writing of five members, in which case five days' notice must be given of such meeting.

The Council shall meet at such times and places as they may consider expedient.

Five representatives shall constitute a quorum at any meeting of the Council.

ARTICLE VII.

Meetings.—There shall be an annual meeting of the Association, at such place as the Council shall determine, on the first Saturday of October in each year. The Council may call special meetings of the Association whenever they may consider it necessary.

Fifteen representatives shall constitute a quorum at any meeting of the Association.

Ten days' notice, in writing, of a meeting shall be given to each representative.

At any general meeting of the Association voting shall be allowed by proxy.

ARTICLE VIII.

Subscription.—The expenses of the Association shall be apportioned and assessed among the associations, unions and clubs as may be determined by the Council, but no assessment to exceed $2 a representative shall be levied in any one year.

ARTICLE IX.

Amendments.—Amendments to these articles may be adopted at any meeting of the Association by a two-thirds vote of those present in person or by proxy, provided that the proposed amendment in full shall be contained in the notice of the meeting.

Racing Rules.

MANAGEMENT.

All races and all yachts sailing therein shall be under the control and direction of the race committee of the club giving the race. All matters shall be subject to their approval and control, and all questions and disputes which may arise shall be decided by them. Their decisions shall be based upon these rules, and shall be final, unless, upon the application of the parties interested, or for other reasons, they choose to refer the questions at issue to the Council of the Association. Such reference shall be final.

No member of the Council or of any race committee shall take part in the decision of any question in which he is directly interested.

A member of a race committee who is the owner of a yacht sailing in a race shall not act upon the committee in the management of such race.

APPLICATION.

Yachts shall be amenable to the rules from the time the preparatory signal is made until the finish of the race.

OWNERSHIP.

No two yachts owned wholly or in part by the same person shall compete in the same class.

ENTRIES.

All entries shall be made in writing, and shall be signed by the owner or his representative, giving the name of the yacht, class, racing length and racing number.

Entries shall be filed in the manner prescribed by the club under whose auspices the race is sailed.

INSTRUCTIONS.

1. The owner of each yacht entered for a race shall, at the time of the entry, or as soon thereafter as possible, be supplied with written or printed instructions as to the conditions of the race and the courses to be sailed.

2. The race committee may change the courses or amend the instructions, provided notice of such change is given to the owner of each yacht before the preparatory signal is made.

3. In the absence of the owner, the delivery of instructions to any person on board his yacht shall be sufficient.

SAILS.

1. The following sails may be carried:

On Schooners: Mainsail, foresail, forestaysail, jib, flying jib, jib-topsail, working main and fore gaff-topsail, main topmast staysail and spinaker.

On Sloops and Cutters: Mainsail, forestaysail, jib, flying jib, jib-topsail, working gaff-topsail and spinaker.

On Yawls: The same as on sloops and cutters, with mizzen and mizzen-staysail.

On Catboats: Mainsail.

2. Light sails may set over working sails.

3. No extra spars, booming-out or whisker poles, except a spinaker boom, shall be used.

4. A working main or fore gaff-topsail must be jib-headed and must not extend above the truck or beyond the end of the gaff. A spinaker must be triangular, and must not extend above the truck or beyond the outer end of the spinaker boom.

FITTINGS, WATER AND BALLAST.

1. Floors shall be kept down, and bulkheads and doors left standing. Galley fixtures and fittings shall be kept on board in their proper places, and one serviceable anchor and cable shall be carried.

2. Trimming by dead weight shall not be allowed, and neither water nor ballast shall be taken in or discharged.

PRIVATE SIGNALS AND NUMBERS.

The owner's private signal shall be carried at the main peak, and the racing number shall be placed above the reef points, at an equal distance from the luff and leach, on each side of the mainsail.

POSTPONEMENT.

The race committee may postpone a race, should unfavorable weather make a postponement advisable.

A race postponed or resailed shall be considered a new race.

TIME AT FINISH AND START.

1. All starts shall be flying, and shall be "time" or "one-gun" starts, as may be specified in the instructions.

2. In time starts an interval shall be allowed for crossing the line, and the time of each yacht shall be taken when the point marked by the foremast in schooners and the mainmast in single-masted vessels and yawls crosses the starting line. A yacht crossing the line after the starting interval shall be timed as having crossed at its expiration.

3. In one-gun starts each yacht shall be timed from the starting signal.

4. The time of finish of each yacht shall be taken when the point marked by the foremast in schooners and the mainmast in single-masted vessels and yawls crosses the finish line.

5. In any start, if the point marked by the foremast in schooners, and the mainmast in single-masted vessels and yawls, has crossed the line before the signal for the start in her class is made, she must return and re-cross the line.

A yacht so returning, or one working into position from the wrong side of the line after the first starting signal has been made, must keep clear of, and give way to, all yachts in the race.

PROPULSION.

1. No means of propulsion other than sails shall be employed.

2. Manual power only shall be used in working a yacht.

MARKS.

1. A mark is a vessel, boat, buoy or other object used to indicate the course, and is not a mark until the starting signal has been given, and does not involve any question of sea room.

2. If the courses are not found as stated in the instructions, or should any stake-boat, buoy or other mark be absent or moved from its proper position during a race, the race may be resailed or not, at the option of the race committee.

ANCHORING.

A yacht may come to anchor, but must weigh anchor again and not slip. A yacht shall not warp or kedge, or make fast to any buoy, stage, pier, vessel or other object, except for purposes specified in Rule —

RUNNING AGROUND AND FOULING.

A yacht running aground or fouling a buoy, pier, vessel or other object, may use her anchors, warps, boats, etc., to get clear, but may not receive any assistance, except from vessel fouled. Any anchor, warp or boat so used must be taken on board again before continuing the race.

ACCIDENTS.

Every yacht shall render all possible assistance to any vessel or person in peril, and if in the judgment of the race committee she shall thereby have impaired her chance of winning, they may order the race to be resailed between such yacht and the winner in her class.

SOUNDING.

No other means of sounding than the hand lead and line shall be employed.

RIGHT OF WAY.

When one yacht is approaching another yacht so as to involve a risk of fouling, one of them shall keep clear of the other as follows:

1. Maneuvering for a Start.—In maneuvering for a start, up to the time of the starting signal, where two or more yachts with the wind on the same side are standing toward the line, and the weather yacht has the wind freer than the yacht to leeward, the leeward yacht shall have the right to hold her course.

2. On Different Points of Sailing.—A yacht free shall keep clear of one close hauled.

3. On the same Point of Sailing with the Wind on Opposite Sides.—When both yachts are close-hauled, or both free, or both have the wind aft and on opposite sides, the yacht with the wind on the port side shall keep clear.

A yacht is deemed to have the wind on the side opposite to that on which she is carrying her main boom.

4. On the Same Point of Sailing with the Wind on the Same Side.—When both yachts are free or have the wind aft and on the same side, the yacht to the windward shall keep clear.

5. Wind Aft.—A yacht with the wind aft shall keep clear of a yacht on any other point of sailing.

6. Overtaking.—An overtaking yacht shall, in every case, as long as an overlap exists, keep clear of the yacht which is being overtaken, except as specified in Sec. 13.

7. Definition of Overlap.—An overlap is established when an overtaking yacht has no longer a free choice of which side she will pass, and continues to exist as long as the leeward yacht by luffing, or the weather yacht by bearing away, is in danger of fouling.

8. Altering Course.—When of two yachts one is obliged to keep clear, the other shall not alter her course so as to involve risk of fouling.

9. Luffing.—A yacht may luff as she pleases in order to prevent another from passing her to windward, provided she begins to luff before an overlap is established.

10. Bearing Away.—A yacht shall not bear away out of her course so as to hinder another in passing to leeward.

11. Rights on New Courses.—A yacht shall not be entitled to her rights on a new course until she has filled away.

12. Converging Close-Hauled.—When two yachts, both close-hauled on the same tack, are converging by reason of the leeward yacht holding a better wind, and neither can claim the rights of a yacht being overtaken, then the yacht to leeward shall keep clear.

13. Passing and Rounding Marks.—If an overlap exists between two yachts when both of them without tacking are about to pass a mark on the required side, then the outside yacht must give the inside yacht room to pass clear of the mark.

A yacht shall not, however, be justified in attempting to establish an overlap and thus force a passage between another yacht and the mark, after the latter has altered her helm for the purpose of rounding.

14. Obstruction to Sea Room.—When a yacht is approaching a shore, shoal, rock, vessel or other dangerous obstruction, and cannot go clear by altering her course without fouling another yacht, then the latter shall on being hailed by the former at once give room; and in case one yacht is forced to tack or bear away in order to give room, the other shall also tack or bear away, as the case may be, at as nearly the same time as is possible without danger of fouling; but should such obstruction be a designated mark in the course, a yacht shall not force another to tack under the provisions of this rule.

DISQUALIFICATION.

Every yacht must go fairly around the course, and must not touch any mark, but shall not be disqualified if wrongfully compelled to do so by another.

If a yacht, in consequence of her neglect of these rules, shall foul another yacht, or compel another yacht to foul any yacht, mark or obstruction, or to run aground, she shall be disqualified and the owner shall pay all damages.

The race committee may, without a protest, disqualify any yacht, should it come to their knowledge that she has committed a breach of these rules.

PROTESTS.

1. Notice of intention to protest that a yacht has violated these rules may be given during a race by displaying flag B of the signal code, and keeping such flag flying until answered by the race committee with the answering pennant.

2. Protests must be filed in writing with the race committee before 6 o'clock P. M. of the day succeeding the race, exclusive of Sundays, and must be signed by the owner or his representative.

3. If through protest the measurement of a yacht be called in question, the race committee shall direct the measurer to remeasure such yacht, and the result as reported by him shall be final. The usual fee for measuring shall be collected from the owner, if the measurement be found wrong; and from the person protesting if the measurement be found right.

While the scheme thus outlined is less elaborate than some that have been proposed, and while it by no means covers all of what we consider the proper functions of such a national yachting body, at the same time it covers the immediate essentials, and it is sufficiently moderate to avoid the objections of even those who can see in such a movement nothing but a trick of the many smaller clubs to exert undue power over the few large ones. As distinctly but rather inopportunely stated in the second article, no body is to be bound by the rules of the Association until it has distinctly accepted such rules. However necessary such a statement may be, its direct connection with the objects of the associations named in the same section, is not quite clear.

One very important point in the establishment of a new organization of any kind is the name. Changes of constitution, by-laws and rules must come in time in all organizations, however carefully the original work may be done, but changes of name are always undesirable; this much, at least, should be done properly at the start.

The name proposed, "Yacht Racing Association of North America," may be strictly correct, but it is open to several objections. In its form it is clumsy and unwieldy; there is too much of it to be used in full, and if abbreviated to the mere initials, as is usually done, it comes in conflict with half a dozen smaller Y. R. As. already in existence. In Great Britain no such objection exists, the simple letters Y. R. A. stand for the one governing body in British yachting; in this country, however, we have the Lake Y. R. A., the Massachusetts Y. R. A., the Interlake, Northwestern and other

naller bodies with similar initials. For this reason it ould seem desirable to start the new and more important ganization on a little different basis, with a name that hall mark it distinctively from all the subordinate associaons and unions.

The correct name must embody three ideas: union, yachtsen, North America; and in some direct and simple form hat is easily indicated by initials, such as the American anoe Association (A. C. A.) and the League of American Wheelmen (L. A. W.). Taking the first idea, union, either f three words, "union," "association" or "league," will onvey the meaning; and there is little to choose between hem as to the fine shades of meaning. Of the three, "assolation" is the least desirable, being already in such general se in the same connection.

The second idea, indicating the sport or the persons interested, is in the form of "Yacht Racing" in the title already roposed. While racing must always be the *raison d'etre* or such an organization, it is not the only one by ny means. The sport of yachting at large, certainly f more importance than yacht racing alone, is quite apable of profiting by the assistance of a national ody devoted to its interests; and there is no reason, even hough at the present time it may be inclined to go no furher, why the new organization should distinctly limit its xertions to yacht racing. Such a word as "Yachting" ould be more compreh ensive, and quite as accurate.

ONAWA, OF LAKE MINNETONKA.
Owned by Messrs. H. J. and W. C. Burton.

The word "American" has, in common use, two different meanings; in its broader sense, as used in the title, "American Canoe Association," it covers the continent of North America, embracing Canada and the United States alike. It was adopted on the organization of the A. C. A. in 1880 by representatives of both nations, and has been in general use ever since without any question arising as to whether it related more directly to one than to the other. At the same time the word is also used in a much more restricted sense to apply to the United States alone, as in the "League of American Wheelmen," which organization is confined wholly to the United States, and has a counterpart, though entirely distinct, in the Canadian Wheelmen's Association. So far as this side of the line is concerned, there would probably be no objection to the term "American," as briefer and better than "North American"; we cannot answer for the feeling on the part of Canadian yachtsmen, but the experience in canoeing indicates that there are no serious grounds for objection.

Without attempting any final suggestion, we would point out the desirability of some brief and compact title, such as "American Yachting League" (A. Y. L.), or one of similar form. It is certainly important that the organization should start with a good title, and we do not consider the one now proposed as at all satisfactory.

The scheme of organization is very simple, with merely a council of fifteen and but three officers, chairman, secretary and treasurer. The general provisions as to representation, meetings, voting, etc., are in accordance with general usage in such associations. The date of the annual meeting, the first Saturday in October, is rather early, the last Saturday would be better, as there will, presumably, be a good deal to do between the end of the active racing, some time in September, and the date of the meeting; all the routine of reports and the proposals for amendment of rules coming at that time.

The action of the original conference is well known; after much discussion it was decided to take no action whatever prior to final organization in the matter of measurement and classification rules; and in accordance with this the special committee on racing rules has dealt only with the general rules relating to the management of races and the racing "rules of the road." Very few changes have been made from the existing practice in the majority of clubs, the most important being the provision that a buoy or boat does not become a mark until the starting (not the preparatory) signal is given; with which is offered a modification of the new rule governing maneuvering for the line. In other respects there is nothing in the rules which alters the general practice on yacht racing.

Onawa.

FOR the past two seasons the 20-footer Onawa has not been raced, but during the present season she has been in commission on Lake Minnetonka, Mr. H. J. Burton and his son, Ward C. Burton, sailing her for pleasure and exercise. Being thoroughly familiar with the yacht after long practice, they have taken special pleasure in developing her highest speed under favorable conditions; and in this they have been aided by the fact that the courses on Lake Minnetonka, where there is neither tide nor current, are accurately surveyed on the ice, and marked by piles driven down immovably. The distances are thus fixed beyond question, and it is only a matter of careful and reliable timing between marks. The accompanying cut, from an amateur photo recently taken, shows Onawa, with Messrs. Burton and Miss Burton on board. The yacht was originally very lightly built, but she is still sound and strong and capable of hard service, such as she is frequently put to when the weather permits, merely for the sake of the excitement of sailing. She is 26ft. 9in. over all, about 20ft. l.w.l., 6ft. 4in. beam, and carries but 400sq. ft. of sail, thus making her racing length close to 20ft. The following account of one of her trials is from the Minneapolis *Morning Times* of Aug. 17; she has equaled this time on other occasions:

The velocity attained by Onawa on Lake Minnetonka is believed to exceed any record yet made by vessels under 100ft. in length, propelled by sails alone.

Between 3 and 4 o'clock P. M. last Friday, the velocity of the wind in this vicinity was twenty-two to twenty-six miles per hour, according to the observations of the United States Weather Bureau. The larger boats were close-reefed, and not all of them succeeded even in getting to windward in the trial of the Minnetonka Y. C. for selecting a representative for the White Bear races.

Onawa was sent out under full racing sail to windward as far as Big Island, in order to return with the wind on the starboard quarter, and made the trip four times. On one run she left the steamer Saucy Kate far behind, going apparently twice as fast as the steamer. The best time made from the Excelsior-Wayzata buoy, near Big Island, to the club house dock, on inside channel was 2m. 10s.

George W. Cooley, who surveyed the M. Y. C. course, states the distance between the two points as 2,990ft., just about one-half of a nautical mile, and .57 of a statute mile. This would make the speed at the rate of 16 statute miles per hour, or 13 nautical miles, somewhat better than the best speed recorded even of the 90ft. Defender.

The Boston Knockabouts.

THE following interesting summary of the season's racing of the knockabout class of Massachusetts Bay is the work of Mr. W. E. Robinson, of the Boston *Globe*. We can speak from experience in similar work of the labor involved in the compilation and comparison of such records:

KNOCKABOUT RECORDS—TABLE 1.

	Starts.	1st.	2d.	3d.	4th.	5th.	6th.	Av.
Gosling	26	7	8	4	1	1	0	.453
Mongoose	23	4	7	5	1	0	0	.380
Fly	27	7	3	5	5	1	2	.361
Cock Robin	5	3	0	1	0	1	0	.325
Cockatoo	20	3	4	2	6	1	1	.275
Hazard	26	3	4	7	4	6	1	.259
Sally III	23	2	1	3	5	5	3	.141
Jacobin	13	0	1	0	2	1	1	.038

KNOCKABOUT RECORDS—TABLE II.

	Gosling.	Fly.	Mongoose.	Cock Robin.	Cockatoo.	Hazard.	Sally III.	Jacobin.
Gosling	..	16	11	2	9	15	16	11
Fly	9	..	12	0	11	12	14	10
Mongoose	9	9	..	1	11	12	13	7
Cock Robin	2	3	4	..	2	4	4	1
Cockatoo	9	7	6	1	..	9	11	7
Hazard	8	12	10	1	9	..	15	9
Sally III	5	7	6	1	5	6	..	11
Jacobin	1	3	3	0	0	3	1	..

In no class in or around Boston has there been such steady and interesting racing as that between the 21ft. knockabouts, nor is there a class in which the boats have been so evenly matched or in which it has been so hard to pick a winner. There have been thirty-six races—club, open or sweepstakes—during the season, in which the boats of the class could enter, and but two of them were on a conflicting date.

The fact that five of the racing fleet entered and sailed in thirty or more of these races speaks volumes for the persistency of their owners, the sport which the racing afforded, and the possibility of a win at any time. The racing is also a high tribute to what can be accomplished in a "restricted" class, where a boat is not necessarily "outbuilt" every year, and where the cost is moderate and the racing strictly corinthian.

Nor does there seem to be any prospect of the interest in the class dying out. The results of the season's racing are not so conclusive in the matter of the superiority of one boat over another as to discourage an owner from continuing next year with this season's boat, while at the same time there is already talk of new boats by men both in and out of the present racing contingent.

Taken all around, the class is proving itself an extremely valuable one from almost any standpoint, and deserves encouragement in every possible way,

In presenting the records of the season's racing, the *Globe* has, however, taken only those races which counted for the Y. R. A. championship. It was this championship which was the main prize in the class, and races which did not count for it were deemed by many of the owners as merely side issues to the main question. In fact, several starts were made which would not have been had the races been championship ones. A comparison of the entire racing season is a very interesting one, but a comparison on a Y. R. A. basis is but simple justice to boats speciallly competing for that championship.

In table No. 1 is shown the number of times a boat has started and the places she secured. No boat is credited with a place unless defeating a competitor. In table No. 2 is shown the number of times each boat has beaten or has been beaten by every other boat in the fleet. Read it across the columns for wins and down the columns for losses. There have been twenty-nine races which counted for Y. R. A. championships.

Jenny Wren is not included in the tables, since she only started in four races and was last each time. So far as the writer could ascertain there are no protests pending except that at Hull, Sept. 11, and they will not affect the standing of the boats, whichever way they may be decided. The positions in that race are therefore credited as the boats finished. The decision of the protests would make but minor changes.

A look at table No. 1 shows that Fly has the "sportiest" record of the lot with 27 starts. Gosling and Hazard are a close second with 26 each, and then come Mongoose and Sally III with 23 each. Cockatoo has been raced with commendable persistency, but Cock Robin has been raced so little in championship races as to make her record an unsatisfactory one for championship comparison.

The boats are ranked in table No. 1 according to their Y. R. A. averages. Cock Robin's total percentage is divided by 10 as required under Association rules, the requirement being made to insure starts in at least ten races by boats really out for the championship.

In table No. 2, however, the boats, with the exception of Cock Robin, are ranked on the basis of series with other boats, won, lost or tied. The writer believes this to be the fairer way of the two, and as more likely to show the boat's relative abilities. The exception is made in Cock Robin's case for the reason that she has started in so few races as to make almost impossible a fair comparison with boats racing five times as often. She is therefore left in the same position between the winning and losing divisions of the fleet to which she is entitled by her Y. R. A. average, and her wins and losses can show for whatever they may be worth.

Gosling takes first place by reason of having won five series, lost none and tied two. Fly comes second with four won, two lost and one tied, while Mongoose is third with four won and three lost. It is a close fit between Fly and Mongoose, but since the former has won her series with the latter she is entitled to precedence.

The question of place between Cockatoo and Hazard is also a close one. They are tied in series lost and won, also in their series with each other, but in proportion to her number of starts—and she has started a sufficient number of times to entitle her to her full rank in the tables—Cockatoo shows a little ahead.

In brief, the results of the tables are: Gosling wins from Mongoose, Fly, Hazard, Sally III. and Jacobin, and ties Cock Robin and Cockatoo. Fly wins from Mongoose, Cockatoo, Sally III. and Jacobin, loses to Gosling and Cock Robin and ties Hazard. Mongoose wins from Cockatoo, Hazard, Sally III. and Jacobin, and loses to Gosling, Fly and Cock Robin. Cockatoo and Hazard win only from Sally III. and Jacobin, while Sally wins only from Jacobin. Jacobin has not been raced with that persistency characteristic of her owner's course in past seasons, but has at times shown much better speed than her low place in the table would indicate.

But after all the careful tabulation of the results of the season's racing, the question may be fairly asked—do the records and tables in this case actually show which is the fastest boat of the fleet, and is the matter of superiority decisively settled?

And in reply the writer would answer that, in his opinion, "no." The records indeed show what has been done in the

season's racing, but they cannot show conditions of wind and weather, nor can they tell how much of that undoubted factor, "luck," has entered into the problem. So for an answer to the question of actual superiority, recourse must be had to the races themselves.

When the Y. R. A. season closed, on Sept. 11, there was a very general impression that Gosling was the best all-around boat of the fleet and that she deserved the championship she had won. That impression has not changed so far as the championship is concerned, and yet it must be conceded that Mongoose was giving her a close race for first place when the season closed, and in view of the entire season's racing, both in and out of the Y. R. A. races, it may be still an open question as between the two.

The question of superiority should not, however, be considered as settled by the sweepstake races of the Knockabout Association, sailed after the close of the Y. R. A. season. Mongoose beat Gosling in all three races, but it must be remembered that all three were sailed practically in two divisions, with Gosling in one and Mongoose in the other. Gosling's owner had planned to stop racing with the close of the Y. R. A. season, but as it was desired to "try out" Cock Robin in the hands of her original owner, Gosling entered the races and made a win from Mr. Eaton's boat her sp ial effort.

A series of races between Gosling and Mongoose would help settle the question, but since this is impossible at thi late date, the fairest way seems to be to let the matter res on the facts as shown. Gosling has the championship, but Mongoose has given her a close rub.

The margin of superiority between any two boats of the entire fleet is, in fact, a very small one. It might, indeed, and often has been wiped out by a poor start or a bit of bad luck. The boat which secured the best start in the races has sometimes been the winner on that advantage alone. It is these uncertain features of the races which have helped make it interesting, and which have so divided the wins as to keep every one guessing.

With wind, weather, the start and luck all entering into the problem, who, then, can give a decided answer?

There is a way, however, by which one feature of the racing can, to a certain extent, be eliminated. With a fleet so closely matched as this one, there is always a temptation to "split tacks" and go looking for a better chance. The yachtsmen who have been racing the 21-footers at Newport had a try at the problem of eliminating this chance by racing the boats in pairs, as is done in other kinds of sport. Just how satisfactory was the result does not fully appear, but at least one race of this kind would not be a bad experiment to try next season. Toward the close of the season it might furnish a basis for accurate comparison not otherwise to be obtained, and might help answer the question which is now puzzling "all hands and the cook."

But there is one question which was asked early in the season, to which an answer can confidently be given. "Can Cock Robin be beaten?" has been answered in the affirmative. The position that she is still the fastest boat in the fleet is hardly a tenable one in view of the racing, and yet she is so close to the fastest that the chances before mentioned would either give her a win or bar her from it. She can be beaten, but not all the time, nor possibly even the most of the time. There is every encouragement for her owner to race her next season for all she is worth, and see just where she stands.

It is also apparent that the new boats are closer to Cock Robin than the boats of last year, and that an advance has been made all along the line. Still it is not the new Herreshoff boats which rank Cock Robin in the table, and more than one yachtsman will be found to say that the Bristol designer's first knockabout was a lucky hit, on which he will have hard work to improve. Yet it is a very close thing all around, and its closeness is what make it valuable. There is no reason why the success of the class should not be continued.

Capt. Henry E. Bayly.

THIS veteran yachtsman, whose name is familiar to our readers in connection with many designs, died recently at his home in Exmouth, England, at the age of sixty-eight years. He entered the British army at an early age, and when stationed at Plymouth began his yachting career; after several years of service in the West Indies, he was transferred to Canada in 1851, spending nearly twelve years there, during part of which time he served in the Royal Canadian Rifles. Always an ardent yachtsman, he took up the pursuit of designing at a time, nearly fifty years ago, when comparatively few yachtsmen concerned themselves with anything more than the owning or sailing of a vessel. As long ago as 1856, when home on leave, he designed the 15-tonner Ethel, remarkable in that day for having a lead keel of nearly two tons. Being home again at Plymouth in 1862, he picked up a sailing boat of the Itchen type—Blossom—and finding her defective in many ways set about rebuilding her, renaming her Coral. When he finally returned permanently to England in 1865 he took the new-old boat in hand again and rebuilt her entirely, making practically a new craft of his own design; the work being done by Bulley, a builder, of Shaldon. As became a Devon man, Capt. Bayly was a staunch admirer of the old Devon sea-dogs, and over the new yacht Buccaneer he hoisted as a racing flag a red scull and crossbones on a black ground. In later years, long after Buccaneer had passed out of the yacht list, her owner still clung to the names suggestive of Drake and Raleigh and the Spanish Main; "Boucanier," merely another spelling, "Piccaroon," "Scourge," etc.

For over a dozen years Buccaneer brought pleasure and credit to her designer, defeating from the start such famous cutters of the day as Quiver, Folly, Dudu and Queen. In 1871 she was taken in hand again, to fit her to meet newer yachts. She was hipped and about half a ton of lead added to her keel, the alterations making her good enough to defeat the then new Ildegonda, 15-tonner. Five years later sh was lengthened to keep her up to the new yachts. Her local fame as a sea boat was such that when offered for sale in 1878 she found purchasers in some Dartmouth pilots, who built up her bulwarks and used her for years in their business.

In 1882 Capt. Bayly designed the 3-tonner Spankadillo, a very fine example of the narrow lead-mine, and raced her for some years, also using her for cruising. When the narrow boats passed away, he designed the 2½-rater Jack O'Lanthorne, quite a successful craft, though increasing illhealth was each year keeping her owner more and more on shore. For several years he had done very little sailing, but he was still able until quite recently to follow his other favorite pastime of golf, to which he was devoted for many years. Though purely an amateur designer, he turned out, altogether, some sixty designs, building from many of them for himself while others were for his friends. Of late years this work has been one of his chief amusements, in default of sailing and racing.

Capt. Bayly was not only a keen and devoted lover of yachting, but he was a thorough sportsman in his love of fair play and his broad sympathies with sport for its own sake and apart from mere personal or patriotic preferences. It was not the mere fact of winning, but the character of the contest which gave it a value to him. A thorough Englishman, and doubly proud of England and Devon, he at the same time held the most kindly feelings not only toward Canada, but toward the United States, looking upon the three as but one great nation. His broad and liberal views extended to yachting, in which field he was ready to recognize merit without regard to nationality. His death makes another gap in the rapidly-decreasing list of old-time yachtsmen who sailed year after year in one craft in those days when it was not necessary to build a new yacht every year.

The Larchmont Races.

THE two successive wins of Syce and Acushla settled the ownership of the commodore's cups in the 51ft. and 36ft. classes, but in the latter class there was a sweepstakes of $100 per boat, calling for a final race on Sept. 29. The wind was light, between south and southwest, and the weather fair. Acushla led over the line at 1:05, and led in the reach to Parsonage Point, but Anaotok passed her when on the wind and led at Hempstead, the times being:

Anoatok	3 41 21	Vorant II	4 39 00
Acushla	3 48 11		

The wind fell and left Vorant II. to leeward of the mark in a tideway. It was a slow drift home, the times being:

	Length.	Finish.	Elapsed.
Acushla, Hanan Bros.	33.97	5 25 29	5 20 29
Anoatok, Oswald Sanderson	N. M.	5 26 22	5 21 22
Vorant II, Geo. G. Tyson	34.00	5 40 15	5 35 15

The Thirty-Footers at Newport.

TWO special races were sailed at Newport on Sept. 29-30, Messrs. H. B. Duryea and A. S. Van Winkle having made up a private match. Mr. Duryea's Vaquero III. being laid up, he borrowed Dorothy II. from Mr. Whitney. The race of Sept. 29 was over the Dyers Island course in a light S.W. wind, the times being: Start, 2:45:

Dorothy II	6 44 22	Esperanza	6 55 57

On Sept. 30 the Beaver Tail and Bishop's Rock course was sailed in a fresh S.W. wind, the times being: Start, 2:25:

	Finish.	Elapsed.
Dorothy II	4 34 09	2 09 09
Esperanza	4 39 37	2 14 37

YACHTING NEWS NOTES.

The Sodus Bay Y. C., of Sodus Bay, New York, has celebrated its fourth season by opening a handsome new club house on the bay, a large reception being held on Sept. 16. The club has elected the following officers for 1898: Com., Spencer Meade, Elmira, N. Y.; Vice-Com., F. W. Chamberlain, Lyons, N. Y.; Fleet Captain, W. W. Cook, Sodus Point, N. Y.; Sec'y-Treas., W. L. Kendall, Sodus Point, N. Y.; Fleet Surgeon, Dr. W. F. Nutter, Newark, N. Y.; Fleet Chaplain, Rev. D. W. Kavonaugh, Lyons, N. Y.; Meas., C. H. Hill, Sodus Point, N. Y. The club is in a prosperous condition, and growing rapidly.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1897-98.

Commodore, F. L. Dunnell, Brooklyn, N. Y.
Sec'y-Treas., C. V. Schuyler, 309 Sixth avenue, Brooklyn, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, Wm. Carpenter, Sing Sing, N. Y.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J. Burrage, West Newton, Mass.
Northern Division, Francis H. Macnee, Kingston, Canada.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

Canoe Rigs.

IT is a long time since anything in the way of a novelty has been seen in the sail plans of American canoes, the two-sail rig with relatively large mizen being universal. In England a different condition of affairs prevails, the sloop and the cat rig being found side by side with the American or "bafter" rig. The *Field* in its recent issues discusses the question of rig as follows:

However settled or determined the question of form of hull may be, or appear to be, in relation to the competitive sailing of canoes, the question of the fastest rig is as open and evergreen as it was twenty years ago. There is probably a confirmed belief among the leading canoe sailors that the sloop rig, so long as it can be effectively handled, is the masterpiece for racing; and this has been fully proved by the season's racing so far. But there have been conditions of wind and water this season when the sloop-rigged canoes could not be efficiently sailed, when, indeed, they were only jilled along under closely reduced sail, while the ketch-rigged canoes were sailing under whole sail. There are times, also, when the sloop takes the bit in her teeth and runs wild.

Now that the autumn racing in the south is taking place on the confined waters of Teddington reach, the tendency appears to be toward single sail rig; possibly this is only because under such rig Dragon has shown remarkable speed around that course; and it may be quite the case that the whole "allowed-area" placed in one sail is a more effective driver where the wind is found in ever-shifting puffs, seldom true in direction or force for more than a few seconds at a time. But for keeping command of the boat, for maneuvering for a start, or for intricate sailing in a crowd, the single sail rig is the least effective, and the most worthy of suspicion as to its possible tricks, of any rig yet put on to a canoe.

Should the races in October fall to the sloop rig or to the single sail, it probably will not bring the question any nearer to a settlement. There will always be the loophole of "if it had not been for so and such," the fluke of wind, the rowboat getting in the way. We, therefore, expect to see some interesting, if not some funny, performances with the single-sail canoes. On the other hand, there is an open question as to the value of the ketch rig in a snorting blow, that is, of the nearly evenly divided rig, not the large main and miniature mizen rig. It has sailed to victory on nearly every such occasion; it is acknowledged as the most masterly rig, and is undoubtedly the most handy cruising rig, both on confined and on open waters. But we have yet to see what may be the true value—possibly the superiority—of the sloop rig for racing on craft sufficiently stout to be able to carry such a rig effectively in a squally blow.

We wrote a little time back on the much debated question of whether the sloop rig is really better than the single sail rig for racing, especially as to racing on confined waters, such as Teddington Reach; the matter is as open as ever, except in the case of the racing-machine canoe, where the sloop rig simply could not be handled in squally or very shifty winds. To work a sloop single-handed with best effect, it is quite necessary to belay the main sheet; and even then there are more than enough lines to be worked in relation to the fore sail for both one's hands, and the helm must occasionally look after itself.

In these circumstances, it will soon become evident to those who actually try the rig on a canoe, that she must be sufficiently stable to allow of the main sheet to remain cleated through any puff or squall; and the balance of helm against sail centers must be very neatly adjusted, or the helm must be clutched while work is being done to the head sail. Such points as these were very amply tested in the new Nautilus (cruising class canoe) under sloop rig on Saturday and Sunday last, in a breeze varying from light wind to actually heavy bursts, strong enough in the bursts to capsize some of the canoes and a "half-rater." The main sheet of Nautilus was kept fast on all points of sailing, and though the foresail was eased off to the puffs, and indeed, reduced by rolling up to small area, she suffered many regular "knockdowns," but as before ascertained, she never goes quite flat; and always is under command, but then, she has a weighted centerplate. The rig she was using was only a patchwork trial rig, scarcely fit to judge performance by, but it showed conclusively that in going to windward she was vastly improved over the ketch rig—*i. e.*, the main and mizen ordinary canoe rig, but also that in running under sloop rig she was slower than on previous trials with the same canoes in company. Probably, however, this was because the sail area set in her jury sloop rig was some 20sq. ft. less area than is her ketch rig.

This canoe was built with main and mizen rig, or ketch, for cruising and general pleasure sailing, but she has all the fittings for sloop rig, to be fitted if it be found advantageous for racing on confined waters. Possibly so stiff a boat might successfully carry her whole rating allowance of sail in one single sail for racing, but luckily for the endurance of the class as a useful general purpose class, the class definition prohibits the use of any spar over the length of the "rating length" adopted by the particular craft. The rating sail area of 143ft. only allows 13ft. as extreme length of L.W.L. or of any spar, and it will be found rather difficult, on a series of 13ft. spars, mast and all, to get one sail of 143ft. of effective nature, and reduceable in workmanlike manner for variations of wind force, etc. On the whole, no doubt, the "racing" canoe, unlimited as to spars, has great advantage in being able thereby to put all her cloth into one garment, but the past season's experience is that the most successful all-round are the two-sail canoes.

The A. C. A. Racing Rules.

KINGSTON, Sept. 25.—*Editor Forest and Stream:* The question of altering the racing regulations, which will come before the executive committee on Oct. 16, is a very important one, but the apparent indifference of the racing men, as indicated by their non-appearance in your columns, may be easily explained. The proposed changes are nearly all in reference to the paddling races, and are of no particular interest to the sailing men; the paddling, this year, was practically all done by the Northern Division members; the Northern Division has decided what changes it considers necessary and, having made its formal proposal to the regatta committee, its members are content to wait the action of the executive.

There was some difficulty experienced by the regatta committee this year in construing the rules, as applied to paddling canoes. This increased the feeling of dissatisfaction with the present regulations which already existed among the racing men of this Division, and the result was that at the annual meeting of the Division a special committee was appointed to look into the matter and propose such changes as they considered best. The committee was composed of men from Toronto, Ottawa, Peterboro and Kingston, who have competed in A. C. A. races, who have had long experience both with the single and double blade, and whose recommendations ought to be worthy of consideration.

When this committee met the members had two objects in view: To increase the interest in racing in the A. C. A. and to encourage a practical, usable canoe, instead of the racing machine, which has been too much in evidence for some years. With these objects in view, they formulated the proposal which has already appeared in your issue of Aug. 28. It was intended that these clauses should be inserted in the Racing Regulations to govern paddling races only. Your proposal is so nearly identical with ours that either one would answer the purpose, and the only other is that published by Mr Schuyler; the dimensions he asks for are the same as those which were in force ten or twelve years ago, except that the minimum of weight was then 40lbs. This amendment would be an improvement on the present rules, because it is definite and concise, but if the intention is to increase the number of entries at the A. C. A. meets, I do not think it would be of any use. Very few men care to bring two canoes to camp, and a boat of this size is of no use except for racing in. In small, quiet streams, a 10in. canoe may be all right, but where the water is at all rough more depth is necessary, and, of course, the same may be said of the beam.

I am sure the executive committee will give this important matter the careful consideration which it deserves.

R. EASTON BURNS, Vice-Com., N. D. A. C. A.

ANSWERS TO CORRESPONDENTS.

P. D., New York.—Kindly let me know if chipmunks are allowed to be shot in the States of New York and New Jersey. Ans. Yes.

H. R., Bay Shore.—Has a person a legal right to pursue and kill wed footed wildfowl on the Great South Bay from a sailboat while sailing during the open season? On page 46 of the *Game Laws in Brief*, "Special Long Island Law," I can find nothing prohibiting shooting from sailboats web-footed wildfowl in the Great South Bay. Ans. The law does not forbid it.

PUBLISHERS' DEPARTMENT.

The Upper South.

PERSONALLY-CONDUCTED TOUR VIA PENNSYLVANIA RAILROAD.

THE last of the early autumn tours to the historic Upper South via the Pennsylvania Railroad, will leave New York and Philadelphia, Tuesday, Oct. 12.

This tour covers a period of eleven days during the height of the season, when the autumn foliage is most beautiful, and includes the battlefield of Gettysburg, picturesque Blue Mountain, Luray Caverns, the Natural Bridge, Virginia Hot Springs, the cities of Richmond and Washington and Mt Vernon.

The round trip rate, including all necessary expenses, is $35 from New York, $63 from Philadelphia, and proportionate rates from other points.

The tour will be in charge of one of the company's tourist agents. He will be assisted by an experienced lady as chaperon, whose especial charge will be ladies unaccompanied by male escort.

Special train of parlor cars will be provided for the exclusive use of the party, in which the entire round trip from New York is made

For detailed itinerary apply to Ticket Agents or to Tourist Agent, 1,196 Broadway, New York, or Geo. W. Boyd, Assistant General Passenger Agent, Broad street Station, Philadelphia.—*Adv.*

Knights of the Golden Eagle Parade, Trenton, Oct. 12, 1897.

FOR this event the Pennsylvania Railroad Company will sell excursion tickets from all stations on the United Railroads of New Jersey Division at the very low rate of 1½ cents per mile (minimum rate, 25 cents).

Tickets good only on above-mentioned date.—*Adv.*

New York Day Nashville Exposition.

THE Southern Railway, in connection with the Pennsylvania, is the popular route between New York and Nashville, via Washington and thence through Asheville, N. C., the "Land of the Sky," Chattanooga, Lookout Mountain, etc. Special low rates are made from New York to Nashville and return. For full particulars call or address New York office, 271 Broadway.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 16, 1897.

VOL. XLVIX.—No. 16. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any address which may be furnished us for that purpose.

There is the Fussy Angler a great bore; of course you will shun him. The "Snob" Angler, who speaks confidently and knowingly on a slight capital of skill or experience. The Greedy, Pushing Angler, who rushes ahead and half fishes the water, leaving those who follow in doubt as to whether he has fished a pool or rift carefully, or slurred it over in his haste to reach some well-known place down the stream before his companions. The company of these, the quiet, careful angler will avoid. Thad Norris.

THE ONE-MAN POWER.

THE management of the business affairs of a field trial or kennel club is distinctly different from the management of the affairs of concerns founded on a strictly business consideration. The former, for management, is almost entirely dependent on the voluntary efforts of its members; the latter has its different interests in charge of paid men, whose special duty it is to devote their time, skill and energy to the furtherance of the concern's welfare. Each man has his duty and authority well defined.

The club depends largely on volunteer service. Of the members of a club, generally a few will be enthusiastic enough to work actively for the club's interest a part of the time, while there are but few cases in which more than one man will attend to club labors all the time.

Aside from paying their dues, the majority of the members do nothing in the club's interest. One would imagine that the man who so freely and gratuitously did the work for the club's good would be praised by his fellows for his enthusiasm, and esteemed by them for his services. But herein comes a curious phase of human nature. Few of the grievances, real or imaginary, which disturb the harmony of kennel or field trial clubs, are made up of such jealousies, heartburnings and unkind feeling as is the grievance which has its source in the necessity of the case, the one-man power.

The members who do nothing, are often disposed to view the acts of the one active man as a usurpation of authority; the ones who assist part of the time, view them as coming from a superofficious meddler who should first consult others of equal authority before he acted; while the outside world, finding that there is but one really active member who attends to its business and gives vitality to the club, looks upon it as a club dominated by one-man power.

And yet the history of all successful and well managed bench show and field trial clubs, indicate that the clubs' affairs were conducted by one man mostly, sometimes two or three, rarely more. Too often they have been the object of petty jealousies and peevish backbitings from fellow members, who envied them their honors yet who shirked the labors by which the honors were won.

The impracticable, who had a theory evolved from observation at a distance, was disgruntled if opposed in its exercise by the one-man power whose experience had taught him what was useful and what was not. The man, member or otherwise, who had an axe to grind was unfriendly to a certainty if he was opposed in his purpose. Drones, who sought office for the sake of prestige and position, were not in favor with the one-man power, who had his club's interests really at heart, and by opposing such he might evoke unfriendliness.

While making many friends, the one-man power was certain in time to have its enemies.

The true value of the one-man power, the sterling article which has for its object the common good of the club, is never fully learned nor fully appreciated till the one-man power retires and ceases to act. Things which before seemed very easily done because they were done by another, now assume an importance which they never before possessed. There is a certain amount of grinding drudgery connected with every institution, be it great or small, and yet it all seems to be a light affair when some one else does the drudging. Sometimes when the one-man power stops, all stops.

Every organization which has any part in the world's activities must be operative. If it is apathetic or inoperative, it is civilly dead and inconsequential. The one-man power is often the only power which keeps his organization in touch with the rest of the world. It may be that in some few instances the power has been abused, but if so they are few indeed. Let the one-man power have more consideration. If he makes a mistake do not let it overwhelm the thousand good deeds he has done. Instead of jealousy and silent disapproval, give him just praise and encouragement. Lend him a helping hand and share his labors, and if any one objects to the one-man power, he can make it a two-man power by turning to and dividing the labor and the responsibility of effort.

THE WAY TO DO IT IS TO DO IT.

IN the days immediately after the protracted unpleasantness between the States there were many grave problems confronting the people, not the least of which was the resumption of specie payment. There were theories innumerable as to the best way to compass it, nearly all of which were based on some makeshift expedient which was juggled into the appearance of the genuine article of resumption. Horace Greeley, with that breadth of grasp and directness of speech peculiar to him, solved the problem and struck a responsive chord in the hearts of the people when he raised the cry that "the way to resume is to resume." Resumption could only be accomplished by direct, material effort; wordy speculations and visionary schemings accomplished nothing. When specie payment, the indication of a sound currency, was established, it was done in the way indicated by Horace Greeley, and in no other way than that could it have been done.

In a similar way there are theories of game protection, whereby the game birds and animals are to be preserved in some vague manner which involves no material outlay or effort by the theorists or others directly interested, and of these fallacious theories, this talking without action, none is more in favor with the theorists than the one of shifting the burden of game protection from the States—to which it properly belongs—to the nation at large, which has no direct concern in it, inasmuch as the game is the property of the State, and the State, therefore, has ample power to protect it if it is so disposed.

Paraphrasing Horace Greeley's words, the way to protect the game is to protect it. The forming of clubs which pass vigorous and lengthy resolutions; the resolutions themselves which recite in stereotyped phrases year by year that violations of the game laws are increasing and that the total destruction of the game is imminent; that the song birds are being rapidly exterminated; and that, therefore, it be recommended that somebody or other do the material work of protection, and that then be it moved that we adjourn, do not protect.

While the theorists have been making their annual or semi-annual set orations on the theme that some one should do something, some States have demonstrated that the way to protect their game is to protect it, and this without blare of trumpet or strident "be-it-resolveds."

The States of North Dakota and Minnesota are conspicuous as examples of what can be done to protect the game by doing something material to protect it. First the people of those States in their wisdom passed proper game laws which are not a dead letter, but such as are made vigorously operative by establishing the needed legal machinery for their enforcement. And how did these States accomplish so much to conserve their own game interests? The taking of game beyond their boundaries was made an unlawful act, thus stopping that ruinous drain on the supply, the shipments to the markets of the great cities. Game wardens in sufficient numbers and with proper legal powers, were appointed to see that the law should be everywhere enforced. So watchful and zealous are they that it is extremely difficult for any one to take birds out of those States, be they ever so cunningly concealed in trunk, or package falsely marked, or in fearless openness, as many can sorrowfully testify who have tried it. Every man who shoots is restricted to the killing of a certain reasonable number, and anything over that number is illegal. North Dakota requires that non-resident shooters shall take out a license, for which a fee of $25 is exacted, while Minnesota throws open her doors freely to all law-abiding shooters who come from States which exact no license fee.

The local wardens in Minnesota are under the supervision of State Warden Fullerton, while those in North Dakota are under the supervision of State Warden Bowers. Both are energetic and efficient. The under wardens are required to be active and zealous in the performance of their duty. The chief wardens of the two States coöperate with each other in suppressing violators or bringing them to justice. All praise is due them for their success.

Thus by directly watching and preventing the shipment of game; by arresting and punishing offenders; and by cooperating with each other, the States of North Dakota and Minnesota protect their game by protecting it. The people of other States can protect theirs in precisely the same manner, and in no other manner.

The people of a State must make their own laws to protect their game, and then provide ways and means for their enforcement. Proper laws and good wardens will protect to a certainty; theories will not protect in the least. There is a distinction between talking about what should be done and doing it.

SNAP SHOTS.

Governor Bloxham, of Florida, has issued a call for an international fishery congress, to assemble at Tampa on Jan. 19, for the purpose of "devising means and formulating methods to save from total extinction many varieties of valuable food fish." In his invitation, Governor Bloxham commends the words of the Hon. T. T. Wright, who says:

> The water farms of the United States, oceans, lakes and rivers, are neglected, and but half developed. Let us turn on them the searchlight of science to reveal their treasures and possibilities, and thereby increase openings for new fields of labor and a larger supply of food for mankind.

And the expressed hope of the promoters of the congress is that its proceedings may stimulate anew the interest in fishculture and wise fishery methods. Governor Bloxham has sent invitations to the Governors of other States, and all fish commissioners in this country and abroad. It is understood that the United States Fish Commission will coöperate. Through Secretary Sherman, invitations have been extended to Great Britain, Germany, France, Russia, Spain, Portugal, Italy, Austro-Hungary, Greece, Sweden and Norway, Belgium, Holland, China, Japan, Mexico and the South American governments, to be represented by their fishery reports. It is manifest that the promoters of the Tampa Congress are making their plans on a gener ous scale.

William A. Stiles, editor of *Garden and Forest*, and one of the Park Commissioners of New York city, died on Tuesday of last week, Oct. 5, in his sixty-first year. By his lamented death the community has lost a citizen and public officer of the highest type. Possessed of a keen appreciation of the beautiful in nature, and ever zealous for its preservation from the assaults of vandalism, Mr. Stiles devoted himself to the championship of the public parks with an enthusiasm which never flagged. In his alertness, thorough understanding of the situation, and unwearied opposition, one set of schemers after another, who have sought to convert the parks of this city to their own selfish purposes, found an obstacle they could not overcome. The people of New York will hold in grateful memory the public services of William A. Stiles.

A Virginia correspondent tells us in a note, given in another column, that the recent decision by a county judge declaring unconstitutional the two-years close time quail law will have application only in the county of Mecklenburg, and will not affect the Commonwealth at large. The Attorney-General has given a counter opinion upholding the law. For Virginia then there will be no quail shooting in 1897, except in Mecklenburg county, and so the curious condition will prevail that the citizens of this one county will enjoy "constitutional" immunities and privileges denied elsewhere. Reports of the bird supply show that the actual result of the two-years close time has been to restore the stock most generously. Quail are found in their former abundance. With another favorable winter the stock will be a generous one in 1898.

The Sportsman Tourist.

UP AMONG THE BALSAM FIRS.

Upward, ever upward, over the broken rock, over the rotten logs, sometimes wading against the rush of the current in the little stream, sometimes clinging by finger ends and "toe holt" along the smooth face of the storm-worn cliffs, but always upward, always further on. The peak looked only a short hour's journey from below, yet it was still on up and the sun hung only an hour above the rim of the world. A tall cliff bars the way, one of those smooth walls of rock that reaches away up into the fog wreaths. Here the little creek comes tumbling out of a notch in the top and fades into a film of spray, just a wisp of a water veil away up there 70ft. above our heads, yet there is a pool below, right among the jagged rocks we have just climbed over, and the little creek tumbles merrily on from this quiet pool just as though it started there, instead of from the glaciers up above where it tumbles over the moss-stained cliff—or is it copper stain?

Surely that moss is not all moss, some of it is the green stain of copper. The prospecting hammer rings its metallic clink, clink, against the face of the cliff. "How's that for good looking rock?" Half copper! Soon a cedar stake is secured among the rocks and there is writing in lead pencil on the smooth wood. "I, the undersigned, this day claim, by right of discovery and location, 1,500 lineal feet along the course of this glacier lode." That is what the stake means—a notice that we have a claim there where the falls are in the wild mountain glen.

The problem of the cliff still confronts us, for we have a notion we will see what mineral is hidden there among the rough peaks above the thick timber.

Off come the heavy shoes, off with coat, hat, packsack, belt and pistol. Our work is cut out for the next 100ft. and the coil of rope and the stout Alpine stick with its iron-shod point and its curved steel hook is all the load we need—that is, the man who goes ahead needs no more.

Soon a figure moves up and along the smooth face of the cliff, clinging like a big beetle, a grip with the finger ends, a bit of hold with the bare feet, a reach and a swing with the steel hook of the Alpine staff for a grip in some little crack.

Slowly up and across the sunlit rocks, slowly over the moss patches and the copper stain, upward and on toward a ragged cleft that splits down into the rock and offers a good road to the top. Sixty, seventy feet above the waiting partners below, who know better than to shout or offer advice to the climber, for they well know that a look over his shoulder, a sudden shifting of weight, any little miscalculation on the part of the figure there against the cliff, may mean a plunge down, a sickening, killing fall into the mass of broken rocks at the foot of the cliff where the pool nestles. The climber has a steady head and good muscle and slowly creeps along, face to the rocks, upward, onward, and at last stands in the cleft.

The coil of rope is unslung. Look out! It unwinds its twisting length downward, and the partners make a packsack fast. The climber takes a turn over a spur of rock, and the second figure climbs the sheer face of rock hand-over-hand, up the stout line, until two figures stand in the cleft of rock. They haul away, and a packsack swings, sways, rolls and bumps along up over the rock until it, too, enters the notch. Soon all the outfit is bunched there together, and the third figure swings against the painted cliff, and he too, enters the cleft.

Packs are slung, the rope coiled, and on they go, these three partners, climbing on up to the top through the split in the rocks.

A juniper grows at the rim, and through this they swing on up into the full light of the yellow sun, just dipping below the rim of the world.

All around rise more cliffs, on all sides save one. At their feet a little lake where the brook is born; a little lake as black as tar; a lake that goes down into the very heart of the world, and whose shores are grim, smoke-stained, blackened and burned cliffs that tower 1,000ft. above its placid surface. Sometime in the long ago this mountain burned and smoked, and red fires bubbled where the little black lake is. Burned and simmered with the blue flames of sulphur; sent forth fumes of copper and arsenic; fretted and lashed its molten rocks against the crater until, weakened, it broke, and the red hot rocks ran in liquid stream down over the mountain side where the partners climbed up.

That was long ago, and one only know it happened because the sign of it all is in the stone record of the eternal mountains.

Now there is a carpet of moss, thick and soft, up there where the hot rocks ran down the mountain's side. Tall balsam firs fight the mountain storms, fight always for life. They twist their clinging roots into the crannies of the rocks, growing stronger, holding firmer, and putting out more branches that are thick with needles. The mountain gales twist them, tear at the limbs, gnarl them into a mass of burls and lumps, stunt their trunks and help the ice and snow to continually battle against them.

The big brown bear reaches up with his claws and tears the bark to ribbons. The big blue mountain grouse crouches among their thickly matted branches and hoots by the hour in his slow and melancholy way. The hunter or prospector lops off their "feathers" for his bed, yet the tree lives on until some spring day the snows and ice that have slowly melted under the warming sun let loose and start down the mountain, roaring screaming, booming like a thousand demons, crushing the rocks into bits. The poor old balsam stands in the path of the roaring mass, it touches the tree, goes on and buries it, slides on down into the thick timber far below, and when it is gone the fir is gone too, and there is only a smooth strip of desolation for the mountain winds to rush over.

We read these things in the signs up there while we were camped on the crater rim. For water we had to melt a bit of glacier instead of using that from the black little lake that was full of copper and of arsenic, and the snow water had none of these when it froze and helped to build the glacier.

We made a quick camp that night there by the ice that is forever moving down the hill, little by little, and we dragged many limbs from the balsam firs over close to the particular patch of moss we had spread our blankets over. It was cold and we had no shelter, only our blankets that we had packed those weary miles in our packsacks. That is how we came to stand watch and watch through a beautiful night and keep a big fire burning among the rocks that had been strangers to fire for ages.

At 11 o'clock it was my turn to sit there awake and see that the fire crackled merrily while the others slept. Such a night I fear will not come to my lot again, but I will always remember the quiet beauty of that one.

When I turned my back to the fire and got the glow of it out of my eyes, I could see the cold, white snows of other peaks glimmering in the moonlight, and to see them the better I climbed a bit of rocky spur, 30ft. or so in height. What a view was spread out in the steely moonlight!

Seven ranges, one over the other, ran their rocky, ragged length from east to west, beginning across the valley that fell away into the blue shadows below me, one range showing its snow-crested peak line above the next nearest until seven were in sight before they met the lower edge of the Northern Lights glimmering in the sky—a background for a grand and rough picture.

Below in the valley mists were creeping silently upward, filling the trees with a damp veil, bringing the blue shadow line always higher, until soon they filled the valley with a great silver river of fog, that the moon burnished into snowy white.

A low murmur of rushing water droned up from below, so faint and far away that at times it was like the gentle summer air among the pines. It was a long way down to the bottom of the valley, and I knew the river that made the noise roared very loud, for I had caught fine trout in its icy waters.

There was an indescribable stillness there among the rocks and the balsams that night, and all the noises from below were faint, yet very distinct. Once I heard a gray wolf howl, and it made me feel creepy, it was so doleful and so full of a wild fierceness, for all it was so far away.

Later I caught a disappointed yell from a hunting cougar that had perhaps missed his kill among the jack pines and tangle of the old slide where the deer fed, half way down the mountain.

I stood there with pipe aglow and my blanket wrapped about me, Indian fashion, until the fire got burned down to a red and steady glow, then came back and stood again, listening, looking at that grand living picture from a point of vantage 10,000ft. in the air, right among the topmost pinnacles of the highest peak in the range. Never, in many trips, have I gazed on so calm and peaceful a scene, so beautiful a picture as old nature threw on her magic screen that night among the peaks, after a hard and dangerous climb that lasted all day and ended in finding a copper mine.

The next morning when the last man on watch saw the gray come into the sky, the valley and the peaks were all buried under the clouds, and soon a wild gale rushed among the peaks and tore at the balsam firs that were scattered among the rocks and a summer storm was on. Through the rift of fog in the early morning we saw a big bear trundle his bulk over the moss beds, nosing about for wild onions while the fog left a tiny ball of dew on each hair along his back.

El Comancho,

A STRING OF BEADS.

I had but slight idea of what a lumbering district was like, for though twenty years had passed since I first waved a red flag at a disappearing antelope, this was my first trip to the big woods.

The first thing that excited my wonder on leaving the train at Aitkin was the badly-splintered sidewalks. Aitkin was not then a very ancient burg, but its sidewalks had the appearance of having been worn for a century at least. The planks were worn and splintered like the back step of a set of target traps that have been used for years, by the fellow who fell short, to paste a 30in. circle on, in proving his gun in error and not himself. In fact, they looked as if they had withstood a long siege, where shotguns and No. 7 shot were used. Not wishing to brand myself as a tenderfoot, I asked no questions but wondered, in a vague sort of way, as to the cause.

A few days later, with the acumen of a Sherlock Holmes, I solved the riddle. A log raft came down the Mississippi, and when I saw the drivers swarming about the streets in their spiked shoes, I soon guessed what was the matter with the walks.

The first man I scraped an acquaintance with was Geo. Rice, the veteran agent of the Northern Pacific R. R. Co. at Aitkin. Mr. Rice proved to be an enthusiast on the game question, and volunteered to show me fur, fin and feathers in any quantity required if I would only wait a few days, until a press of business was "rounded up," so that he could take a vacation of a few days.

The interim of waiting was filled in by daily excursions to nearby lakes and streams.

My first trip was to Deer Wood, where a fishing lodge was kept by some parties whose names I have forgotten. The fishing was fairly good, but with no demand for my catch I soon tired of that. My second trip was south to the cluster of lakes that are strung like beads along the thread of Mud River. Just why this stream should be called Mud River was hard for me to determine, for clearer, purer water never bubbled over more golden sands than lined its course from bead to bead.

There was Bay, Farm Island, Pine, Hickory, Spirit, Wild Rice, Mud, and Hanging Kettle lakes, all strung on a thread fifty miles in length, and then dropped into the great wood in such manner that the first and last bead were only about six miles apart. All of these lakes except Wild Rice, which, as its name signifies, is overgrown with wild rice, were clear, pure and deep. The margins of these lakes varied from the wide sandy beach to a bold, rocky and precipitous shore, with now and then a fringe of rushes, where lurked the pickerel and bass, and where the woodduck reared her young and whiled away the summer days.

There were occasional rice bays, too, where, late in the evenings, hundreds of woodducks collected to feed on the wild rice. In summer or early autumn there are very few ducks, except woodducks, in that region; but late in October, when the mallard comes down from the North, I have seen them collect in these rice bays and lakes in countless thousands.

The bays are unapproachable except by boat, as wild rice is the origin of floating bogs, the stems floating on the surface of the water and collecting other vegetable matter until a sod is formed. This floating sod sometimes extends far out over deep water, and to break through it, with 20ft. of water underneath, means the knocking of a prop from under the great Republic, by disappearing for ever.

Farm Island is rather the most beautiful on the string, though I felt with the fellow who was besieged by feminine beauty that "'t were easy here to make a choice were the other fair charmers away." In this lake is an island of some sixty acres of very rich soil.

The foliage on the island is often green long after the surrounding woods have taken on the tints of autumn, the warmth of the water holding jack frost in check to a later date. The Indians had, in the long ago, taken advantage of this immunity from early frosts and cleared patches on the island on which to raise corn and other vegetables; but the government, seeing this, has removed them to other localities where no such opportunities for self-support offered, their clearings have grown up to weeds, and the long boxes that cover the graves of their buried dead are rotting away beneath the pines.

From this cultivation by the Indians the lake gets its name of Farm Island.

On one of my rambles in the woods I had occasion to stop at a farmhouse for dinner one day.

The house was situated on Mud River, between Hickory and Spirit lakes; Hickory being some 200yds. to the west of the house, and Spirit a like distance to the east. The dinner proving satisfactory, I began negotiations for a week's board, which resulted in the young lady who had served the dinner calling her father, who was at work somewhere about the place.

I was soon introduced to Mr. Ben Lamere, and in answer to my request for a week's board he said, "Sure," and the preliminaries being arranged, the conversation turned to hunting, and I was soon apprised, incidentally of course, of the fact that Ben Lamere was the great deer hunter of that section.

Many and lurid were the tales of deer, bear and moose hunting old Ben told me that autumn afternoon as we sat beneath the primeval oaks before his door.

The Lamere place was finely located for a headquarters from which one could hunt, fish and dream the time away, and I improved it to the utmost while opportunity offered.

The following day I went to Aitkin for my outfit and also brought back lumber for a boat. This boat when finished proved to be the handiest ducking boat I ever owned, and cost the splendid sum of $1.60.

Leaving instructions at Aitkin for Mr. Rice to notify me when he got ready for our proposed hunt, I devoted myself to such pleasures as were within my own resources.

My first trip after locating at Lamere's was to one of the rice bays after wood ducks, but as an hour's work of an evening supplied the demand for several days, I had much time for fishing and exploring. Exploring places that are conveniently near to comfortable quarters is one of my strong points, and here I had ample scope. An hour's walk in the woods would take me to lonely dells where I could easily imagine no human foot had ever pressed its yielding moss before; an hour with the paddle would give me the choice of three beautiful lakes, and two hours would give me the choice of two more, Wild Rice, where I went for ducks, and Farm Island, where I went to "moon" about its shaded and rocky coves and islands, or drift upon its bosom when the wind was still.

The latter was very irregular in shape, having some twelve or fifteen miles of shore line, though only about three miles from land to land in the longest reach. It had large bays and small bays, and long, narrow cover extending far back between the wooded hills. Beside Farm Island there was one other small island in the lake. This island reared itself suddenly up out of the lake to a height of 30ft. or more, and its diameter did not exceed 60yds. either way. Its shores were very abrupt except at the south end, where there was a sand spit which made a convenient landing.

On one side trees grew out from among the rocks and hung far over the water. Under the shade of these trees I have passed many a pleasant hour lying on the clean washed boulders and listening to the lap, lap, of the waves when the wind was light, or the heavy swish, swish when it was strong.

I had been at Lamere's but a short time when rumors of bears began to be rife. Old Ben urged the feasibility of my hunting the oak ridges with a gun and shooting some of them, but the sly coquettes, the lakes, had me in tow, and I dallied with them, though fully determined to stroll out some day and shoot a few bears.

The rumors of bears, however, which were vague and uncertain at first, grew stronger and ever stronger, with living witnesses to testify as to the truth of them. At last the climax came that swept me into the bear column. I had stayed at the house one day to write some letters, and was still engaged with them when a boy dashed into the house with the information that his dog had treed a bear and was then watching him a couple of hundred yards up the road.

The boy and his sister were on their way to school, the girl being some distance in advance, when a bear suddenly appeared in the road between them. They had a dog with them which charged the bear on sight, and the bear had taken to a tree; the boy then returned for his Uncle Ben and his rifle, while the girl ran on to the schoolhouse for safety.

In one minute after this announcement three heavily-armed men were running up the road at top speed—*i. e.*, Ben Lamere, with his .45-60 rifle; a neighbor who had called in, with a .40-82, and myself, with my 10lb., 10 gauge Parker, loaded with 6drs. of black powder and twelve buckshot suitable to its choke in either barrel. The boy and myself, being the best sprinters, arrived at the tree first; but bear and dog were gone, and a diligent search failed to find any trace of either. Being powerless to do more, we returned to the house, and my first bear hunt was at an end; but the seeds of a mad ambition were sown, and I resolved to kill a bear.

No sooner was it noised abroad that I had set my sight for bear than I began to get advice from all corners as to how to proceed. The methods of procedure were as numerous as the advisers. One told me I would find it very tame sport, as shooting bears was like going into a pig pen and shooting domestic hogs. Another one told me if I should find a she bear with cubs, I must charge the cubs with a savage yell and they would tree, and the old bear would return for them, when I would be sure to get all three. Still another gray-bearded nimrod, who had grown stoop-shouldered from carrying a rifle and had never been known to kill anything larger than a chipmunk, told me the best way to do was to catch one of the cubs and twist its tail until it squealed, and when the old one charged, open-mouthed, to insert the muzzle of my gun between her teeth and fire both

barrels at once, and then run away while she was spitting out the shot.

Thanking them all for their well-meant and innocent chaffing, and taking old Ben's advice as to where to look for the game, I made up my mind to kill the bear in whatever way seemed advisable when I found him.

The first week of bear hunting was a failure, for, outside of finding a couple of rotten logs that had been torn in pieces by bears in search of grubs, and one track in the mud where one had crossed a small run, I saw no sign of a bear. The outlook was rather discouraging, but loafing in the woods or other where with a gun has agreed with my disposition from the long ago, when I used to carry a crooked stick and fondly imagine it was a gun, up through the varying stages of horse-pistol, smooth-bore rifle, musket, single-barrel muzzleloading shotgun, ditto breechloading, to the acme—a double-barrel Parker ducking gun.

Thus it was that I persevered—despite the facts which leaked out concerning the success, or want of it, of other bear hunters in that locality—to the grand *finale*.

One afternoon I took the boat and paddled over to the east end of Spirit Lake, some three miles from the house, and leaving it, started across the divide on foot toward Hanging Kettle.

The divide between the lakes is a high ridge covered with oak, and a likely place for bears, which follow the oak ridges in search of acorns.

Along the west shore of the Hanging Kettle is a road which leads from Aitkin to the settlements to the southeast. I had wandered down as far as this road without seeing anything, when I met a boy who lived a little farther down the lake.

Broaching the subject of bears to him, he was all excitement in an instant, and said he had seen three the day before. To my eager query "Where?" he answered, "In the oaks on the ridge just above the east end of Spirit Lake." I had just come from there, but bringing the interview to a speedy close, I sidled off in that direction.

For two hours I searched through the oaks, cautiously scanning every suspicious object, and listening intently to every sound without result, and finally sat down to rest on a log that had fallen across an old logging road. The road had been in disuse for several years, and had grown up to weeds. On either side of where I sat was a dense growth of underbrush, while the large trees formed an arch overhead which shut out the rays of the sun.

How long I sat on that log, or what lands I traveled, or what adventure I experienced I do not now know; but I was brought back from pursuit of the imaginary to the real, by a crackling in the bushes down toward the lake on my right. As I listened the crackling became plainer. That something was approaching through the underbrush there was no doubt; but what?

There were domestic cattle running at large in the wood, and in the distance I could hear the tinkle of a bell, and a horrible fear seized me lest the author of the crackling develop into a cow.

It did not seem like a noise made by a cow, however, but more like a dog sniffing this way and that through the dry underbrush. I had done my best to make myself believe it was a bear, with but indifferent success, when the crackling ceased about 20yds. to the right of the road.

Listening intently, I could detect no sound, and the seconds began to drag like the footsteps of a weary hunter crossing a marsh with twenty fat mallards on his back. I waited some time for a renewal of the sound without hearing anything, and then started down the road in the direction of where I had last heard it.

I had not proceeded 10ft., looking sharply into the underbrush at the right, when my attention was turned up the road by a snort and a commotion in the weeds just ahead and the next instant a long, black something, resembling an arrow in its flight, shot across the road and into the woods, followed immediately by two more. Though the glimpse I got was of the flash and gone variety, I had seen enough to know they were bear, and that they had seen all they wanted to of me and were gone. Remembering what one man had told me about yelling at the cubs, and knowing of nothing else to do, I tore into the bushes and yelled till the dead limbs fell from the nearby trees. But all in vain, for I could hear the bear crash through the brush like a whole herd of horned cattle, their feet thumping the ground like a bass drum until the sounds died in the distance, leaving me alone there in the wilderness with my dead-hopes of ever killing a bear.

An examination proved that the cessation of the crackling occurred when the three bears came to a cow-path. They had then followed the cow-path to its intersection with the road, and had turned down the road toward where I was sitting on the log. The weeds in the old road had concealed the bear from me, and I was probably up and moving before they came out to the road and looking intently in another direction for them; anyhow they made good their escape and I was left to mourn.

From where I had met the bears it was only about 200yds. down a steep hill to where I had left the boat, and my thoughts were tinged with sadness as I reflected what a triumphal home-coming it would have been with those three bears aboard.

The Lamere's were much excited over my adventure, and old Ben told me I had probably come nearer to killing a bear than many men who had spent their lives in the woods. And thus it was I finally came to look upon my bear hunting experience as a grand success. E. P. JAQUES.

[TO BE CONTINUED.]

In Apache Land.

Editor Forest and Stream:

In connection with the article that appeared in your issue of the 18th inst. with the above heading, I thought the inclosed, taken from the New York *Evening Sun* of the 1st inst., might be interesting to some of your readers:

The completion of the Rio Grande, Sierra Madre & Pacific Railroad brings within easy reach of travelers the adobe town Cases Grandes, in Chihuahua, Mexico, built 400 years ago by the Aztecs. Remains of the palace of Rex Ferdinando, the last of the Indian Kings, and those of a convent built by the Spaniards in the seventeenth century, are among the interesting relics of the Aztec decadence. Another showpiece is the aqueduct which serves to irrigate the land in the vicinity of the town. Stone forts, 900ft. above the town, are yet in comparative preservation. But the ancient cemetery is remarkable for its dimensions, which are forty miles long and six miles wide. Thousands of mounds, from 3 to 5ft. high and conical, are scattered throughout the city of the dead, which is 125 miles from El Paso, Tex. R.

Natural History.

LOCKED DEER HORNS.

FRANKFORT, Ky., Sept. 10.—*Editor Forest and Stream:* I send you herewith a photograph of locked deer horns that I found in possession of Dan Divine, an old settler on Clear Lake, Wis., during the recent camp of the Kingfishers at Presque Isle Lake, closely contiguous. Divine had found the horns during one of his scouts through the forests near his cabin by the lake.

The photo imperfectly shows the absolutely unyielding lock, interlaced and firm, of stock and prong, one within the other. It is not partial, but complete in each antler of both deer, showing the tremendous energy exerted by the animals as they came together and struggled in mortal combat. A close examination showed that nothing less than

LOCKED DEER HORNS.
Photo by Sam'l R. Smith.

axe or saw could part the horns that, yielding to the crash of onslaught, had each bent to pass the opposing member and then sprang into natural position behind and within its antagonist. Grasping one of the prongs and shaking vigorously developed no losseness in the lock, but an embrace rigid and firm as if the whole were one piece.

Placing the horns on a snow sled, the photo was taken by Dr. Elliott, of Lodi, O. In the background are shown the waters of Clear Lake, famous for pike and muskaling. Old Dan has lived by the lake eight years, and, though forty miles from the nearest doctor, has raised a family of eight healthy and fine-looking half-breed children—the mother an Indian of full blood. SAM'L R. SMITH.

THE CLOSE OF THE SEASON.

AS THE maples and chestnuts assume their gala robes, there is an unusual flutter and excitement among the birds. Eager notes come from the trees and hedges and from the grass and thickets along the byways and open recesses of the woods. Finches and sparrows and kinglets and swallows begin to gather in small groups, which are daily augmented by fresh arrivals. The half dozen become a dozen, twenty, a hundred, and sometimes swell into thousands. They cover the branches of trees and rise like tiny black clouds from councils held in open pastures; they hold informal meetings on telegraph wires, along the roadsides, on the roofs of barns and sheds, and out among the apple and cherry trees. They are eager, noisy, impetuous, and each seems anxious to add his mite to the general stock of information. There are reminiscences of former journeys to be related; of perils escaped, of delightful stopping-places, and of places to be avoided, and the leaders listen with heads cocked on one side, and judiciously sift and digest the vast amount of advice and information poured into their ears.

Presently long columns of lithe, dark-vestured swallows rise into the air and move away toward the South, and they are soon followed by finches and sparrows and kinglets. As the companies move away, the clear, sharp commands of leaders may be heard closing up lines of stragglers or giving directions as to the route.

Among the deeper recesses of the woods the thrushes flock silently and disappear. We scarcely realize their departure until they are gone. One day we hear the clear, flute-like notes among the shadows of the trees, the next, their haunts are strangely silent. And it is only by this silence that we know our sweet, shy friends are on their way to their southern homes.

Down in the meadows the bobolinks have already flocked and gone, and one by one the other small birds form their columns and move away. As we wander through the now quiet woods we have a strong, almost uncontrollable impulse to follow them. The silence of the woods, where there was so much song and life, is more depressing to us than the increasing cold and frequent premonitions of snow; and were it not for the occasional appearance of a squirrel we should be almost tempted to forsake the woods ourselves.

Little by little the red and gold of the maples change to a dull, uniform brown, and at last we notice a large, silent bird, high up in the air. It is a hawk going south, and marks the close of the season. F. H. S.

PEACE DALE, Rhode Island.

Birds in Predicaments.

MICHIGAN CITY, Ind., Oct. 9.—*Editor Forest and Stream:* Several of your correspondents have, in recent numbers of FOREST AND STREAM, related cases which have come under their observation of animals or birds having been accidentally entrapped or captured in some singular manner. Recently a friend of mine had an experience of this kind which is worth relating. While driving along a country road which crossed a small brook he heard the familiar cries of a chicken in the direst trouble, and, pulling up his horse, looked around for the cause of the disturbance.

At first he could not locate it, but presently discovered a hen, evidently in great distress and calling loudly for help, standing in the brook where the water was 4 or 5in. deep. He went down to the spot to investigate, and as soon as Biddy saw him coming she plainly recognized a deliverer, and ceasing her cries and struggles, allowed herself to be taken up without resistance, when it was found that a turtle had hold of one of her feet. She would probably have been dragged into deeper water and drowned had not some one come to her rescue.

On another occasion I found a song sparrow entrapped where it must have met a lingering death but for friendly help. While driving in the country, where one of those detestable wire fences bounded the road on one side, I saw a small bird hanging by one leg to the upper strand of the fence, motionless and apparently dead. I stopped my horse to have a better look, and saw the gleam of a bright eye which plainly belonged to no lifeless object. As I approached the little thing began feebly to flutter its wings, but could not do much more. On examination, I found that in alighting upon the twisted wire it had got one of its toes between the two strands, where the inserted barb holds them apart for half an inch or so, and on trying to fly away found it was fast. The foot was badly wrenched, but I carefully released the imprisoned toe, and had the satisfaction of seeing the little bird take wing after resting for a few moments, somewhat crippled, but otherwise all right. I presume nature is kind to the wild things, which have only her to depend upon.

I remember once when I was a boy hunting squirrels in the woods of eastern Indiana, I espied one upon a sloping tree but a short distance away, and was aiming at it, when over the sights of the rifle I saw that a forefoot was gone, but the stump seemed (and I could see it quite plainly) as nicely healed over as if amputation had been performed by a skillful surgeon. It had probably been taken off by a ball from some other sportsman's rifle.

I am glad to remember that boy as I was, when I saw that my game had but three feet I would not shoot, but lowered my gun and walked resolutely away from temptation.

LEXDEN.

Song Birds and the Law in Georgia.

IT was with much pleasure that I received this week a letter from Hon. Mel Branch, stating that in accordance with my article of last week on the legal protection that should be given bull bats and some other birds, that he would introduce such laws in the next Georgia Legislature. He asks me to classify and enumerate the Georgia birds; which with the help of my ornithological friend, Dr. Truitland Cleckley, I now do. The present Georgia law, which I give, is a positive invitation to gunners to kill during certain portions of the year insectivorous and singing birds! "It shall be unlawful to kill any wild turkey, pheasant, snipe, partridge or any insectivorous or singing bird, except English sparrows, crows, larks, rice birds and wheat birds in the State, between March 15 and Nov. 1, and it shall be unlawful to kill any dove between March 15 and Aug. 15." This law puts a mocking bird on a parity with a partridge and invites the slaughter of them both between Nov. 1 and March 15.

The useful birds and the song birds, which I should protect through all the twelve months are these: Turkey vulture, black vulture or carrion crow, cuckoo or rain crow, woodpeckers, blue birds, fly catchers, blue jay, orchard oriole, buntings, nonpareil, martins, swallows, vivoes or hanging birds, warblers, mocking birds, nut hatchers, chickadees, gnat catchers, bull bats or night hawks, whippoorwill, chuckwills widow, yellow hammer.

The present law enumerates the game birds and is a fairly good law possibly for their protection. This list is partridge, snipe, wild turkey, pheasant and doves. The dove law might be better if extended to Sept. 15. For doves raise two broods per season. Some nest as late as August and the young are not fully fledged till about Aug. 15.

The following birds are considered detrimental to the public good and should not be included in protective laws: English sparrows, crows, rice birds, wheat birds, hawks, owls, kingfishers, herons or cranes, king birds, jackdaws, shrikes or butcher birds, cat birds, fig eaters or crested fly catchers, sapsucker.

I should like to put in a good word in this list for the catbird, for his quiet, subdued songs are very sweet; but he is under the ban in more ways than one.

No one expects that a law could put a total stop to the killing of insect-eating birds. But as with the game bird law when first introduced, it would have some effect, and that effect would be cumulative with succeeding years. Without a game warden, who is an important personage in many States, we cannot expect very many arrests and convictions. But good laws enlighten public opinion and public opinion of itself aids in their enforcement.—*N. L. Willett, in Augusta Chronicle.*

Shooting Casualties.

TROY, N. Y., Oct. 8.—*Editor Forest and Stream:* Judging from the reports in the daily papers for the past week or two, this season's crop of "shot-by-mistake" victims promises to be a fairly large one. Some of the cases reported, were it not for the fact that they were attended with loss of life or serious bodily injury, would be really funny.

For instance, a few days ago on the Beaver River, in the Adirondacks, one hunter shot another, mistaking him for a deer; and the following excuse is given as the cause of the shooting: The shooter had heard or read that at this season of the year the deer are in the blue coat, and as his comrade wore a blue coat—navy blue, I learn the color was—he, the shooter, took it for granted that his victim must of course be a deer. At last reports the man in the blue coat was in a Utica hospital in a dying condition, the man who shot him remaining in the woods, presumably looking for another deer in the blue coat. The papers, however, say that he was too nervous to accompany the party out—a case of buck ague perhaps.

On the night of the 6th inst., near Hudson, N. Y., a man named Yougonson, while out coon hunting, was fatally shot by a companion who mistook him for a coon. Yougonson died the next day from the effects of the injuries received.

How in the name of the seven wonders a man could mistake another for a raccoon surpasses understanding. A navy-blue deer is bad enough, but mistaking a man for an animal scarcely larger than a house cat is a blunder worse than crime.

The papers of this morning report a fatal shooting case at Tuckahoe, N. Y., where a fur cap was mistaken for a woodchuck. Unfortunately the head of the owner of the cap happened to be in it at the time when the shooting occurred, and thus another was added to the long list of fool accidents.

I imagine that if a few of these careless shooters found their way into the penitentiary each year there would soon be a decided falling off in the number of so-called shooting accidents. A mighty good rule to observe is, when you shoot be sure you know what you are shooting at. S.

Game Bag and Gun.

The "Brief's" Pictures.

There are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

THE NATIVE AMERICAN HUNTER.

II.—THE LIE THAT CAME TRUE.

It was more than forty years ago. Sun's Road was a young man eighteen or twenty years old, big enough to have a sweetheart, and there was a girl in the camp that he greatly wished to please. He had been to war several times and had counted some *coups*, and once he had given his body to the enemy*; but he had lived. He was ambitious, and wanted to do more great things, to make the people talk about him, to be successful always, to become a great man.

The Cheyennes were camped on the South Platte, a big village of near 200 lodges. It was late in the fall, and all had their new lodges, white and clean. The camp looked nice. The buffalo had all gone away. None were to be found. The people were starving. They had eaten all their food, and now they were eating their dogs, and most of these were already gone.

It happened one day that two boys, each the son of a chief, had killed each an antelope and taken it to his father's lodge; and these were cooked and the chiefs called together to feast. There was not enough food to allow them to call any other people beside the chiefs. After these chiefs had eaten, they talked of the suffering of the people and tried to think what could be done to help them. After a time one of the chiefs came out of the lodge and walked through the camp, calling out to the people. He said: "Listen, listen, you people; we will all stay here in this camp." This he called out again and again. After a time Sun's Road heard his name called. The old man shouted: "Sun's Road, Sun's Road, the chief wants you to go to his lodge. He wants you to go out to look for buffalo." Then he heard another young man, Red Coyote, called in the same way.

Sun's Road went to the chief's lodge. They told him to sit down by the door, and gave him a little piece of antelope meat to eat. After he had eaten the piece of meat, the chief said to him: "We want you to go to-night across the river on to the other side, and you will go to where the pile of bones is, where we had the fight with the Pawnees. On the other side of that hill the country is level for a long way. Look over that country and see if you can see any buffalo, and come back and let us know what you have seen. If you see no buffalo do not go any further. Come back from there." This pile of bones was a fortification of buffalo bones built on the top of a very high hill by some Pawnees who, many years before, had been surrounded then by the Cheyennes.

Sun's Road started on his journey. When he got to the river he took off his leggings and moccasins, and waded across. It was cold, for by this time it was pretty late in the night. On the other side, he put on his leggings and moccasins again and walked on north. After he had walked a long way, and it was beginning to get toward morning, he felt tired, and thought he would rest for a little while. He looked about for a place to lie down, and pretty soon he found a little bunch of brush behind a small bank, and decided that he would unbelt his robe, and lie down and sleep for a little while. He did so, but he had not slept long when his feet got cold and woke him, and when he raised his head he saw that it was beginning to get day. He said to himself: "Why, I must not stay here longer. I am out looking for buffalo for people who are starving. I must not lie here." So he rose and tied up his waist and started on.

He walked on and on, and at length he saw the high hill and on it the pile of bones. As he went on, it came nearer and nearer, and he walked up it until he was close to the pile of bones. Then he stopped, for he was afraid. He was afraid that when he looked over the hill he would see nothing. He wanted to make a great man of himself and to take back the news that he had seen buffalo, so that his name would be talked about among the people, and that they would all say that he was smart and was lucky. He was so afraid that he would see nothing when he looked over the hill that he stopped. He said to himself: "If I should not see anything and go back, they will all hear of it, and my girl will hear of it. They will not think much of me. If I could only see plenty of buffalo, what a great man I should be!"

He went on, and when he reached the top of the hill and looked over, there, down below him, he saw thirty bulls and a calf. He looked at them and said: "Those are bulls. They are not much, but something." He looked another way, and presently he saw one bull, and then two, and others, scattered—in all five or six. He said again: "These are not many, but they would be some help to the people." A little to his right and down the hill was a point of the bluff that hid some part of the country beyond, and he went down there, just a few steps, to see what was over that way. When he got there he looked out into a very pretty, level basin, with a stream running through it. He said to himself: "This is a pretty place, a good place for buffalo; there ought to be a great many of them here." At first he could see none, but he kept on looking, and at last he saw far off a few—a very few—perhaps ten or fifteen, cows.

For a long time he stood there, thinking what he should tell the chiefs when he got back to the camp. He said to himself: "If I go back and tell them just what I have seen it will be nothing. Now, I want to make a great man of myself, and I am going to tell them a lie. Yes, I shall have to tell them a lie. I shall tell them that when I looked over the hill I saw those thirty bulls with one calf, and that beyond I saw many buffalo—hundreds. I know it is a lie, but I shall have to tell it." Then he turned about and went back.

He traveled fast, walking and trotting, and sometimes running, for he wished to get back to the camp before night. It was late in the afternoon when he came to the river, waded across it and reached the camp. He went into his father's lodge and sat down. His father was at work making a whetstone; he looked up at his son and said: "Ha, you have got back." Then he turned to his wife and said: "Give our son something to eat." His mother was cooking a little dog, the last one that they had, and she gave Sun's Road a piece of it and he ate. Then he took off his moccasins, went over to his bed and lay down, covered himself with his robe and went to sleep. He did not speak and he made no report to the chiefs. There were some children playing in the lodge and making a little noise, and his father said to them: "Go out. You will wake my son. He is tired and has gone to sleep."

Sun's Road slept only for a short time, for the lie that he was going to tell troubled him. Pretty soon he heard one of the old chiefs coming—old Double Head. He could hear him coming, coughing and grunting, and he knew who it was by the sound. The chief entered the lodge and sat down and asked Sun's Road's father if his son had returned. The father said: "Yes, he is asleep." He filled the pipe and Double Head smoked. Sun's Road lay still. In a few minutes he heard another old man coming toward the lodge, grunting. He knew who it was—White Cow. He came in, sat down, asked the same question and smoked.

White Cow called to Sun's Road: "Nephew, get up now and tell us what you saw. We are starving."

Sun's Road rolled over, pulled the robe from his head, raised himself on his elbow and said: "I went to the hill of the Pile of Bones, and right over beyond the bones on the other side of the hill I saw thirty bulls and a calf. Just below them, as I looked over, I saw many buffalo."

The old men stood up and went out. Soon he heard them crying out through the camp to all the people: "Sun's Road has got in. On the other side of the pile of bones he saw thirty bulls and a calf, and just below this he saw many buffalo. Gather in your horses; get them up; women sharpen your knives; men whet your arrow points; tie up your horses, and early in the morning we will go after buffalo. The camp will stay here. All will go on horseback." Sun's Road was frightened, but it was too late now to be sorry for what he had done.

Next morning, just at break of day, before it was light, all the people were out. The old crier was shouting out: "Saddle your horses! Make ready to start! Men, women and all!"

Soon all were saddled and they crossed the river and went on. The chiefs rode first, and every one was behind them; no one rode ahead of them. They went pretty fast, for all were eager to get to where the buffalo were.

Pretty soon they came in sight of the pile of bones. Sun's Road could hear the old chiefs talking and saying to each other: "There are the bones; soon we will be there at the buffalo." All the time he was thinking of the lie that he had told, and remembering that there were only a few buffalo, while he had said that there were many.

When they reached the foot of the hill close to the bones, the chiefs stopped, and everyone behind them stopped, too. All the chiefs got off their horses and sat down in a row and filled the pipe and began to smoke. Soon Sun's Road heard one of them call out: "Sun's Road! Sun's Road! Go up to the pile of bones and see if you can see your buffalo now. Let us know if they are there." Then Sun's Road was frightened; his heart was beating so fast that it almost choked him. He did not know what to do. He did not move.

Soon old Standing Water, another chief, called out sharply: "Sun's Road, my nephew, go to the pile of bones and see if you can see those buffalo. Come back and tell us what you see."

Then Sun's Road started and rode up toward the pile of bones. Just as he did so, a crow flew over him and began to call, *Ca, Ca, Ca*. He kept riding on, his heart beating fast; but as he rode he held up his hands toward the crow and prayed. "Ah, Crow," said he, "take pity on me and fetch the buffalo." He held his hands up higher, and prayed to the Great Spirit: "Oh, *He amma wihio*, you are the one who made the buffalo. Take pity on me. You know what I need." Then he rode up to the top of the hill.

The moment his head got to where he could see over the hill, he looked and there he saw the thirty bulls and the calf; they had hardly moved at all. Then he went on a step further, so that he could see beyond them, and the place that he had seen the day before was just full of buffalo. Again he held up his hands to heaven, and said: "Oh, Crow! Oh, *He amma wihio*, you have made my words true. The lie that I told you have made come true."

He turned and rode down the hill toward the chiefs. Before he had reached them, one of them called to him to come right to the middle of the line where they were sitting, and when he had come near they told him to get off his horse, and called some one to take the horse and lead it off to one side. They told a young man to bring a buffalo chip, and he brought one and put it down on the ground before the old chief, Standing Water, and then went away. The chief placed the chip on the ground in front of him, about the length of his arm distant from his knees. Then he filled a pipe. Sun's Road still stood out in front of the line in the sight of all the people. He was still badly frightened, for he did not know what they were going to do. He was young, and did not as yet know of the ceremonies.

When the pipe was filled, the old chief lighted it and pointed the stem to the east, to the north, to the west and to the south; then up to the sky, and then down to the ground. Then he rested the bowl of the pipe on the buffalo chip and said: "Sun's Road, come here." When he had come close, the chief said: "Take hold of this pipe and take five draws." The old man held the pipe, and so did Sun's Road, until he had drawn on the pipe five times. Then said the chief: "Now do you hold the pipe," and Sun's Road held it, while the old man took his hands away. Then he said: "Sun's Road, pass your hand all down the stem and over the pipe, and then rub your hands over your face and head, and over your arms and body and legs. Then hand me the pipe." Sun's Road did as he was bade. Then the old man put his hand on the buffalo chip and said to Sun's Road:

"Hŏ tū'a nī vōm?" (Did you see bulls?) and Sun's Road answered:

"Nau vōm." (I saw them.) The old man pulled in the chip a little way toward him.

"Did you see cows?"

"I saw them." The chief moved the chip a little further toward him.

"Did you see two-year-olds?"

"I saw them." He moved the chip a little further toward him.

"Did you see yearlings?"

"I saw them."

"Did you see small calves?"

"I saw them."

After each answer the chip was moved nearer to the chief, and when all these questions had been answered it was close to his body. Then Standing Water lifted up his hands to heaven, and thanked *He amma wihio* for all his goodness to the people.

Then Standing Water cleaned out the pipe, emptying the ashes on the chip in four piles, and left them there. He put his pipe in its sheath, and said to the people: "Now let none of you people go round to the left and pass in front of this chip (between it and the camp). Back off and all come around behind it (on the side toward the buffalo). If you pass in front of it, this might make the buffalo all go away." All the people went around it, as they had been ordered.

The chiefs mounted and all rode up on the ridge, and all saw the buffalo. The chiefs said: "Now here we will divide into two parties. Let half go the right and half to the left. The chiefs will go straight down from here. Let one party go around below the buffalo, and the other party on the upper side. When you get to your places, make your charges all at the same time."

Sun's Road watched where his girl was riding, and when he saw that she went to the right he went that way, too, and she saw him on his fine horse. They charged down on the buffalo and he rode close to a fat cow and killed it.

The people killed plenty of buffalo and took much meat back to camp and ate, and all were happy.

A day or two afterward some one who was out saw the buffalo quite close and coming toward the river. They went out and made another killing. Two or three days later they began to come down to the river and then to cross the river and to feed in the hills about camp. The people stayed in this camp for a long time and killed many buffalo and made plenty of robes.

George Bird Grinnell.

* The adventure referred to here will be related at another time.

THE EVOLUTION OF A SPORTSMAN.

Editor Forest and Stream:

Nineteen years ago this very month of September, an ancient musket, scratched and battered by years of service, rusted through the negligence of its successive owners, and kept thus far from dissolution by divers nails, screws and twists of wire, passed into the possession of a farmer's apprentice. Memory cannot recall all the circumstances of that transaction, but treasure upon treasure was added to the original offer, until, like the merchant in the parable, the boy sold everything to gain this pearl of great price. When at last the actual transfer of property took place joy was unconfined and aspiration beheld nothing beyond. Weeks of bombardment attested the faithful effort to bring breech, sight and object into effective collocation. Stumps, posts, bottles, cans and escaping birds marked the advance of the tireless nimrod. The farmer's wife, startled by a white apparition stealing around the corner of the house to shoot a roosting partridge, the involuntary acrobatics of the old cat, stumbled over in the mad rush for a shot at a low-flying duck, the pale face of a companion who heard one charge whistle past his ear, are as fresh as yesterday. Surely a lenient Providence guards reckless mortals. The gun came to an end almost as suddenly as the one-horse shay, but the boy pulled through safely. For fifteen years a solitary grouse occupied the place of honor—the first and only success amid a dreary fusilade of crazy shots.

In the fall of 1892 a clergyman inherited a Colt breech-loader. It was a handsome gun and a famous shooter, but the recollection of that first campaign and its single trophy furnished no incentive to further effort. The gun might have gone into an undeserved obscurity, had not a refractory liver invested it with unsuspected medicinal virtue. "You are built for outdoor life," said the doctor; "get out on the hills and into the woods." "I have a gun," replied the minister. "Good! Use it!" That prescription settled my fate. Let those who inveigh against clerical sportsmen reserve their choicest censure for these heretical doctors who preach the gospel of red corpuscles and even advocate masculinity in preachers. What justification have these fellows in their baneful work of keeping us young? Still, we must obey them or they order us to stop work. I remember the look of utter astonishment that settled on the face of the first parishioner I met when he penetrated the disguise of cap, boots and hunting coat and found a minister—his minister! It was not the strangeness of a gun, for he had handled one sixty years. It was rather the unexpected association of theology and gunpowder.

"Well, well, pastor," said my old friend who sits in the second pew from the front; "that's a han'sum gun, but I didn't know you keered about shootin'."

"Doctor's medicine," I replied. "Good enough for anybody. I'd like to go with you."

I had not scandalized him, and thus encouraged I pressed on to meet a friend who had promised to locate some birds. That first shot! Whir-r-r-r—straightaway, a diminishing patch of brown. Bang!—a clear kill! Scientific shooting, indeed. I laughed at my amazed companion, but it was perfectly clear to me. The boy had become a man. The training of the schools, the ball field and tennis courts had developed mental balance, accurate judgment, and control of nerve. An alluring prospect opened before me. At least a dozen birds should grace my table and regale invited friends. Vain hope, born but to die. Never was a triumph more fleeting, nor expectation more completely crushed. That shot must have been fired backward, for there followed the most convincing proof that my eye had not lost its obliquity of vision nor my left hand its gyratory motion. Day after day revealed my absolute dependence on the meat market. The flight of a grouse would set every nerve on the jump or cause temporary paralysis of every muscle. When at last the gun was fired, the shot would be so utterly meaningless that I would catechise myself to see if I was sure of my mental

faculties. The jump of a rabbit into the brush would be followed by an ounce of shot, hurled at some unoffending tree 20ft. away. Long shots, near shots, cross shots, straight shots, impossible shots, incredible misses—the result was the same. There stands the record, matchless, grotesque. Two seasons, fifteen years, two birds.

The true sportsman soon learns a lesson, which, rightly understood, would correct the tendency of some to disparage sport on the ground of its drudgery or its brutality. The lesson is that while the actual securing of game is an incentive and a fitting climax, it is, after all, but a small part of hunting. As I look across the study to my guns and recall the camp life of the past three years, the indescribable fascination of mountain, forest and stream, the wealth of suggestion drawn from nature's treasury, the friendships formed with manly men, I can but rejoice that I learned some lessons well and from the start. There, for instance, was the gun. Some poor shots are forever berating their gun, slandering it outrageously, if not inflicting actual violence upon it. If my 12-bore had been a new gun, such giving the benefit of the doubt to the gunner might have passed, but it had an excellent record. Often after an exasperating miss I would hold it on an inanimate object. True as a die and a perfect pattern. The gun shot just where I aimed it, without any boomerang antics to offset my lack of skill. "Never mind," I would say; "it is my fault. Kick me as much as you want to." Then there was the lesson of needless killing. I left the discussion of the larger question of taking animal life to those kind-hearted people whose arguments would have greater weight if the remonstrants would first adopt a strictly vegetarian diet. There are many birds and animals in the fields and woods that not only do no special harm, but they serve no useful purpose as food. Practical immunity has made them quite tame, and it requires little if any skill to shoot them. I learned to regard these as companions and friends rather than game. I studied their appearance and habits, learned and compared their notes and cries, and left many a tidbit for their meal. The woods also took on a deeper meaning. I began to see visions and hear voices The eye became stronger and clearer. The glory of the autumnal foliage; the interplay of lights and shadows; the variety of berries, bark and moss; the answering flash or deep shadows of the brook; the gray rocks and fallen trees, were an unceasing delight. The spirit of the wood seemed to whisper in the stirring leaves; to laugh in the running water; to moan and sob in the rising storm. Again all would be silent, and in the silence there would come peace and rest. What man who has learned to love the woods has not yielded to the spell of that absolute calm when there seemed to exist in all the universe but two beings—himself and God? The taking of game for food, the uncertainty and excitement of the quest, the matching of wit against instinct, skill and pleasure in handling a reliable gun, are all indispensable to hunting, but they are not all. Music, beauty, health, exhilaration, solitude, communion, comradeship, these are the greater part, and until the service of gun and rod in introducing the sportsman to these rich but all too rare experiences is learned by actual experience, the hold which hunting and fishing have upon manly men will not be understood, much less appreciated.

Such was my introduction, such the meager results as regards game, and such my progress in the spirit if not the skill of hunting. The gun secured an honored place near my desk, and the thought of what it might yet accomplish led to a complete revolution in my vacation plans. If the narrative of subsequent experiences and impressions will afford any entertainment to the readers, it shall be given, for next to hunting is the pleasure of "talking it over."

PENOBSCOTT.

SOME TEXAS DEER HUNTERS.

Editor Forest and Stream:

I have been a regular reader of FOREST AND STREAM, getting it from local newsdealers for the last fifteen years, and have often promised myself that I would some day give to its many appreciative readers and brother sportsmen (for I, too, was born with the instinct) some of my earlier experiences in Texas with the Nessmuks of that day and time, having emigrated from Tennessee to Texas with my father's family when a youth in the winter of 1849-50 I have had the pleasure of the acquaintance of such noted deer hunters as Murphy, Phelps, the Wrenns and a host of others; men who could look at a deer's track and almost tell you what the deer was thinking about when he made it

Often have I seen Wash. Wrenn, who is now, alas "resting under the shade of the trees on the other side," when the hounds would be bothered trying to work out a cold trail where the deer had been feeding, dismount, hand his bridle reins to some one of the party, find the tracks, be it in the dry baked soil of Scaley Bark Glade or on the rocky and barren hillside, work out the trail and give the hounds a fresh start.

And there was Uncle Jimmie Simmons, my ideal of a deer stalker, who knew exactly at what hour the deer would be feeding, and whose boast was that he never saw a deer running when hunting, until after he had fired his gun; in other words, no deer was so watchful that Uncle Jimmie's keen eye didn't see it before he was detected by the deer. Like Nessmuk, he preferred hunting by himself; though, being my father's nearest neighbor, and observing my proclivities in that direction, he has often taken me with him (he a man past fifty, and I a boy of only ten or twelve), and kept me in the woods with him all day, apparently enjoying my companionship as much as he would that of an experienced hunter of his own age. Be assured there was no game of ball or marbles so attractive that I wouldn't abandon on the instant to go with him into the woods.

What hunting those forests of east Texas, bordering on the Sabine, Angelina and Neches rivers, afforded! Ah, but it was the sportsman's paradise indeed! In the rivers and creeks were beaver and otter; bear, wild cat and coon in the swamps and canebrakes, and deer and turkey everywhere; besides, in the winter, mallards by the millions.

On such occasions Uncle Jimmie would never lose an opportunity to instruct me in woodcraft and the ways of wild game and how to stalk them, and to what part of their anatomy to direct the fatal bullet. Like most hunters, he was fond of his pipe, and his invariable rule was when he first discovered a deer (which, as before stated, he always did before the deer saw him) to get to the windward of it, even if he had to describe a half-circle to do it, then light his pipe and stalk it at his leisure.

"Never get in a hurry or allow yourself to become excited," he would say, "for be assured the deer will never become frightened as long as you advance only when his head is down, and keep to the leeward."

He has long since been summoned to the far-away "hunting ground;" but I imagine that I can see him now as he leisurely advances up the pathway that led down to my father's spring, from which both families were supplied with water, with his old flintlock rifle, with rear sight shaded with a piece of tin bent over it, and old Beave, his "slow track," with yellow hide, bob-tail and prominent dew-claws at his heels. Again can I see that smile and hear that ever-pleasant and welcome voice calling at the gate: "Milton, get your gun and come along, I've got the salt and biscuits."

How my little heart would bound with delight, and how I would dart like a fawn to my mother's side to ask permission to go. And, oh! the delight of the hunt. Yes, it all comes back. I can see it all. It is true it is only a memory and a vision, but it is a pleasant memory and a delightful vision; yea, to me a heavenly one.

I only started out to say that I may hereafter write up some of those old frontiersmen and memories, for they belong to the craft and should not be withheld.

MILTON MAYS

[We trust that our correspondent will tell us something of these old-timers. They deserve a writing up in the columns of FOREST AND STREAM.]

WITH GOKEY, OF DAWSON.

LAST week I spoke of a little hunt which my friend, the Chief, from New York, and myself, intended taking out in North Dakota with State Game Warden Bowers and his friend, Deputy Warden Gokey, of Dawson. We took the hunt and had one of the pleasantest little experiences either of us has known for a long time. We left St. Paul on the evening of Monday, via Northern Pacific, and taking up Mr. Bowers at Fargo, N. D., where he lives, we spent the rest of the night on board the train conversing about all those things which come up to the minds of children out of school. It was daybreak when we reached Dawson, and soon thereafter we were introduced to one of the most celebrated and justly famous citizens of the great State of North Dakota, Gokey, of Dawson.

In appearance we found Gokey to be strictly weird, about medium height, but with long black hair hanging on his shoulders. His garb was of corduroy, his hat no derby, but the soft covering of the plains. His manner was that of the genuine West. In two minutes we were all acquainted, and in four we had our plans for the hunt completed.

Gokey, of Dawson, has done more to make his State famous than any politician within its borders. He is known all over his own State, and, moreover, in every other State of the Union. He has friends by the score among the best and wealthiest sportsmen of America. Not to know Gokey is to argue oneself unknown, and that is why the Chief and I went out to see him.

Gokey, of Dawson, was once upon a time a New Englander, and his parents wanted to make a business man out of him, but he was always sneaking off to go hunting, so they gave it up. Some score or more of years ago he resolved to come West, where he could breathe deeper and oftener and under less restraint. He reached Dakota in the buffalo days. He knew the antelope before they were gone. He will tell you that even to-day he believes that he can take you, inside of four days, to a place in the unknown Dakota lands, where you may see a buffalo, a real live wild buffalo. But he does not state for publication where this place may be found.

When Gokey located, years ago, in the little prairie town of Dawson, he faced the problem of making a living just as the rest of us have to face it under one condition or another. In the little towns of the West the channels of trade run in miniature, and perhaps a single one does not offer a living of itself. In the cities each man does one thing, or part of it, but on the prairies he is obliged to do many things.

Gokey, of Dawson, is above all things a hunter, yet not a market hunter, and not a butcher. He takes out parties into the best duck and goose country of Dakota. This season is short, of course, and for the rest of the year Gokey does many things. He is deputy game warden, and a rattling good one. He is justice of the peace, of course, for the most prominent citizen is always elected to be justice of the peace in a Western town. He says that not since the first year of his arrival in Dakota has he been without holding an office of some kind. Also, he is a harness maker, and a very good one. He repairs guns and all sorts of firearms. He loads shells, and sells supplies for guns. More than that, he is a professional photographer, and makes some very sweet pictures of Dakota babies. Not content with this, he is also a dentist. He pulls teeth after a painless method which he advertises. When the patient tells him that he has been hurt, Gokey, of Dawson, apologizes, and tells him that he forgot to rub on that painless stuff, and offers to put the tooth back and do it over again. I asked him where he was graduated as a dentist, and he said he just picked it up. Not yet done is the catalogue of Gokey, of Dawson. He is leader of the town band, and plays the clarinet with exactness and confidence. I have an obscure notion that his painless method of dentistry is in some way connected with the clarinet, though of this I am not sure. Gokey, of Dawson, is a musician, a scientist, a philosopher, a business man, a jurist, a corking fine duck shot, and the very best fellow in the world. No one ever saw him out of humor. Day or night, he is always with a laugh upon his lips. He will not wear rubber boots, but goes into the water, no matter what the weather, in old shoes and trousers direct. Yet he was never known to shiver; he never had rheumatism, and he is never sick. He can break a dog, handle a gun, or pole a boat with the best of them. I nearly forgot to add that he is the town barber, and he shaves and cuts hair as well as he shoots ducks. No man ever knew him who did not love and admire him. There is only one of him in the entire State of North Dakota, and if you see him once you are bound to go back and see him again.

Picture to yourself Gokey, of Dawson, engaged at his work, or more properly speaking, at his works. I do not say that he can try a case at law and shave a man at one and the same time, but suppose this doubtful situation is not offered him. Suppose that he has merely to make a set of harness while he is trying a case, or to load some shells after he has given the band the regular lesson in Sousa's marches (which they really play). Suppose that he merely has to shave a man, after he has fixed up a broken gun, or something of that sort, and is then about to make a picture of a Norske infant. You approach Gokey so employed, and mention to him the possibility of a little hunt. Presto! You find the real business, the real preferences of the man. He continues the law case. He postpones the parents of the Norske infant. He lets the harness wait, and tarries not at all to evoke sweet notes upon the clarinet. In four minutes Gokey, of Dawson, has his two rough-looking but speedy horses hitched up to his light covered wagon. His dogs, rough-coated but old-headed, trail out behind. On a little two-wheeled cart of his own invention a duck boat travels on behind the light wagon. His useful gun, his well-worn coat and suit are in evidence. Gokey, of Dawson, is no longer jurist, barber, artist, merchant. He is in every shining, happy lineament Gokey the hunter, unapproachable in his chosen craft.

It is thus that I would lovingly picture him, nor can I suggest greater happiness for any person, whatsoever be his condition, than at some day thus to see Gokey, of Dawson, and to think that he is to be head of an expedition out over the big gray plains, where the air is sweet and keen, and where the blue sky has long, dark traceries drawn across it by the wavering flights of the fowl.

We had two days at Dawson; Warden Bowers, the Chief and myself, and though we had had no sleep the previous night on the train, but had visited and talked like schoolgirls till the gray of dawn, we lost no moment getting off for our hunt. On this first day Gokey determined to take us only about six or seven miles out of town, to the Dead Buffalo Lake, near the old Sibley battle ground. On the way out he and Warden Bowers told us all sorts of cock-and-bull stories about the numbers of ducks we should see (all local ducks, of course), and to this I listened politely, as one used to many such stories which had never found fulfillment. Here let me apologize. The stories in this case more than came true.

At the head of the Dead Buffalo Lake there is a narrow strip of water separating it from a smaller lake above, and between this little sheltered basin and the wide, deep water where the wild celery grows, there is a more or less constant flight of ducks. We put out our team and hastened quietly as we could down to this fly-way, seeking not to alarm the birds till we had taken our stand on the ridge between the lakes, where the rushes grow much higher than a man's head and run out almost entirely across the narrow channel. One of the dogs ran on ahead of us, and even before we could run over to the pass, there arose an enormous black cloud of ducks, which began to stream over the pass and to spread out over the big lake below.

Hot Times on the Pass.

Each of us had his pockets full of shells, and before we had deployed as skirmishers across the pass the pockets began to empty. The ducks came in a constant stream, without intermission for many minutes, nearly all of them low and almost in our faces, and with that velocity of flight seen nowhere except on a duck pass. The four of us with shouts and calls and eager vociferations of "Mark! mark! mark!" poured in such fire as we could. Mr. Bowers cut down his first two birds after his regular style, and Gokey, wading out into the middle of the channel, began to fold up birds with the smoothness of the oldtime shot. I came near stopping my own gun to watch the sport of duck shooting on the pass, which I consider to be one of the most difficult and exciting forms of shooting. High up in the air the passing bird would suddenly close up, its head falling back, and come down like a stone with an excellent great splash. For the Chief, I can say he was diligent, and often I saw him cut down his duck, sometimes dropping it at his feet as he stood on the dry ground. Both the Chief and myself were raw at first on the pass, but after the flurry we got down to it and shot with our average of badness I suppose. All of us killed ducks, many ducks, so many and in such mingled fashion that for a time no one could tell whose duck it was that fell out of the flight under the pattering fusillade. The retrievers were busy wading and swimming, and we, too, at times paused to pick up a bird or so. In half an hour the flight slackened, and we stopped to take account. Many of our birds fell back of us in the water, and unless killed stone dead such birds were as good as lost; for they would dive and disappear as soon as they got to the water. We could see that many of our ducks were canvasbacks and redheads. I shall make it short by saying that the first hurried flight did not last long, and that during the day, which came off very hot, the birds did not move much, Gokey very wisely declining to go out and stir them up, as he said that would drive them off their feeding beds and cause them to leave the lake. The evening was still, and the birds did not move as we had expected. Moreover, we were most of us tired and sleepy, and not disposed to kill everything in sight. After we had picked up our dead and found such of the cripples as we could, we had somewhere between thirty and forty ducks, I believe, nearly a dozen and a half of which were fine fat canvasbacks and redheads. This we voted plenty good enough for us.

Not so Gokey. Both he and Bowers declared we had seen no shooting at all. They held conference, and soon announced that on the following day we must be prepared for a long ride. We were to go to the famous Chase Pass, about twenty-four miles northeast of Dawson, and to see what both these gentlemen declared to be the best flight of ducks in the whole country.

Dreams Realized.

Here again I am obliged to say that the representations held out did not begin to equal the reality. The Chief and myself have traveled a little in this big country of America, and have seen ducks all the way from British America to Mexico, yet never, even on the Gulf coast of Texas, did we ever see so many ducks, such comfortable, obliging ducks, and ducks so accessible and incessant. It was a wonderful sight of wildfowl, one of those sights which make the unthinking say that there are "just as many ducks now as there ever were." Gokey said this was always a great place for ducks, but that this year the birds were more numerous than for many years previous, thanks to high water and to the license law, which cut off the non-resident market shooting and reduced that of game hogs who knew no moderation. Gokey said that up to the past two years it was a daily sight at Dawson
